Mr. Wilnot Townsend's little sketch of marsh shooting carries me back to precisely similar experiences in the fresh-water marshes near San Francisco. He describes just our methods and the character of the sport we enjoyed before these marshes were converted into agricultural properties—and what were not became the exclusive shooting privileges of the numerous clubs now monopolizing them. But the shooting has been greatly impaired by the idiotic introduction of the German carp into our fresh waters. Like all pestiferous things, they have thriven to an extent worthy of a better fish. They are vegetarians, and at high water roam over the marshes, consuming the natural feed of the ducks, with the result of shortening the stay of the birds, and each year the shooting is more indifferent.

There is still some good shooting for a month on the opening of the season, and some of the bags on the Suisun marshes at the outset gave 75 to the gun per day, mostly sprigtails and teal, and a few mallards; but a heavy rain storm so raised the river as completely to overflow the marshes and spread out the area of water so greatly as to destroy shooting from blinds over decoys, scattering the birds. For the last month consequently duck shooting has been poor, much to the disgust of club members, who own fine club houses on the marshes and run them at no inconsiderable expense; for it is characteristic of the California sportsman that whatever he has is of the best, be it dogs, guns, boats or club houses. The cost is never considered. And this reminds me of the cut in your same issue of the fellow who sits in the boat without a gun, and looks longingly at the flock of ducks just beyond that he

has no means of bagging. You were wise in not endeavoring to divine what he is saying to himself for being so stupid as to leave his gun at home. The language doubtless would not bear repeating. I have been there and know how it is myself.

The Doings of a Decoy Doe.

Reading Mr. Isaac Kenwell's experience as to the question of deer killing sheep (which he denies, giving personal experience on that head), and also of the tame doe that went off at times and returned with an occasional buck, serves to "remind me" of the case of the proprietor of the hotel at the Soda Springs, Shasta county, in this State, who owned a tame doe that always accompanied him in his deer hunts. When he had ensconced himself behind a log and said "Go for 'em Bet" she would start out and not return until she had picked some gay Lothario, whom she decoyed to within range of her master's rifle; and she seemed to find great satisfaction in compassing the death of the victim. The gentleman told me he had often rested his rifle across her back when firing at another deer.

As an illustration of her fondness for the sport: On one occasion, when I was at the Springs, he went indoors for his rifle. The doe was feeding in the yard at a distance. On seeing him emerge from the house with the gun, she ran toward him and began capering about as we see dogs showing their delight at the sight of a gun in their master's hand. Her greatest delight seemed to be to entice her kind to their death. So it would seem that the female deer is not unlike the human of her sex in their fondness for drawing the male animal into difficulties just for the fun of it—from which a moral can be drawn, and a warning to be careful how you fool with dears or you may get your foot in it.

Poor Bet finally met her fate at the hand of a pot-hunter, who came upon her in the woods near the house and knocked her over, much to the grief of the owner, who declared he would not have taken a \$500 bill for her; and thereafter venison was a much scarcer article on the hotel table. PODGERS.

SOME NOTABLE SHOTS.

I.

It was in the Little Missouri Bad Lands, in the western edge of North Dakota, when I, a youth of nineteen, was "riding lines" in the winter time to keep the cattle from wandering out on to the great plains to the eastward. It chanced one evening that I called on a neighboring cow camp, some miles from the humble dugout which was my abode, and for some reason went afoot, taking my rifle along. When part way home I saw a bunch of light-colored animals scudding across my path some 100 yds. ahead of me, looking, in the darkness, like big wolves; so thinking to give them a passing salute and perhaps make them run a little faster I let a .45 cal. ball go in their approximate direction, holding the rifle at my hips without the slightest idea of hitting any of them. At the flash and report the creatures disappeared into the darkness and I continued on my way, thinking no more about it until a few days later, when I happened to ride by that spot and discovered an antelope shot directly through the heart by my random shot. Unfortunately the flesh was spoiled.

II.

When the then Territory of Montana put a bounty on ground squirrels and prairie dogs in 1887, we, the floating population or "foot loose" portion of the community, embraced the opportunity of making a living by trap and rifle, and made a pretty good one, too, though we did not confine our operations to the vicinity of farms, where the pests were doing the damage, but hunted where we found our quarry thickest. Thus it happened that I camped on the Shields River, near the Crazy Mountains, and waged war against the rodents during the spring months, before the squirrel-hunters so emptied the territorial treasury that the bounty law had to be repealed. For the squirrels I had brought along a .23 cal. single shot Winchester and some 10,000 rounds of .23 short cartridges, and we had no other gun in the outfit.

Seeing some antelope one morning, I told my partner that I thought I could kill one with the little popgun if I got near enough. He doubted it. I saw that they were feeding up a long "draw," by the side of a ledge of red scoria that cropped out on the crest of the ridge, offering good places of concealment, so I started after them, made a detour so as to get ahead of them, and concealed myself in the rocks, where I thought they would pass. Sure enough, presently they came in sight, working my way, occasionally stopping to look back in the direction they supposed me to be coming. I let them feed within about 60 yds. or less, and then put one of the little bullets just where I wanted it, behind the shoulder of a nice one, thinking as I shot what nonsense it was to suppose I could hurt an antelope much with such a charge. The antelope all disappeared over a ridge together, the one I shot at going as well as the rest, and I went to the brow of the hill to see if any dropped out or acted as though wounded. I could hardly believe my eyes to see my game kicking its last, some quarter of a mile away. I found that the bullet had actually gone clean through the animal, not happening to strike a rib. This was a .23 short. Maybe my partner wasn't tickled to see fresh meat coming into camp!

May we not hear from others of your readers about their noteworthy shots? IPSARRAKA.

Ducks on Great South Bay.

WHEN the cold weather came the bay and the creeks shut up tight and all the birds left—even the black ducks, which we always expect to stay with us, no matter how cold the weather—and I guess they have gone, not to come back until spring. A hole has opened off Greene Point, about 500 acres in extent, and I was in it all Monday morning and did not get a shot. I have just looked over it from the window with a field glass, and there is only one duck in it. I have been out every day from daylight until dark, storm or shine, and have shot at only nineteen ducks, killing fifteen. That is all the birds I got this winter. When the bay shut up there was a hole kept open down the channel, near Fire Island, where all the ducks stopped. Two market gunners got at them and killed all—542 birds. A. A. F.

A COLORADO OUTRAGE.

DENVER, Col., Feb. 4.—A Chicago paper printed an article from a Kansas or Nebraska correspondent giving an account of a hunting trip in Routt county, Colorado. The hunters killed elk in large numbers, taking only the saddles, in direct violation of State laws, and amused themselves by trying to shoot deer through the ears with a .22cal. rifle.

According to the article the law was violated in several instances. The new game warden should look this fellow up. The *Republican* comments upon the proposed game law as follows:

The proposed game law, whatever its merits in some respects may be, is seriously defective in one particular. This defect consists in the permission it gives dealers to sell game out of season which may be brought from other States. This does not speak well for the sportsmanship of the men who framed the bill. To the sportsman the killing of game out of season should be objectionable, regardless of where the killing may be done. The proposed law virtually offers a premium on the killing of game in the adjoining States and Territories. To say the least, this is not generous to the communities which surround Colorado, and following the example proposed to be set them, the Legislatures of those States and Territories would be justified in offering a market for game killed unlawfully in Colorado. If game birds and animals were respecters of State lines there might be, in pure selfishness, some excuse for the provision to which we are objecting, but it could be excused on no other ground. These birds and animals do not, however, to the best of our knowledge and belief, pay any attention to or have any regard for State lines. The deer of Colorado may stray into Wyoming and the birds may fly into Kansas. We may say that it is a foolish bird which does this, but nevertheless many of them may do it and there is no protection for them in their Colorado nativity. A Kansas Populist would not hesitate on this account to kill a Colorado quail. On the contrary, he would be encouraged to do so by the fact that he could find a market for the Colorado bird in Denver or Pueblo. * * * TEESEBY.

"An Amateur's Breaking in."

NEW YORK, Feb. 21.—*Editor Forest and Stream:* I have read with some regret, I must acknowledge, under the caption, "An Amateur's Breaking In," and signed by "A Disciple of Frank Forester," the disciple's idea of training a dog. One would assume from the first portion of the article that the amateur was a gentleman, but I think that any one who was so thoroughly imbued with Frank Forester's principles as this writer seems to think he is, would have hesitated before he kicked a poor untrained puppy with sundry applications of a heavy hunter's boot for doing just what the thoroughly untrained puppy would naturally do. No sportsman and no gentleman in his senses ought to kick a dog under any circumstances, and when a man is so rash as to take an entirely untrained puppy into the field and after his really wonderful performances pointing and retrieving without any teaching, kick him because he runs a rabbit, why the least you can do is not to publish such a savage's writing in the *FOREST AND STREAM*. Surely Hammond's "Training vs. Breaking" does not advise, nor its author back up any such barbarous treatment. E. K. L.

Deer in Central New York.

UNION SPRINGS, Feb. 6.—I was in Chemung county a few days ago and was surprised to find, within five miles of the city of Elmira, three wild deer wintering there and seen almost every day; they are a buck and two does. They have plenty of forest and feed, and if they could be protected for three or five years in the counties of Broome, Tioga, Chemung, Steuben, Schuyler, Allegany and Cattaraugus, they would become quite plenty. There is plenty of timber and feed, and a long range of high hills and mountains. Some one should be interested and have a law passed this winter to protect them for five years, and try and bring them back where they were forty years ago. Trusting some action may be taken, I will leave it to some one that lives in that locality. HENRY C. CARR, Game Protector.

Kansas Live Quail.

MR. CHARLES PAYNE, of Wichita, Kan., writes that he is supplying live quail for stocking purposes, sending them to several States, among others to Oregon, where they are reported to be doing well. He has sent 350 to Shanghai, China. But as the Kansas law prohibits the trapping or snaring of quail, how is it that Mr. Payne is in the business on wholesale scale?

West Virginia Quail Frozen.

HUNTINGTON, W. Va.—I am informed that whole coveys of dead quail have been found near this city—killed by the intense cold. The anticipations of shooters are of a correspondingly low temperature just now. N. D. E.

ALBANY FISH AND GAME BILLS.

[Special Correspondence *Forest and Stream.*]
ALBANY, Feb. 7.—A bill for an appropriation of \$5,000 for a fish hatchery in Sullivan county has been introduced in both Houses of the Legislature.
A bill by Assemblyman Rice amends section 100 of the game law by striking out the prohibition against the running of saw dust into fish streams.
Senator Smith has an amendment to section 141 which includes Onondaga Lake among the other lakes in which bullheads, etc., may be caught through the ice; and it adds to the section a provision that suckers may be caught with hook and line or speared at any time in any of the waters of the State.
A bill by Assemblyman Townsend amends Section 172 so as to permit angling on any day in the year in Jamaica Bay. It also strikes out the provision relating to bass gin in length.
Assemblyman Kinsella has a long bill for the preservation of fish and game in Orange county.
Feb. 7.—Assemblyman Conkling has an amendment to Section 115 of the game law so as to add: "And no set net or eel pot shall be placed in the waters or canals of this State unless each and all of the stake poles for supporting and holding the same shall extend above the surface of the water at least high tide to a height of not less than 3 ft."
Assemblyman Kinsella proposes to amend Section 141 so that bullheads, etc., may be caught by hook and line, or by tip-ups, through the ice in Orange and Sullivan counties.
A meeting of the Assembly Fish and Game Committee was held Tuesday afternoon, Feb. 7. Among those in attendance were Commissioners Huntington and Hackney and Clerk Doyle, of the State Fish Commission, and Chas. B. Reynolds, president of the New York State Association for the Protection of Fish and Game. On the suggestion of Commissioner Huntington, who said that the Fish Commissioners and Chief Protector Pond were to prepare a brief embodying their views on the several bills, Chairman O'Connor suggested that it would be wise to defer taking any immediate action, and the committee adjourned, to meet again Tuesday, Feb. 21. The views of the Commission will then be submitted.

As a Harbinger of Spring.

SCRANTON, Pa., Feb. 4.—I have this day sent money for *FOREST AND STREAM* for another year. I have not sent before on account of my finances, but I am allowing myself this one extravagance because I feel as though I could not get along without it. I miss its pleasant face. It comes during these cold winter days as a harbinger of spring. X

Sea and River Fishing.

The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.

ON THE NORTH SHORE.—V.

The Trip Up.—V.
[Continued from page 99.]

THE dawn did not open in rosy colors, for a mutter or two of thunder was heard, and columned clouds in sombre shade were rapidly forming and marching, while a stiff breeze was making the lake quite turbulent. There was every indication of a stormy day, which would doubtless confine us to camp. We sat down to the early meal with rather rueful countenances, but with a determination to go to Blind River, for which we had planned the evening previous, if there were a possibility of reaching it in anything but a heavy gale. Emery shook his head, saying "Bad look," and Peter said, "Heavy rain soon," but we said, "Get the boat ready as soon as possible and we will try to make the river at all hazards." That settled the problem as to the weather, and when the boys announced that all was prepared, we boarded the boat and soon were sliding along with a simmering noise of broken waters at her side. Coming to some good trouting grounds, as was indicated by the bottom, we commenced casting, and before reaching the river caught two, weighing, respectively, 2 and 1½ lbs. Arriving at the river we found it impossible to enter with our boat owing to the unusually low stage of water in the lake. Last summer we here made our prize conquest, and were therefore anxious to again ascertain if the scarlet-hued beauties still reposed in its crystal waters. The boat not being able to go up the stream Ned and the two half-breeds concluded to walk to the pool and fish it from the bushy banks. I remained as guardian of the boat, having no desire whatever to go through the dense bush for an angle where it was almost impossible to cast owing to the overhanging trees and bushes.

It was not long after they had left that storm-clouds of the most pronounced character began to arise and gather into a compact mass and surge toward us with a menacing aspect, while torn mists sprang up and whirled about like birds with immense wings. On the edge of this came a volume of heavy fog, which, as it struck the bending trees, peopled them with phantoms formed half of the imagination and half of heavy moisture. The lake now began to caper as if it, too, must add to the completeness of the picture developing at the inspiration of the storm king. Rain soon pattered, and the wind, like an onslaught of cavalry, was lifting the waves into a prominence which made them run in seas of foam, while the gulls, ever in delight at a storm, were sailing over snowy crests with inharmonious screams. Byron must have caught the inspiration of such warring elements when he wrote in his "Heaven and Earth":

Hark! hark! deep sounds, and deeper still,
Are howling from the mountain's bosom;
There's not a breath of wind upon the hill,
Yet quivers every leaf, and drops each blossom;
Earth groans as if beneath a heavy load.]

Every moment I looked for the return of Ned and the boatmen, as I was positive the arising storm would hasten them; but they came not. There I sat in the stern of the boat, with my rubber buttoned tightly around me, endeavoring to solace myself as best I could with my dismal surroundings. Our boatmen, particularly the prophet of the elements, were doubtless smiling at the consummation of their forecasts. They had long been desirous that we should not at any time venture with the boat against their judgment. This being a case in point, they were therefore happy, I presume, even if they did get a good soaking as a result of the execution of my order. After waiting and watching for about an hour the unruly elements, which presented some grand cloud painting, the absent party put in an appearance without displaying a single scale for their enterprise. They were all eager now for the return, and it was fortunate indeed that the wind gave us a lee. As we struck the deep water of the lake, the roar of the waves and the moan of the forest fell in mournful notes, while the riven masses of shattered rocks and the precipitous cliffs with their stern, strong and ugly facings, rose up in the misty air like gigantic spectres. It was a grand picture in a dark shading, which only a glowing sun and azure sky could transform into one of rugged beauty, for here—

"Huge terraces of granite black
Afforded rude and cumber'd track;
For from the mountain hoar,
Hur'd headlong in some night of fear,
When yell'd the wolf and died the deer,
Loose crags had toppled o'er."

The distance to the camp being only a mile and a half, we sailed it in about a quarter of an hour, with a beam wind that made the water roll in froth from the outwater. We were glad when we reached the camp and were out of the dripping moisture.

Soon after dinner the wind fell and the moan of troubling waters subsided. It was again to boat, and this time we tried the east side, where three unfortunates of the scarlet tribe fell to our lures. The trout were not rising and snapping as we desired, but we were ever hopeful that good catches would soon be made, and the angler correspondingly happy. We returned in a very stiff breeze, which again indicated that Lake Superior intended to keep up her reputation for unpleasant and uncertain weather. Emery was all at sea in his official capacity relative to indications, and was now fearful of hazarding an opinion lest he be ridiculed if he failed. The old fox was growing wary.

The night closed in deep gloom, with the sea beating a requiem on the rocky coast, but the morn, as if in compensation, developed with the sun pouring its libations of gold and purple over the pinnacles of the rugged mountains and down into the cool valleys. The lake, too, rejoiced in the splendor and sang in tinkling ripples. Ned, overjoyed with all this glorious awakening of nature, which made it an ideal day for the angler, had the entire camp aroused and in preparation for a raid upon the finny tribe that wear the colors of the sunset and the rainbow.

Feeling the importance of the day, and assured that it would bring us a rich harvest of the brook beauties, I selected two of my choicest flies which had been wrought into such artistic form as would surely allure the most wary of the trout. They were a "Lord Baltimore" and a "Montreal," and did on this occasion make mourning in the realms of the *S. fontinalis*. "All aboard!" came the signal of departure, and we were in the boat without delay and headed for the east shore. We had barely gone a couple of hundred yards before Ned hung one of the dappled darlings that was over two pounds, while I had one equally heavy racing around with my "Lord Baltimore." This was simply the inauguration, and we were delighted, for it assured us that unalloyed sport which every true angler desires. When we reached the point that ran at right angles with the main shore, two more were boated, and soon after another. This satisfied us that we were now going near grounds liberally peopled with the dandies of the "gleaming stars." We were here but a short time when Ned got in trouble with a heavy-weight. He, however, obtained a victory over his crafty and stubborn foe after a gallant fight of full five minutes. It pulled the scales over the three pound notch, and so far was the blue ribbon trout of the captives. Ned, pointing to the adamantine walls just ahead that looked like the golden gems of the landscape, suggested stopping there and fishing as we had previously done.

To the glittering rocks we went, landing in a little cove that gave the boat a quiet harbor. I started with Peter as my netter, while Ned of course was paired with the astronomer, who could, read him a lesson in the celestial pathway when he wearied of catching trout. I left them on a line of continuous rock that ran a couple of hundred yards without a fracture, while I sought the shore above, which presented a confused mass of tumbled and terraced granite, requiring not only toil, but suppleness, to travel over. It was along choice waters, and therefore I heeded not the rough, uneven pathway. I saw Ned land two before I had secured a rise, but after I had crawled down a ragged-faced rock by the aid of Peter, I made a cast that brought me a double catch and a shout from my netter that caused Ned and the astronomer to place their optics upon us. I heard Ned distinctly say: "I'll be blanked if he hasn't got two." This was not all, for on my very next cast I made another double catch, and then Peter again disturbed the serenity of the sage old angler and the tawny gazer of the azure blue, with a vigorous concentrated halloo that went echoing over the water and through the forest inland.

"He's in big luck this morning," now came from Ned in response to the cheerful shout.

My fish had hardly been netted before a joyous cry came from Emery, who was down below on the edge of a rock to land a large and savage fighting *fontinalis* that Ned was actively playing. Peter and I both watched the fight for supremacy with much interest, and with the hope that the delighted angler would score a victory; but alas for sanguine expectations, the trout when about conquered got, I presume, a square bat with his tail, and departed with the fly in his scarified jaw. I imagined I could see the shade of disappointment chasing away the glowing excitement that had so illumined the unfortunate angler's bronzed features during the battle. My heart went out in full sympathy to him. He looked despairingly toward us, after he had reeled in to repair damages, and cried out in disappointing tones:

"He got away with my fly."
"Entirely too fly for you," I replied.
"One too many."

The unlucky fisherman soon had another fly on, and again went to work with an earnest will that forbode danger to the next inquisitive trout. In the meantime, I had a struggling beauty that was endeavoring to escape, but he was too well hung for that, and was soon repenting his hasty action in the net. A shout now rang out from the astronomer, and on looking, I saw a heavy trout which he had landed for Ned. We were evidently getting more fish than were necessary for our immediate use, and I began to think it about time to desist in the slaughter. Peter, however, persuaded me to walk over the rough-edged rocks to some huge blocks of stone that lay in the water but a short distance from the shore, and where he was sure numerous trout poised in the deep crevices. I went as suggested, and succeeded in a very short time in capturing two more, that were daintily painted in lurid colors.

I then declared that enough was as good as a feast, and discontinuing the sport, climbed to the summit of a hoary rock that overlooked the lake, and there in the noonday sun, that was beautifying all things with its silver shafts, listened to the lullaby of a scarcely audible surge that pattered against the base of the storm-battered walls. I was wrapped in a very elysium of delight at the scene of magnificent splendor that lay before me, and which only the infinite solitude of the hills and the lonely lake can bring. I repeated, as if in unison with the silent and glowing scene that lay unrolled around me, that lovely and emotional stanza which Charles G. Ames has made so appropriate for just such an occasion:

I stand on high
Close to the sky
Kissed by unsullied lips of light;
Fanned by soft airs
That seem like prayers
Floating to God through ether bright.

The emerald lands,
With love-clasped hands,
In smiling peace below outspread;
Around me rise
The amber skies,
A dome of glory o'er my head.

Wind-swept and bare
The fields of air
Give the winged eagles room for play;
On mightier wing
My soul doth spring
To unseen summits far away.

After enjoying my *dolce far niente* for quite a while I began to think of Ned on the Titanic rock, who was doubtless awaiting my return. Taking up my tramp over the fractured blocks strewn in pell mell confusion, after arduous climbing and jumping, I reached the well-worn path and soon joined him. He was quietly enjoying a solacing smoke and doubtless the grand and lovely surroundings. Since my departure he had caught two more

trout, and, thinking as I did, that we had an abundance, withdrew from the field of sport.

Previous to our starting for camp we took a survey of the quarry that had but recently tenanted the waters and were somewhat amazed at the size and number. They ran in weight from 1½ to 3½ lbs., and as they lay in their silken sheen with spangles bright and rainbow hues it was a sight indeed to gladden the heart of any true disciple of the guild. Ned was so delighted that he deliciously warbled—

"They showed me the marvelous flowers
And fruits of their sun-beaten lands;
They said: 'Here are vine-tangled valleys;
Forget ye the barren white sands;
For a weariness unto the spirit
The dash of the breakers must be;
So dwell ye beside our blue waters;
Forget the sad song of the sea!'"

We scarcely reached camp before the ill-boding Emery shouted out: "Wind gone to the northwest; no more fishing to-day, nor for three days." And so it proved, for in less than an hour the ponderous waves were battling the shore with a savage fury that tossed the spray in surging sheets with a wailing moan. We, however, congratulated ourselves that we had sufficient trout for at least the three days' storm foreshadowed, for it is seldom a northwester discontinues its gale in less time.

Ned at once set to work to replace the fly he had lost in the morning by a creation which would surpass anything that had come from his artistic hands, or for that matter any other. If his workmanship was only as well developed as his conceit in this delicate construction, his flies would be a marvel that would bear exhibition at the World's Fair. He was no slouch, I assure you, with the bright tinsel and feathers gay, but he was not excelsior.

The night went down in gloom; not a star twinkled nor a gleam from Luna; the heavens one universal pall, and the howling winds and the battling waves the only dirge. It was a dismal scene, in which the unruly elements alone held the sceptre.

To arise in the dawn and find your desires in regard to the weather realized is no surprise, but to find it *au contraire* is; for that morning we were greeted with a change in the course of the wind, and a dismayed countenance from the copper-colored oracle, who had found his forecast all wrong. Instead of a northwester, which rocked us to sleep by its vigorous lullaby the night previous, there was a southeaster blowing down the prophet's throat, as if to throttle him for being on the wrong side of his augury. Ned lacerated him and I bled him, in regard to his failure, until he grew as dizzy as if a prize-fighter had slugged him in a vulnerable spot. Prophetic Emery, astrollogical Emery, horoscological Emery, you are again downed, there to remain till the flying scuds—your celestial friends—come along and restore you to the throne from which you have so ruthlessly been driven in a northeaster by a blow above the belt. *Requiescat in pace.*

We had planned a trip to Sand River, some four miles east of our quarters, but as it was not like being in a rosy couch to venture just then, we lay around camp all the morning, indulging in every thing that answered as an auxiliary to the burial of time. We read till the books lost interest; played cribbage till a duel almost ensued, went out on the rocks and wagered on the height of the spray, and then came back and bounced poor Emery as a good-for-nothing Medicine Man of the weather, until finally we sat down to a meal, which, out of pure, unadulterated restlessness and a rapacious maw, we devoured like cannibals.

ALEX. STARBUCK.

[TO BE CONTINUED.]

BOSTON AND MAINE.

Governor Russell and B. Pond.

ALL the bitterness of politics must often fall even upon the lovers of the fly-rod, if perchance they happen to occupy prominent positions in the Commonwealth, and by their deeds, no matter how honest, leave the slightest chance for their motives to be misconstrued. Governor Russell, of Massachusetts, is being most severely taken to task by a Boston paper of opposite political faith for signing the petition to the Maine Legislature asking that B. Pond, in the town of Upton, in Oxford county, be closed to all fishing, except with the fly, for a series of years. The article is headed "Russell's Trust," and the Governor is recklessly and untruthfully accused of trying to "get up a corner on trout." The writer sneeringly claims that the Governor "does not desire that the sturdy Democracy of Maine shall share his trout pond," but desires "special legislation" in the case of B. Pond. Then the author of the venomous political fling makes use of these words:

"Of course, all the State of Maine knows that the Governor is very strong against special legislation here in Massachusetts on the subject of trout, for last year, in a message to the Legislature vetoing what was known as the 'Gilbert' Trout bill, he gave this as one of his reasons for that act: 'Because, in effect, if not in form, it is legislation for a special interest against the public interest and to the public injury.'"

The article most unjustly criticises the action of Governor Russell in signing the petition, which was only done as an individual, and at the request of other members of the club. The shores of B. Pond are owned by the Oxford Club, and have been for a number of years. The petition for preserving the trout in the pond originated with the club, and it is almost universally signed by the best citizens of the town of Upton. His name is on the petition with both Republicans and Democrats. The petition is spontaneous, from its signers, asking that the trout of the pond be preserved against the ravages of ice and bait fishing. The Governor has only been a member of the club since 1891, though the club was organized in 1875, and has on its list of members some of the first merchants and statesmen of Maine, Massachusetts and New Hampshire. Some of these men have passed away, but usually they have been sportsmen in the truest sense of the term. The club has had a rule for a long time specifying that only fishing with the fly shall be indulged in on B. Pond, by its members, and that every trout under one pound in weight shall be returned to the pond. A prominent member of the club, Mr. J. O. Wetherbee, of Boston, says that the club, notwithstanding its ownership, does not wish to prevent the citizens of Upton, or any other town, from participating in the fishing which the pond affords, only to limit it, to the members of the club and everybody else, to such fishing as the trout can stand without depletion;

and they believe that to be with the fly only. The club also puts upon its own members a limit of twenty trout in one day, and only asks that everybody fishing there shall exercise the same reasonable restriction. Within a year, the club, at considerable expense, has put in a large number of young trout of 6 in. in length.

Ice Fishing.

The weather is still too cold and the ice most too thick for extensive ice fishing. The pickerel fishermen in Massachusetts are doing almost nothing. In Maine, though the law permits citizens to fish for trout after first of February, but very little fishing has been done. One report mentions an attempt to cut holes through the ice where the whole length of the ice chisel, handle and all, came into use, but the water not being reached, the attempt was abandoned till warmer weather.

Maine Game Legislation.

Fish and game legislation is the most exciting theme before the present Maine Legislature. "The fanatics are all at Augusta," each with his pet scheme. I have it from good authority that but few of these "pet schemes" will ever receive the sanction of the Governor in the form of legislative enactments, if indeed they pass either house. I have it from Commissioner Stanley himself that he believes the fish and game laws of that State to be about right as they are, and that he is opposed to the ridiculous tinkering asked for by the fanatics, believing that such tinkering would only end in a jumble that it would not be in the power of any commission to enforce. Mr. Stanley would like to see the open season on large game made on Sept. 1, or at least the 15th, but he has not the least idea that such an act will be passed, owing to the opposition of the lumber interest.

Mr. Stanley looks upon the attempt to pass a law subjecting non-residents to a license of \$5 to either hunt or fish in that State, the work of fanatics, and hopes that no such bill will pass. On the other hand, the committee on fish and game has actually reported such a bill, and it is now in the Senate, and it would not surprise me in the least if it passed both houses. It is just here that the lumber interest may come in. It is pretty well understood that this lumber interest would be glad of any legislative action that would tend to "keep sportsmen out of their woods," and they are pretty likely to find this five-dollar-license measure just about the thing; hence the chances are that they may go in and support it. We shall see.

SPECIAL.

ANGLING NOTES.

The Pickerel Does Favor the Pike.

MY notes in FOREST AND STREAM about pike and pickerel having been copied by a local paper, I have had many opportunities to explain the difference between the two fish to local fishermen; and the pike-perch, locally known as Champlain pike, has also come into several discussions upon the subject of nomenclature. In northern New York a pike, *Esox lucius*, is always a pickerel, and the pickerel, *Esox reticulatus*, is almost unknown, but, as I have already stated, the pickerel have, within a few years, made their appearance in the upper Hudson River. A few days ago I was doing my marketing when the marketman called my attention to some fish which he had just bought from a local fisherman who had caught them in the river. In the bunch of fish were pike and pickerel, and as I was pointing out the difference, an old man, a customer in the market, became quite interested, and when I had finished, he declared quite positively that all the fish were pickerel. Taking one of each species and putting them side by side, I again pointed out marks of dissimilarity, but the doubter was loth to give it up, and said: "Well, this fish that you call a pickerel certainly does favor that one that you call a pike."

This reminded me of a story that I never told but once, and then I was charged with doctoring it, but it is absolutely true and occurred as I will relate it. In an emergency a family that I knew required a nurse and there was no nurse to be had, but a physician said that out in the country there was a motherly old soul who had a reputation as a nurse among her neighbors and she might do at a pinch, so she was sent for and when she came to town it was probably her first appearance away from her native heath. In one of the bedrooms of the house she was called to was a framed photograph of the Madonna and child, taken from a painting by one of the old masters, and the old lady was impressed with it the moment she saw it. Putting on her glasses and adjusting them she walked up to the picture to inspect it closely, and said with much earnestness: "What a pretty baby; and how she does favor her ma!" Then she discovered the halo about the head of the Madonna, and exclaimed, "Well, now! where do you suppose she got that jockey?"

Game Protector Burnett.

A few days ago I wrote that my connection with FOREST AND STREAM as a correspondent dated back seventeen years, and before the ink was fairly dry I had a call from Wm. H. Burnett, a special State game protector, who reminded me during his stay that it was just seventeen years since he called upon me, early one morning, with his first prisoner, arrested for violating the fish laws of New York. At that time I was president of an association for the protection of fish and game; the game laws had been a dead letter and the fish poachers were supreme, until Burnett's election as town game protector was brought about and the association pledged him its support to enforce the laws. The morning referred to was the beginning of a new era in practical fish and game protection. I had been up the night before and was sleeping late, when a frightened maid rapped at my door and announced in a voice that gave evidence of fright that was almost hysterical, that there were two men covered with blood and carrying a gun at the door and wished to see me. Before I could put on enough clothes to be presentable the household was in a panic of alarm. The maid had taken the precaution to lock the front door when she saw who the visitors were, and when I saw them I did not blame her for so doing, for they certainly did look not only as if they could, but as if they had, scuttled several ships and cut a number of throats. It was Burnett and his first prisoner, caught red-handed shooting fish. The offender resisted arrest and clubbed the officer with the gun, cutting him badly; but when Burnett closed and got his hands on the man, he "wore out" the man and the gun and the earth, and when I saw

the prisoner a child could have led him. That was the beginning of a war that lasted for years.

A "bad man," one of the Bitter Creek sort, thought it would be well to settle matters once for all with Burnett, and he went to him boldly, announced that on a certain night he would spear fish at a place named, and he would shoot any man who attempted to touch his jack, spear or boat, for he had the right under the Constitution or something, to defend his own property. Burnett was on hand at the date that was billed and took the jack, spear and boat, and has them yet, I reckon, and the bad man only tore the atmosphere wide open with his tongue. Next Burnett caught the bad man with a set line and some fish on it and arrested him, and when he left court after paying his fine you could trace him by the sulphurous fumes of his conversation—and his threats. Burnett then sued him for the penalty, and after he had paid \$200 and odd, he took a front seat on the mourners' bench, and has been there ever since, and has kept mum. No one clubs Officer Burnett now, and no one threatens to do him harm unless they go off in the woods where only the trees and the rocks can hear. He has never run from anybody or anything, and his word is better than some bonds, and as good as any ever executed. Four days before his last call upon me I had sent for him and put a case in his hands, giving him the name of a man who had violated the fish law, and the names of three witnesses. His call was for the purpose of telling me that after journeying over 200 miles by highway and railway he had secured complete evidence in the case, and had that day served a Supreme Court summons on the party, who admitted his guilt for penalties of over \$500.

A. N. CHENEY.

A DAY'S BLACK BASS FISHING.

ON a clear morning in early July I found myself on the borders of a beautiful lake in northern Pennsylvania, my object being the capture of that gallant game fish, the black bass.

As I looked over its wind-ruffled surface, shining like silver under the rays of the morning sun, and at the foliage forming its background, which varied from darkest hemlock to bright birch, I thought the omens auspicious for a successful day's sport, being the more confident because the bass had been striking well during the past fortnight.

Soon I was rowing slowly along the shores, with my minnow 80ft. astern. Suddenly the rod bends and the reel sings as a bass strikes sharply; dropping the oars, I snatch the rod and a steady strain sets the hook. But not for long, for instantly, 75ft. away, he shoots into the air, his sides glistening in the sunlight, shaking his jaws savagely, and though I lower my tip, I see, with a sinking of the heart, the hook fly from his jaws. The hook is quickly rebaited and the oars resumed. Soon another strike, another leap, and this time, having made a gallant fight, he floats exhausted near the surface and is brought within reach of the landing net. Then the sport becomes splendid; eight, and also a good pickerel, are boated, and several are lost before the school moves elsewhere. Once, having lost a minnow in the water as I was netting a bass, I bend over to recover it, a hungry bass snatches it when my fingers well-nigh grasp it, throwing a shower of spray into my face as he does so.

The minutes run into hours and the sun has already passed the zenith and is sinking in the west, but I take no heed of time, nor of the hawk wheeling on graceful pinions in the clear air, nor of the green heron standing motionless upon the limb of a dead hemlock, nor of the harsh, rattling note of the kingfisher as he flies from one resting place to another or after he has broken the silvery surface of the lake in pursuit of his prey, while the glorious sport lasts. My lunch basket lies, its contents almost intact, in the stern. During these halcyon hours my whole being was wrapped in watching the bending rod and whirling reel and the gallant leaps of the bass, and feeling the quivering of the rod under the tension of the line.

One, the largest of all, was killed on a five-inch minnow that I had put on as an experiment. Five times he cleared the water, in spite of all I could do to prevent him, and each time my heart rose in my throat as I lowered my tip to meet the leap, until the renewed strain gave tidings that he was still there.

At last, my supply of shiners being exhausted, I quit, and though they were rising freely to the fly, I thought I had had enough fishing for that day. There were twenty-three bass and a good pickerel, a good score for five hours' fishing. Seven other bass were returned to their native element.

I turned my footsteps homeward from the lake as the shadows of the oaks and hemlocks were lengthening over its waters and the soft light of the dying day spread its golden radiance over the once ruffled, but now placid, surface.

EURUS.

CURIOUS CAPTURE OF MUSSELS.

United States Fish Commissioner McDonald has allowed us to publish the following interesting record of taking fresh-water mussels, or unios, on a hook:

"WASHINGTON, D. C., Dec. 13, 1892.—Hon. M. McDonald, Commissioner: As a contribution to the life history of the fresh-water mussel I have the honor to submit the following:

"On the ninth instant I made collections of water plants in Little Hunting Creek, near Mount Vernon, Va., having as an assistant W. T. Lindsey, the custodian at Bryan's Point station, when a dozen mussels were caught with the rake—the same having been turned over to Mr. Harron for the aquaria.

"In discussing their habits Lindsey informed me that last summer while fishing from our wharf at Bryan's Point station with hook and line, he caught more than a dozen mussels. He said that they sucked the worm on the hook with their mouths, and were hooked when he drew them up.

"In this connection I would also mention a fact which I have not seen printed, yet am sure that it has been often observed by others, that in hauling the seine on the Potomac River great numbers of mussels are pulled ashore, their mouths being closed on the twine—the twine having fallen into the open valves. Yours respectfully, S. G. Worth, Superintendent Central Station."

Commissioner McDonald considered this hooking of the mussel as purely accidental. The mouth of the animal is very small and its food consists of diatoms and minute crustaceans. When an object like a hook, a net, or a rake comes in contact with the shell it would immediately close and thus fasten itself to the disturbing body.

TOLD ON THE WAY.

A VENERABLE but chance acquaintance and I had been coloring our cornucopia and silently watching the swift-moving, fleecy clouds drift over the full round silvery moon, but the tobacco got low, my friend thumped his pipe on his boot and asked, "Which way are you tramping in the morning?"

"Thought I would try that little stream off east of here."

"Well, if that's yer lay, I can give yer a lift if yer'll git up airy and don't object to riding on a road cart, but yer must roust out afore 8 o'clock, as I mean to start at 6 sure."

"Thanks, my dear sir, that will suit my complexion to a dot and match my walking apparatus to a charm. As for the road cart, if it is not one of my make I'll chance it."

Five minutes past 6 the next morning we were on the road. The old man was a trifle criss cross at first, the mare was a bit frisky, his briarwood a trifle stubborn. However, the sandy road soon dampened the ardor of one and a 10-pound suction drew the obstructions from the stem of the other, then the old man's face beamed; he was himself again.

"See that house over yonder jest agin that bunch of pines?"

"If you mean that one where half of the chimney top is gone, I do certainly."

"Well, the meanest man I ever heard tell on used to live there. Folks said he was so condensed mean that shingles on his roof wouldn't shed rain and his one winder let in no light. He used to go to meeting up in the village and to git rid of paying anything he'd make his folks sit in the wagon, or, if it was cold or stormy, make 'em stand up in the entry during the whole service. Never went into a pew for years. Why, blast him, he used to water the skim and sour milk he fed to his hogs."

"The man that jined farms with him on the east lost a barn and a lot of grain and feed, barn was struck by lightning and all burned up. The hull neighborhood turned out and helped him git out new timber. Raising day we all went to help. Somehow or other that air cuss was there. He ate three good meals and carried home his pockets full of grub, then the very next day put in a bill dollar and a half for his work."

"He'd a lot of bees onct. Somehow he got it into his leetle head that they didn't work hours enough, so he'd git up afore it were daylight, take a club and pound on the hives to wake 'em up and make 'em git out and git to work. He got 'em larnt arter awhile so as he didn't have to wake 'em up; then the leetle cuss weren't satisfied; darned if he didn't try to cross 'em with a lightning bug so as they'd work nights. See that air cow-path over that little rise? That leads into an old logging road and that road crosses yer stream 'bout half a mile from here. Hope you'll have good luck. Git up, Maria!" A. W.

GRAND RAPIDS, MICH.

GRAVES MEADOW.

It is only a small green spot in the woods of southern Vermont, in the town of Stratton, lying on the eastern slope of the Green Mountains. Perhaps it is forty rods long by fifteen or twenty in width. A clear mountain stream runs through it, fringed part of the way with alders. Its name even is known to only a few hundred in that thinly settled region; but it is to a limited few a famous place. For the last half a century or more, indeed since the days of the early settlers, it has probably yielded the fishermen more trout than any other place of its size in all New England. It has peculiar natural advantages in this respect. Above it and below it for half a mile in either direction are alder swamps, so dense and tangled as to bid defiance to any but the most persistent angler. There the trout lay and breed in comparative security, and from them the little meadow is constantly stocked. In my younger days, long, long ago, it was no unusual thing to take a hundred fine trout from this place. The supply seemed inexhaustible. The next day after being thoroughly fished it would swarm with a new lot. I remember once taking forty-four from a small "hole" in half an hour. They would probably average over 7 in. in length.

Even at this day, when most of the trout streams in that vicinity are depleted by constant fishing, Graves Meadow is making a heroic effort to maintain its old reputation. Last May I took about thirty trout of legal size (6 in.) from its waters. Having during a long life enjoyed many pleasant hours in this beautiful spot, I think the least I can do is to endeavor to preserve its memory before the greedy lumbermen shall have destroyed this old landmark.

FRED L. BALLARD.

SPRINGFIELD, MASS., JAN. 30.

BASS OF LEWISTOWN RESERVOIR.

CINCINNATI, Jan. 10.—In the issue of Jan. 5 I see an article, "The Lewistown Reservoir," by Nathaniel R. Piper. I spent seven weeks there in July and August and about a week the latter part of October and can say the same as Mr. Piper, that it is the best black bass fishing ground I have ever been at. I found that the best side of the pond to stop at was the bulkhead side (Robinson post office, Logan county, O.). Mr. Norviel, whose card I inclose, has the post office, also a store and small hotel, or rather, private houses, where there is very good accommodation. He has three minnow pools fed by a flowing well 83 feet deep of the very finest water. Minnows are 25 cents per dozen and always plenty on hand. His charges are \$1 per day board and sleeping. His boats are free of charge, also the ice that may be used. By dropping Mr. Norviel a postal he will get sportsmen free of charge from Huntsville, on the Sandusky branch of the Big Four Railroad and five and one-half miles from the bulkhead. This side of the pond is nearest to the fishing grounds. Parties wishing to camp will find a very nice place at Mr. Russell's, about one mile from the bulkhead and within fifteen minutes of the fishing grounds by row-boat. There are eight or ten guides living at the bulkhead. The charges are \$2 per day for guides, but it is not necessary to have one, although it is better, at least in the beginning. This is the headquarters for sportsmen and is as near to the railroad as any other place.

I send you to-day a photograph of a black bass that I caught there weighing 7 1/2 lbs. Four days after and before being frozen in the cake of ice it weighed 7 1/2 lbs. I sent the fish to W. H. Hughes, chief of our fire department, who in turn had it frozen and photographed. I have seen

larger fish than this one caught at this place. I caught 7 1/4 while fishing there, ranging from 4 lb. up. The best time for large bass is the latter part of August and in September, although there are large ones caught at most any time of the year.

The above I give for the information of sportsmen and will gladly give any other data they may ask for, and if any decide to visit the waters this next season they will find me there. I also inclose card of Mr. Matt Covington, who is always at Huntsville ready to take parties to the fishing grounds at 50 cents per person. PETER RENNER.

Eastern Massachusetts.

WELLESLEY, Mass., Jan. 27.—We had a good deal of sport fishing for white perch and black bass in Morse's Pond last summer. The perch were very gamy and many of them of good size. I caught several and put them alive in Lake Waban, hoping to stock the lake with them. During the summer I wanted to get one or two large snapping-turtles and set several lines attached to blocks of wood with good-sized hooks baited with fish. I caught several big turtles—one that weighed 26 lbs., one of 31 lbs. and one of 44 lbs. They are ugly fellows to handle and three or four big ones loose in a boat are liable to make things lively. A good many pickerel have been taken in Charles River this winter through the ice not more than a mile or two from Wellesley. One party took 75 lbs. in a day, while others carried home good strings. Two or three persons are trying to introduce the white perch into Charles River, and if they prove successful there will be good sport in three or four years. The white perch grows very large here, averaging 1 lb., while specimens weighing 2 1/2 lbs. or even more are not rare. S. F. DENTON.

Missouri Notes.

We learn from Mr. W. F. Page that fishing in the immediate vicinity of Neosho, Mo., has not yet opened. There was good fishing for small-mouth black bass in Current River, Carter Co., about the end of January. He was informed that the deer shooting there had been above the usual average this season.

When at San Marcos, Texas, in the early part of January, he saw a great many fine strings of large-mouth black bass, and was surprised to notice that the bass were actively engaged in making their nests. Evidently the prospects are bright for the new fish commission station which is to be established at San Marcos. Mr. Page had taken upward of 500,000 rainbow trout eggs at Neosho at the close of January.

Fishculture.

Minnesota Commission Report.

MINNEAPOLIS, Minn., Feb. 4.—The second annual report of the Minnesota Game and Fish Commission has just been presented. President Robert O. Sweeney, Sr., requests the making of better laws and enforcing the present law, by forbidding the selling and shipping of all game killed and fish caught in Minnesota. Also restrict the use of dogs in hunting and use of dynamite for catching fish in large quantities. The Game Warden reports that 30 complaints were made during the year, with 13 convictions. Notices were served upon 30 owners of dams to provide fishways, and 21 ways have been built. The Willowbrook hatchery distributed fry as follows: Brook trout 514,500, Loch Leven trout 234,000, California trout 49,000, lake trout 165,000, landlocked salmon 15,000; wall-eyed pike 15,000,000 (estimated). W. F. D.

Sowing Wild Oats.

We have been asked where the seed of water oats (*Zizania aquatica*) can be obtained for introduction into fish ponds. Mr. E. D. Sturtevant, of Bordentown, N. J., can furnish it and give directions for planting. Dr. Hessel has used it at Washington, where it grew so luxuriantly that he had to destroy it. He first soaked the seed and then sowed it in water from two to four inches deep.

Colorado Commission.

It is reported that W. R. Callicotte, Esq., of Denver, has been appointed Commissioner of Fisheries for Colorado, his term to begin April 1.

Attractive Tours to the Near South via the Pennsylvania Railroad.

The advantageous season of the year and the attractive destinations fixed for the tour to the Near South on Feb. 9 make it one of the most desirable of pleasure trips. The territory traversed is the most attractive and historical portion of the Union, embracing as it does a picturesque route, the military post of Old Point Comfort, the beautiful resort of Virginia Beach, and the cities of Richmond and Washington. The rates of \$45.00 from New York and \$42.50 from Philadelphia cover railroad fare, hotel accommodations, and all necessary expenses during the entire tour of nine days spent on the tour. For an extended tour to Washington an exceptional opportunity is offered on Feb. 16. Seven days will be spent on the trip. The rates, including transportation, hotel accommodations, transfers, carriage ride, and a trip to Mt. Vernon, are very low. This tour affords ample time for thoroughly viewing and resting at the Nation's handsomest city. Further information furnished on application to Tourist Agents, 849 Broadway, New York, 860 Fulton street, Brooklyn, and 233 South Fourth street, Philadelphia, or Ticket Agents, Pennsylvania Railroad Company.—*Adc.*

Hundreds and Hundreds.

The New York Central's transactions are assuming large proportions. The company recently ordered 100 new locomotives. They are adding to their passenger equipment this summer 100 new sleeping cars, and now it is stated on authority that they are laying 100-pound steel rails in their superb tract. Surely "America's Greatest Railroad" is not doing anything by halves.—*Adc.*

We call the attention of our readers to the advertisement of Wm. Wood, 25 West 125th street, New York, manufacturer and importer of high grade sporting, athletic, gymnastic and boating goods and supplies. A new and complete catalogue will be mailed free on application.—*Adc.*

A New-Subscriber Offer.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

The Kennel.

FIXTURES.

DOG SHOWS.

Feb. 21 to 24.—Westminster Kennel Club, New York city. James Mortimer, Supt. Entries close Feb. 6.

Feb. 28 to March 3.—Keystone Kennel Club, at Philadelphia, Pa. James Watson, Sec'y. Entries close Feb. 17.

March 7 to 10.—Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderfer, Sec'y. Entries close Feb. 25.

March 14 to 17.—Washington, D. C. F. S. Webster, Sec'y.

March 21 to 24.—City of the Straits Kennel Club, at Detroit, Mich. Guy D. Welton, Sec'y.

March 22 to 25.—Elmira, N. Y. C. A. Bowman, Sec'y.

March 28 to 31.—Illinois Kennel Club, first show, at Indianapolis, Ind. Chas. K. Farmer, Sec'y.

April 4 to 7.—New England Kennel Club, at Boston, Mass. J. W. Newman, Sec'y.

April 19 to 22.—Fifth Annual Dog Show, at Los Angeles, Cal. C. A. Sumner, Sec'y.

May 5 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.

June 13 to 17.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.

Sept. 7 to 10.—Hamilton, Ont. A. D. Stewart, Sec'y.

FIELD TRIALS.

Feb. 13.—United States F. T. Club Trials, New Albany, Ind. P. T. Madison, Sec'y-Treas., Indianapolis, Ind.

THE HEALTH OF DOGS AT SHOWS.

NOW that the show season is coming on it may be well to draw greater attention to the veterinary department. It is to be hoped that the different bench show committees will exercise every precaution that will insure the health of their temporary charges, not only in appointing a qualified veterinarian to examine the dogs at the entrance but to see that he is attending to his duties, and so arrange the entrance that but one dog can pass through at one time. Many dogs arrive at unreasonable hours and are benched by the watchman at all hours of the night. These dogs may be all right and they may not, and should they be diseased in any way the damage is done and it is superfluous to ask the "vet." to look the dog over in the morning. The vet. should be instructed to remain at the show entrance till 11 P. M. the night before the show opens. After that hour the watchman should be instructed that under no circumstances must he allow later comers to bench their dogs. This may work a hardship in some cases, but the benefit to the few must be sacrificed to the good of the many. Let there be no sentiment in this veterinary appointment; hold the appointee to a strict acceptance of his duties. It is not enough for a "vet." after he has examined the dogs at the door to put in appearance for an hour or two in the evening during the rest of the show to see how things are getting along. Every "vet." should be paid such a price that he can afford to be on call at any moment; also to periodically make a round of the benches and see that the health of his charges continues good. To him should also be entrusted the regulating of the ventilation so that it be equable as far as the conveniences admit. That the ventilation be not so disposed as to cause undue draughts on certain dogs totally unable to stand it, so that the careful owner has to so protect his dog's stall or cage with blankets and so forth, that effectually conceal the dogs the public pay money at the door to see.

Some dogs develop a cold or diarrhoea very quickly at shows, and a careful, conscientious "vet" will remove the animal at once from public gaze, and to a room set apart for such purposes.

In many shows in the past the "vet" has been conspicuous by his absence after the first day, and when present is unknown to any but his immediate acquaintances. He should wear a badge at all times when on duty; whatever his feelings in this respect, he owes it to his position to conform to the latter requirement, so that any exhibitor may command his services and find him without difficulty. All these suggestions may seem trivial, but their importance is the growth of past negligence of an important office. Under the new rules of the A. K. C. regarding veterinarians, the "vet" at the smallest show cannot afford to neglect them. He should also give a look to dogs that are shipped home by the club, for often dogs arrive home more by good luck than through good management. If a dog is sick when shipped to his owner, the latter should be notified by wire of the fact, and so be prepared to receive the dog at the earliest moment and attend to its wants. Any owner who loves his dog will thank a committee for this kind attention, and that club may be sure of the owner's entry another year.

Mr. Everett Millais makes a very pertinent remark in a recent letter to the London *Field*, in which he says: "Thorp-Hincks very justly remarks, regarding distemper, that he is not quite sure that it does not rest in a great measure with the dogs themselves. With this sentiment I cordially agree, for in our striving after type—a goal we can only reach by inbreeding of a peculiarly narrow character—we unfortunately lower the immunity of the dog, and produce animals of a more susceptible nature to disease than outbred animals are from the other extreme. If this is the case—and I hardly think any person in a position to judge will attempt to controvert my statement—how great, how perfect, and how systematic ought not our precautions to be in the *locale* where we bring the product of years of thought, judgment and experiment together, in order that we may influence the produce of the future? My experiments alone show that distemper is a bacterial disease, not only of the most destructive character in inbred dogs, but under the same regulations as other diseases of a like nature."

SARATOGA KENNEL CLUB.

Editor Forest and Stream:

At a meeting of poultry and dog fanciers, held at the Commercial Hotel on Wednesday evening, Jan. 25, the Saratoga Poultry and Kennel Club was organized.

A great deal of enthusiasm was manifested by those present and all felt confident that a successful show could be held here next winter.

The club will join the American Kennel Club and hold its bench show under their rules. It was decided to hold a show sometime in January, 1894. Exact dates will be announced later.

The following officers were elected: President, Col. A. B. Hilton, of New York and Saratoga Springs; Vice-Presidents, R. G. Smythe, A. Gerald Hull, Geo. L. Corliss, Allison Curtis, John E. Hodgman and Erwin A. Hall, of Saratoga Springs; A. E. Bluck, of Johnstown; Edward Rosch, of Schenectady; W. A. Fuller, of Fultonville; T. B. Zimney, of Gloversville, and C. E. Rokenstyre, of Albany; Treasurer, John J. Wandell; Secretaries, William D. Eddy, for poultry department, and Lyman W. Clute, for kennel department; Directors, Daniel Eddy, Frank Sherman, J. A. Willis, F. W. Gaylor, W. T. Rockwood and W. A. Coster, of Saratoga Springs; H. R. T. Coffin, of Glens Falls; C. A. Houck, of Albany, and James R. Draper, of Troy. Delegates to American Kennel Club, H. R. T. Coffin, of Glens Falls; Alternate, C. Rathbone, of Albany; Veterinary Surgeon, Dr. T. H. Childs.

The first Tuesday in each month, excepting July and August, were determined upon for holding the regular meetings at the Commercial Hotel. W. D. EDDY, Sec'y, SARATOGA SPRINGS, N. Y., Jan. 27.

THE FANCY IN ENGLAND.

The English *Kennel Gazette*, as customary, and in pursuance of a policy that might be followed by our own *Gazette*, publishes its annual retrospect of breeds, written by different specialists. Commencing with bloodhounds, all the principal breeds are treated. Dr. Turner says that, contrary to 1891, there have been few deaths among the young bloodhound stock and that many of the new stars, such as E. Brough's Burgundy and Banner are still shining. The breed is gaining in points which go to make a good, sound, workmanlike hound, though dogs with a little more wrinkle, depth and squareness of lips might be more sought for. These give character to the head, but he deprecates any loss of hound properties to get them.

Deerhounds are, according to "Stag," contrary to this country, increasing in popularity, and breeders and exhibitors are on the increase. Pointers, says E. C. Norris, though there is nothing sensational to write of, yet the breed has fully maintained its popularity. The Rev. O'Callaghan takes rather a pessimistic view of the Irish setter and attributes detrimental results to the incompetent and all-round judges who are ready to judge anything, from a sheet anchor to a needle, and advises breeders to steer clear of all shows judged by all-round judges. There has been a falling off in type during the past year. Perhaps the day may not be far distant when America may be able to put the breed in England on its legs again with some new blood. Gordon setters, according to Mr. F. A. Manning, have been fairly represented at shows, though we find that at the Crystal Palace show no more than seventeen were shown and probably many of those came from Mr. Chapman's kennels.

"Thornbush" takes all the different breeds of sporting spaniels. He remarks that the entries at most of the shows have been short and that nothing of any moment has been brought to the front. The "Sussex" is spoken of as being stronger to-day than ever, and the cocker is also looking up a bit, while the toy cocker has gone to the wall once more, as it should do. Good and typical Chumbers are fewer in numbers than ever, and the English water spaniel is almost extinct; while Irish water spaniels do not improve in type, but are getting more like retrievers; some short of topknot, others short in feather, and many winners longer in legs than they used to be. Speaking of field spaniels, he says: "The breeders' and exhibitors' weakness—if not some of the judges—for length, which point has now almost become an absurdity, is now doing much in the direction of destroying the beautiful working symmetry of this variety of spaniel and requires checking before it is too late," and then refers to the probable spectacle of a field spaniel having to be lifted out of a ditch because of his extreme length.

About Bassets, Mr. Millais fills over three columns, in which he deplores the scarcity of young stock to come on for the present year. He thinks the dog Louis la Beau is by far the best hound dog brought out since the days of Paris.

"Nestor" agrees with "Trefoil," the writer of last year's article, in feeling that the collie has not advanced. There is still a craze after long, senseless-looking heads, though it seems that the days of the Borzoi head, as it is now called, are numbered. The bitches are said to be more responsible for the weak heads than the dogs. An ear craze has now set in and the idea is to get as small an ear as possible, set right on top of the occiput, with will lead to prick ears becoming the rule and not the exception. The ear free of feather and only slightly drooping over is against nature, and is poor protection for the ear. Further on "Nestor" remarks: "There has been, in 1892, more than in any previous year, a strong predilection on the part of the more modern judges to award prizes to dogs possessing the longest heads, narrowest skulls, smallest ears and longest coats; legs, feet, shoulders, chest, and in fact make and shape generally being either ignored, or looked upon as merely of secondary importance." And very truly, he adds, "It may be remarked here, *en passant*, that density of coat, and not length, should be aimed at, for to a working dog in snow and slush a long coat is a terrible nuisance, as any practical collie breeder well knows. True, to a show dog who is deficient in body properties, shelly in make, bad in shoulders, and with no quarters, a long coat is invaluable, like charity, covering a multitude of sins."

The popularity of the collie is not on the wane, and prices rule high for good specimens. Ormonde is hailed the crack of the year.

About bulldogs Mr. Fred Crowther, now secretary of the Bulldog Club, writes very entertainingly, and at the same time instructively, so that we think it advisable to give the bulldog men of America an opportunity to put themselves *au fait* with the changes and doings in this breed of old England.

Mr. Crowther says: "Taken as a whole, I am inclined to think that the bulldogs of the year show considerable improvement in most of the essential characteristics of the breed. Narrowness of underjaw is, however, much too prevalent to be pleasant, and I am sorry to say I cannot think of any blood likely to transmit the broad 'navy's shovel' underjaw. It behooves us to bear in mind that a bulldog's underjaw should be broad as well as turned up, for I am afraid that we are beginning to sacrifice breadth of underjaw in favor of remarkably turned up, but woefully narrow underjaw, or to be unduly carried away with a broad, but straight underjaw. There are several stud dogs who possess broad turned-up underjaws, but, alas! they do not seem to possess the property of transmitting it to their progeny. Again, good thick arched necks are none too conspicuous, although the arch is present in profusion in the narrow-necked brigade. There is a serious tendency for noses to run small, and consequently the nostrils present a very pinched appearance. The effect of wide nostrils on a bulldog's face is very grand, and is, moreover, a very ancient property. I think we ought to encourage the breeding of bulldogs with nostrils of a size which would readily admit the insertion of the finger. At the present time the nostrils of most specimens are so small and pinched that it would be a hard job to pass a toothpick. It will, of course, be readily understood that I use the finger and toothpick illustrations as indicative of what nostrils now are and what they ought to be from an appearance point of view. I mention this in case any one should suppose that there is some need to push a finger up a bulldog's nostrils. Too much attention cannot be paid to the set of the eyes. Unfortunately in many of our best specimens they are set obliquely to the stop instead of at right angles to it, as they should be.

"We have made grand improvement in ears. Not very long ago button ears were very common, but the pretty rose ear now comes out very strongly. Shortness of back is always a source of trouble to produce, and although there are plenty of long backs visible at the present time, yet I think we have shortened them a bit generally, and greater uniformity exists in that respect. In order to perpetuate short backs, I advise breeders to infuse Reeve's Crib blood into their strains. A long-backed bulldog is an abomination, so I hope special attention will be paid to endeavoring to eradicate the pre-disposition which undoubtedly exists for backs to become long. Shortness of legs, and elbows standing well away from body are properties which seldom are to be found approaching perfection, but when they do, never fail to impress the bulldog fancier. There can be no doubt that we have suffered from the 'Daddy Long Legs' type of bulldog for years past, but I am pleased to see that we are making rapid strides toward improvement in that respect. I believe that owing to the judicious combinations of strains which have been made by thoughtful breeders during the past few years, the word 'stilty' will ere long be eliminated from the bulldog reporters' vocabulary. At the same time I would urge upon breeders the advisability of breeding in

rather closely for a few generations to low-legged, out-at-shoulder bred bulldogs. By this means the reliability of producing that which one seeks to perpetuate will probably be attained.

"Opinions seem to differ very considerable as to what degree of 'out at elbows' is the correct thing. Some fanciers are to be found who aver that dogs with elbows like British Monarch, Kitty Cole, etc., etc., are cripples or deformities, while others regard Father O'Flynn, Dhurty Dublin, Orphan Lad, etc., etc., as perfection in elbows. To my way of thinking a bulldog cannot be too much out at elbows, provided his activity is not interfered with and he walks on his feet and not on his pasterns. Judging from old prints, I dare say there is some amount of truth in the assertion that our dogs of to-day are not quite so active as the very old-fashioned dogs. The answer is (1) that we do not need them to be, as the bulldog now is a 'fancy' dog, and not a bull-baiting animal; and so long as he is active enough to be a man's companion that is all that is needed. (2) The old dogs were trained for feats of endurance, whereas nowadays we have no occasion to train them for any such purpose. If we had to test their powers of endurance I have not the slightest doubt that we could bring some of the first prize dogs up to a condition fit to fight for a kingdom, because we know the 'heart' is in them." The Bulldog Club's scale of points is true to the traditional style and make of the old English dog and Mr. Crowther thinks that breeders need not fear about getting a wrong sort of dog if they can evolve such a dog as the standard calls for. Further consideration of the breeds must be left for another time.

THE BALTIMORE SHOW.

BALTIMORE, Feb. 6.—*Editor Forest and Stream*: The Maryland Kennel Club have completed all their arrangements for their coming show of March 7 to 10. The following specials have been received up to the time of writing, viz:

The Collie Club, for members only: Silver club medal, value \$20, for the best collie dog or bitch, in open class. Bronze club medal for the second best dog or bitch in open class.

The Bulldog Club offers for club members only: Club's silver medal, for best bulldog or bitch in the show. Club's silver medal for the best American-bred bulldog or bitch in the show.

The American Spaniel Club offers, for members only, the George H. Whitehead trophy, value \$25, for best cocker stud dog shown with two of his get, to be won four times before becoming the property of any one member; \$5 for best field spaniel; \$5 for best cocker spaniel.

The American Mastiff Club offers their silver challenge cup for the best American-bred mastiff, dog or bitch, under two years of age, open to all. An entry fee of \$5 will be required, one-half of the aggregate of the entry fees to go to the winner, the other half to the Mastiff Club to meet the expenses of the cup. Provided there are at least three in competition for this prize the name of the winner will be engraved on the cup and the owner will receive the club's diploma.

The St. Bernard Club of America offers four of their club silver medals (partial list not yet received).

The following express companies will return dogs free when full rates have been paid one way: National, Wells, Fargo & Co., American, United States, Baltimore & Ohio, Long Island, New York & Boston Despatch Co. and Adams.

We are in receipt of the following letter from Mr. William Fleming, Secretary of the Trunk Line Association, which covers the following railroads: Grand Trunk, N. Y. C. & H. R., West Shore, N. Y., O. & W., N. Y., L. E. & W., D. L. & W., Lehigh Valley, Central Road of N. J., P. & R., Pennsylvania, B. & O. and C. & O.:

"No. 143 Liberty Street, New York, Feb. 1.—W. Stewart Diffenderfer, Esq., Secretary, Baltimore, Md. Dear Sir: Your application of the 27th ultimo was duly received and the following authorized: For each ticket not more than three dogs to be carried free; care takers must present for inspection the necessary identification papers. Yours respectfully, William Fleming, Sec'y."

W. STEWART DIFFENDERFER, Sec'y.

PHILADELPHIA KENNEL CLUB.

SECRETARY F. G. TAYLOR, of the Philadelphia Kennel Club, tells us that "In order to insure a larger attendance at our monthly meetings and strengthen the social features of our organization, it has been decided to use a portion of the club's funds in giving, each meeting night, a nice little supper to those in attendance.

"On Tuesday, Feb. 14, at 7 o'clock P. M., the first supper of the series will be given, to be immediately followed by the business meeting of the club.

"A gun committee has been appointed and it is proposed to hold semi-monthly shoots at live birds and bluebirds.

"A bench committee will consider the advisability of holding a show in the near future.

"The open field trials recently held, notwithstanding their being the first attempted, and necessitating a large outlay of labor and expense were, nevertheless, brought to a successful issue and the guarantors thereby released from all liability of being called upon to make good any deficit.

"The report of the treasurer showed the finances of the club to be in a satisfactory condition, all debts having been paid and a healthy surplus steadily accumulating.

"The ability of the club to furnish its members with the entertainment proposed, is principally due to the generosity of Mr. S. Murray Mitchell, of the Aldine Hotel, in providing it with a place of meeting free of expense."

WASHINGTON DOG SHOW.

Editor Forest and Stream:

We hope your many readers will be interested to know that the Washington City Kennel Club will have a bench show commencing March 14 that will be to the taste of the most fastidious and all for love.

Last year we were handicapped in having a show in an out of the way place, which, coupled with enormous outlay, made it unprofitable, but not discouraging. This year we will have to rent at heavy expense a larger hall than we really need. It doesn't suit our pockets, but our loss will be profit to the exhibitor, for such a gorgeous, magnificent place for a dog show is, probably, not to be found in America—325ft. long by 125ft. wide; in short, it covers an acre of ground. Think of it! This new hall is conveniently located, brilliantly illuminated (800 electric lights), and thoroughly ventilated and heated. Indeed, in a sanitary sense, it will be well nigh perfect. And when the curtain goes up the prologue will be, "Let Hercules himself do what he may, the cat will mew and dog will have his day."

BENCH SHOW COMMITTEE.

WASHINGTON, D. C., Feb. 1.

Mr. J. H. Winslow, of Philadelphia, writing of the pointers he has been advertising in *FOREST AND STREAM*, says: "I have sold to Mr. J. Guild Cook, of Baltimore the pointer bitch Claucary, liver and white, about 48lbs. weight, and to my mind the best one I ever bred. She is by Beppo out of White Fawn, she by Grafton (a full brother to Beau of Portland, winner of the Southern Derby, 1891) out of Ethel, a daughter of champion Beaufort, out of Zanetta. She has been in the hands of W. W. Gleasing for some time and said to be a good performer in the field, and it is my opinion that she is destined to be a winner on the bench."

FLAPS FROM THE BEAVER'S TAIL.

TORONTO, Canada.—Mr. A. E. Elmer, Kingston, has lost by death the black and tan terrier Lady Don (Kaiser—Desdemona), who won first in the puppy class at Toronto last year, being placed over the Brodies' importation, The Black Earl and Mrs. Potterson's Broomfield Florence. She was also vhc. in the open class, dogs and bitches, at Kingston.

A change has occurred in the Forest Kennels by which Mr. E. J. Walsh, Oakville, becomes a member of the firm. Mr. Walsh brings in with him the English setter dog The Sultan, which Mr. Davidson awarded first to at Toronto. The Sultan, a new pointer bitch and probably one or two more will be shown at New York. The other partners in the kennel are Mr. C. A. Stone, of Toronto, and Mr. McGregor, of Chatham, the kennels being located at the latter town.

The bull bitch Luna, owned by Mr. Cecil French, Montreal, winner of first, Nottingham; third, Burton-on-Trent, etc., will make her appearance at New York show.

Mr. Fred S. Wetherall, of the Compton Kennels, Compton, England, has just returned from England and brought a long string with him. He has a good one in the wire-haired bitch Roath Rennie, by Darlington Jester, out of Wasp. Rennie is a big winner in England, having seventeen prizes to her credit, among them first Bishop Auckland, third open Fox-Terrier Club show, third open K. C. show, first Llanidoloes, etc. She came out in whelp to Mr. Hopgood's Valuer (champion Brittle—Vida), winner of sixty purses up to November last, specials and five cups, including the ten guineas at Oxford in 1890. The bitch was bred by Mrs. Berry and is now a little over 3 years old, white, with tanned ears.

Mr. Wetherall's other purchases are two Scottish terrier bitches bred by Mr. James Blair, Woodside, Aberdeen, and three Irish terrier bitches. Particulars I have not yet been able to ascertain. Mr. James Lindsay, of Montreal, has an interest in the Irish terriers and will join with Mr. Wetherall in the establishing of a strong kennel of this breed.

During Mr. Wetherall's absence in England Compton Merit (C. 2,119), the bitch he imported last year, was killed by her kennel mates, and, as "misfortunes never come singly," two of his own breeding, Compton Hazel (C. 2,036), and Compton Beauty (C. 2,035), were poisoned by some rascal. H. B. DONOVAN.

MR. MULCASTER'S RIDE.

Editor Forest and Stream:

Allow me to send tardy comment on the late discussion on the question of whether or not the judge, Mr. Mulcaster, rode out to the grounds in the conveyance of the press representatives at the American Coursing Club meet, held at Great Bend, Kan., last October. The comment is late, because I have already been at the pains to telegraph a correction of Dr. Cattanch's criticism of my statement, because I do not doubt the editor of *FOREST AND STREAM* has entire confidence in the accuracy of the *FOREST AND STREAM* report in all such detail. It is too much trouble to say a thing twice when you know you have been right in the first saying of it. This now is my third assertion that Mr. Mulcaster rode out with the press men, as was originally stated in my report. I can not see why Dr. Cattanch or any one else should wish to "correct" a simple fact, especially since the correction brings into all the worse light those who should have attended to providing a proper conveyance for the judge. If it were in the least necessary, I could refer to Mr. Basil Hayman, the representative of the *American Field*, or to Mr. Haynie, of Lawrence, who was also doing press work. Mr. Hayman, Mr. Mulcaster and myself sat on the back seat of the surrey wagon, or rather, I sat upon Mr. Hayman and Mr. Mulcaster, who sat upon the seat. Mr. Mulcaster sat upon the left hand side of the seat as we went north. His knees being rather hard, and both he and Mr. Hayman rather uneasy after I had sat upon them for a few miles, I stood up for a part of the time. When I stood up I stood on the floor of the surrey, or surrey wagon, and held on to the collar of Mr. Haynie's coat, grasping it about an inch and a half to the right of the middle seam and not directly in the middle. Mr. Haynie sat on the front seat, to the left of the driver, as we went north. That is how I could hold on to his collar. If necessary, I can furnish a diagram of this, describe the scenery and tell how often the driver greased the wagon. It never seems to have occurred to Dr. Cattanch and all other gentlemen who may have taken Mr. Mulcaster out to the grounds that all the above might be true and they might still believe their own eyes. I will be courteous enough to express entire belief in their statements and will even go so far as to say that very possibly Mr. Mulcaster may have ridden out not only one or two mornings, but every morning, with some one who took compassion on him, instead of in a proper vehicle, properly provided for him by the proper officers. As to that I can not speak of my own knowledge and so do not presume to contradict a gentleman; but as to my original and subsequent statements to the effect that Mr. Mulcaster rode out with us on the morning when I said he did so ride out, I speak of my personal knowledge, know what I am talking about, and know it almighty well. E. HUGHES.

THE BEXAR FIELD TRIALS.

MANCHESTER, Tenn., Jan. 20.—*Editor Forest and Stream*: I notice in *FOREST AND STREAM*, Jan. 20, in report of Bexar field trials your correspondent says: "Messrs. A. M. Young, of Manchester, Tenn., and W. G. Pilkington, of Pilkington, Va., are the two gentlemen who agreed to come and act as judges, and though they had sent word not to make any other arrangements, did not materialize after all, nor yet seemed to have thought it of sufficient importance to wire their inability to come. They were tendered the thanks of the club for non-appearance."

I desire to say in reply to the above that some two or three weeks before the trials were to take place I wrote to Mr. Ferlett, editor of *Texas Field*, "and also an active member of the club," and told him on account of sickness I could not attend, and asked him to inform the secretary, Mr. Chabot and also Mr. Rounds.

While I know I should have written to the secretary, I thought this would be sufficient notice. I very much regret Mr. Ferlett did not deliver my message, and I assure the gentlemen the disappointment was a very great one to me as I had looked forward to meeting Texas sportsmen with much pleasure. A. M. YOUNG.

GORDON SETTER CLUB.

YONKERS, N. Y.—The annual meeting of the Gordon Setter Club of America will be held at Madison Square Garden, New York, on Thursday, Feb. 23, at 7:30 P. M. (the third night of the dog show), for the election of officers and members, and the transaction of such other business as may then come up. Members are requested to send in their annual dues, \$5, and the names of those to be proposed for membership to the secretary-treasurer.

The attendance of all officers of dog shows is drawn to the resolution of the stud book committee of the A. K. C. in December, 1891, whereby the term "black and tan setters" was abolished, and only the name "Gordon setters" to be hereafter used for such black and tan setters, as are eligible or registration in the stud book. L. A. VAN ZANDT.

POINTS AND FLUSHES.

Children of a Larger Growth.

OPELOUSAS, La., Feb. 3.—Wise reader, have your ever started by rail on a hunting trip, with your dogs carefully crated while en route? If not you may have been one of the multitude which have seen dogs so inclosed. It is fortunate that the dogs in this country are not all in crates at the same time, since it would reduce the whole nation of men to a uniform state of silliness for the time being, with a little spice of impertinence here and there to season the whole. It may seem strange that a dog in a crate should have such an effect on the nobler animal. Strictly speaking, he doesn't. He simply affords the opportunity for the man to demonstrate that he is a large child.

To the average good citizen the dog, be he large or small, with or without color, is a dog, in the same sense that eggs are eggs, or clams are clams. The good citizen can walk along the streets or roads all day without seeing dogs, even though they be plentiful and at large. Put any one of the multitude of dogs in a crate and the demand of the population in the immediate vicinity of the dog undergoes a change.

Imagine that you have just alighted from a train, your crate of dogs has been set on the platform of the depot and the train has gone puffing on its way, carrying with it the baggage man who manifested such tender solicitude for the welfare of the dogs, or sulky inactivity, till he secured his gratuity.

An aged gentleman, well dressed, polite in manners and with all the added respectability which white hair, a silk hat and cane can bestow, comes along and sees the crate. His countenance fades to a vacant look. He gazes earnestly at the dogs with a wistful stare. Not for the world would this polite old gentleman open your trunk to see what it contained or prod your person with his cane to see if you are alive. No; he is too polite. But he pushes his cane between the slats, stirs up the tired dogs, and never is conscious that he is impertinent and intrusive. By this time there is a crowd of men and boys three or four deep, all alike in the expression of blank curiosity and forgetfulness of good manners. One man sticks his hand through the slats and wiggles his fingers. Another gives a poor imitation of barking. Another hisses and says, "Sick 'em!" Another clucks and says, "Good dog."

You may want to take your dog out of the crate and politely ask to be permitted to do so. The affair is a miniature repetition then of a scene in the city when a man is run over by a street car. Those in the rear press forward, crane their necks to see over the heads of their fellows, and all are eager to feast their eyes on the thrilling sight of a man opening a door to let two dogs out of a box. The crowd steadfastly holds every inch of its ground.

After the dogs are loose, the crowd becomes talkative. Not one would, in your presence, criticize your clothes, your trunk, your person. No, they are too polite. They, however, cheerfully and candidly on the dogs make all kinds of comments and suggestions, according to the individual idiosyncrasies of each.

"Poor dogs, why don't you give them something to eat?"
"Are they mad?"
"What kind of dogs are they?"
"That box isn't big enough for them."

"My old dog Fido looked just like the biggest one."
"Goin' a-huntin', stranger?"
"What did that box cost?"

"Blamed if I'd pay so much as that for a box to put a dog in, but some people have more money than anything else."
"Cum all the way from Chicago! Du tell. An' jest ter hunt some partridge. I know a man in Chicago. His name is Tom Jones, an' he works in a store. Do you know him? Good fellow, Tom was. You ought to see him when you get back. He knows a heap about dogs, 'n' ken tell you all the latest notions about 'em. Allus owned one sence he was a boy."

"What breed are they?"
"So that is a bull setter, is it? They are the first I ever seen."

"What do you feed them dogs with? Look zif they'd been fed hoops 'n' staves."
And so on, and so on.

It is said that human nature is the same everywhere. It is. There is the same kindness, the same good, the same influences to do right, but a dog in a crate paralyzes it all for the time being. Yes, human nature is all alike.

This is not offered in a spirit of peevishness. It is offered as an admonition to the great army of men, who feel privileged to take all sorts of liberties with dogs in a crate, that it is quite as improper to do so as to be childishly curious about any other personal belongings. Of course there will always be left men whose gray matter settles flat on the brain pan for hours, at sight of a tall building, a circus procession or a dog in a crate.

We pity the eager curiosity of women and children. The every day sights which are common to men are many times new and novel to women and children, therefore their curiosity is more noticeable concerning every-day matters, in consequence of their inexperience. Let a Turk, or the King of the Cannibal Islands, or a famous prize fighter walk the streets, and behold man's curiosity! He follows each with prick-eared wonder.

Railroads and Dogs.

The transition from man's emotions to his pocketbook is easy. It is near the foundation of all his emotions. Anything which tends toward protecting his pocketbook is always recognized as sensible and commendable. The following may be profitable to know:

A shooting trip by rail is always expensive. After making all the estimates it can safely be multiplied by 2 to get at the actual expense. But if one travels far on the Southern Pacific R. R., the shooter who does so will find his expenses largely increased so far as dogs are concerned. In its circular the management says it will not take any dogs for transportation, but that owners can make arrangements with the train baggage men. This seems very simple, but it isn't. Station agents disclaim all responsibility. It is purely a personal matter with them whether they handle them or not and they generally do not, unless paid for it. The train baggage man in dealing with the owner is not sure but what it is necessary to turn them over to the express company unless he is well paid. If I were going on a shooting trip again I would go to some other section to avoid the annoyance and constant and unreasonable demands which have to be paid, for no other reason than that the company will not protect sportsmen in transporting their dogs. In making it a personal matter between the sportsman and the baggage man it causes endless expense, and in a manner the ill-will of other employees. As the matter is between the owner and the train baggage man, other agents do not feel like gratuitously doing work which accrues solely to the benefit of said baggage man. This was clearly exemplified at New Orleans. The baggage agent of the Southern Pacific was polite and attentive enough so far as checking a trunk was concerned, but when it came to the crate with two dogs in it; he didn't know anything about them, further than in his opinion, curiously given, that they would have to go by express. I mildly mentioned that the road advertised that arrangements for transportation of dogs could be made with train baggage men. He seemed irritated, said he had nothing to do with it. Thought the baggage man would know, but still he thought they would certainly have to go by express. He grew quickly less civil. He called the train baggage man, who said that he could take them, and would

leave the fee to my liberality. When I changed cars at Lafayette, the baggage man, before the train started and a moment after the dogs were put on by two gentlemen of dark complexions who required feeling also, sent in a messenger with the statement that he wanted to see me. I knew the statement was equivalent to a command. I went.

"Are these dogs yours," he said.

"Yes."

"Got a pass for them?"

"No."

"Want them to go by express?"

"No. Your road advertises that dogs will be taken charge of by train baggage men."

He looked sour. "I never heard of such an arrangement," he said. He said the thing which was not, for he knew it well enough.

The distance was about twenty-two miles. The ticket for the distance was sixty-five cents. I offered him fifty cents, which he took readily, his face brightened up and thereafter he was troubled no more with fears as to whether I had a pass, whether the dogs would have to go by express or whether there were any official rules governing the transportation of dogs. It is unpleasant to be held up in such a manner at the beginning of every baggage man's run.

Any sportsman contemplating a hunting trip on this road should secure a pass, and if he can not do so it would be wise to make his trip to other fields.

B. WATERS.

POINTER CLASSIFICATION.

TUCKAHOE, N. Y., Feb. 4.—*Editor Forest and Stream:* Accidentally Mr. Waters gives some of his reasons in general in your Feb. 2 issue and the gist of it is that the present division in weight classes compels bench shows to give more money. How parsimonious and how illogical. No bench show gives more than it has to and it is perfectly regulated by the entries they get.

Otherwise, Mr. Waters advances the new idea that all setters had the same right to weight division; why, he leaves us to assume. Because he, and I, suppose, some more setter men, assumes it unfair to the setters. It may be so now, though I have failed to notice that setters do have a great difference in size and weight, except the immensely inbred Llewellyns of modern days, where one is very apt to get some very small specimens, but the general run is quite even. But how Mr. Waters will demonstrate that because the setters do not get a division this compels the cutting off of the pointer class division I fail to see.

Pointer classes have pretty nearly always, and everywhere here and in Old England, been divided—as a matter of fact and necessity—by the peculiarities of the breed; the setters have never been divided, either by weight or size, as there is no cause for it. As to the relative question between light-weight and heavy-weight pointers, in regard to field qualities, Mr. Waters lets his setter vein have a bit of freedom. I should just like to see a few pointer field trial monopolists as we have setter monopolists, and, as much as I admire the setter, I am positive it would be a toss of a copper which would come out ahead.

It is only ten years since dogs have, in reality, been taken up, as Mr. Waters correctly states; and does he really think this relative span of time is enough to settle the question between the two breeds? As yet the setter had his fad; when the turn comes it is bound to be the pointer, heavy or light, as they come in a litter.

Dog-jockeying, as I call it, between the classes should be more severely dealt with, I agree, and have to acknowledge it is done by men who would be very much insulted if you would call them sharper, and it is nothing else. But this, like many other shortcomings, will be in a short time eliminated from every honest sportsman, like shooting open on the ground, which, I see, is even done by a handler in open field trial. Perhaps California has a different code of shooting etiquette and it may be there the proper thing.

G. MUSS-ARNOLD.

ILLINDIO KENNEL CLUB.

INDIANAPOLIS, Ind., Feb. 4.—Inclosed please find clipping which explains the organization of the Illindio Kennel Club here Feb. 2. We have applied for membership in the A. K. C. and also claimed dates, March 28, 29, 30 and 31, for our show, and you will please add them to your list. We have the best men in the city interested, and by following the Detroit show ought to have a good entry.

CHAS. K. FARMER, Secy.

"The name of the new organization is Illindio, a combination of Illinois, Indiana and Ohio. The following officers were elected: President, Harry S. New; First Vice-President, A. A. Anderson; Vice-Presidents, Dr. Q. Van Hummel, Thomas Taggart, J. B. Heywood, Ed. Lilly, Harry C. Pomeroy, Gen. T. A. Morris, Indianapolis; J. A. Hulman, Terre Haute; F. C. Wheeler, Cincinnati; J. E. Dugre, Toledo; J. Hudson, Covington, Ky.; W. J. Baughn, Ridgeville, Ind.; and Robert Wishard, Dana, Ind.; Secretary, Charles K. Farmer; Assistant Secretary, Clarence Foster; Treasurer, Henry Schwing; Attorney, L. C. Walker; Veterinarian, Geo. H. Roberts, D.V.S.; Steward, Robert M. Riley; Directors, H. Van Hummel, Horace Comstock, Frank Samuels, Joseph Becker, Peter Travis, Harry Atkins, L. C. O'Brien, William Fortune, T. R. Thornburg, Albert Leiber, David Bergenthal, David Wallace, Oran Perry, T. C. Peck, W. H. Dye, Harry T. Hildebrand, Joe H. Alexander, Ben Eaton, D. P. Erwin and Joe Lilly.

"The objects of the club are to promote interest in thoroughbred dogs, give bench shows, field trials, etc. Application has been made for admission to the American Kennel Club, and a bench show will be given in Tomlinson Hall, March 28 to 31, under the rules of that organization. It will be the first really correct bench show ever held in this city, and it is expected that there will be from 500 to 600 entries of the finest dogs in the country. Encouraging letters have been received from the East, and it is believed that Cincinnati alone will send at least 150 fine dogs. The week previous the Detroit show will occur, and many of the exhibits will come here from the Michigan city. Therefore it is expected that the local show will be second to none in the country. The field trials will be held near the city, where sportsmen and others interested can easily be spectators. The club will be a benefit to the city, as it will give the thousands of sportsmen here an opportunity to come in touch with those from other portions of the country."

A medium-sized black dog furnished lots of amusement to those curious enough to walk up to the reservoir in Central Park last week. If ever there was a desire on the part of a dog to commit suicide by starvation this misguided animal furnishes a living example. By some means he succeeded in getting through the close railings and on to the ice which covered the reservoir. In spite of every inducement in the shape of appetizing food to tempt him to come ashore, the dog kept persistently in the middle of the lake and out of shot. Many attempts were made to capture the dog, but the ice not being very thick it was as much as a man's life was worth to follow him on the slippery surface. One man went through, and to add to his troubles the park policemen arrested him for breaking a city ordinance in getting over the railing. Eventually, after five days' starvation, some boys, tempted by a reward, clambered over the railings, and circling round the weakening brute finally cornered him; a boy called Ward taking him home, where at last accounts the dog was feeding all right. Of course the museum men are after the dog, and it is reported that \$500 was paid for him by one of them.

CHICAGO DOG SHOW.

[Special to Forest and Stream.]

CHICAGO, Ill., Feb. 7.—The show opened this morning with an excellent list of dogs, entries numbering 520. A number of Western exhibitors are here—Messrs. Bunn, Kimball, J. B. Lewis, Anderson, Hanson, Seidler, Merrill, Van Hummel, Siddons, Woodward, Wedekind. Davey and Gibson from Canada. Dr. Glover, Sauveur, Booth, Trickett, Jarrett, Connors, Ben Lewis with twenty-eight dogs, and Joe Lewis with a big string of Irish setters from the East. Mastiffs and St. Bernards are good, great Danes very strong, pointers and setters well represented, Irish setters especially so, collie classes also filled well. Judging nearly completed. Attendance very good. Weather fine but very cold.

AWARDS.

MASTIFFS.—CHALLENGE.—Dogs: 1st, Kimball's Elks; 2d, Bunn's Ormonde. Bitches: 1st, Cod; 2d, Lynn's Lady Dorothy.—OPEN.—Dogs: 1st, Lynn's Cardinal Beaufort; 2d, Holcomb's Prince Colk. Reserve, Livine's Sraosha. Bitches: 1st, Bunn's Iford Cameo; 2d, Bunn's Matella. Reserve, Spring Forest Kennels' Melrose Portia.—PUPPIES.—Bitches: 1st, McLean's Persia; 2d, Fitzgerald's Queen Spens.

GREAT DANES.—Dogs (17): 1st, Studebaker's Maj. McKinley; 2d, Wright's Prince Victor. Reserve, Loubinger's Tiger. Bitches: 1st, Osceola Kennels' Neverzell; 2d, Altonbach's Nellie B. Reserve, White's Franklin.—PUPPIES.—Dogs: 1st, Estberg's King William; 2d, Kuchler's Prince. Bitches: 1st, Dietrich's Delia; 2d, Otto's Ethel E.

ST. BERNARDS.—ROUGH.—CHALLENGE.—Dogs: 1st, Schallenberg's Aristocrat. Bitches: 1st, Moore's Lady Livingston; 2d, Ruppert's Lady Gladwyn.—OPEN.—Dogs: 1st, More's Altouner; 2d, Schallenberg's Saladin. Reserve, Tichenor's American Caesar. Very high com., Ruppert's Kingstonian Count. Bitches: 1st, Lewis's Io; 2d, Schallenberg's Alta Berna. Reserve, Moore's Lady Sneerwell.—PUPPIES.—Dogs: 1st, Hilgert's Ashland Jumbo; 2d, Higgins's Foot. Bitches: Withheld.—NOVICE.—1st, Moore's Altouner; 2d, Sauerharing's Lord of Richmond. Reserve, Kramer's Sir Barry Bodvire.

ST. BERNARDS.—SMOOTH.—CHALLENGE.—Dogs: 1st, Lewis's Victor Joseph. Bitches: 1st, Ruppert's Empress of Contoocook.—OPEN.—Dogs: 1st, Moore's Melrose; 2d, Hilgert's Lawrence Garza. Reserve, Map Leaf Kennels' Victor. Bitches: 1st, Ruppert's Bellegrade; 2d, Schallenberg's Columbia Venus. Reserve, Lewis's Fernwood Goldie.

WOLFPOUNDS.—Dogs: 1st, Hacke's Seloem. Bitches: 1st, Hacke's Ormeda.

DEERHOUNDS.—Bitches: 1st, Paul's Alice; 2d, Veronica.

GREYHOUNDS.—Dogs: 1st and reserve, Van Hummel's Vansorrell and Vampet; 2d, Whitling's Lanchwood. Bitches: 1st and 2d, Van Hummel's Viola and Verdure Clad. Reserve, Sarvis's Lady Olivia.

POINTERS.—CHALLENGE.—Dogs: Prize withheld from Inspiration. Bitches: 1st, Davey's Lady Gay Spanker.—OPEN.—Dogs: 1st, Dutton's Duke of Kent II.; 2d, Bidle's Glenmore. Reserve, Davey's Westminster Drake. Very high com., Connell's Rock II. Bitches: 1st and reserve, Davey's Josie Brackett and Lightfield Madge; 2d, Donough's Sal II.—PUPPIES.—Dogs: 1st, Daniels's Fred Graphic; 2d, Dummee's Blaise M. Bitches: 1st, Daniels's Scotty.

ENGLISH SETTERS.—CHALLENGE.—Dogs: 1st, Taylor's Breeze Gladstone. Bitches: 1st, Lawson's Blue Nell.—OPEN.—Dogs: 1st, Merrill's Paul Bo; 2d, Ward's King Gladys. Reserve, Hunter's Trueblue. Bitches: 1st, Pennsylvania Kennels' Katie Noble II.; 2d, DeLong's Mishka of Elms. Reserve, Elms's Bonnie Pegmatite.—PUPPIES.—Dogs: 1st, Donoghue's Monk of Furness Drake. Bitches: 1st, Donoghue's Monk of Furness Lily; 2d, Middleton's Countess Roy.

IRISH SETTERS.—CHALLENGE.—Dogs: 1st, Seminole Kennels' Tim (beating Beau Brummell, Price of Parsy, Kildare, Seminole, Duke Elcho, Dick Swiveller and Kildare Glenore). Bitches: 1st, Oak Grove Kennels' Norma.—OPEN.—Dogs: 1st, Glenmore Kennels' Finglas; 2d, Sharpless's Barney Jr. Reserve, Carmichael's Shamrock Bruce. Bitches: 1st, Glenmore Kennels' Coleraine; 2d, Oak Grove Kennels' Mollie D. Reserve, Carmichael's Lady Miller. Seventeen in each class.—PUPPIES.—Dogs: 1st, Carmichael's Lord Elcho, Jr.; 2d, Seminole Kennels' Kennore Chief. Bitches: 1st, Tompkins's Red Rose; 2d, Strand's Lottie C.

COLLIES.—CHALLENGE.—Dogs: 1st, Chestnut Hill's Charleroi II. (beating Merit, Truitt, The Squire and Rocky Top). Bitches: 1st, Chestnut Hill's Flurry II.; 2d, Seminole Kennels' Cora II.—OPEN.—Dogs: 1st, Chestnut Hill's Toronto Wonder; 2d, Seminole Kennels' Curzon. Reserve, Seminole's Chrysolite. Bitches: 1st, Chestnut Hill's Donna; 2d, Gibson's Vanity. Reserve, Chesterford Park Kennels' Lass.—PUPPIES.—Dogs: 1st, not marked; 2d, Turner's Laddie. Reserve, Chestnut Hill's Doctor. Bitches: 1st, Chestnut Hill's Donna; 2d, Gibson's Fussie. Reserve, Chesterford Park Kennels' Lass.

BULLDOGS.—CHALLENGE.—Dogs: 1st and 2d, Illwiss Kennels' Harper and Bo'swain. Bitches: 1st and 2d, Illwiss Kennels' The Graven Image and Duchess of Parma.—OPEN.—Dogs: 1st, Illwiss Kennels' King Lud. Bitches: 1st, Illwiss Kennels' Lady Nan.

BULL-TERRIERS.—Dogs: 1st, Luzzboro Kennels' Crisp; 2d, Chataqua Kennels' Sir Monte II. Reserve, Wilber's Edgewood Bendigo. Bitches: 1st, Chataqua Kennels' White Gypsy; 2d, withheld.

DACHSHUNDS.—1st and 2d, Wedekind's Taps and Zuerherst.

YORKSHIRE TERRIERS.—Dogs: 1st, Oliver's Dick York. Bitches: 1st and 2d, Oliver's Minnie York and Pinky York.

TOY SPANIELS.—Dogs: 1st, Goldsmith's Calumet St. Cyr. Bitches: 1st, Goldsmith's Calumet Alice.

TOY TERRIERS.—1st, Sherman's Pencie; 2d, Herdlick's Chromo.

PUGS.—CHALLENGE.—Dogs: 1st, Davis's Sprake; 2d, Pryer's Bob Ivy. Mr. Seidler judged this class because exhibitors and Mr. Goodman objected.—OPEN.—Dogs: 1st, Seminole Kennels' Dixie; 2d, Schmalman's Bobby Mac. Reserve, Lake Shore Kennels' Duke Howard. Bitches: 1st, Seminole Kennels' Midget; 2d, Davis's Sprake Patti. Reserve, Davis's Toadie. Very high com., Seminole Kennels' Little Kate.—PUPPIES.—Dogs: Howard Kennels' Alvon. Bitches: 1st, Davis's Sprake Patti; 2d, Rogers's Lady Pen. Very high com., Davis's Susie Kerwin. The others will be judged by Mr. Davidson to-morrow.

ST. BERNARDS.—Best kennel, R. H. Moore. Best four roughs, Col. Ruppert. Best rough or smooth dog, Moore's Melrose. Best smooth or rough bitch, Io. Best American bred smooth dog, Melrose. Best bitch, Empress of Contoocook. Best rough dog, Altouner. Best bitch, Io. Best kennel greyhounds, Van Hummel. Best kennel collies, Chestnut Hill.

Three rings were provided, but too small for judges to work properly. Show nicely arranged and better management than last year. Seminole Kennels have just purchased from Mr. Stretch the celebrated collie Ormskirk Goldlust, ten months old, winner of a number of first prizes. Pennbrook Hunt Club dispersed, and hounds sold by auction last Saturday. La Rue's Dance Bang hurt toe, will not run in Southern trials.

H. W. LACY.

SOUTHERN FIELD TRIALS.

[Special to Forest and Stream.]

NEW ALBANY, Miss., Feb. 6.—The Derby of the Southern Field Trial Club began this morning. The weather was cloudy, rain threatening, but none fell. The judges are F. I. Stone, P. H. Bryson and Dr. M. F. Romers. There were 21 starters. Kingston, Ruby Blad, Spot Cash, Chloe, Chevalier, Paul Dombey, Lochinvar, Modoc, Sport Kent, Elgin, Lillian Russell, Lady Mignonette, Rex The King, Hope's Mint, Hamlet, Maiden Aine, Dick Fox, Ridgeview Beppo, Pink B., Direct, Gaity a bye. The work was uniform, though none of it could be called brilliant. Nearly every dog made a good showing. Mr. Lorillard's Rod's Sue and Count Anteo died recently. Wun Lung is very sick with distemper at Louisville. Ninety-nine large bevers were found to-day, all strong bitches. The first series was finished to-day.

NEW ALBANY, Miss., Feb. 7.—The weather was raw and cold, a high wind blew all day; birds were in shelter and difficult to find. The work was scant in quantity and ordinary. One brace was run this forenoon under conditions so unfavorable that the judges suspended the running till afternoon. Thirteen were left in the second series, namely: Sport, Lady Margaret, Lillian Russell, Kent Elgin, Hope's Mint, Maiden Aine, Lochinvar, Paul Dombey, Modoc, Chevalier, Dick Fox, Gaity, Kingston. Five braces were run to-day. The weather is turning still colder to-night.

B. WATERS.

DOG CHAT.

An All-Round Team.

When George Thomas goes to England it is generally to some purpose. The team that he will put down for the Anglo-American Kennels at New York show is both varied and good. Mr. Mayhew will have no sinecure in judging Scottish terriers, for the prospects are that the greatest show America has ever seen in this breed will be forthcoming. Mr. Brooks's kennel is composed of some of the best, and to make matters worse, Mr. Thomas sailed Feb. 4, on the s.s. Georgian, of the Leyland line from Boston, with Three, purchased from Mr. W. E. Adcock. This dog was whelped in May, 1889, and is black, with brindle on legs. He is by Alister out of Coll and counts first prizes at Kennel Club shows, Glasgow Kennel, Crystal Palace, Edinburgh, among his records, and is one of the dogs illustrated in Dr. Perry's new book. Rhudman is another good one that will come over, and with Scotch Hot in open dogs, Kilston in challenge and Gypsy Yet in open bitches, the outlook is full of uncertainty for both kennels. The future of Scottish terriers in this country seems very bright just now. Another importation is Tilda II., a puppy, by Abergeldie, but will be kept at home with Norwich Mouse, who has just had a litter of puppies. Scotch Gold and Highland Roy, by Gypsy King out of Kelvin, may also be sent from this kennel.

In Irish terriers two new ones will accompany George over the salt divide: they are Pincher and Maxman, a puppy by champion Bredenhill out of Mystery II., and these with Jack Briggs, Salem Witch, Valley Boxer and Paddy Doran will comprise their team of "dare devils." A new fox-terrier, Lady Roseberry, by Ratio out of Nettle, by Ambrose Joe, will also be among the lot. They will also launch into field spaniels as well, George bringing over a bitch called Dainty, by Street Arab out of Stayley Baroness. She is just a year old. Some new bull-terriers are also coming. Prince Gulley, over 30lbs., by True Blue (who is by champion Streatham Monarch) out of the noted bitch Queen of the Dale, ex Polly, by champion Como ex Rose, is one of them. Then a bitch called Mermaid, under 30lbs., is also by True Blue ex Camelia, she by Comet—Hackness, and another dog, Grillo, for under 30lbs., completes the list of new ones.

Mr. Purbeck has not allowed his spare cash to remain idle either, for in George Thomas's charge come the greyhounds Honor Bright, Southern Beauty and Wild Rose, all of them winners. These will of course go in the open classes. Of the old lot Gem of the Season and Ornatus, now himself again, we are glad to say, and Bestwood Daisy, who has regained her dainty form after maternal duties, will appear in the challenge classes, while Lily of Gainsborough, who also has been increasing the stock of greyhounds in this country, will also have to be reckoned with, together with some puppies that have weathered the trials of distemper. Mr. Symonds has cabled for a "grand" St. Bernard bitch, served by Young Bute. This one is, however, for a new fancier, who is said to have the means (that's good news) and enthusiasm as well, to place him at the top. We cannot as yet furnish names of either bitch or owner. George will have to skip round to Judge Tallman's ring, too, for awhile, as he will have in tow some young pointers by Naso of Strasburg out of their Ruby VII. The Anglo-American Kennels will enter some 25 dogs, and there will be one tired man when the judging is all over, and that will be George Thomas.

The Toronto Kennel Club.

The Toronto Kennel Club held its regular monthly meeting on Jan. 19. After the business part of the meeting Dr. Wm. Mole, a member of the Royal College of Veterinary Surgeons, and late of London, England, read a very interesting and instructive paper on "The Origin and Development of the Dog." Dr. Mole has lately taken up quarters in Toronto, and has been elected an honorary member of the Toronto Kennel Club. The Toronto Kennel Club wish to thank those who have so kindly contributed pictures of their dogs to help decorate the walls of their club rooms. In response to a few letters asking for photographs, and an appeal through this paper, about seventy-five pictures have been received and many promised. The promises do not seem to have been forgotten, as pictures are arriving nearly every day. The Toronto Kennel Club are anxious to have the largest and best collection of canine portraiture on this continent, and ask those who have pictures of their dogs to let the Toronto Kennel Club have copies, all pictures will be properly framed. A number of the most prominent kennels have sent some very fine pictures of their dogs.

Whippet Racing.

We have always had a good word to say for this exciting sport and it is a pleasure to hear that a club has been formed in London, England, for this purpose. With such names as the Duke of Hamilton as president and Lord Lonsdale as vice-president, to say nothing of several other titled men on the committee it cannot help but jump into popularity and at once command a following. It is expected to knock fox-terrier coursing sky high. To the untiring exertions of Mr. John A. Tatham, who was editor and owner of the defunct *Canine World*, is due the formation of the Whippet Racing Club, and he will fill the offices of secretary and handicapper, the latter a most important and difficult position. By the by, Lord Charles Innes Kerr will be the general manager. The first race, which will be a £50 handicap, will take place shortly. The New Jersey Kennel League, if they have not already too many irons in the fire, promises to give some attention to this sport at the fall fairs.

A. K. C. Accounts.

The auditing committee appointed by the A. K. C. did their best to trip Mr. Vredenburgh up in his accounts, but found everything as it should and so certified. At the same time, we hear that they drew up a suggestion to the effect that they thought there was too much power in one man's hands, the secretary's, in the matter of passing accounts rendered to the club. The committee suggested that each bill should, in addition, have the indorsement of at least two of the auditing committee. This in no way conveys any reflection on the secretary, and in fact meets with Mr. Vredenburgh's approval.

Speaking of the latter official it is intimated that at the annual meeting he will be asked to continue in the secretaryship under the present arrangement. Mr. A. D. Lewis acting in the same capacity he does at present; which plan seems to work satisfactorily, and is producing an air of dignity and reserve in Mr. Lewis, befitting the position.

Advisory Committee Judgments.

We think the time has come when the attention of the delegates particularly and the kennel public generally should be called to the more or less star chamber proceedings of this committee. Judgments are rendered by this committee which affect the standing of different members of kenneldom. Whatever their effect may be outside of the circle in which canine affairs have their part, these decisions effectually make or mar a man in the kennel world. Thus are two or three men invested with somewhat arbitrary power. This may be unavoidable as affairs are legislated at present, and with this we have no present concern. What we wish to bring before the kennel world in America is the fact that it is the opinion of several members of dogdom with whom we have conversed on the subject that if the

A. K. C. will not publish the proceedings of their meeting in the sporting press which devotes space to kennel affairs, this body should, at least, for the benefit of its associate members, publish the full charges and correspondence connected with the cases brought before the advisory committee tribunal. The advisory committee holds a meeting and passes judgment, after due investigation, on these charges, only the findings being published in the *A. K. C. Gazette* in the January number. Do we know whether they have made just decisions or not? Their decision is to all intents and purposes final, therefore the dogmen who support the A. K. C. have a right to know how such decision was arrived at, and this should be published in the *Gazette*, the official organ conducted for that purpose. The proceedings in such matters are all published in the *English Kennel Gazette*, and this is a self-constituted body and not representative, as the American Kennel Club. Take the Elliott-Twyford case, for instance. There has been more or less interest attached to this case among dogmen, principally owing to the publicity given to the case by the principals themselves. Naturally the dogmen want to know the facts and how the committee arrived at the decision they have given in the matter. Either publish the proceedings of the advisory committee in the *Gazette* or allow the sporting press an opportunity to do so, with full access to letters, etc., which accompany charges and defense. We do not intimate in any way that this committee is unjust in its decisions, but the kennel public have a right to know whether they have done right or wrong.

Dog Show at Victoria, B. C.

Most of the prizes at this show held the last week in January were won by dogs from Seattle, Wash. First in St. Bernards was won by H. E. Stumer's Plimmonarch. In Irish setters first went to J. Collins's Nat Glencho, and this dog would have won the prize of \$100 for best dog in the show if this special had not been confined to dogs owned in Victoria six

RODREKA'S FREE FOR ALL.
From amateur photo by F. G. Taylor.

months prior to the show. Mr. R. B. Palmer's Roby won in English setters and George N. Folsom's Crib in bull-terriers. First in fox-terriers went to L. S. J. Hunt's Jennie and second to J. Collins's Psyche. Best Gordon, R. M. Palmer's Romeo.

Dogs and Cholera.

A correspondent of the *Lancet* writes: "I crossed over to Caen from Havre Oct. 25. Three days previously there had been another death at Havre which was attributed to cholera. It occurred under very curious circumstances. The victim was a lady related to one of the professors of the town. She was devotedly attached to a dog which had been suddenly seized with violent vomiting, diarrhoea and cramps. The animal died rapidly, and the carcass was in such a condition that it was not judged prudent to bury it in the garden. It was given to the scavengers and placed on board the boat which takes sludge out to sea every day. Shortly after, the lady, who had nursed the dog throughout, was seized with the same symptoms, and died at the end of three days' illness. This case has excited great interest in medical circles of Havre, and regret is expressed that the dog's symptoms were not more carefully observed. Of course, the owners of the dog were taken altogether by surprise, and suspecting no danger, had taken no precautions."

Cincinnati Kennel Club.

At the annual meeting of the Cincinnati Kennel Club, held Feb. 1, the following officers were elected for the ensuing year: Dr. Herman J. Groesbeck, Pres.; P. J. Heister, Vice-Pres.; Al G. Eberhart, Sec'y; Jas. W. Utter, Treas. Also, in addition to above, as Board of Directors, John Hawkes, Geo. H. Hill and E. O. Hurd. Several new members were elected, among them the well-known judge, Frank C. Wheeler and R. I. Carter. The latter gentleman is a doggy man and also sporting editor of the *Times-Star*, and promises the liberal support of this paper when next they give a show. The giving of a bench show was talked of, but was laid over to future meeting. The club is in good shape and has paid up all its debts.

National Beagle Club Meeting.

TARRYTOWN, N. Y., Feb. 4.—A special meeting of the National Beagle Club of America will be held on Wednesday, Feb. 23, at 2 o'clock P. M., in Madison Square Garden, New York city. All members are requested to be present.

GEORGE LAICK, Sec.-Treas.

Conflicting Show Dates.

ELMIRA, N. Y., Feb. 3.—The City of the Straits Kennel Club insist on holding their show the same dates awarded the Elmira Kennel Club by the A. K. C., and I wish you would please state in your next that the City of the Straits Kennel Club can not hold their show under the A. K. C. rules.

C. A. BOWMAN, Sec.

Southern California Kennel Club Show.

LOS ANGELES, Cal., Jan. 30.—The Southern California Kennel Club will hold its fifth annual dog show at Los Angeles on April 19, 20, 21 and 22.

C. A. SUMNER, Sec.

Irish Setter Club Meeting.

The annual meeting of the Irish Setter Club will be held at the Westminster Kennel Club's show, on Feb. 22, the second day of the show, in the show building, at 3 o'clock in the afternoon.

The Pet Dog Club is to give an exhibition in the Lenox

Lyceum, May 30 to June 2, and prospects are very bright for success. Spratts have been applied to for to bench the exhibition, new members are joining the club daily and it will be quite an extensive affair, with novel attractions, though it is to be devoted almost entirely to toy dogs. The members at the meeting last week were very enthusiastic over it, some members offering \$100 apiece besides valuable specials. The meeting was held at the house of Mrs. Barnum, Lexington avenue, president of the club; members present were Mrs. Barnum, Mrs. Cunningham, Mrs. Randolph, Mrs. McKee, Miss Bannister, the secretary, Messrs. Fryer, Barnum, Morris and T. Farrer Rackham.

Mr. Frank Conger Baldwin, Detroit, Mich., is desirous of learning the address of Mr. Frank Robison, the owner of the Gordon setter bitch Rosa B. He has a puppy out of Rosa B. by Gunner (A. K. C. 25113), born July 1, 1892. Mr. Robison lived in Detroit at that time, but has since moved away; he thinks to Syracuse, N. Y.

Mr. A. E. Elmer, of Kingston, Ont., has lost his black and tan terrier Lady Don by death that was shown round the Canadian circuit last year with some success.

Wife—Have you done all you could to recover Fido? Husband—Have I? Didn't I just tell you I had ordered a pound of sausage from every butcher in town?—*Brooklyn Life*.

Here is some dog news: According to a writer in the *New York Recorder* Judge Hilton's son Fred showed fifteen or sixteen Japanese spaniels at the last New York dog show and "each mite of doganity wore a solid silver collar, costing in the neighborhood of \$50." Well, well!

When the brutal fight between a man and a dog took place many years ago at Hanley, in England, we hoped never to hear of another such horrible exhibition. At Bridgeport, Conn., however, we hear that such a contest took place Jan. 30 between a negro and a bulldog. The negro had been victorious in several similar contests, and stripped to the waist was willing to try again in the presence of a number of "sports." The dog proved the victor this time, one is pleased to hear, lacerating the man fearfully about the head and breast.

A dispatch says that "Red" Angus, a sheriff in Jefferson county, Wyo., was recently in Cheyenne, Wyo., to purchase some dogs for his kennel. His dogs are wolfdogs, and he has been breeding them for some years. He has had killers for a long time, but now wants to get the requisite speed for the chaser. He has now three dogs, any one of which will kill a gray or black wolf in short order. He expects to produce a dog that will hunt the wolf alone as a natural enemy. His stock originates from a so-called bloodhound bitch, and his present stud dog is a cross between a mastiff and a deerhound, and bred back to strong deerhound or greyhound bitches should produce what he wants.

The Detroit show will, we are told, give \$50 in prizes for Boston terriers at their coming show. Chicago has also offered money for these dogs, but none of the Boston contingent will be represented this year, as it is hardly worth while sending so far on the off chance of the wins counting, if either the club or the breed is admitted into the A. K. C.

It is said that a farmer's foxhound, called Nimrod by the way, recently ran a fox for seventeen hours on Dutch Mountain, near Scranton, Pa., lugging along with him a trace chain and a pail bail by which he had been fastened, finally killing the fox and bringing it home. This beats everything we ever heard of in this line; but if the dog did it, it should not be difficult to believe.

Mr. John W. Munson, vice Mr. J. Locke, has been appointed managing director of the Chicago show now being held. Mr. Munson is well known to the exhibitors of the early 80s, and formerly lived in St. Louis, Mo., where he was president of the old St. Louis Kennel Club, which had a far-reaching effect on pointer breeding in the West. He removed to Chicago about two years ago, but has taken little interest in dog matters. Mr. Munson will be chiefly remembered in connection with the more or less celebrated pointer Meteor, whom he owned, and whose defeat of Beaufort at New York in 1884 furnished the "talent" with lots to talk about for months after.

Mr. F. G. Stewart, late manager of the White Oak Kennels, is now manager of Mr. Geo. Kenney's estate, "Kinnelon" Butler, Morris county, N. J. We understand Mr. Stewart is pleased with the change he has made.

Mr. N. Q. Pope informs us, unfortunately too late for our last issue, of the death from pneumonia, of the well known greyhound Highland Chief (12311). This dog was imported by Mr. Huntington, in the fall of 1888, and first shown under Mr. Watson, at Buffalo the same year, and has since had a successful show career, winning something like thirty prizes and becoming a champion in short order. He was by Courtoise out of Rechabke and in color white and blue. There was always a good deal of difference of opinion as to the merits of this dog, but all agreed that he was a very handsome greyhound. Mr. Pope still has champion Balkis, Old Stone, etc., to console him in his loss. Highland Chief was always Mrs. Pope's especial favorite, and to her our sympathies are extended.

The new beagle field trial club recently formed in Boston has for its object the improvement of beagles and basset hounds in the field. Officers are to be nominated by the club and not by executive committee. The secretary's duties are also better defined than in the by-laws of the N. B. C. We fancy after all that the idea advanced by the N. E. F. T. Club will bear investigation. The beagle members of the club would have such consideration in the arrangements and on them would devolve the making of rules for running, choosing of grounds, etc., that they would differ but little from a separate club. Of course, no trials could be held on the Assonet grounds owing to scarcity of rabbits. By combining their interests with the older club they would at once gain power, prestige and greater pecuniary benefits. Many of the present members of the N. E. F. T. Club would, no doubt, if the trials were held by their club, run a beagle or two for the fun of the thing. It would be an excuse for a few days' pretty sport. More valuable prizes than the recently formed beagle club can hope to give, for the present at least, would make the trials as important as those held by the National Beagle Club. We would like to hear the opinion of the beagle men on the subject.

The members of the Washington bench show committee are evidently very enthusiastic and the least exhibitors can do is to half fill that enormous building. Washington is sure to be crowded after the inauguration and the thrifty fancier may find it profitable to expose his wares at that time.

Mr. James Watson sends us the following notes regarding the Keystone Kennel Club show, to be held in Philadelphia, on Feb. 28 to March 3. The four St. Bernard Club silver medals are for members only, and will be given to the best American-bred rough dog, rough bitch, smooth dog and smooth bitch. Mr. G. W. Price, of the Lansdowne Kennels, donates two gold scarf pins containing a miniature likeness of old Belgrave Joe, one to the best American-bred fox-ter

New York Yacht Club.

REPORT OF THE COMMITTEE ON MEASUREMENT AND CONFERENCE 1893.

Gentlemen:

Your committee on measurement and conference was somewhat delayed in the commencement of its labors by the absence from the city of some of its members through illness and other causes. Since its session began, however, it has met many times and has given much earnest thought to the subjects which have been discussed. Some of these have, really, been engaging much attention wherever yachting and yacht racing has been actively engaged in.

The extreme development of certain features in modern yachts and the introduction of new forms and features have raised the question very generally among yachtsmen, whether in the interest of yachting and to preserve the sport and pastime some recognition should not be made in the measurement rule or allowance scale of such features, where their use was intended for advantage in speed and was attended by such advantage.

In the foreground of such subjects is the modern practice of building yachts with great draught and only moderate depth of hull, or with even very shallow hulls, the hull in such case being shaped rather for the purpose of carrying a deep keel or fin—practically a long lever on which to suspend a mass of lead—than for the purpose of affording such support and accommodation as depth in the body of the vessel itself would give.

The most extreme things of this kind that have been produced up to the present time are the bulb fins. The largest of these is, perhaps, just too small to be entered upon the lists of this club. But the long lever, diminished weight and smaller midship section, which is characteristic of this kind of craft, is just as clearly and certainly characteristic of the hulls of the cutterboard or the deep keel vessel, and only different in form or degree.

With the advantages to speed established and recognized of the bulb fin vessel, fitted with an appropriate sail plan, it would appear that only such vessels could be built for successful racing, and that there is not, at the present time, in the rules of this club, or of any other club, the means of putting these vessels into any other relation to the rest of the fleet than that of an unequal advantage.

While nothing of the bulb fin kind has up to this time been entered in the lists of the club, an examination of the matter has shown your committee that in yachts recently built the keel takes up a much larger proportion of the draught than it formerly did; that designers, in competing with each other, exhibit a regard for the advantage of the deep keel with lead upon it; that successive productions of the same designer show an increase of this advantage; and that, with the liberty to use without restraint or charge a lower weight and longer level, the area of midship section has, in some instances, been cut down. In the discussion of such matters and in considering the propriety and practicability of formulating a mode of dealing with them to be submitted to this club, your committee has corresponded with some of the leading designers, and has had others present by invitation at their meetings and has discussed them, and has also heard any suggestions which they had to offer.

While your committee has been thus engaged here, it appears from the public prints, and from a formal report recently received, that in England a committee of the Yacht Racing Association has been somewhat similarly engaged.

This committee conducted its inquiries by getting, with considerable fullness, the views and suggestions of the prominent designers and yachting experts.

Some of the conspicuous and objectionable features which these gentlemen find in the modern yacht, are excessive draught, and overhang forward and aft. Midship sections which lack the compactness and strength of the older forms; sections which, "due to unrestricted beam and draft, are hollow in shape, with deep, hanging keels, and masts placed at a long way back of the lead, thus straining the vessel."

These designers, while deploring the existing tendency to small displacements and low centers of gravity, did not agree upon any plan to prevent it, and the Y. R. A., in view of the absence of any definite and well-considered propositions for changes in the rule as it affects these matters, and also having regard to the influence which restrictions might have in the development of the greatest speed relative to existing standards, decided to make no change, but to leave the rule as it now is to stand for the present.

It is of much interest to your committee to view these observations and conclusions, made, as they were, independently and without any communication between the parties concerned in these discussions, and it is remarkable that the main points taken up were about the same, and the conclusions nearly the same, thus straining the vessel, so far as related to things that have been already referred to, your committee have decided to recommend no immediate change.

There is this difference, however, that in view of the fact that at a later date the club may see fit to take some action toward putting in special relation to other yachts, racing vessels of attenuated midship sections and bulb fins, your committee have carefully examined a plan submitted by one of the designers for the application of the rule to such a vessel, and have explained in this report. To this plan of putting in check, in some degree, the development of the tendency toward great draft, small displacement, high center of buoyancy and low centers of gravity, your committee gave much attention, and saw in it a promising means of adjustment which might permit of successful racing with vessels of less extreme features than those which have been referred to, and which, in their extreme development, would, doubtless in the eyes of yachtsmen be considered undesirable, and the vessels which should have them as being unfitted for their service.

Your committee were for a long time inclined to recommend the plan which has just been referred to for adoption in the club, but in view of the fact that it would introduce a new factor into the measurement rule, would require a new and special measurement of some of the yachts, that it could not be applied to the proper level of the yachts to take part in the coming international contests, and in view also of the very important consideration that such a rule might influence a preference for a more desirable form, to the detriment of speed, relative to existing and accepted standards, your committee felt that their function would be best served by simply explaining their method and leaving it to the club for such further consideration or action as they saw fit to take. It may be the case that the next season will show it to be desirable to deal with this matter and with others, such as the forward position of mast of sloops and the foremast of schooners, also with the use of excessive overhang. In such case it would clearly be well that one change in the measurement rule should cover all such matters as would affect the formula.

As a preliminary to the explanation of the plan which has been considered for correction, it may be stated that those with whom these things have chiefly originated—the designers themselves—seem as a class to recognize the need of some corrective to be introduced. A most eminent designer here several years ago proposed that draft should be limited, evidently with the purpose of affecting the position of the ballast.

Such a restriction, however, would seem to be arbitrary and ineffective for the purpose now in view. The matter needing adjustment is not one of absolute draft, but of relation—the position of the keel and ballast to that of the hull—and a restriction put upon draft would very evidently have the effect, not so much of restricting the use of deep keels as reducing the depth of bodies of yachts and widening them as they were shoaled.

Another proposition made by an eminent designer to your committee, was that the cubic contents or Custom House measurement of the yacht should be used in the measurement formula as a divisor, so as to have the effect of reducing her measurement, and to give inducement for a large amount of bulk. The effect of this would be to count in the long ends over water, and the freeboard of the vessel, and not necessarily to cause the use of an increase in under-water body.

Another method suggested by the same eminent designer, was to use the displacement of the vessel as a divisor, and so give inducement to the use of bulk in the under-water body of the vessel, and in this way practically to make the measurement and the charge for length and area of sail less to the vessel of large under-water body than to a canoe-like form. The last named plan would, in the case of a vessel of large under-water body, have the effect of increasing the measurement, and with an effect, varying with the formula used, would make necessary both large displacement and large sail plans, and the encouragement given to displacement and the use of corresponding weight of ballast, would, proportionately, remove the necessity and inducement to extended depth for the location of that ballast, which would, however, still be without other and more direct consequence of such rule, would be carried for racing purposes as low as a regard for depth of water and the extent of surface exposed to the retarding effect of friction would permit.

In respect to the use of displacement as a factor, it may further be said that any customary method of arriving at it would require that several sections should be taken off, to be used in the calculation, and enable the calculations to be made, and the process is more tedious and troublesome than such as are usually needed for measurement for racing purposes. In the opinion of your committee the rules at present in use for measurement in this club are in principle good enough, and in practice and application new factors to modify the effect of the rules should be limited in their use and apply only to such vessels as were known or believed to possess certain extraordinary features, and which brought them within a well defined limit and made them justly subject to a discriminating charge.

In comparing the older vessels, and even those of a few years ago, with the new ones, it will be seen that, putting aside any question of relative depth and disregarding that which is properly keel, the mid-

ship section from the waterline down to its junction with the keel is, to speak generally, much the same now as it was years ago. Since, however, the advent of the lead keel, and more particularly within two or three years past, the keel has become a much more considerable part of the yacht's draft than formerly; and the largest cross section of the vessel under the waterline, inclusive of the keel, say as instanced in the class of 40ft., or of 45ft., would in the yacht of to-day occupy a much less proportion of any parallelogram, within the lines of which such midship section could be shown, than would the corresponding section, which should represent the yacht of ten years ago. Such a scrutiny as is here suggested would show probably more clearly than any other the sharp lines of discrimination between the fin and the keel boat.

An examination of some of the models in the possession of the club shows that in all vessels, extending over one or two of the built-up hulls a year, the midship section of these yachts would, if drawn within parallelograms, all of them occupy over forty per cent. of the space needed to hold them. The first Cup defender, the *Magie*, had a coefficient of fifty-three per cent., other Cup defenders in every instance nearly fifty per cent., and the last contestant, differing as she did from her antagonist in so many features and proportions, appears to have been alike in this. So far as your committee is aware, no yacht now on the club's lists has an underwater midship section which is much less than forty per cent. of its circumscribing parallelogram. Some of last year's productions are perhaps two or three per cent. below it, but the bulb fin boats, which may represent future introductions, have some of them a coefficient of only twenty per cent.

The proposition which this committee have to make in the way of a suggestion for the consideration of this club is that as a check in some degree to the tendency which has been commented upon, all vessels with a midship section immersed, which shall fall below a certain percentage of the parallelogram which would include it, shall have a certain reasonable addition made to their measurements. The precise formulation of this suggestion could be effected in a variety of ways, the simplest of which would probably be by a direct addition to the vessel's measurement, the percentage being added to the degree or percentage which her midship section falls below the standard agreed upon.

It may be said for this method that it could leave all yachts excepting those of most extreme forms untouched. That it would operate neither upon beam nor depth as such; that the deep keel yacht *Minerva* and the shallow keel yacht *Nathan* would both be alike in this, and that of 42 per cent. stand precisely alike under the rule, while it would take into account most directly and effectively and by means probably as simple as any practicable such features as it has been considered desirable to control. The effect in operation of such a rule would, of course, be restrictive, or encouraging, or negative, accordingly as the weight of the tax corresponded to the value of the feature taxed. That measure of tax would seem to be best framed, which should leave the yacht owner without necessity to build a taxed craft in order to win races and yet with opportunities to win if he did. To this end the framers of a rule could only do their best.

The next subject to which your committee gave its consideration, and to which it would now call the attention of the club, is the great difficulty of obtaining the measurement of yachts entered for club races, and the consequent losses and distress to the club, and the progress, and the impossibility of announcing the result on their termination.

Racing Rule V., page 100, section 1, disqualifies yachts which have been measured before a race; and it, having been found impracticable to enforce this rule, your committee suggests the following addition: "Unless permission in writing to enter such yacht be given in writing by the regatta committee, no yacht which has been measured must be measured within ten days of the date of such race, otherwise she shall be disqualified."

Another matter which seems to require action is that of defining the L.W.L. measurement, and your committee suggest the excision of the paragraph on this subject which begins at the foot of page 93, in Chap. XIV. of By-Laws, and the substitution of the following:

"The L.W.L. shall be the distance in a straight line between the points furthest forward and furthest aft, where the hull, exclusive of the rudder post, is intersected by the surface of the water when the yacht is afloat, in racing trim, with all persons on board when the measurement is taken, amidships, provided always, that if any part of the stem or sternpost, or other part of the vessel below the L.W.L. projects beyond the length taken as mentioned, such projection or projections shall be taken as part of the length, and added to the length taken as stated, and pieces of any part cut out of the fair line of the stem, sternpost, or of the ridge of the counter, with the apparent purpose of shortening the L.W.L., shall not be allowed for in measurement of length. The measurer, at the time of taking his measurement, shall affix a distinctive mark at each end of the L.W.L."

The next matter to which the committee have given their attention is the rule which relates to the measurement for representation. At the time this rule was formed, and until recently, the length, as taken for the tonnage, was a clear enough definition, and susceptible of no misunderstanding; its limit aft was the after side of the sternpost, and with the vertical ports then in use in our yachts, and still common to merchant vessels, this point was usually about the same as the point where the length of the waterline and the length of the counter were, on the average, about the same thing. Vessels are now, however, being built without any sternposts, and without a change in the definition of length for tonnage, it is impossible for your measurer to make a measurement for representation in such cases that would not be open to question and objection.

It is, therefore, proposed that Chapter IV. of the By-Laws, page 89, be amended, so that the length dimension, as there defined, shall be taken from the forepart of stem to the after part of sternpost at the height of the main deck, "and substituting therefor 'length of load waterline,' which will make the end of the first paragraph read, after secretary specifying her dimensions and rig, and that she has a capacity of fifteen tons or over (old measurement), as ascertained by the following rule; and that she is a full-decked vessel, reasonable cockpit excepted. The rule to be substituted shall be the same as at present, excepting only that L.W.L. should be substituted for length as there used."

The next subject taken up for consideration by your committee was classification.

In the report made last winter by the committee which then dealt with this subject (classification), it was stated that as the result of a comparison between its own indications and the representations of other clubs, that there had been expressed, to quote the words of the last report, "a unanimous conviction that the classification, which in all cases is in this club now made by waterline lengths alone, should be made by the sailing lengths; in other words, by the length taken into account for the determination of the allowance, which length is the mean between the square root of the sail area and the length of the waterline."

In this conclusion your committee fully concurs, and indeed it has never thought otherwise. It appears to some extent arbitrary and inconsistent that two factors should be in use to determine time allowance and only one of these to determine the classification.

These conclusions quoted from the last report are indorsed by this committee, and in the explanation of the present recommendation it would further be stated that the remarks made in the last report, advantages which might be attained to by this more consistent method of classing yachts are less in sight in the case of the larger vessels, the sloops and schooners, whose racing lengths have not been so commonly built to, and which may not be in the near future. With the smaller vessels, which have been held more in favor recently for racing purposes, the advantages which have been referred to are more apparent.

Such vessels as have been built for racing purposes below 70ft. waterline could apparently be reclassified by sailing length without separating yachts that have been used to sail together, while between the 40ft. class and the 70ft. class there are at this time very few racing vessels. There are none being built, and the present may be said to be a very poor time for such a change, and the action might not be a prudent one to take at present, but in the future, if such changes which are at the present time practically little more than nominal.

For the method of classifying by sailing length, it may be said that to the owner it would give a much greater liberty in choosing the dimensions and properties of his vessel. As the class into which any vessel would fall would be determined, not by length of waterline, nor yet by sail area, but by the divided sum of factors representative of these two features, so that it would practically make sail and length interchangeable—a part of one for the part of another.

ALL IN A NUTSHELL.

It would follow that an owner, whose purpose and convenience would be met by having a vessel of somewhat greater length than others, could have that kind of yacht if content with the amount of sail which corresponded to the length, and which would keep his vessel within the limits of his class, and would not be held back also, and in rising to some length a great amount of sail—equivalent to the length given up—could be gained.

Further than this, the addition of length to a yacht to improve her speed or accommodations, would not necessarily result in her leaving the class she had previously belonged to. Whatever further advance may be made in the future in a knowledge of matters and proportions which govern the sailing of a vessel, it seems to be to be desired, and would be a most hopeful and hopeful than the enactment of such a rule as is here suggested, with the enlargement of experience and opportunities for comparison which it would give in any class where it operated.

Acting in the spirit of the foregoing remarks, your committee would now recommend that the racing rules, as shown on page 99 of the club book, in so far as they relate to the classification of sloops, cutters and

yawls, shall be amended by striking out the present classification from Nos. 1 to 7 inclusive, and by substituting the following therefor:

- Class 1.—All over 77ft. sailing length.
- Class 2.—All over 60ft. sailing length and not over 77ft.
- Class 3.—All over 50ft. sailing length and not over 60ft.
- Class 4.—All over 48ft. sailing length and not over 55ft.
- Class 5.—All of 48ft. and under.

Such a classification is really an adaptation, so arranged as to allow vessels which have been accustomed to sail together to continue to do so, and while, with scarcely an exception, they would be enabled to do this, the greater liberty which the rule would give, in proportioning sail to length of hull, might furnish the needed incentive for new vessels to be built in some of the classes, in which no new addition has for many years made its appearance.

Some examples are given to show how the proposed classification would operate, and it may be well here to state that such changes as have been proposed in this report require no remeasurement of the yachts.

PRESENT CLASSES.

- Class 1.—All over 80ft. L. W. L. length—Puritan.
- Class 2.—From 70 to 80ft. L. W. L. length—nothing.
- Class 3.—From 61ft. to 70ft. L. W. L. length—Katrina 69.34ft.; Gracie, 69.55ft.; Bedouin, 70.17ft.; Huron, 69.50ft.
- Class 4.—From 53 to 60ft. L. W. L. length—Athena, 54.20ft.; Dare, 57.14ft.; Ventura, 59.74ft.; Clara, 53.05ft.; Hildegard, 60.85ft.; Wayward, 60.50ft.
- Class 5.—From 46 to 53ft. L. W. L. length—Adelaide, 46.17ft.; Forget-Me-Not, 50.60ft.; Gullnare, 47.29ft.
- Class 6.—From 40ft. to 46ft. L. W. L. length—Uvira, 42.60ft., and the 40ft. yachts.
- Class 7.—Those of 40ft. L. W. L. length and under—Saona, 33.45ft. and the 40ft. yachts.

PROPOSED CLASSES.

- Class 1.—All over 77ft. sailing length—Puritan.
- Class 2.—From 60ft. to 77ft. sailing length—Katrina, 76.08ft.; Gracie, 74.03ft.; Bedouin, 73.11ft.; Huron, 69.44ft.
- Class 3.—From 50ft. to 60ft. sailing length—Athena, 59.08ft.; Dare, 60.08ft.; Ventura, 60.23ft.; Clara, 53.12ft.; Hildegard, 65.60ft.
- Class 4.—From 48ft. to 55ft. sailing length—Adelaide, 46.17ft.; Forget-Me-Not, 50.60ft.; Gullnare, 47.29ft., and all the 46ft. yachts.
- Class 5.—All 48ft. sailing length and under—Uvira, 47.14ft., and the 40ft. yachts.

The foregoing is respectfully submitted.

(Signed)

JOHN HYSLOP.

JAN. 21, 1893.

New York Y. C.

The annual meeting of the New York Y. C. was held on Feb. 2, with Com. Gerry in the chair. A great deal of business was transacted, the most important being the election of officers, as follows:

Com., Edwin D. Morgan, steam yacht *May*; Vice-Com., William Butler Duncan, Jr., cutter *Huron*; Rear-Com., Ralph N. Ellis, schooner yacht *Proctor*; Sec'y, J. V. S. Oddie; Treas., F. W. J. Hurst; Messrs., John Hyslop; Fleet Surgeon, Morris J. Asch, M.D.; Regatta Committee, Charles H. Bunker, Chester G. Grinnell and Irving Grinnell. Committee on Admissions—Edward M. Brown, Frank F. Robinson, James C. Bergen, Daniel T. Worden and Robert Carter. House Committee—E. A. Houghton, Frank M. Cronise, A. B. Jones and L. Vaughan Clark. Library Committee—J. M. Woodbury, M.D., William Gardner and Sanford B. Pomeroy.

The following members were also elected: G. G. Loper, W. H. Brown, F. S. C. Cord Meyer, J. E. B. Walker, R. M. Jones, Geo. Drakely, T. M. Brumby, U. S. N., J. B. Potter, E. H. Bulger, Alfonso de Navarro, E. A. Starring, S. W. Very, U. S. N., G. C. Reid, U. S. N., J. McGowan, U. S. N., T. B. Clark, A. V. H. Ellis, J. H. Lidgerwood, R. F. Lopez, U. S. N., H. W. Harris, F. C. Penfield, F. G. Bourne, E. H. Bennett, W. L. Camps, U. S. N., A. S. Kenny, U. S. N.; Edward Benet, J. B. Metcalf, G. L. Hoyt, B. H. Jordan, Chas. McLaughlin, G. H. Lea, U. S. N., and a committee appointed to consider a change of classification of our most common and owned in this country and between 65 and 80 ft. on the load waterline.

The sum of \$8,000 was appropriated for the Regatta Committee during the year. In connection with a letter from Mr. Royal Phelps Carroll asking the club to challenge for the Royal Victoria Y. C. Cup, the main question was a committee appointed to consider the matter. August Belmont, J. F. Tans and Gouverneur Kortright to consider the matter. As the former gentleman was unable to serve, Com. Morgan has since appointed Mr. George L. Rives in his place.

The reports of the officers showed the club to be in a specially good condition as to membership and finances, the roll including a membership of 850, and a fleet of 34 sloops, cutters and sloops, 105 steam yachts and 15 miscellaneous craft, or 290 vessels in all.

The measurement committee presented a lengthy report which was not read, the time being short and the report having already been printed and sent out, but the various provisions were voted on. The one relating to the waterline length was adopted, the one relating to measurement of yachts prior to entry was referred to the regatta committee, and the one relating to the reclassification of classification of our most common and owned in this country and between 65 and 80 ft. on the load waterline was also voted on. To amend Rule V. Section 1, by adding to it "unless permission in writing to enter such yacht be given by the regatta committee, in which case the said yacht must be measured within ten days of the date of such race, otherwise she shall be disqualified."

The following important announcement was read: "The America's Cup committee of the New York Y. C. beg to announce that, for the purpose of selecting a vessel to represent the New York Y. C. in the coming contest for the America's Cup, trial races will be sailed probably early in September. These races will be sailed under the rules and time allowances of the New York Y. C., as far as applicable, but any excess of length on the load waterline over 85ft. will be counted double for time allowance. These trial races will be open to all vessels of our most common and owned in this country and between 65 and 80 ft. on the load waterline."

In their selection of the vessel best adapted in their judgment for the defense of the America's Cup, the committee reserve to themselves absolute freedom of choice, based upon all around qualities, the results of the trial races not to be considered as necessarily conclusive, and the evidence furnished by performances prior to such races to be considered or not at their discretion. Due notice will be given of the exact dates of the trial races."

The date of the annual regatta was fixed for June 15. Com. Gerry made a farewell speech on leaving the chair, and a vote of thanks for his long services to the club was passed unanimously.

Cups for the New Outters.

The New York Y. C. has received the following letter:

ESTATE OF WILLIAM ASTOR, 23 W. 26th St., New York, Feb. 2, '93. To Commodore Gerry, New York Y. C.:

DEAR SIR: I desire to present for competition two cups of the value of \$500 each, to be sailed for on Tuesday, July 25; Thursday, July 27, and the third race, if necessary, on Saturday, July 29, the race to take place off Newport, and the cups to be open to sloops of the New York Y. C. reserving to myself the right to admit any foreign yacht in our waters to compete.

The course for each race to be an equilateral triangle, each leg of which is to be ten knots, and the first leg to windward if possible. The racing rules and time allowance of the New York Y. C. to govern, except that the race must be sailed in six hours.

The conditions are as follows: The winner of the first day's race is to be considered or not at their discretion. The second and third races to be sailed on the second day, and the winner of the second day's race to be considered or not at their discretion. The winner of the first day's race, there shall be a third race between these two boats, and the winner of the third race shall take both cups. Sincerely yours,

J. J. Astor.

The "Forest and Stream" in the West.

A correspondent in the West writes us as follows: "I attribute the enthusiastic movement in the Western towns to the series of contests over the America's Cup which revolutionized matters, and to the teachings of the *FOREST AND STREAM* shown in new soil. I have rarely met a southern or western sailor, along the Great Lakes, the lesser ones and the rivers, who in 'boat talk' has not quoted its yachting and canoeing columns in support of his arguments."

The following nominations for officers of the Eastern Y. C. have been posted: Com., J. M. Forbes; Vice-Com., W. A. Gardner; Rear-Com., C. F. Adams; Sec'y, J. M. Eaton, Jr.; Treas., P. T. Jackson; Messrs., Henry Taggard. Members of the Council at Large—Augustus Hendricks and F. E. Peabody. Regatta Committee—W. S. Eaton, Jr., P. T. Jackson, A. N. Rantoul, Thomas Nelson and H. Burr. P. Committee of Admissions—R. H. Sterenson, Gordon Dexter, F. E. Peabody, C. F. Adams and William S. Eaton, Jr. House Committee—Dudley L. Pickman, Edward B. Haven, T. Watson Merrill, George P. Messervy and William S. Eaton, Jr. The election and annual meeting will be held on Feb. 14.

* Three rounds, thirty miles.
The racing measurements of the boats are: Orion 57.90, Cinderella 57.90, Vreda 47.69, White Wings 45.74, Aggie 40.33, Zelma 39.96, Yama 39.90, Vedetta 29.91, Erma 29.75, Norma 28.95.
Abbreviations.—W, windward; L, leeward; T, triangular course, generally equilateral; Q, quadrilateral course, or two sides thereof and reverse. Distances are in nautical miles; tides the same. Wind velocities in statute miles.

The Cruise of the Cy-pres.

TWO WEEKS IN A 22-FOOT BOAT.

THE Cy-pres* is a staunch little plumb stern cruising boat, 22ft. long on the water, 25ft. on deck, with 5ft. 6in. beam, drawing 4ft. 8in. She has 4,800lbs. of iron bolted to her keel, and is practically non-capsizeable. Her cockpit is large, holding easily six people, and is self bailing. The cabin is lighted by a large skylight, which extends from the mast aft to, and is the continuation of the companionway; this arrangement gives almost as much headroom as a house, and gives very much more room on deck. She was built by Geo. Lawley & Son, of Boston, in 1889, and a better built boat of her size would be hard to find.

When she came into my possession in the spring of 1891 she was sloop rigged with double head sails, both of which were set on stays. Almost the first time I used her I was plunged into the ice cold water of Massachusetts Bay up to my waist while stopping the jib down on the bowsprit. One ducking of this kind was all that I could stand, and I immediately changed things so that I could set the jib flying, taking it clear in on deck, or stowing it below if necessary. A jib running on a stay, and stopped down on to the bowsprit when furled, is all right when sailing off and on from moorings in sheltered water, but if one is forced to anchor or moor in open water, where he is liable occasionally to have a good chop on, he will be sure to get wet sooner or later, and will find the flying jib much more convenient to handle.

I sailed the Cy-pres continually for two months, back and forth between Marblehead and Gloucester, getting used to her, and also becoming familiar with the water in the neighborhood. To take a cruise has always been my dearest dream, and now that I possessed a craft capable of taking me anywhere, I saw no reason why, in another year, my dream might not become a reality. I found that many things would have to be done to the boat, however, to make her comfortable for a long journey, and I measured her inside and out, so that I could make drawings of the changes I wished in her accommodations.

In September I laid her up at Frisbie's yard in Salem, fully determined if it could possibly be brought about, to take a cruise down the coast of Maine during the following summer. During the winter I made drawings of the alterations I wanted in her cabin, and forwarded them to Frisbie, who did the work in a very satisfactory manner. I had lockers for clothing, cooking utensils and dishes put in, fitted her out with two anchors, a 50lb. one, with 30 fathoms of ¾ galvanized chain, and a light 25lb. folding ledge, besides a large collapsible one that was already in her, which I had never had occasion to use.

The old flat bowsprit was taken out, and a round one put in with a sliding ring in it for hauling out the foot of the jib. The new bowsprit was two feet shorter than the old one, and I had the same amount cut off from the luff of the jib, as I had found that she had too much head sail, carrying a strong lee helm when there was any breeze going.

Enter back stays were rove from head of her pole mast, as I intended to carry a club topsail, and did not wish to run any chance of the masthead carrying away. This topsail I never put on her but once, as I found she had all the sail she needed and all I could handle without it.

I bought a full set of charts of the coast from Nantucket to Mt. Desert, and also all the harbor charts on a large scale, and studied them carefully during the winter in connection with the "Stebbins's Illustrated Coast Pilot." When spring came I felt that I was pretty well prepared to take the long-talked-of cruise, and was impatient for the day to come when I could sluit down my desk and speed away to the seashore.

It is an old saying that all things come to him who waits, and at last my turn for a vacation came. I made a bees' nest for Salem, Mass., and riving there about noon on July 13, and went at once to Frisbie's yard to see if the Cy-pres was ready for me. She was still on the ways, but her sails were all bent and everything was ready for launching except stowing the chain and getting the anchors on board. While this was being done I went on a shopping expedition and laid in my supplies of eatables, cooking utensils, blankets, towels, etc., having every thing delivered at the yard where she was lying, ready to be put on

board of her as soon as she was launched. As the tide would not be right till late in the afternoon I left orders to slip her off when the water was deep enough and anchor her at the end of the dock in 5ft. of water at low tide and I would come and get her next morning. I then took the train for Magnolia, seven or eight miles away, where my wife and children were spending the summer, and where I was to meet my fellow voyager F.

In the morning, Thursday, July 14, we, F. and I, took the train back to Salem, arriving there about noon. We made some purchases, had a light lunch and then went on board the yacht, where we had our hands full for some time stowing away the hundred and one things that go to make up an outfit for a cruise.

We found on checking off the bills that we had the following articles:

- 1 qt. saucepan.

1 qt. agate saucepan.

1 tin candlestick.

1 qt. paper pail.

1 tin breadpan.

1 can-opener.

3 coffee cups.

3 tumblers.

4 1pt. Mason jars.

1 salt shaker.

1 pepper shaker.

6 steel knives.

6 steel forks.

1 agate dishpan.

1 gal. oilcan.

1 tin wash basin.

1 can screw.

3 tea cups.

3 dinner plates.

6 iron teaspoons.

3 iron table spoons.

2 iron dessert spoons.

1 2qt. tin pail.

1 small tin funnel.

1 lemon-squeezer.

3 egg cups.

1 2gal. jug.

12 qts. assorted soup.

1 can pressed corned beef.

1 can boned turkey.

2 cans boned chicken.

1 can boneless ham.
- 1 can tongue.

2 boxes Epps cocoa.

1 lb. ground coffee.

2 bottles raspberry vinegar.

1 bottle lemon juice.

1 lb. sugar.

1 lb. salt.

2 cans green corn.

2 cans green peas.

2 cans succotash.

2 cans baked beans.

1 can Boston brown bread.

2 cans smoked herring.

1 pt. chow chow.

1 box Kennedy's pilot biscuit.

1 bottle Jamaica ginger.

2 cans condensed milk.

1 box black pepper.

1 box wooden toothpicks.

2 boxes damp-proof matches.

1 box canned salmon.

1 dozen lemons.

¾ dozen spring clothespins.

1 dozen lager beer.

1 gal. coal oil.

2 woolen blankets.

4 dish cloths.

6 dish towels.

2 Turkish bath towels.

4 hand towels.

1 box vanilla wafers.

The sun was hot and it was uncomfortably warm working below deck, but by 5 o'clock the last thing was put away and we were ready to up anchor and be off. There had been very little air sailing all day and we hesitated some time about starting for Magnolia, where we expected to take on the balance of our outfit, but finally decided to do so, as we could take advantage of the last of the ebb and hoped we might get more breeze when the tide turned. We drifted lazily along till we were abreast of Baker's Island, when the little breeze we'd had died out entirely, leaving us helpless on the glassy water to be carried on past the island by the slowly ebbing tide. As we lay on the deck watching one of the most gorgeous sunsets we had ever seen, we noticed heavy clouds rising in the southwest and lightning leaping from point to point. The glorious golden light of the setting sun slowly changed to inky blackness as the approaching storm moved steadily toward us.

F. took the tiller while I furled the foresail and got the anchor ready to let go at a moment's warning, lighted the lantern, setting it on the cabin floor, where it would be handy if wanted, and so shaded that the light would not shine in our faces. Oilskins were gotten out ready to put on, side lights put in their places, skylights were closed and everything made snug as possible. The tide had turned by this time and we knew that it was slowly but surely setting us in toward Little Misery or Whale's Back Reef and we were anxious to get a glimpse of something that would enable us to fix our distance from them. I went forward and strained my eyes, peering into the blackness, hoping to be able to see something of the land. Fortunately, just as we were getting a little worried about our position, a gentle breeze sprang up which increased slowly for half an hour and we

slipped rapidly along in the perfectly smooth water, heading for Eastern Point Light, knowing that this course would take us clear of everything and allow for the set of the tide, too.

As we approached Magnolia we could see lights ahead; we easily distinguished the hotel by the profuse display of electricity, and changed our own heading for it. We would have if we should reach our moorings before the storm broke, or before the hotel lights should be extinguished, for should they be turned out, we would have no mark to steer by, as we could not tell whether the other lights were on shore or were anchor lights on fishing boats, which usually lie just inside of Kettle Island. The breeze was baffling, the hours long and anxious, and we wished many times that we had staid quietly at anchor in Salem Harbor.

About midnight we got the first strong puff from the approaching storm, and at about the same time made out Egg Rock just ahead on our port bow. We could see it plainly in the lightning flashes and knowing our exact position held on to our canvas much longer than we ought to have done, steering boldly in for the anchorage on the west side of Kettle Island. The wind was rising rapidly and we flew along, passing swiftly through the fleet of fishermen lying off the nets at the plant of the island. As soon as we were clear of them we rounded up head to the wind, let our anchor go, and rattled the mainsail down, just in time to get the stops on when the squall burst on us in all its fury. It was soon over and after setting our anchor light, and paying out a little more chain, we wrapped ourselves in our blankets and slept soundly till long after sunrise next morning.

There is a good anchorage on the west side of Kettle Island, well sheltered from any wind, with fine holding ground, and, within easy rowing distance, there is a post-office, telegraph office, grocery, drug store and livery stable, and good water right at the landing. We got up at 6 o'clock the next morning and pulled ashore, landing at the stairs on the north side of the old steamboat dock. We took with us our two water jugs, oil-can and market basket, intending to get all filled here, as we did not know whether we would have another chance before reaching Portsmouth. We took breakfast at the Ocean-side, one of the best hotels on the whole New England coast, and as there was no breeze staid ashore till noon, visiting our friends. After dinner we went on board the yacht and spent the time till dark washing dishes, filling and trimming lamps, airing blankets and cushions, and getting a little accustomed to our cramped quarters.

We took on board here our barometer, charts, field glass, coast pilot and oil-stove, also a camera, kindly loaned us by a friend, as our own was too large for our crowded quarters. The oil stove was the ordinary round one with two tin wicks; it was a great heater and never gave us any trouble. We kept it, when not in use, in a deep pan with nearly vertical sides, and if any oil was slopped out by the pitching of the boat it was caught in this pan.

The wind continued light next morning (Sunday, July 19) and consequently we did not start until 9 o'clock. At that hour a light southerly started up and we got off, running before it, for Eastern Point. The breeze grew gradually stronger as we turned the point, and we bowled along in fine style for a half hour. In the north-west were numerous small fleecy clouds, their lower sides being straight and well defined. They rose rapidly, increasing in size as they did so till just as the foremost ones began to pass over our heads we noticed that a change of wind was coming, a white line on the water to the west of us showing plainly where the puff was coming from.

I called F. to the tiller, ran forward and quickly took in the foresail. The puffs came harder and harder, knocking us down till our lee deck was all awash; we luffed up a little each time she buried her rail, and gradually drew close in to Thatcher's Island. Seeing that we could not continue luffing much longer, as we were close into the rocks and as the boat evidently had made in a very uncomfortable manner, we let slip the jib sheet, shot her up into the wind and hove our anchor overboard. We stowed the jib below, turl'd the mainsail loosely, putting a few stops around it, and sat down in the cockpit to catch our breath.

The wind was now blowing furiously, and quite a sharp sea was getting up. The tide, running swiftly past Cape Ann, set us round broad-side to it, and we rolled about in a very uncomfortable manner. The boom thrashed and jerked so that we feared it would fetch away the traveler. We tried in vain to control it by the sheet, and finally lashed it fast to the timber heads on either quarter. We lay at anchor a while

*Pronounced see pray—a legal phrase, meaning "as near as possible, or about right."

waiting to see if the squall would not let up. The coasters came flying in from all directions to get in the lee of the land; some of them ran close up to the coast near Cape Hede and dropping all canvas. A fine steam yacht ran close to us and we envied them their ability to go where they liked regardless of wind or wave. The seas grew larger every moment, and as we lay right in the trough we rolled frightfully. The boat seemed determined to roll her rail under and swamp us if she could not pitch us out.

Seeing that the wind was likely to continue and that our position was momentarily getting more uncomfortable, we decided that the best thing we could do was to turn two reefs in the mainsail and try to make Rockport. While tying the reefs down I had a narrow escape from going overboard. I was sitting on the cockpit rail with my left arm thrown over the boom, feeling for the reef point with the other, when the boat gave a savage roll, throwing me on my chest across the boom. Back she came with a snail-like motion and pitched me clean out of the cockpit. Had my head on the boom been less firm I should most certainly have landed in the water. It shook me up in a very uncomfortable manner, and I was thoroughly impressed with the fact that it would not do to fool with that boom very much.

After getting the reefs tied down and the anchor chain hove in short, we ran the mainmast up smartly. The wind caught it broadside on, and before we could get it up we were lying on our backs, and the boat was on her side. We thought for an instant that our time had come and had the Cy-pres been less deep and heavy she surely would have gone over. We let the halliards go with a run, when she righted instantly; gathered in the bunt of the sail, stopped it loosely round the boom and sat down breathless in the cockpit, each of us wishing inwardly that we had not come, though neither would have admitted to the other that they were scared. The only expression at all bearing on the situation came from F. who said, "Well, it seems as though we were getting our cruising experience butt end first."

We waited as patiently as we could for half an hour longer, hoping the gale would blow itself out, but seeing no signs of its doing so determined to make sail again. We hoisted the mainsail more slowly this time, letting the boat swing round with her head to the wind before we got it clear up. We were on a lee of the land, and the wind was the Londoner, and I feared if we lost any time between the breaking out of the anchor and the hoisting of the foresail that we would drift helplessly down on to the latter, so determined to get a "move" on her as quickly as possible after the anchor was clear the bottom.

F. took the tiller, as he always did when getting under way, and I named the masts, rattling the chain in lively. As soon as I thought the anchor was off the bottom I ran the foresail up, belayed the halliards and sprang aft and hauled in the sheet. As her head swung off and she began to gather way I was congratulating myself that we were well out of this scrape, when, to my consternation, I felt a slight shock and saw the chain running rapidly out over the windlass. I took in the situation at a glance and let the foresail sheet run, called, "Down with the tiller, hard down," sprang forward and let the foresail halliards go, and as her head came round, took a turn with the chain round the bitts.

We took it a little more leisurely next time and I did not hoist the foresail till the anchor was chock up, and we got off without further mishap.

After rounding Cape Ann our course was dead to windward into Rockport harbor, and as there was a big sea on it was a little anxious to see how the Cy-pres would work under such short course. She behaved splendidly in the short tacks, never missing tacks once, and worked to windward in fine style. Once while going about off Straitsmouth light, just as we had put our tiller down and everything was slating about at a terrific rate, the foresail shook itself loose from the hook in the light of the sheets. The leather in the hook had become softened by the water, and it had allowed the hook to slip out of the leather. There the sheet was, exposed to the elements, separate, although the leather remained in its place. I had a hard task with the sail, trying to hold it firmly enough with one hand to pass the leather through the eye that locks the hook with the other, and do it while we were going about—over we had run on toward Avery's ledge and must go about and no mistake.

We ran into Rockport without further accident and dropped our anchor at just 10 o'clock. Glad enough we were in there, we did not enjoy the perfectly still water, after the terrible tumbling we had been subjected to for the last two or three hours. Rockport is a good harbor for a small craft in any wind, except possibly a northeaster. There is an outer and inner harbor. The outer harbor is formed by an artificial breakwater of broken stone, built out from the west side and curving round to the eastward till it leaves but a narrow opening between it and the mainland. There the water is very deep, and the harbor at low tide; the deepest place being close in toward the artificial part of the breakwater. The inner harbor is built of great granite blocks and is perfectly protected from any storm. It is nearly square with the entrance at the northeast corner. The bottom is nearly all bare at low tide and one must tie up to the pier when going in there, and carefully watch the lines as the tide goes out. On the port hand going in are stone steps all along the beach, and a hard task to get up iron rings and huge granite posts to make your lines fast to. We were surprised at the solidity and strength of these piers and the seemingly unnecessary number of round granite posts.

The entrance to the inner harbor or basin is narrow and there are usually a number of fishing schooners lying at the piers close to it, so it is not safe to get under way at any time; one must anchor outside and not expect to go in till the water is very deep, and by a small boat to see if there is room to pass. It is much better to anchor in the outer harbor at all times in a northeast blow. As there is scarcely any current when the tide ebbs and flows you can sail out under any slant of wind. Quite a number of fishermen come in here, besides coal and stone sloops, so it is best to keep well over to the west side, and out near the shore, where the water is deepest, where the water is deepest, and ride to ash shore a chain as possible, so that you will not swing out across the entrance and be in the way of incoming vessels. There are a number of sunken rocks on the west side of the harbor, but they are all above the point where the natural rock is joined by the artificial work of the breakwater.

We walked through the village calling at one or two shops to get a few things that had been forgotten, and then we had a look at the quaint old houses perched on the very edge of the rocky shore, and in some instances actually hanging over the water. Very close to the harbor we saw the ruins of what was once a splendid granite cotton mill, it was burned a few years ago and abandoned. It seemed to us that no one could hope to run such a business successfully in such an out of the way place, and we were not surprised that they were not justly abandoned.

Shortly after returning to the yacht (about 4 o'clock), a good sized Cape catboat came in, towed by the Rockport tug. As there were five men on this boat and she was a powerful looking one, we felt better satisfied with ourselves for working our way in when such a crew felt obliged to give it up and haul a tug. I have always regretted that we did not go on board of her and get their experiences of the day.

We were sitting on deck after supper when the 30 ft. cutter Saracen came in. She made a wonderfully pretty picture, bowing along under all lower sail. She had a crew of seven men on board, and as she came up to the entrance to the harbor, they took in both headsails smartly. She had a great move on her and they were obliged to leave their anchor over to snub her, and did so just in time, for, as she lost headway and came to rest, she was less than three feet from a large rock that was just under her bows. She was so close that we noticed this rock before, and getting into our tender we rowed over to it and sounded all around it, finding two and a half fathoms. The skipper of the Saracen, not liking his berth, got out a boat line, and towed up to the entrance of the inner harbor and tied up to the stone pier. Two or three small fishing schooners and one big stone sloop came in while we lay there, and we were very much interested in watching them handle such heavy loads in so small a harbor. They took in all sail while outside the breakwater and shot in under bare poles, rounding up to the end of the pier of the inner harbor, snubbing the vessel as she came broadside to the wharf. We had a wonderful exhibition of the aurora borealis in the evening. The wind died out completely as the sun went down, and the sky was wonderfully clear. The flashes of light were very brilliant, extending clear across the sky from north to south, two or three under each other, with a peculiar spiral motion different from anything we had ever seen.

[TO BE CONTINUED.]

We have received from Chas. L. Seabury & Co. a very handsome catalogue of steam yachts and launches, the book being tastefully gotten up and illustrated with exceptionally good pictures of the yachts built by the firm. They cover all sizes, from the new Embra, 154ft., now building for J. H. Hanan, down to the 30ft. open launch of the Alva, a remarkably fast and handsome boat. Though still a young concern, it has already made a reputation for the high quality of its work in all departments—hulls, engines and boilers.

The 18th annual meeting of the Philadelphia Y. C. was held on Feb. 1. The following officers were elected: Com. J. Brown, Vice-Com. S. L. Kent; Rear-Com. A. Box; Sec'y, G. T. Gwilliam; Meas. F. B. Mead; Harbor Master, S. B. S. Barth; Fleet Surgeon, T. C. Stetlweag, M.D.; Trustees, C. H. Downing, C. L. Wilson, S. F. Givin, Wm. S. Stockton; Regatta Com., W. W. Hollingsworth, M.D., H. P. Lloyd, Stephen E. Haas. The officers' reports showed a very satisfactory condition.

The West Lynn Y. C., of Lynn, Mass., has elected the following officers: Com., J. W. Dalton; Vice-Com., E. E. Rich; Fleet Captain, Charles Morley; Rear-Com., E. Brown; Treasurer, C. Olin; Meas., Samuel Guilford, Jr.; Trustees—W. H. Parnell, J. P. Lumehan, George Brougham and A. W. Stevens. Financial Committee—E. F. Davis, George Brougham and Edward Rich. Regatta Committee—P. Lynch, W. J. Rooney, Edward Rich, E. F. Davis and J. D. Harris.

New York Yacht Racing Association.

The annual meeting of the New York Yacht Racing Association was held at O'Neill's on Feb. 1, bringing out a large attendance. Com. A. J. Prime, the president, occupied the chair, and on the call of the roll by Secretary Parkhill delegates from the following clubs responded: Bayswater, Brooklyn, Canarsie, Columbia, Harlem, Hudson River, Indian Harbor, Jersey City, Newark, New Jersey, Oceanic, Pavonia, Staten Island Athletic and Yonkers Corinthian yacht clubs—14.

After the minutes of the previous meeting had been read and approved the secretary read his annual report, which set forth in detail the doings of the association during the past year and since its organization, and made several valuable suggestions.

The secretary was followed by the treasurer. While the latter report did not show a very large balance to the credit of the association, it still showed it to be entirely out of debt, and with a small balance in its favor.

The executive committee reported that they had admitted the following clubs to membership in the association: Greenville Y. C., of Jersey City; Bayonne Y. C., of Bayonne City, and Shrewsbury Y. C., of Red Bank, N. J., and stated that this brought the total membership of clubs in the association up to 23. They also reported that they had given the matter of the Florida disqualification some consideration, but inasmuch as all opposition had been withdrawn, the report of the regatta committee would stand. Mr. George W. Poucher's schooner Edith in consequence will take the prize in Class A.

Much discussion was provoked on the report of the special committee on club steamer and the regatta for Labor Day. A few of the officers of the Association were of the opinion that it was better in order that a sum might be raised to pay the expenses of the regatta and for prizes. The conclusion was finally reached not to depart from the present manner of conducting the regattas. The special committee was authorized to contract for a steamer.

The dinner committee reported progress, and said from present indications they fully expected 250 at the dinner, which takes place next Monday evening at 8 P. M. at O'Neill's.

After various matters of interest had been discussed the following officers were elected for the year: Pres., Com. Benjamin F. Sutton, Brooklyn Y. C.; Vice-Pres., Com. Norman L. Rowe, Pavonia Y. C.; Sec., George Parkhill, Columbia Y. C.; Treas., Robert K. McMurtry, Staten Island Athletic Club; Executive Committee, Daniel O'Reilly, Brooklyn Y. C., chairman; Edward M. Griffiths, Harlem Y. C.; Chas. Pevers, Yonkers C. Y. C.; C. E. L. Hinrichs, Canarsie Y. C., and Charles Schade, Newark Y. C.

Com. Sutton, in thanking the members for the honor, said that he hoped and saw no reason why, like the New York Y. C., this Association should not have stations both on Long Island Sound and New York Bay. Com. Rowe, the vice-president, also made some fitting remarks.

Com. Hinrichs moved that the thanks of the Association be tendered to Com. Alanson J. Prime and George K. Gartland, the outgoing president and vice-president, who had been instrumental in adding so much to the success of the Association. The motion was unanimously carried.

Com. Prime, in replying, said that it would seem rather strange for him to move from one end of the room to the other, as since the organization of the Association he had occupied a seat at the head of the table. He assured the gentlemen present that the fact of his relegation to a private berth would not lessen in the least his interest in the Association, and that he would at all times be prepared to fight its battles when necessary.

Mr. Gartland made some remarks in the same tenor, and told the new vice-president that he hoped his duties would not be as arduous as those he had just done, and that he was sure the Association would be able to give him the chance to preside at a meeting of the Association in that capacity.

After the meeting had adjourned the members, at the invitation of the new president and vice-president, sat down to a spread.

The Cup Defenders.

The Carroll boat is now ready for launching, the dredging of the slip and the lengthening of the ways being also completed, so that she can be hoisted over at any time. As soon as she is aloft the heel of the Rogers boat will be laid, and as the frames are bent and the plating ready she will go together very rapidly. The second syndicate defender will be built in the north shop, now filled with steam yachts and small racers; these will be stored elsewhere as soon as completed, leaving the ways clear for the big boat. The Paine boat is now a certainty, and Lawley will build her whether on the soaped window or on the new ways to be seen in the New York Times prints the following interview with Gen. Paine on Feb. 3:

"I shall undoubtedly build if I can be assured by the manufacturers that I can secure the steel necessary for the construction of the boat as soon as it is needed. Lawley will build the boat, and the contract will be signed as soon as I receive the assurances I desire. I shall use her for my own cruising during July and August, and then, if she should prove fast enough to stand a chance in the trial races, I shall turn her over to John and let him have charge. I shall have nothing to do with her in the trial races or in the Cup races, if she should be fortunate enough to be selected.

"In case I build I shall resign my membership in the America's Cup Committee. As to particulars about the boat, I can only say that since the Cup defense make secrecy the rule, I can only follow their example.

The list of 35ft. cutters now building is as follows:

Name.	Owner.	Designer.	Sailing Master.	Builder.
R. P. Carroll	N. Herreshoff	Chas. Burr	Herreshoff Co.
Rogers Synd.	N. Herreshoff	Hank Haif	Herreshoff Co.
McN. N. Herreshoff	N. Herreshoff	Wm. Herreshoff	Herreshoff Co.
John B. Paine	John B. Paine	John Barr	Lawley & Co.
Valkyrie	Lord Dunraven	G. L. Watson	W. Cranfield
Britannia	Prince of Wales	G. L. Watson	J. Carter
Clyde Syndicate	W. Fife	J. A. Hogarth	A. & J. Inglis
A. D. Clarke	J. M. Soper	Ray & Co.

Mr. Grinnell, owner of Quickstep, has generously consented to give us the services of Capt. Hansen of Mr. Isella for the second syndicate boat, and has thus settled a very important question, as the last of competent and available skippers is running short. Capt. Hansen's reputation in Sachem first and Quickstep afterward gives every assurance of his fitness for his present position.

YACHT NEWS NOTES.

Specific information as to the Carroll boat and the Cup defenders for New York syndicates is as yet unobtainable at the Herreshoff works. The day watchman who was placed on duty in front of the north and south building shops about a fortnight ago still keeps up a vigilant patrol, so that any one disposed to disregard the firm's wishes about not entering the shops is likely to find a stalwart obstacle in the way. It is said, *sub rosa*, that the power of the watchman has been tested with a result most unsatisfactory to the intruder. Regarding the placing of the watchman, an act which has been strongly condemned in some quarters as an abuse of authority, the Herreshoff firm refuse to be drawn into any controversy. President John B. Herreshoff points out, however, that the use of both day and night watchmen, and the careful exclusion of visitors unless introduced by the firm, is so common in the large English yards as to excite no comment there. Of the firm's refusal to give specific information of the large boats now under way or ordered, Mr. Herreshoff said: "Our refusal to give such information is based wholly on the ground of the importance of not allowing English yachtsmen to know what we are doing in Cup defence. We believe that in such a case as this the public should be willing to wait for details until all possibility of benefiting by them on the other side has passed away."—Boston Globe.

While excavating to an unusual depth for the foundations of the new power house of the Broadway Cable Co. at 17 Front street, New York, the workmen came upon the well-preserved remains of a very old vessel beneath the foundations of the four-story brick buildings which have stood on this site for nearly two centuries. The vessel, about 30 ft. long, of ancient model and carrying three masts, was shown by the dead-eyes still along the sides. The timbers are covered with a thick black substance, which seems to have preserved them as sound and hard as when new, but the vessel must have lain in her berth for at least a century, and probably half as long again. The whole locality is made ground, the site of the first city docks and landing place of the early ships, and the remains of any vessel sunk so near the shore. It is possible that the vessel had been condemned and sunk, or that, being sunk by accident she was not removed, but utilized as a part of the filling-in when the work was first begun. A number of relics, such as British coins, a pewter mug, a cannon ball and part of a bar shot have been taken from her. The starboard side has been entirely cut away, but the port side lies under the walls of the building adjoining the excavation, and will not be disturbed.

The South Boston Y. C. has elected the following officers: Com., O. F. Merrill; Vice-Com., F. Ferdinand; Rear-Com., A. White; Sec'y, H. Pope; Treas., T. Christian; Meas., S. Bertram; Fleet Surgeon, J. G. Reed; Trustees, J. F. Bertram, W. A. Haskell and C. McKenna; Regatta Com., W. Allerton, F. E. Bowker, T. F. Bruen, C. J. Chance, H. L. Stickney, B. Stone and J. V. Young.

The Riverside Y. C. held its annual meeting on Feb. 2 at the city club house, 29 West Thirty-first street, New York, the following of-

ficers being elected: Com., G. I. Tyson; Vice-Com., F. Boltz; Rear-Com., H. F. Crosby; Sec'y, J. G. Porter; Treas., J. F. Peck; Meas., E. F. Lockwood; Regatta Com., C. T. Pierce, F. B. Jones, W. A. Huffing-ton, Menasha Club, Com., E. H. Burris, C. E. Wilson, J. A. Outwell; Trustees, E. D. Hurlbut, H. E. Doremus, W. A. Hamilton, C. T. Pierce, W. S. Bagg, A. M. Brush, G. G. Tyson, L. V. Harkess. The club will hold its annual regatta on July 8, the cruise will start on July 10, and the mid summer ball will take place on July 28. The dates for the pennant regatta and ladies' day will be decided on later.

At a meeting on Jan. 18 the council of the Yacht Racing Association decided on the following limits for crews: Not exceeding 9.5 rating, two persons; not exceeding 1 rating, three; not exceeding 2.5 rating, five; not exceeding 3 rating, six; not exceeding 10 rating, nine. In the classes over 10 rating there will be no limit to the crews. The above figures include every one on board during a race. A committee was appointed to decide on marks for the headline, which will be supplied by the Association and fixed by the owners; the regulation being that both must show clear above water with the crew on board and amidships.

Messrs. Chas. P. Willard & Co., of Chicago, have secured from the management of the World's Fair the privilege of running small steam jachts on the waters of the Fair grounds, they agreeing to pay 25 per cent. of the gross receipts to the Fair. For this service they are building 17 yachts, 12 of them 50ft. long and 6 of them 75ft. The engines will be triple compound, 4½, 7 and 12x8in., and all of the boats will be fitted with the Roberts water tube boiler. The firm has lately sent to Galveston, Texas, a despatch boat for the Government, which is also fitted with the Roberts boiler.

The steam yacht Fauvette, designed by Dixon Kemp for E. A. Perignon, the French yachtman and engineer, has since her completion last summer been fitted with a system of forced draft designed by her owner, and at the same time her feathering propeller has been replaced by a solid one of less weight. The result of these changes, as shown on a recent trial trip, was that the mean speed of 15.6 knots was attained, as compared with 14.5 knots last summer under the original system of forced draft. The yacht is 189ft. 9in. over all, 160ft. l.w.l., 23ft. 8in. beam, 12ft. 11in. draft, with engines 18, 30 and 48x32in.

The nominations of the American Y. C., whose annual meeting will be held on Feb. 14, are as follows: Com. Frank R. Lawrence, steam yacht Thyrta; Vice-Com., John H. Flagger, steam yacht Solene; Rear-Com., G. Weaver Loper, steam yacht Aveland; Secretary, Thomas L. Scovill; Treas., Geo. W. Hall; Fleet Surgeon, C. I. Pardee, M.D.; Meas., C. H. Haswell; Consulting Engineer, G. W. Magee, U.S.N. Trustees to serve three years—Clement Gould, steam yacht Adroit, and E. S. Chapin. Regatta Committee—G. W. Hall, W. S. Alley, S. W. Roach, Isaiah Paxson and J. K. Hegeman.

On Feb. 14, as the schooner Miranda was being lowered from the ways at Swan's, the backing chain of the ways parted, leaving the cradle stuck with the yacht in a little over 5ft. of water. On Feb. 4 she was hauled off without injury and towed to New London, where she will fit out before coming to New York for her final departure. She will go out to California by the way of the Suez Canal.

The Corinthian Y. C., of San Francisco, has elected the following officers: Com., John Pew; Vice-Com., M. A. Newell; Sec'y, F. E. Baker; Treas., W. F. Dixey; Port Captain, H. E. Pennell; Meas., H. H. Goulet; Regatta Committee, Harry J. Kelly, S. A. Graham, Charles H. Wilson; Directors, W. A. Stringer, J. H. Keefe.

The new Maxwell schooner is partly in frame at Moore's shipyard, Elizabethport, N. J., and the workmanship thus far promises a very finely finished yacht. She will be named Emerald. The ironwork is now partly completed at Winttingham's smith shop, and the yacht will be finished and fitted up at Bay Ridge.

The officers of the Carolina Y. C., of Charleston, S. C., are: Com., Wm. D. Porcher, Vice-Com., C. T. Lowndes; Sec., C. E. Prioleau; Treas., Wm. Jennings; Meas., Rutledge Holmes; Fleet Surgeon, J. L. Dawson, Jr.; Solicitor, G. M. Trenholm; Fleet Captain, Andrew Simons.

The Supervising Inspector of Steam Vessels, George H. Starbuck, rendered a decision on Jan. 30 in the case of Capt. Henry Morrison, of the steam yacht Alva, reversing the action of the local inspectors at Boston, by which Capt. Morrison's license was revoked for six months.

The White Lady, Mrs. Langtry's steam yacht, reached Marseilles on Jan. 30, after a very stormy passage from Coves, during which the deck and cabins were flooded and the furniture ruined by the water. Mrs. Langtry was not on board.

The Herreshoff 16-footer Mab, owned by Com. Shaw, of the Quincey Y. C., has carried a centerplate of Tobin bronze in all her races last season, and has won the championship of her class in the Hull, Quincey and Hull Corinthian clubs.

Asp, the 21ft. fin-keel built for Mr. E. S. Hunt last season, and which excited some comment from her peculiar lines, the sections in every direction being segments of circles, has been sold and will be taken to the West.

The Gardner schooner Aleneva will next year be under the charge of Capt. Frisbee, who has for several years been in the employ of C. S. Eaton in the steam yacht Melissa and Polly.

The Cape Ann Y. C. has elected the following officers: Com. John Brenton; Vice-Com., Fred Tanton; Fleet Captain, John McLaughlin; Sec'y, F. H. Shute; Treas., F. E. Smothers.

Sheldon & Co., of Boston, will build an 18ft. fin-keel yawl for use about Boston early in the season, her owner intending to take her to New York later on.

Among the new Cape cats at Crosby's shop, Osterville, is one 28ft. over all and 24ft. l.w.l., for Frank M. Randall, vice-commander of the Pavonia Y. C.

Atlantic schooner, has been cleared from the ice at Bridgeport and towed to New York to fit out for a Southern cruise.

Bedouin, cutter, has been sold by Archibald Rogers to C. W. Wetmore, owner of Liris and Nameless.

Minerva, cutter, has been sold by Willard P. Ward to T. C. Zerega, who will use her for cruising.

Verena, cutter, has been sold by A. E. Austin, Providence, to Ogden Jones, New York.

The new Vanderbilt yacht, the successor to Alva, will be named Valiant.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters drawings or descriptions of boats and fittings, and all items relating to the sport.

The beautiful poem which we publish this week appeared some time since in the *Wassersport*, the German yachting and canoeing journal, but it will be new to our readers. It needs only to be known to become popular with all canoeists.

FRITZ SCHLAUKOPF'S CANOE.
"Mein Bootsmann laut laut, als ein Kerl, der am Strand
Mit stilvollem Anzug so patzig dastand,
Seine Mienen verriethen, er dünkt sich nicht klein,
Und es schien, als ob alles auf Erden wär' sein.
Jack lüchelt verschmitzt, legt ein Priemchen sich zu
Und sagt: Du hast sicher Fritz Schlaukopf's Canoe.

Herr Schlaukopf, der grosse, allwissende Mann,
Der im Sturm oder Regen im Boot sitzen kann,
Fritz Schlaukopf, der immer als Erster bekannt,
Bis er einst für die Meisterschaftspaddel genannt.
O, Fritz! da hattest du nicht triumphirt,
Da hast du die Freunde,—dich selber blamirt.

Denn er sagte: Jetzt werd' ich allein mir was bau'n.
Das alles, ob Dampfer, ob Kutter wird hau'n.
Auch die Risse, die Bauart, die werden nicht laut.
Denn mein Renner, der wird in dem Keller gebaut.
Bin Erbauer, Kapitain und die Mannschaft dazu,
Und siege dann leicht in Fritz Schlaukopf's Canoe.

Nun hämmert und hobelt er Tags und bei Nacht,
Kaum gönnt er sich Ruh', bis das Werk er vollbracht.
Die Arbeit ist riesig, ist wahrlich kein Spass,
Der Geruch auf der Werft der war fürchterlich nass.
Er liess in den Keller auch Niemand hinzu.
Geheimniss umhüllte Fritz Schlaukopf's Canoe.

Der Renntag bricht an, und die Winde die weh'n,
Wir hielten auf Fritze wohl Hundert ze Zehn,
Beklagten die Armen, die sonst noch genannt,
Und furchtbar war alles auf's Rennen gespannt.
Denn er sagt zu uns stolz: Ja wettet nur zu,
Doch kommt, nehmt vom Stapel Fritz Schlaukopf's Canoe.

Wir freuten uns riesig, und folgten vernüht,
Als ob er schon jetzt über Alle gesiegt.
Da lag es nun endlich in prachtvoller Form,
Die Linien so reizend, die Spanten enorm.
Die Flagge die sticke sein Lieb' ihm dazu,
"Kamilla"—nach ihr—hiess Fritz Schlaukopf's Canoe.

Wir hoben sie hoch auf die Schultern zu Hauf'
—Ich meine das Boot—und wir trugen sie auf,
Doch das Boot war zu gross, und die Thüre zu klein,
Wir rannten uns beinah die Köpfe noch ein;
Auch die Fenster des Kellers, sie reichten nicht zu,
Und Windstille war's—um Fritz Schlaukopf's Canoe.

Explodirt mir das Dach, reisst die Wände mir ein,
So hört man verzweiflungsvoll Schlaukopf jetzt schrein!
Er tanzte vor Wuth und er fluchte und trat,
Kein Erdbeben kam, so sehr er auch bat;
Nichts hilft ihm, nichts nützt es, was immer er thu',
Und das Rennen begann,—ohne Schlaukopf's Canoe.

Jetzt kam noch Kamilla, sie wär' fast erstiekt,
Als sie zu besänftigen, an er sich schickte.
"Pass nur auf," rief sie wild, als vor Kummer er schwieg.
"Die Elsa, die dumme, die kriegt noch den Sieg."
"Meine Liebe ist flöten—einfältige Kuh,
"Geh' mir aus den Augen mit deinem Canoe!"

Drum sag' ich jetzt immer: Wer allzu hoch denkt,
Wer Alles nach eigenem Gutdünken lenkt,
Seiner Freunde wohlmeinenden Rath noch vergisst,
Wer Alles nach eigener Elle nur misst,
Dem ruf' ich dann lächelnd für immer laut zu:
Du segelst gewiss in Fritz Schlaukopf's Canoe.

CANOE NEWS NOTES.
The annual dinner of the Hartford C. C. on Jan. 23 was a most enjoyable affair, the members of the club being present, with Messrs. Winne, Nickerson, Knappe and other invited guests. One event of the evening was the reading of the history of the club for the past year by the club historian, T. S. Cheney, with many clever hits at the various members. President Parmele, Vice-Commodore of the Eastern Division, presided.
The Hoboken C. C. will hold a smoker on Saturday, Feb. 25, at 8 P. M. at the club house, foot of Tenth street, Hoboken, N. J.

Rifle Range and Gallery.

THE REVOLVER CHAMPIONSHIP.

W. C. Petty Again the Winner of the Winans Trophy—Score, 21 1-3in.
The Winans trophy was won for the fifth time on Saturday evening last, and after a well-made endeavor on the part of the popular "Barney" Walther to wrest the championship from Mr. W. E. Petty the latter scored another victory and remains in possession of the trophy. The match took place in the same gallery where so far all the winning scores have been made, that of the New York Pistol Club, at 12 St. Mark's place, this city, and from start to finish it was anybody's race, and the final string record of eighteen consecutive counting shots left the men a mere shade over an inch apart. There was a large degree of interest felt in the match, with the clubmen all on the Walther side in hopes and wishes, but with the valiant roundsman it was an expert of experts ready to call each shot the instant the trigger was pulled. Mr. Petty chose a 1in. bullseye, and, though the gallery was very clear of smoke, he found the strain on the eye very great indeed when it came to sighting shot after shot on so small a black spot. Of course, with an eye equal to the task, the smaller the bull fired at the better the chances, if the holding be up to the other conditions for scoring a close hit.
In such shooting as that for the Winans Trophy, where each shot is measured from the center of the 5in. cardboard disk, the area of the black bullseye is quite immaterial, hence all sizes of aiming spots are used, from 3in. bullseye down to a 1in. budd. Mr. Walther was content to fire at a 1½in. black center, and found it very easy to miss. The arms used were practically identical, being 8 & W. 44cal., 6in. barrels, firing special loaded ammunition, with a round ball. A lot of

new cartridge shells used by Mr. Walther annoyed him very much by their failure to explode, the trouble evidently being in the factory primers. A toss for the lead-off was won by Mr. Petty, who sent his antagonist to the range first. Bang! went the first shot, and a glance through the glass told the shot off the disk, only a fraction of an inch, but enough to score a miss on the record. Mr. Petty stepped to the score and did precisely the same thing, landing a bullet neatly just without the measuring disk. So far what honors there were were quite equal, and the first string in each of the scores was knocked out of any value in the record. On the next shot each man got on the disk and stayed there until the twenty-eighth shot, when the sequence of misses again happened, Petty following his opponent in a wild shot.

CHAMPION PETTY'S STYLE.

This left the three interior strings of the series of five to count under the conditions for the 18 shots of record. The first counting string went to Mr. Walther with 8.02in. for his six shots against the 8.81in. made by Mr. Petty. On the next string there was another slight advantage to Mr. Walther. 7.08in. against 7.12in. for Mr. Petty. It was the third or middle string of the series which really won the match for Mr. Petty. He was then shooting very close and held down to 5.41in. in the six shots, while Mr. Walther's score rose to 9.36in.

The delicate measuring device of the Zettler gallery which has settled so many hard fought battles of marksmanship, was put at work

BARNEY WALTHER'S STYLE.

on the disks as soon as the fight was over, with President Henry Oehl and Secretary Hecking taking the readings. The figures were quickly converted into inches and decimals of an inch, and how well each shot sped for the absolute center the following shot by shot record of the match will tell:

under will con.

W. E. PETTY.				
1st string.	2d string.	3d string.	4th string.	5th string.
.....	2.27	.92	.46	.26
.37	1.84	.63	1.44	1.22
.51	1.16	.66	.57	2.41
1.77	1.17	.46	2.17
1.02	.33	2.05	.89	2.31
1.12	2.04	.69	1.65	1.83
8.81		5.41	7.12	
Record—8.81+5.41+7.12= 21.34 in.				
BERNARD WALTHER.				
1st string.	2d string.	3d string.	4th string.	5th string.
.....	.37	2.50	1.45	.60
2.30	.32	1.77	1.33	.87
.48	1.97	.85	1.03	.40
1.00	2.33	1.35	.46
2.36	1.37	.39	2.46	1.62
.54	1.66	1.50	.35	1.24
8.02		7.26	7.08	
Record—8.02+7.27+7.08= 22.36 in.				

As the referee called out upon verification of the figures that "Mr. Petty is the winner on a score of 21.34in.," there came down on the table before him another deft from a capital revolver shot. It was from Theo. Beck, of Newark, N. J., the recent winner of the New York city championship match, held under the auspices of the New York Pistol Club, and in every way a worthy match for Mr. Petty. Thus far the Trophy has been well fought for, with an average of about one inch per shot for the winner scores of the entire series of five shoots. This is pretty good shooting at that distance as revolver work generally goes, but the arm is capable of better and closer scoring, and it is for the men to bring their skill up to the level of the machine. The record of the Winans Trophy and its conditions in brief stands to date as follows:

The Trophy was formally declared to Dr. Louis Bell as first winner on June 9, 1892, with his record of 17.52in. in 18 shots.
Geo. E. Jantzer and Dr. Bell shot for it on Aug. 3 and scored 22.5in. and 26.6in. respectively.
President Henry Oehl was the next challenger, and on Oct. 15 with 16 shots scored 19.82in. against 19.11in. on 16 shots for Jantzer, Roundsman W. E. Petty on Dec. 3 put up a score of 15.31in. in 18 shots against 20.49in. for Jantzer.
The match of February, 1893 with the scores of 21.34in. for Petty against 22.36in. for Bernard Walther brings the record of the match up to date.

If the New York Pistol Club takes up the invitation sent from Boston a very interesting revolver vs. pistol match ought to be the result. The Boston Athletic Association, which has a fine range in its club house, wishes to have a team of five of the New Yorkers come on for a match with either pistols or revolvers, promising to send on a team to shoot in the New York gallery and if necessarily a tie to shoot off in some neutral gallery. It is doubtful whether the New Yorkers can arrange for the trip; but if they do it would be necessary to take along their best skill to meet Sumner Paine and the other crack shots who make their headquarters at the Boston range.

Cincinnati Rifle Association.
CINCINNATI, O., Jan. 29.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores as appended below, the conditions being 200yds., off-hand, at the Standard target:

Gindele.....	9 10 9 7 9 9 8 9 8 7—85
Louis.....	7 10 9 10 10 7 9 8 10 9—89

The Zettler Rifle Club Shoot.
The prize shoot of the Zettler Rifle Club, booked for Jan. 28, 29 and 30, was by all odds the most successful of the season. All of the principal clubs in and about New York were represented.
Among the prominent visitors were: Gen. Franz Siegl, of the late unpleasantness; John H. Brown, the inventor of the famous wire gun; Capt. W. H. Robidoux, of the Greenville Rifle Club; Capt. L. P. Hansen, of the Excelsior Rifle Club; Capt. G. A. Schmitt, of the Williamsburg Shooting Society; Capt. E. Fisher, Miller Club; Capt. Wm. Weber, German-American Association of Jersey City; Henry Strater, of the New York Schutzen Corps; Henry Zettler, President of the Empire Rifle Club; H. Rehban, Hudson Club; August Christian, Jenette Gun Club; J. Arnold, New York City Schutzen Corps; Butcher King, German-American Society of New York; Henry Holges, from Harlem, N. Y.; Gus Weigman, from Newark; Geb Krauss, the great mogul from Williamsburg. The scores of the successful shooters will be found appended:
Ring target, 3 shots per ticket, two best tickets to count, possible 150 points:
B Zahn.....74 75—149 H Zettler.....73 74—147
M B Engel.....74 75—148 I Marten.....73 73—147
H Holges.....74 74—148 L P Hansen.....73 73—146
M Dorrier.....74 74—148 H Strate.....71 74—145
R Busse.....73 75—148 L Buss.....73 73—145
B Walther.....73 74—147 L Schmitt.....71 73—144
W Rosenbaum.....73 74—147 E Fisher.....72 72—144
F O Boss.....73 74—147
Most Bullseyes—Best prize, B. Zettler; second prize, Ignatz Marten.
Best Bullseyes—B. Zahn, E. Fisher, B. Zettler, B. Walther, C. W. Horney, W. Rosenbaum, C. G. Zettler, J. Holges, L. P. Hansen.
GREENVILLE.

Miller Rifle Club.
The following scores were made by the members of the Miller Rifle Club at headquarters, 423 Washington street, Hoboken, Feb. 1:
D Miller.....240 W Rogers.....222
F Kloepping.....230 J J Devitt.....207
H Vanderheyden.....210 C Prien.....220
W Forkel.....228 L Sohl.....232
F O Boss.....239 A Pfingh.....212
F A Stadler.....217
Medal winners—First class, Miller, 240; second class, Kloepping, 230; third class, Stadler, 217.
The officers elected later in the evening were: Captain, Ernest Fischer; First Lieut., Louis Sohl; Second Lieut., Frederick Kloepping; Third Lieut., Charles Prien; Orderly Sergt., August Meyns; Sergeant at Arms, Frank Kammer; Secretary, J. H. Kruse; Treasurer, Frederick Brandt; Trustees, H. Cordts, William Meyers and Captain Fischer. The positions of financial secretary and first and second shooting masters will be filled at the next meeting. Wm. Rosenbaum and August Pfingh were elected members.
JAY H. KAY.

Rifles at Maple Bay.
SYRACUSE, Feb. 2.—The following are scores made by members of the Syracuse Rifle Club at Maple Bay range yesterday. Distance 200yds., standard American target:
Rest.
Clark.....9 6 11 11 11 11 12 11 10 12—104
Leighton.....9 11 12 11 11 9 12 11 8 9—103
* Double rest and telescope.

R. McNEIL, JR., Secretary.

Beideman Rifle Club.
BEIDEMAN, N. J., Feb. 4.—The following completes the weekly shoot of the Beideman Rifle Club week ending Feb. 4. Conditions, 25yds., ½in. ring-targets, 1½in. bullseye, ½in. center, possible 250, open air range:
A J Yergey.....226 W Giebert.....220 H Myers.....225
J L Wood.....241 Mr Bradbury.....229 A J Hayes.....224
A L Gardener.....241
WALT. GIEBERT, Secy.

Cuyahoga County Championship.
CLEVELAND, O., Feb. 4, 1893.—Beginning Saturday, March 4, and on the first Saturday of each month following until won, the shooters of Cuyahoga county will have a chance to contest for a handsome \$100 Parker gun on the grounds of the Arlington Gun Club. The above club has made arrangements with the Parker Bros. for the purchase of such a gun, and they will take special care in the selection of the gun, making it a trophy worthy of the contest. The shooting will be at 30 bluebirds per man from five expert traps, rapid fire known traps, unknown angles. Winner must win it six times to become its owner, not necessarily in succession. Handicap can be had on application.
R. J. BISSETT,

Trap-Shooting.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

February.—Live bird tournament on Erb's grounds, Bloomfield avenue, Newark, N. J.
Feb. 14-16.—Reading Shooting Association, second spring tournament, at Shillington, Pa. Two days at targets, third day at live birds.
Address H. W. Matz, Three-Mile House, Shillington, Pa.
Feb. 14-16.—Forester Gun Club tournament, Davenport, Iowa.
Feb. 16.—Essex Gun Club shoot, on Heritage's grounds, Marion, N. J.
Feb. 20.—Match shoot, T. C. Wright and Thos. Murphy, at 25 live birds, Hurlingham rules, for \$50 dollars a side, at Park Hotel grounds.
Feb. 21.—H. P. Davies Co. tournament, Toronto, Canada.
Feb. 21-23.—Atchison, Kansas, tournament. Amateurs only.
Feb. 21-22.—Highland Gun Club tournament, Des Moines, Ia. Live birds and bluecock targets.
Feb. 21-23.—Oneida County Sportsmen's Association tournament, at Utica, N. Y. Live birds and targets.
Feb. 22.—Live bird tournament, on Erb's grounds, Newark, N. J.
Feb. 22.—Syracuse Gun Club, "jack rabbit" tournament, at Syracuse, N. Y.
Feb. 22.—J. L. Brewer vs. E. D. Fulford, 100 live birds each, for \$100 a side, Utica, N. Y.
Feb. 22.—Eclipse Outing Club, annual shoot at live birds, at the Pine Brook Hotel grounds.
Feb. 22.—Match shoot, Wm. Ryan vs. Chas. Anderson, at Willard Park, for \$25 a side, at 10 live birds, old Long Island rules to govern.
Feb. 22-23.—Bloomburg (Pa.) Gun Club tournament.
Feb. 28.—New Jersey Trap-Shooters' League, team shoot, grounds of Union Gun Club, Springfield, N. J.; also open to all tournament, beginning at 9 A. M.
March 10.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap, live bird tournament, New Jersey (grounds to be named); Hurlingham rules, Monaco boundary.
March.—New Mexico Mutual Fish and Game Protective Association, second annual tournament.
May 2-3.—Independence (Ind.) Gun Club tournament. Added money.
May 9-11.—Ohio Trap-Shooters' League tournament, Columbus, O.
May 17-18.—West Newburgh Gun Club spring tournament, at Newburgh, N. Y.
May 23-25.—Knoxville Gun Club tournament, \$1,000 added to purses. Also valuable merchandise prizes.
May 29.—Eastern New York Trap League tournament, at Canajoharie, N. Y.
May.—Saratoga (N. Y.) Gun Club tournament.
May 30-June 1.—Iowa State Sportsmen's Association, Clear Lake, Ia.
June 5-10.—Illinois State Sportsmen's Association, Chicago, Ill.
June 12-16.—New York State Sportsmen's Association tournament, at Rochester. H. M. Stewart, Cor. Sec'y; 412 Ellinger & Barry Building, Rochester, N. Y.
Oct. 19-20.—West Newburgh Gun Club fall tournament, at Newburgh.

DRIVERS AND TWISTERS.

A club composed of trap-shooting enthusiasts has recently been organized in Woodside, N. J., under the name of the Columbia Gun Club. There are fifteen members, and these are the officers: President, Edward Shroud; Recording Secretary, Samuel Taylor; Financial Secretary, V. W. Rembe; Treasurer, Calvin Pitt. The United States Pigeon Company traps are used. The grounds are located near the Belleville reservoir. Strict rules are enforced, and shoots, open to all, at targets, will be held on all legal holidays. The club meets at 167 Sylvan avenue, Woodside, and will have its next shoot on Washington's Birthday. Communications for the club should be addressed to V. W. Rembe, Woodside Steel Works, Newark, N. J.

Shooters who go to the Reading Shooting Association tournament next Tuesday, Wednesday and Thursday will get a royal reception from the club members, but President Harry Matz in particular. Mr. Matz is an expert live bird and target shot and is immensely popular among Pennsylvania sportsmen. Those shooters from other places who have taken part in Reading shoots know well his lavish manner of entertaining. The Three Mile House, where the club has its headquarters, is a famous old hostelry, and accommodations for shooters and shooting cannot be surpassed. The grounds may be reached from Reading by electric cars, which run every fifteen minutes.

The annual election of officers of the Washington Heights Gun Club was held at the club's headquarters, 304 Amsterdam avenue, on Jan. 26, and the following officers were elected for the year 1908: President, H. W. Oliver; Vice-President, Matthew Cox; Secretary, J. R. Terhune; Treasurer, Alderman R. B. Saul; Captain, C. R. Terwilliger; Executive Committee: Hugh Harrison, David Wagner, M. J. Ellis, Thomas Rodgers, Eugene Seales. The regular monthly live pigeon club shoot will be held Feb. 15, at the club grounds, 170th street and Kingsbridge Road.

The match to be shot next Monday at Erb's Newark grounds, between Howland Gasper and Allen Willey, was forced upon the latter, who at first positively refused to again meet Gasper in a match. Willey is at least ten birds in a hundred better than Gasper, and even this is a high rating for Gasper. Gasper insisted, however, upon having a race on the terms finally arranged, and as Willey was a winner he was compelled to accept.

On Feb. 1 T. W. Morley, of Paterson, and Mr. Woolf, of Morristown, shot at 25 live birds each for \$25 a side, on Frank Class' Morrissey Driving Park. Woolf killed 18 to Morley's 11. In a series of 10-bird tweeps which followed the scores were: Morley 7, 7, 6, 8; Tenard 7, 8, 7, 8; Woolf 8, 9, 8, 9; Class 9, 10, 9, 9; Lyons 5, 7, 5, 7; Willison 5, 7, 5, 7.

A kingbird shoot, jack rabbit system, will be held on the Syracuse Gun Club grounds at 10 A. M. sharp, Feb. 22. Lunch on the grounds. Each shooter breaking over 60 per cent. receives 10 cents for every target broken, balance divided 50, 30 and 20 per cent. to the three highest scores. Ties to be divided. Shells for sale on the grounds. A. E. Spangler, G. H. Mann, H. R. Becker, field committee.

At the annual meeting of Endeavor Gun Club officers were elected for the year: Dr. Z. P. Fletcher, President; F. Post, Vice-President; J. D. Polhaus, Secretary; C. W. McFeck, Treasurer; J. A. Creveling, I. McFeck, and A. R. Strader, Directors; E. Hollister, Captain. The secretary's address is 11 Cottage street, Jersey City, N. J.

The annual meeting of the Machinodous Gun Club, Moodus, Conn., was held Monday evening, Jan. 23. The election of officers was as follows: U. S. Cook, President; S. P. Clark, Vice-President; F. C. Fowler and D. J. Treat, Directors; G. P. Leckenier, Secretary and Treasurer; F. C. Fowler, Captain.

The Syracuse Gun Club was the first to claim Feb. 22 for a tournament, but since then four other claims have been made for the same. This does not matter so far as clubs long distances away are concerned, but it does look as though Utica might have avoided the date.

At the annual meeting of the Knoxville, Tenn., Gun Club the following officers were elected for 1908: S. B. Dow, President; T. C. Eldridge, Vice-President; S. Van Gilder, Captain; J. C. White, Treasurer; R. Van Gilder, Secretary.

Mr. H. Bishop writes from White Haven, N. J.: "I will hold an all day target shoot at White Haven, N. J., on Friday, Feb. 10, beginning at 10 o'clock. Will insure a good time to all who will visit us."

The Bloomburg (Pa.) Gun Club will hold their second annual tournament on Feb. 22, 23 and 24. Live birds all day on the 22d, and targets the other two.

The sportsmen of West Orange, N. J., are about to form the West Orange Gun Club, which will not only practice trap shooting, but field shooting as well.

A live bird match between James Dunn and John Conlin took place at Dennis's Hotel, in Kearney, on Jan. 31, Dunn grassing 20 to Conlin's 18 out of 25.

The White Plains Gun Club will hold an all day shoot at live and clay birds on Feb. 22 on their grounds at White Plains, N. Y.

C. H. TOWNSEND.

Saratoga Springs Tournament.

SARATOGA SPRINGS, N. Y., Feb. 2.—The Saratoga Gun Club claims the following dates for their four-day tournament, to be held May 9, 10, 11 and 12, and would further say to all interested in trap-shooting, send a postal card to W. H. Gibbs, secretary, Saratoga Springs, N. Y., with your name and address, thereby avoiding the possibility of being overlooked or not on the list when we issue the programme. It will be the shoot of the season. Come, enjoy, be convinced that we are the people.

INTERSTATE M. & D. ASSOCIATION.

CERTIFICATE OF THE ORGANIZATION OF THE INTERSTATE MANUFACTURERS' AND DEALERS' ASSOCIATION.

"This is to certify that we, George H. Sampson, Charles Tatham and John H. Dressel, do hereby associate ourselves into a company, under and by provision of an act of the Legislature of the State of New Jersey entitled "An Act Concerning Corporations," approved April seventh, eighteen hundred and seventy-five, and the several supplements thereto and acts amendatory thereof, for the purpose herein mentioned, and to that end we do by this certificate set forth: That the name which we have assumed to designate such company, and to be used in its business and dealings, is the Interstate Manufacturers' and Dealers' Association."

The places of business in this State where the business of such company is to be conducted are Jersey City, in the county of Hudson, and Oakland, in the county of Bergen, and the principal part of the business of said company within this State is to be transacted at Jersey City, in the county of Hudson; and the objects for which this company is formed are, to encourage field and trap shooting throughout the United States of America and its territories, by organizing and assisting to organize clubs for that purpose, and by giving tournaments and distributing advertising matter pertaining thereto among sportsmen.

That the total amount of capital stock of said company is twenty-five hundred dollars, the number of shares into which the same is divided is fifty and the par value of each share is fifty dollars.

The power of transfer of any share of said stock by the holder thereof is limited and restricted as follows: Before such holder shall transfer the same to any person not already an authorized shareholder, he shall offer in writing the sale of the same to the board of directors of the company for the benefit of the shareholders, at a valuation to be fixed by the board of directors; such offer shall remain open for the period of thirty days, and if not accepted within that time, in writing, the holder may transfer such share to any person. The said power of transfer is also to be limited and restricted by such by-law in regard to assessments upon shareholders as may be adopted by the shareholders of the company.

The amount with which the said company will commence business is one thousand dollars, which is divided into twenty shares of the par value of fifty dollars each.

The period at which said company shall commence is the first day of January, eighteen hundred and ninety-three, and the period at which it shall terminate is the first day of January, nineteen hundred and forty-two.

In witness whereof, we hereunto set our hands and seals this twenty-third day of December, A. D., eighteen hundred and ninety-two.

GEORGE H. SAMPSON.

CHARLES TATHAM.

JOHN A. H. DRESSSEL.

By-Laws.

ARTICLE I.—Stockholders.

1. As far as possible, stockholders shall be confined to manufacturers and dealers in firearms and supplies.
2. Application for stock shall be made in writing, and for at least one share, and shall be acted upon by the executive committee at its first meeting after such application is made.

ARTICLE II.—Meetings.

1. The annual meeting of stockholders shall be held on the third Tuesday in December of each year for the election of officers and for the transaction of such other business as may properly come before the meeting.
2. To constitute a quorum at any meeting of stockholders there must be at least a majority of the outstanding capital stock, and each share of stock so represented shall be entitled to one vote. A majority of the votes cast shall be decisive.
3. A special meeting of the stockholders shall be called whenever the executive committee may deem one necessary.
4. Notice of each annual meeting shall be mailed to each stockholder ten days before the date of meeting, and notice of each special meeting at least five days before the meeting.
5. The president to call a special meeting at request of holders of five (5) shares of stock.

ARTICLE III.—Officers.

1. There shall be a board of seven directors, who shall be elected by the stockholders by ballot at each annual meeting, to serve for one year or until their successors are elected. A majority of the votes cast shall be necessary for election. The board shall fill its own vacancies occurring during the year of its service.
2. The board of directors shall elect from their own number the president, vice-president, secretary and treasurer required by law, and shall appoint from their own number an executive committee of three.
3. The board of directors shall also appoint a manager.

ARTICLE IV.—Duties of Officers.

1. It shall be the duty of the president to preside at all meetings, to have a general supervision of the affairs of the Association.
2. The secretary shall attend to all meetings and record all votes of the company and directors, and keep minutes of their proceedings in a book provided for that purpose, preserve all records, send notices of the time and place of all meetings and prepare and publish all notices and communications ordered by the executive committee. He shall be sworn to the faithful discharge of his duty.
3. The treasurer shall collect all moneys due the Association, make all disbursements upon bills approved by the secretary and manager, report of the annual meetings, and of other matters required, the state of the funds of the Association, and the names of members who are in arrears for their assessments or dues. All checks shall be signed by the treasurer, and he shall give bonds if required to do so by the directors. He shall also sign all certificates of stock issued.

ARTICLE V.—Assessments.

1. Each shareholder may be annually assessed by the board of directors to the amount not exceeding two hundred dollars, payable in equal quarterly payments, and due without notice Jan. 1, April 1, July 1 and Oct. 1. In case such shareholder shall fail to pay such assessment within thirty days after it becomes due, the board of directors may, in their discretion, cancel any certificate held by such delinquent shareholder, and written notice of such cancellation shall be mailed to such shareholder, and thereupon he shall cease to be a shareholder in said Association and a new certificate for any share so canceled may be issued to such person as the board of directors may direct.
2. No special assessment for paying guaranteed purses or other extraordinary indebtedness shall be levied, except by two-thirds vote of the outstanding stock.

ARTICLE VI.—Privileges of Stockholders and Others.

1. Only stockholders and those licensed by the directors of the Association shall be allowed to have tents on the tournament grounds, and only such ammunition as is manufactured or dealt in by stockholders will be for sale.
2. The targets furnished by the Association must be manufactured by a stockholder of the Association.

ARTICLE VII.—Amendments.

1. These by-laws may be altered or amended by a majority vote of the stockholders present at any annual or special meeting of the Association. Such proposed amendments shall be presented in writing, signed by at least two stockholders, and notice of same shall be forwarded to each stockholder of the Association at least two weeks before the time at which same are to be acted upon.

The Powder Challenge Accepted.

Editor Forest and Stream:

I proposed to Mr. J. A. R. Elliott or anybody else a "practical" test of the killing forces of Schultze and American wood powder, because Mr. Elliott has seen fit to belittle Schultze powder, which he has, however, repeatedly failed to do, after signs of failure under American wood. He stated as a reason for writing that his silence might have been construed that wood powder was the cause of his being defeated in his first match with Mr. Fulford by a very low score, a fact which all spectators knew to be the case, and which caused Mr. Elliott to substitute Schultze for wood in the next four matches.

I was very careful to state explicitly how the test was to be made fair and impartial in every particular, and how to eliminate the elements of luck and difference in the skill of the shooters.

I wanted the test to be made and did not challenge with generalities or impossibilities for the sake of newspaper notoriety, and I asked no advantage.

Mr. Elliott was free to choose between several ways and means of comparing the actual killing forces of the two powders under exactly alike and fair conditions. Not to place Mr. Elliott at a pecuniary disadvantage, I offered him \$100 expenses to come to New York to have the test made. I offered odds and also placed my check for \$250 in the hands of the FOREST AND STREAM as a guarantee of good faith on my part.

I knew Mr. Elliott to be in the pigeon shooting business as a professional, and that my proposition was not exactly under his line. He declined my proposition, and gives a good, valid reason, namely, that his business connection heretofore would prevent him from accepting.

This is perfectly satisfactory, but he might have declined with a little better grace and not shown his ugly spirit, born no doubt of disappointment. However, we do not all see alike.

That I succeeded, in the opinion of practical, unbiased sportsmen, to devise manner and means to arrive at the exact killing forces of the two powders, is proved by the expressions of leading shooters from various parts of the country.

In reply to Mr. Lindsey's letter in the same issue of your valuable paper, I am very happy to accept his proposition as made and request Mr. Lindsey to post his check for \$500 with the editor of FOREST AND STREAM to cover my check for full amount, which is now in the same hands, and which I wish to apply for this bet.

I concede all Mr. Lindsey's mentioned conditions. The test to be played or played, both powders to be bought in the open market at four or more different places by disinterested parties or the referee, and an equal number of cartridges to be used from each lot.

The velocity tests to be made of course with measure for measure charges, as Mr. Lindsey proposes. The comparative bursting pressures of any value and were it not for the genius of Mr. E. W. S. Griffith, the world would not know any facts about the stringing of shot. However, if Mr. Lindsey has discovered something new, so be it, and I will allow him to carry out any fair experiment he may wish in this line. It will prove, however, "rainbow chasing" on Mr. Lindsey's part and never be a subject of comparison for different kinds of powders.

Additional questions as to manner of how to arrive at fair results of the comparative merits of the two powders to be left to the decision of the judges and referee.

As soon as Mr. Lindsey has deposited his \$500, I shall be willing to meet him at his own office to complete arrangements, though he makes it a point to say that he is not willing to come to mine, and I promise him that I shall not hold him to my feet. This would be a glorious country best, that an American without any scientific schooling in chemistry, etc., who of necessity must mix, make and sell small amounts, and is constantly experimenting and changing his powders in quality of product in a pot-luck style, can compete with the greatest acknowledged scientific authorities in explosive chemistry in the world, operating plants and scientific machinery, backed by unlimited capital, watched constantly by government experts, mixing 100 times as many batches and keeping their product under observation for twelve months before marketing it, although they are Englishmen.

However, the objections which might be urged against the English products on the score of American patriotism have been removed, as far as the E. C. powder is concerned, already, and the ever-increasing demand for Schultze powder will soon necessitate an American company and a new factory for Schultze also.

NEW YORK, Jan. 6. JUSTUS VON LENGERKE.

Editor Forest and Stream:

After a cursory examination of the columns of your valuable paper for the past few weeks I notice that the all-absorbing topic seems to be the question of how it is best to classify and handicap the trap-shooters of the country. I cannot at this time refrain from inviting myself unasked to criticize the various systems advanced by these would-be handicappers. Our friend Jesse Humphrey's ideas are theoretically all right, and he is to be congratulated on his effort; but we cannot admit that they are practical. While they appear simple, they are anything but so. To work successfully on the tournament grounds, the ideas of our friends Crutty and "Jack Rabbit" Worden are worthy of serious consideration as far as the division of purses is concerned, but the idea of constantly changing shooters from one class to another as advanced by nearly all of the new handicappers causes great confusion and dissatisfaction, while the retrogressive action of being compelled to shoot the same number of shots, and the same number of times, is a system that will be modern and up to the times.

Shooters go to a tournament to shoot and not to be entertained by other sports or amusements, and if a reasonable programme be issued they will not be shot out at the end of the day and will have had ample time to partake of refreshments and indulge in friendly conversation. If a shooter is not called to the score once every fifteen minutes he becomes restless, forgets about shooting, and for amusement turns his attention to other things which may or may not take him away from the shooting grounds. Every shooter can fire from 100 to 150 shots between 9 o'clock in the morning and 5 o'clock in the afternoon without becoming over-fatigued.

Mr. Parker has been trained in the Interstate camp and many of his ideas emanate from those handicappers, and will no doubt be used by the tournament grounds. Distance to be used as the basis for handicapping, added money, portable screens, etc., are ideas that have long been talked of at headquarters.

It would be useless for me to send any system for handicapping, etc., to my friends in the American Manufacturers' Association, for although they know that I am the author of the rules for trap shooting which were adopted by the American Manufacturers' Association, they have not the slightest modification to make. The system which has been used very generally throughout the country under one name and another, and also that I claim authorship to the present system for handicapping the shooters, which, in spite of some objection, has been recognized and used in almost every State in the Union, they would brand anything coming from me as wrong, bad, impracticable on its very face, while they know that what I have heretofore published has been for the time being entirely satisfactory.

When the Keystone rapid firing system was first introduced and the amateur rule only was used there was not a trap shoot in the country who could average over 80 per cent., whereas the same men had been averaging much better than 90 per cent. shooting at unknown traps, unknown angles and different distances under the one-man-up system. It took the experts a year to become accustomed to the new system. They means were devised to handicap them so that the weaker shots would have more opportunity to cope with them, and to prevent the experts from dropping for places, forming pools, etc., they were compelled to shoot before the amateurs. Notwithstanding the fact that some of the expert shots have complained that the Interstate Manufacturers' and Dealers' Association handicap is too severe, they have as a rule maintained such a high average that they have received more money than if they had shot under the amateur rules and been compelled to divide the purse with the semi-experts and the better shots among the amateurs who would have been close on their heels.

Two difficulties with the system have developed: The first is, that it has not been practicable to advance all the amateurs, who are averaging the records made at their home clubs, have averaged 80 per cent. or better to the semi-expert class; this in turn makes the semi-expert class deficient.

The second is that the trap-shooters in general want something new, simply because it will be new.

As a member of the classification and tournament committee of the Interstate Manufacturers' and Dealers' Association, I shall submit the following system to the members of the coming season: Novelty Rule. Five traps will be used in a straight line, with three traps placed in the field 60 yds. from the score, 10 yds. apart. The outside traps to be numbered 6, 7 and 8. Unknown traps, unknown angles, different distances. Six men to a squad. Amateurs, semi-experts and experts will all shoot this rule, and the traps will be sprung by the experts.

The amateur (Class C) will stand at the 16-yard mark, the semi-expert (Class B) will stand at the 18-yard mark, and the expert (Class A) will stand at the 20-yard mark. Shooters will be classified by the Association from the records they have made at their home clubs for a period of three months previous to their application for a certificate of classification. As soon as an amateur averages 75 per cent. he will be advanced to Class B; as soon as a semi-expert averages 85 per cent. he will be advanced to Class A. Purses will probably be divided into five money, and if there is any change in this rule due notice will be given of same. It is also proposed to add 50 cents for each entry to at least two guaranteed events each day of a shoot, which money will be donated by the Association. This system will be copyrighted by the

Interstate Manufacturers' and Dealers' Association, but any association or club will be at liberty to use the same providing they publish it under its proper name. All these different matters will be embodied in the general trap shooting rules issued by the association.
H. A. PENROSE, Sec. I. M. & D. A.

Utica Midwinter Tournament.

We will hold a grand midwinter tournament at live birds and targets on Feb. 21, 22 and 23 at the West Shore Shooting Grounds, two minutes' walk from the West Shore depot. The generous response received from our preliminary notice of the shoot from shooters all over the country leads us to announce positively that the leading live bird and target shooters will be present. We have a large house, well warmed, and can accommodate all the shooters who may come. Remember, no handicaps and nobody barred. This will be the only big shoot of the season where all shooters can meet on even terms. The live birds will be strictly first class Western birds, and our arrangements warrant us in guaranteeing to have all the live birds the shooters may want. All live birds from King's fast traps, American Shooting Association Rules. Bluecock targets from expert bluecock traps, and kingbirds from Cruttenberg & Card's expert traps. American Shooting Association rules to govern all target contests. The three sets of traps will be running all the time, thereby insuring the shooters all the shooting they may desire. There will be bluecock, kingbird and live birds every day.

We take great pleasure in announcing that we have arrangements completed for a race between Capt. John L. Brewer, of Bridgton, N.J., champion live bird shot of the world, and E.D. Fulford, of Utica, N.Y., at 100 live birds each for a citizens' purse of \$200, donated by the citizens of Utica. This will afford the shooters of the country an opportunity of seeing a genuine contest between these well known experts. We also desire to announce that on the 5th and 6th of the month of New York, champion lady shot of the world, will also be present and shoot an exhibition race at 50 live birds with Henry L. Gates, of Utica. This will be on Wednesday at 1 P.M. sharp. The Brewer-Fulford match will follow at 2 o'clock.

All money divided 40, 30, 20 and 10 per cent., all target events rapid-firing, birds included in entrance. All ties divided. Five per cent will be deducted from each target event. This will be divided into average prizes for events from 1 to 9 inclusive, 40, 30, 20 and 10 per cent. for best averages.

Davis Cottage Hotel is located within a short distance of the shooting grounds, where warm meals will be furnished at all hours. Special rates can be obtained at all hotels. Squires' high-grade hand-loaded shells for sale on the grounds. Our long experience in managing tournaments is a sufficient guarantee that the conduct of this shoot will be first class in every way. Remember that the shoot will take place no matter what the weather may be. Positively no outside shooting will be permitted. We shall spare no pains to make this shoot a grand success. Programmes mailed to any address on application. Send us the address of your shooting friends and we will mail them copies.

E. D. FULFORD, A. S. HUNTER, W. C. HARRIS, H. L. GATES.

The Kazoo System.

All of the trap-shooting systems which have been promulgated through Forest and Stream have shown serious defects. Why? Because it is an easy matter to make a system on paper, but to make one that will stand the practical test of usage; then it's different.

Considering that an experience second to nobody's has educated me in these matters, I will try and help you out. I will take what is good of the known systems and by combining same with features new and original thus give the shooters a system which only needs a trial to convince that it is "the way they have always sought." How shall I do this? First, combine the good features of the old five-trap, one shooter up at a time, with the fast-firing system, in order that the shooters may get quick action and not have to wait. Shooting rules as follows: Five traps, fast firing, traps pulled out according to indicator, indicator changed every five shots. This gives a shooter five unknown traps when at No. 1, four ditto when at No. 2, three ditto when at No. 3, two ditto when at No. 4, and one ditto when at No. 5, he is the pulling, then he will know his trap.

Money division, modified "jack rabbit" giving equity to all shooters, whether expert, good or bad, poor or indifferent, by crediting or charging equally for hits or misses. Handicaps are a puzzle, the North and the Parker, which rank the amateur with the expert when he chances to get into the money, are no good, because they cut the amateur's head off by penning him as an expert, and must not cut out the expert by adding yards to his firing point, and we can afford to throw him out, because when he goes to a shoot he enters in every match from start to finish. If he loses a dollar or two, he doesn't seek a secluded seat on the grand stand and watch the horses go around in waiting for a match in which there is no entry fee. We can't afford to lose him, even if he is a pirate, and how shall we handicap him. Let me tell you how to do it. Shoot in the manner above shown and handicap the expert by giving the amateur more yards. The form of shooting is difficult, very difficult, for the best of experts will make misses, lots of 'em, and the amateur, oh, dear, he'll make many more; so to equalize matters just let him use his second barrel. Result, more entries, more noise, lots of fun, all are happy and everybody satisfied.

BEN O. BUSH.

KALAMAZOO, Mich.

An Old Long Island Wing Shot.

Mr. Peter Garmes, Sr., is one of the oldest members of the New York Getman Gun Club, who hold their shoots at Dexter Park during the season. He is over 70 years of age and was born in Hanover, Germany. In his younger days he used to be an expert at cross-shooting, and at the present time he is able to hold his own with some of the best trap-shooters in his club. At the closing shoot of last year he tied with H. Thorsen with a score of 8, but was defeated on the shoot-off for the club medal. He made at the last club shoot on Jan. 18 a score of 7 out of 8 from the 25yd. mark. His son, Peter Garmes, Jr., is also a member of the club and won the medal at the last shoot with a straight score of 8. Mr. Garmes, Sr., has been for a great number of years a prominent man in the produce business at Washington Market and on all possible occasions joins in any shooting expedition that he can in the vicinity with his son and club members.

"Jack Rabbit" System in Use.

On Saturday last the Wilmington (Del.) Rod and Gun Club gave a pleasant shoot at its grounds, Front and Union streets. During the afternoon a shooting match at 25 bluecocks took place between Charles Fehrenbach, "Olderback," and Harry Hartlove, of the Wilmington Rod and Gun Club, and Harry White, of the Waverly Gun Club, and Newton Grubb, of the Grubb's Corner Club. The former pair won by a score of 45 to 24. The individual scores were, Hartlove 24, Fehrenbach 15, White 11, Grubb 13. The sweepstakes shooting was spirited, the "Jack Rabbit" system being used for the first time in this city. The new system met with the approval of the shots who were present. The scores:

Ten birds, 50 cents entrance, 11 entries:

Charity Shoot at Rochester.

ROCHESTER, N. Y., Jan. 29.—Herewith find scores of our "jack rabbit" shoot held Jan. 25 by the Rochester Rod and Gun Club. This shoot was entirely in the interest of charity, the entire proceeds being given to the poor of our city. I have given at the end of each shoot the figures showing how the money was divided according to the "jack rabbit" system, also the figures showing how it would have been divided under the 40, 30, 20 and 10 per cent. system. Our jack rabbit division paid 10 cents for each target broken, the surplus being divided into three moneys, 50, 30 and 20 per cent. Keystone targets were used and thrown from expert traps, unknown angles, known traps.

Sweep No. 1, 15 keystones, \$1 entrance:

Keystone Shooting League.

FRANKFORD, Philadelphia, Feb. 3.—Inclosed find score of the Keystone Shooting League of Philadelphia, club shoot for prizes. This is the first monthly shoot the league has held since its reorganization. The prizes consist of very handsome gold badges, and are to be contested for monthly, until they have been won three successive times by one person, when they become his property. The shooters are classified and handicapped. It was beastly weather to shoot in which partly accounts for the low scores made. Wm. H. Wolstencroft at

18yds. won in class A, N. M. Bancroft at 16yds. in class B, and Elmer Ridge at 15yds. in class C:

Answers to Correspondents.

R. C. L.—The name is E. Malley.
T. W. W., New York.—Address the State Geological Surveys at the capitals of the several States.
O. G. L., Comstock, Mich.—The autobiographical sketch of "Nessmuk" published in his "Forest Runes" was reprinted in our issue of May 8, 1890, the number containing notice of his death. See "Nessmuk" memorial note elsewhere.
C. O. H., Springfield, Ia.—Please inform me through your paper if there is any law in Iowa to protect rabbits from being hunted by ferrets. There are parties hunting rabbits that way here, and they say it is all right, but I don't think so, although I can't find any law to protect

them. Ans. The Book of the Game Laws gives no law at all on rabbits in Iowa.

W. E. R., Reading, Pa.—Please tell me through your paper what number of shot and powder charges I should use for ducks; an arrangement for my first ducking trip this coming spring? Ans. For 10-gauge gun use 4½dbs. powder and 1½oz. No. 6 shot; for 12-gauge, 3½dbs. powder, 1½oz. No. 6 shot.

W. G. B., Boston, Mass.—Are seals known to eat wild fowl, or do they subsist wholly on fish? Ans. They subsist chiefly on fish, with the probable addition of squid and shrimp, but occasionally capture gulls and other sea birds. They are reported to swim beneath the fowl and seize them unobserved. See Dr. J. A. Allen's "History of North American Pinnipeds."

W. E. D., Portland, Oregon.—Where and how and at what cost can I procure the reports of the Fisheries Commission? Ans. For Reports and Bulletins of U. S. Fish Commission write to Marshall McDonald, Washington, D. C., or to your Representative in Congress. For State reports address the presidents of the various Fish Commissions mentioned in our issue of Jan. 12, 1893.

S. L., Union Centre.—As there seems to be some doubt in regard to the law, will you kindly advise. Is the catching of perch and pickerel with hook and line on tip-up to be used in holes cut through the ice prohibited by the present game law in the counties of Broome and Tioga, also in Susquehanna county, Pa.? Ans. For the New York law see answer to C. S. S. The Pennsylvania law forbids taking pickerel between Feb. 1 and June 1.

C. K. S.—What was the name of the author of "Woodcraft," when and where did he die, and what was the significance of the word "Nessmuk"? Ans. "Nessmuk" was a pseudonym of Geo. W. Sears, who died May 1, 1890, at his home in Wellsboro, Pa. The word is Narragansett Indian origin, and signifies "Woodduck." See this issue and preceding ones for notice of memorial fund now in progress to provide a stone for the grave of "Nessmuk."

COOKING CRAWFISH.—A correspondent wants to know how to cook crawfish. New York, New Orleans and San Francisco are the principal markets for these crustaceans. The best crawfish come to New York from Milwaukee. Montreal furnishes the smallest kind, and San Francisco has a form generally distinct from the Eastern ones. Milwaukee and Montreal crawfish are said to turn red after boiling, while those from the Potomac River do not become red. Perhaps some readers of FOREST AND STREAM will inform us of methods of cooking these animals other than by boiling.

INQUIRER, Florence, Mass.—Can you tell me who the game warden for western Massachusetts is? I send you an advertisement cut from our local paper which shows that our markets and restaurants are selling game here right along. I saw grouse, quail and jack rabbits in one of our markets to-day. Is it not against the laws of this State now to sell game? Ans. For name of warden apply to Fish and Game Commissioner E. H. Lathrop, Springfield. The birds you name may be sold in Massachusetts all the year around, according to the laws of 1891. Hare or rabbit may be sold to March 1.

MURR, Portland, Ore.—What would be the cost of 10,000 black bass fry landed at this place? Ans. We do not know any one who would undertake to fill an order for such a number of black bass, but suggest that you write Mark Samuel, 10 East Sixteenth street, New York. The U. S. Fish Commission distributed upward of 30,000 young bass recently and perhaps might be able to send you enough to stock your waters this year. Black bass are easily carried, but the number you mention would fill a car. The cost from private parties

would be about \$400 or \$500 and the transportation will be an expensive item.

C. S. S., Haverstraw, N. Y.—Will you please inform me through the columns of your valuable paper if it is against the law to fish through the ice for pickerel in Rockland county? Ans. The State law (see Game Laws in Brief) provides as follows:

Sec. 104. No fish shall be caught through the ice in any waters inhabited by trout, salmon trout or landlocked salmon, except as permitted by Sections 133 and 140 and 141. Sec. 133. The provisions of section 104 against fishing through the ice do not apply to Lake Ontario, Lake Erie, Otsego Lake, Roundout Creek, below Honk Falls, the Hudson and Niagara rivers. Sec. 140. It shall be lawful at any time to fish for suckers, bullheads and pickerel with nets and fykes, to shoot and spear such fish through ice and to catch the same in any of the streams, ponds or lakes in Warren county, excepting in Schroon Lake and Long Pond or Glen Lake, and Lake George as to the use of nets, fykes and the catching of bullheads. Sec. 141. Bullheads, catfish, eels, suckers, perch, pickerel and sunfish may be caught by hook and line through the ice in Lakes Champlain, Seneca, Cayuga, Keuka, Canadatego, Skaneateles, Oneida and Oswego lakes; also in any of the waters of Chenango, Delaware and Madison counties, Fair Haven Bay and pond in Cayuga county; also all waters in Wayne county and in Seneca River. This section shall apply to catching bullheads in Chautauqua Lake.

The law also says that no fish shall be caught "in any manner or by any device except angling;" and angling is defined to mean "taking fish with hook and line or rod held in hand, and does not include set lines." The Attorney General has ruled that "tip-ups" for pickerel come under the head of "set lines." From this view others differ. The question has not been otherwise judicially passed upon.

A PRIEST, New Jersey.—1. What, if any, is the precise difference between the lake trout and the landlocked salmon? 2. How comes it that all of the efforts so far made to stock the waters of northern New Jersey with lake trout and landlocked salmon have ended in utter failure? 3. Have we a right to expect that the pike-perch will propagate his kind in a spring lake without either inlet or outlet, but deep, cool, and having a splendid gravel bottom? 4. Is minnow-casting, so much belauded by Dr. Henshall, a generally successful mode of angling for black bass in our Eastern ponds and streams? 5. Is it not a fact that in the same waters the black bass is more than a match for the pickerel of murderous mouth? I, for one, have more than a few reasons to think that he is. Ans. 1. The lake trout is related to the common red-spotted brook trout, while the landlocked salmon is scarcely different from the sea salmon. The lake trout has very small scales (nearly 200 rows along the median line of the body), and is profusely marked with round, pale spots. The landlocked salmon has about 125 rows of scales along the body and has numerous black spots. The trout has a deeply-forked tail, while the tail of the salmon is nearly truncate. The lake trout reaches a weight of 25lbs., and the landlocked salmon seldom weighs more than 5lbs. Besides these there are many other important differences between the fish. 2. Probably because the lakes are too shallow, too warm, and not provided with food suitable for these fish. 3. They will thrive best in large streams and lakes. In lakes they spawn on sand bars in depths of 4 to 8 ft.; in streams they select sandy bottoms in shallow water. Unless the lake is large and deep, it will probably not suit the pike-perch. 4. In many waters known to us it is, particularly on the Potomac, Susquehanna and Delaware, as well as in Lake Erie. At certain times other methods are more successful. 5. Yes, the black bass is more pugnacious and more powerful in action than the pickerel and most other fish of equal size.

Handling and Kennel Management.

By B. WATERS.

A comprehensive and practical guide to the training, care, management and breeding of old dogs. Cloth, 373 pages. Price \$2.50

FOREST AND STREAM PUBLISHING CO.
318 Broadway, New York.

SOME anglers labor under the false impression that large dealers and manufacturers charge more for their goods than the keepers of small shops. A glance at our new Illustrated Catalogue and Price List for 1892, which we will mail on receipt of 6 cents to cover postage, will show how much they are mistaken.

ABBEY & IMBRIE,
Manufacturers of All Grades of Fishing Tackle,
18 Vesey Street, New York.

A Most Decided Novelty.
Elegant for Display.
Distinct in Marking.

JAPANESE
VARIEGATED HOP

Admirable for Decoration. Illustration was taken from photograph of plant.

Useful and ornamental annual. Very rapid grower; leaves six to seven inches across, are beautifully and distinctly marked with silvery white, yellowish green and dark green, part regularly striped as well as marbled and blotched; in some cases leaves almost white. Not injured by insects; does not suffer from heat; retains its fresh variegated and densely packed foliage till cut down by frost. At a little distance looks like a mass of white flowers spotted among the green.

Price, 25 Cents Per Packet.

Where requested each purchaser will receive FREE a copy of THE POETS' NUMBER

VICK'S FLORAL GUIDE.

For 1893 we have combined a most novel and charming feature in the way of hundreds of beautiful and appropriate poetical quotations from the best authors, making THE POETS' NUMBER of VICK'S FLORAL GUIDE a source of interest and pleasure the whole year. The practical part contains Colored Plates of Alpine Aster, Begonia, Dahlias, Dutchman's Pipe, Clematis, Fancies, Cannas, Corn and Potatoes, hundreds of Engravings, descriptions of the sweetest and most prolific Pea—The Chamer, The Golden Nugget Corn, which was such a favorite last summer, new Roses, new Chrysanthemums, and scores of other grand and good things. Names and prices of everything one could desire in way of Flowers, Vegetables, Plants, Bulbs, etc.

Sent for only 10 cents, which can be deducted from the first order. Cash Prizes.

Steam Yachts and Launches; Their Machinery and Management. By C. P. Kunhardt. A new edition, with extended text and many added illustrations. Cloth. Price, \$3.00.

FOREST AND STREAM PUB. CO., 318 Broadway, N. Y.

THE PROTEAN TENT.

There are times when the "breezes of heaven" could be dispensed with, as on a cool evening when the party gathers round the camp-fire. All you have to do is to locate your fire on the lee side of your PROTEAN, throw up the side, spread your blankets on the hay or bow bed, and "take your ease." The sloping roof and sides will catch and reflect the heat as well as any half-faced camp that ever was pitched.

FAMILIAR ACQUAINTANCES.

THE TOAD.

DURING our summer acquaintance with him, when we see him oftenest, a valued inhabitant of our garden and a welcome twilight visitor at our threshold, we associate silence with the toad, almost as intimately as with the proverbially silent clam.

In the drouthy or too moist summer days and evenings, he never awakens our hopes or fears with shrill prophecies of rain as does his nimbler and more aspiring cousin the tree toad.

A rustle of the cucumber leaves that embower his cool retreat, the spat and shuffle of his short, awkward leaps, are the only sounds that then betoken his presence, and we listen in vain for even a smack of pleasure or audible expression of self-approval, when after a nervous, gratulatory wriggle of his hinder toes, he dips forward and with a lightning-like out-flashing of his unerring tongue he flicks into his jaws a fly or bug. He only winks contentedly to express complete satisfaction at his performance and its result.

Though summer's torrid heat cannot warm him to any voice, springtime and love make him tuneful and everyone hears the softly trilled, monotonous song jarring the mild air, but few know who is the singer. The drumming grouse is not shyer of exhibiting his performance.

From a sun-warmed pool not fifty yards away a full chorus of the rapidly-vibrant voices arises and you imagine that the performers are so absorbed with their music that you may easily draw near and observe them. But when you come to the edge of the pool you see only a half-dozen concentric circles of wavelets, widening from central points, where as many musicians have modestly withdrawn beneath the transparent curtain.

Wait, silent and motionless, and they will reappear. A brown head is thrust above the surface, and presently your last summer's familiar of the garden and doorstep, crawls slowly out upon a barren islet of cobble stone, and assured that no intruder is within the precincts sacred to the wooing of the toads, he inflates the pouch beneath his throat and tunes up his long, monotonous chant. Ere it ceases, another and another take it up, and from distant pools you hear it answered, till all the air is softly shaken as if with the clear chiming of a hundred swift-struck, tiny bells,

They ring in the returning birds, robin, sparrow, finch and meadow lark, and the first flowers, squirrel cup, arbutus, bloodroot, adder-tongue and moose-flower.

When the bobolink has come to his northern domain again and the oriole flashes through the budding elms and the first columbine droops over the gray ledges, you may still hear an occasional ringing of the toads, but a little later they have fallen into the long silence that hibernation scarcely deepens.

THE "NESSMUK" MEMORIAL FUND.

THE purpose and plan of the "Nessmuk" memorial fund was set forth in our issue of Jan. 26. Those friends of the late George W. Sears who knew him as a contributor to the FOREST AND STREAM, over the pen name "Nessmuk," and who were attracted to the personality revealed in those writings and in the books, "Woodcraft" and "Forest Runes," have undertaken to express their affectionate memory of him by providing a memorial for his grave in Wellsboro, Pa. All persons who may wish to join in such a tribute are cordially invited to send their subscription to the fund. The minimum sum to be raised is \$200, of which \$170 is now in hand. The Forest and Stream Publishing Co. will acknowledge subscriptions, administer the fund, assume the responsibility of putting the stone in place, and render an accounting to the contributors.

The subscriptions already received have come from widely separated points, literally from the Atlantic to the Pacific, and with them have come the written words which testify anew to the friendships which had grown up between "Nessmuk" and his readers.

In our issue of Feb. 2 we reported subscriptions to date of \$145. The present amount in hand is \$170. The subscription formerly credited to Mr. William Pollard should have been credited to Mr. O. Fred Neubert, Lawrence, Mass. Others whose contributions have been received since former acknowledgments were made are:

MR. G. A. ROSS, Fort Wayne, Ind.
L. H. S., North Chelmsford, Mass.
MR. J. GAYLER, New York.
MR. and MRS. W. A. W., Scranton, Pa.
MR. M. H. GILCHRIST, Parkville, N. Y.
MR. and MRS. C. L. KENDALL, Tarpon Springs, Fla.
MR. G. O. SHIELDS, Eddy, New Mexico.
MESSRS. A. and E. G. KOCH, Williamsport, Pa.
"UTAH."

THE ALBANY MUDDLE.

THE bills to amend the New York game and fish code pour into the committee rooms in Albany, and the members of the committee must be more than human if they have not already been muddled by the extraordinary number and complication of these measures. Changes asked for range in importance from the prohibition of killing deer by jacking to the provision of a close season for skunks and coons. In a large share the bills are local in their application; and all of these which provide for further protection might just as well be made subjects of local enactment by county supervisors; indeed, ten or more county boards of supervisors have already adopted ordinances which cover the particular needs of their territories.

As we reported last week, the Assembly committee at a recent hearing determined to defer action on any of these multitudinous measures until they should have the views of the Fishery Commissioners. These will be presented in the form of a brief at the hearing of next Tuesday afternoon. The Commissioners have been in conference with Chief Game Protector Pond and Mr. Edward G. Whitaker, one of the members of the codification committee who prepared the code. They have carefully considered each proposed amendment and are prepared to advocate or oppose it. They have also submitted several amendments.

It is needless to point out that the committees of the Legislature will be adopting the most sensible and judicious course if they shall follow the recommendations of the commissioners and the chief protector. Those who have the actual administration of the law are the ones who of all others are cognizant of its strong and weak points; and to them we should look for counsel in amending the statutes. The Syracuse convention of the State Association recommended that no changes whatever should be made this year. That would undoubtedly be the wiser course; but there is little probability that it will be the one approved. Some amendments will be adopted. But if only those changes shall be approved which have the recommendation of the Commissioners, the code will remain practically as it is to-day. The Commissioners are known to be opposed to any radical alterations.

As for this flood of bills following the 1892 adoption of the codification, it is preposterous that the code should be thus assailed. If we are to have public respect for the game and fish laws, in the name of common sense let us retain some one law long enough for the people of the State to find out what it is

SNAP SHOTS.

Opinions may differ, and differ honestly enough, about the probable success or failure of the projected World's Fair Trap Shooters' Association. But the one thing concerning which there is not a shadow of reason for hostile criticism or apprehension is the ability of those who are promoting the scheme to put it through successfully if any body of men on earth could do it. The Chicago sportsmen, who have taken upon themselves the task, are men of business ability, good repute, liberal spirit and high sportsmanship. They have set about the work in a practical way, by organizing temporarily, for the sole purpose of facilitating the progress of the work; and in doing this they have adopted the only course open to them for facilitating the progress of the work. In short, they have acted as business men, in a businesslike manner. Unless the sportsmen of the country—whose co-operation is invited, are as a unit fools, they will recognize the action of the Chicago gentlemen as legitimate, sensible and proper. Mr. Donald and his associates might have talked and talked and talked till doomsday. Being gifted with common sense—hard horse sense—they not only talked but acted. If the project should fail, these gentlemen would at least have the satisfaction of reflecting that they had done the right thing in the right way at the right time. But the project is not likely to fail; and the probabilities are that they will have this reflection of well-doing as an added element of gratification over the complete carrying out of their plans.

SOME professional men get themselves made deacons, so that church people, seeing them on Sunday, may employ them professionally on week days. Others join secret societies, that they may by cultivating the fraternal spirit cultivate business too. Such men are deacons and fraternity members for revenue only. And some go into trap-shooting and game protection clubs and fishing associations, that they may be seen and known of their fellows, to the end that business may boom. Such men are sportsmen for revenue only.

The darkest cloud has its silver lining; in the deepest depths of adversity silver dollars may be harvested if we have but the wit to gather them in. It is said that a certain New York clergyman who was called on last autumn to pay heavy fines for killing robins, afterward lectured on the robin to two or three thousand people at fifty cents a head, and so managed to come out of the affair with a handsome margin of profit.

There is a limitless amount of empty chatter about the ahead-of-time millenium to come from a grand national sportsmen's convention at the World's Fair; but there is not a man in America who can point out any common sense practical or practicable good to be secured by such a convention except the possible individual advantage from the personal advertising which is sought by the promoters of the scheme.

A bill to prohibit Sunday fishing in Maine has been reported unfavorably from the committee. The difference between Maine and New York in this respect is that Maine fishermen fish on Sunday lawfully and New York fishermen fish on Sunday unlawfully. There is not a statute of any character on the books to-day that is more of a dead letter than the New York law forbidding fishing on the Sabbath.

And now they are dubbing as "fanatics" the Maine advocates of a non-resident license fee for shooting and fishing. The term savors of strong feeling, but perhaps it is fully justified. The penalty proposed is a \$5 fine, to be imposed on every man, woman or child who shall cross the State line to fish or shoot. As a source of revenue the Maine authorities might better pay a premium of \$5 to induce visitors to come into the State.

THERE is a screw loose somewhere. New York State imposes taxes on dogs. New York courts have repeatedly held that dogs are property. Now comes Assemblyman Porter with a bill which authorizes the killing of dogs by the owner of premises over which they may be roaming without master or muzzle. Query: If a dog is property, can that property be destroyed without due process of the law? And is it due process of the law when from a back window a shotgun belches its charge into a dog in the back yard?

The Sportsman Tourist.

JONAS ASKEM'S COON SUPPER.

It was a cold, crispy night late in November, a good many years ago, that the tavern of Jonas Askem, prominently situated on one corner of the intersection of the two main roads which passed through the center of the little village of Pine Valley, was brilliantly illuminated within, and from it came the mirthful voices and laughter of a happy party. Without, a large lamp on a high post served as a beacon to the distant traveler and lighted the broad porch that covered the entrance of the hostelry.

The sound of rattling wheels coming from up the road approached nearer and nearer, until a sprightly young team of bay horses, drawing a pretty, red-wheeled buggy, pulled up to the hitching rail. The driver jumped out and proudly assisted his companion to throw aside the robes that enveloped her and alight. Then, as she tripped up the steps without further assistance and disappeared in the doorway, he jumped back into his buggy and drove around to the rear of the tavern, where he carefully blanketed his horses under the long shed, which was already nearly filled with other teams. When he had assured himself that they were safely and comfortably cared for he returned and entered the door of the tavern to find himself in the midst of a jolly crowd of young people who had already welcomed his pretty partner, who now stood smiling sweetly in her party dress of plaid and brightly-colored ribbons. He was cordially greeted with "Hello, Hank," "How do do, Hank Bender," and as cheerily returned the salutations as he passed through the throng to lay aside his overcoat.

It was the occasion of the first dance of the season; and the cause of it was coons.

Some time before, when Hank and Silas Larkum, the noted coon hunter, had stopped at the tavern to separate after a successful night's coon hunt, Jonas had volunteered to give a coon supper and a dance, if the hunters would furnish the coons. Silas, whose love for hunting, and Hank, who liked anything in the way of a frolic, readily gave their promise, which now being fulfilled, had only to wait for Jonas to fulfill his. So now, in response to the general invitation that had been extended throughout the community, those who liked to dance and a good many who did not, but wished to meet their near and distant neighbors for a good time, assembled in numbers so large that the best room would not hold them all, and the bar-room became a general resort for the eldest and for most of the married men folks, who did not feel in gallantry bound to remain with their gentler companions while waiting for the dance to begin. The supper was to be spread at 12 o'clock, Jonas said, and he wanted everybody to "git up a good appetite 'n' enjy themselves, fer he had coons fer them 't liked 'em, 'n' sunthin' fer them 't didn't."

Jonas was attired in his best frock coat and "biled shirt," and moved around among his guests cheerily shaking their hands and wishing them a good time. Silas Larkum was there, modest and retiring. He was uncomfortable in his "store clothes" and confined himself to a corner of the bar room, where he felt more at ease among the men of his acquaintance, and could not be induced to enter the parlor in the presence of the ladies. Some one had given him a cigar, which, out of respect for the donor, he was awkwardly trying to smoke, but, after biting and chewing at it until it was more than half consumed, the wrong way, he threw it away in disgust and lit his pipe.

Through the door leading from the bar room into the hall and adjoining parlor came the joyous shouts and screaming laughter of the feminine part of the assemblage, intermingled with the coarser voices of their male companions, who were out-doing themselves in their efforts to furnish wit and make themselves agreeable to their sweethearts. At length the discordant tuning of the fiddles caused a lull in the hilarity and brought everyone to a sense of expectation. Those who were outside began to flock to the large dining room where the floor was cleared of its tables and chairs, and the fiddlers, seated in an elevated position were thumbing their strings, while a brisk young man in a low-cut vest and large green necktie busied himself about his duties as floor manager, as with an air of disdainful importance he stepped to the middle of the room and called out, "Choose yer pardners for a plain quadrille."

Hank Bender offered his arm to his blushing companion and proudly stalked to the head of the room, where they were soon joined by three other couples who formed the first set. Other sets followed the coaxing call of the floor manager, "two more couple this way; one more couple this way," until the floor was filled and the fiddlers who had been patiently waiting, drew their bows across the strings once more to assure themselves that they were in tune, and the leader, with a great flourish of his bow, struck up "Dan Tucker," accompanied by the stentorian voice of the caller, who, following the tune, gave the first command, "Honor yer pardners, every one," and each dancer courtesied according to his or her own idea of politeness, some merely nodding, others bowing nearly to the floor. The next figure, "First four forward 'n' back," set every foot shuffling as the two couples moved forward and backed to their places. "Sides the same" gave the opposite sides opportunity to display their graces, and the dance was well on its way.

The spectators who stood around the room or filled the doorways had enough to occupy their attention now in watching the movements of the dancers and listening to the homely but agreeable strains of the music and all conversation ceased. The man who handled first fiddle was soon warmed up to his work, and rasped his bow across the strings as if he had a given time to saw them in two; and the second, who seemed to use only the bass strings of his instrument, did so with half closed eyes, as if his work was more monotonous than pleasing, while both patted the floor with his foot as earnestly as if that member was alone responsible for a correct rendition of the tune, and if one were to quietly step on it the music would stop.

According to the fashion of the day, those who occupied the floor danced three "sets" before retiring, the second to quicker music than the first, and the third usually a jig or a hornpipe; so with the ending of the second set, as was announced by the sing-song "promenade all!" the onlookers, who had by this time become sufficiently interested, began to look up their partners for the next dance.

After a short rest, during which the fiddlers thumbed and tuned their strings again, and before the dancers had fully recovered their breath, the lively strains of "The Devil's Dream" straightened every back in anticipation of the hard work to come.

The figures were called so rapidly in succession now that it required lively movements to keep up with them, and by the time "sashay, all!" and "ally-man-left!" was gone through with they were all glad enough to hear "promenade, all—'t yer seats!" Then as the fiddlers ceased playing and the couples half staggered from their exertion off the floor, laughter and conversation was resumed. The second fiddler woke up and the two laid aside their instruments and crossed the floor toward the bar room as if they, more than any one else, needed something to refresh them.

Now that the dance was fairly inaugurated, the company began to seek comfortable places and social companionship. Some resorted to the parlor and others to the bar room again, where, after a word or two of approving comment, the conversation turned to different topics. Silas, who had been an interested spectator in the doorway, was in his old place again, filling his pipe for another smoke. A stout, ruddy-faced old gentleman, whose countenance beamed with good nature, notwithstanding that he occupied the exalted and dignified position of justice of the peace, moved about, condescendingly greeting one and another with a friendly word. He casually stopped with extended hand and inquired: "Well, Silas, I see you are making yourself comfortable. How be you?"

"Purty well," said Silas, taking the proffered hand without rising, and scratching a match on the side of his chair he continued, as he lighted his pipe, "How be you and your folks, Mister Banks?"

"Well, we've nothing to complain of. Most of us is here, I guess. Polly and Sarah and Mary and Jane came over with us in the democrat, David and Philip hitched up and went over the ridge after their gals and I haven't seen them since, but I guess they're around somewhere. You haven't been over our way lately, Silas?"

"Was over there day b'fore yesterday, huntin'," said Silas.

"Was you? Well, I didn't see you. Why didn't you stop and get a snack to eat? We've got some good cider in the cellar, too."

"Wal, I didn't hev time 'f I'd a thought on it. I scart up a flock o' pa'tridges just b'fore I come t' your house, 'n' I had to sheer 'round," said Silas, as if eating and drinking were of no consequence when he was hunting.

"Well, well; I don't hunt any nowadays, but I like to think how I used to enjoy it when I was a young man. You're getting pretty well along in years. How old be you, Silas?"

"Fifty-six," replied Silas.

"Dear me, there ain't much difference between us then. I'm fifty-nine, and it don't seem so long ago when we were boys and went to school together. You haven't forgotten the old log school house and the schoolmaster with his beech gad, that he could reach with from one end of the bench to the other, I guess, and the time we boys tied him fast in his chair while he was sleeping at noon hour. I wonder you never settled down and got married, Silas."

There was a merry twinkle in his questioner's eye, and Silas might have suspected that the remark was as the priming to the pump that was being worked upon him in order to learn how a certain little love affair in years long gone by had terminated, for he blew a fresh cloud of smoke, and with a cautious little chuckle returned, "Mebbe you're lookin' for a job, Squire, but ye can't make nothin' out o' me unless ye let me hev one o' your gals."

"You can have either one of them, but you'll have to fix it up yourself. Now, there's Jane, she'd make you a good housekeeper; but you'll have to get rid of your old dog if you take her." This with a merrier twinkle.

"Wal, I don't think Jane'd have me since Dan scart the cow and upset the milkin'." The remembrance of which caused him to chuckle again, in which the Squire joined heartily.

The incident referred to had happened a year before when Silas's dog, striking the trail of a fox that had passed through the barnyard only a few moments before Jane had seated herself to milk, gave tongue so sudden and startling as to cause the cow to jump, kicking over the milkpail, and Silas, who came upon the scene just in time to see the milking stool roll one way and Jane the other, was treated to an outburst of temper that made him give her a wide berth ever after.

"I guess I'll wait till Don dies, 'n' he's purty healthy yet, b'fore I speak to Jane," said Silas as a young man tapped the 'squire on the shoulder and informed him that he was wanted in the ballroom. "Why, bless me, what's up now," he exclaimed as he turned to follow the messenger to the dining-room, where he found nearly all the older folks gathered in a group, from the midst of which Jonas was explaining that "the young folks 's had their fun 'n' naow the old folks 's goin' t' hev some tew. The' can't nobody 't's less 'n fifty nor more 'n a hundred dance in this set 'ceptin' ladies, 'n we old fellers 's goin' t' show you youngsters somethin' 't ye never see before," followed by a dozen "Oh, my's!" from the older ladies and twice as many shouts of approval from the younger ones. The idea took well and those who were qualified began to look around for partners.

Jeremiah Wixon, a gray-bearded old man of sixty-five, whose feet had been constantly shifting during the progress of the dance, now straightened his bent shoulders with the remark that "The' wa'n't no better dancer 'round these parts when I was a young man," and briskly stepped across the floor and awkwardly but politely offered his arm to his better half, but Mrs. Wixon coquettishly shrank back, while her eyes and face beamed with the returning beauty of former years, as she simperingly chided her lord, "Jeremiah Wixon, ain't you ashamed o' yourself, to think 't I'd make such a show o' myself!"

"Wal, now, Mari, ye didn't use to think so when all the young fellers was runnin' after ye, cause ye was the purtiest gal 'round here, 'n' the best dancer, too, 'n' me a breakin' my neck to get in ahead of 'em," gallantly coaxed Jeremiah, and added, as he intended a further compliment: "Ye needn't be ashamed o' yerself if I ain't." Then three or four of the young ladies who were interested listeners began to coax and finally prevailed upon the good lady to get up and blushing take the arm of her partner, who led her out, accompanied by exclamations of "only to think!" and "I'll never do such a thing again; no, never!"

But Mrs. Wixon's courage was stronger when she found herself at the head of a set composed of people of about her own age, among whom were buxom Mrs. Banks and the hostess, whose ruddy faces, like her own, were glowing with excitement. After much persuasion and the loss of a good deal of time there were enough of the old-timers on the floor to justify the floor manager in giving the signal to begin.

The first fiddle was almost through with the first bar of "Pike's Peak" when the second began its monotonous accompaniment, and, luckily for the stiffened joints of the dancers, the tune was of a dolorous character, which gave them an opportunity to keep up with the figures as they were called and prepare them for what was to come, so that by the time the first and second sets were through they were all fairly limbered up, though panting with excitement. Mrs. Wixon, whose avoirdupois began to tell upon her, declared, while resting after the second set, that she could never go through the next.

"Yes ye can, Mari," encouraged Jeremiah, "ye'r better 'n' half the young folks yet."

As if they needed any warning of what was to come the floor manager announced that the next set would be "sumthin' lively," whereat Jonas shouted to the musicians, "Jist give us the best ye kin, Bill; there's nothin' too good fer us," and Bill, with a wink at the caller, declared that the best thing he knew "fer sich lively old gents was a tune 't' he used to play over 't Vanetten when folks wanted sumthin' quick 'n' devilish was 'Sich a Gittin' Up Stairs.' He hadn't played it in a good while, but 'lloed 't he c'd keep up with 'em if they 'lloed to try it."

"Let 'er come 's lively 's ye know how," shouted irrepressible Jeremiah. "We're gittin' tired o' restin'."

The fiddlers again thumbed and sawed their strings to be sure that they were in tune—did any one ever see a fiddler at a country dance who did not have to tune his fiddle at the end of every set?—and presently Bill announced himself ready.

If these old stagers ever danced to quicker time they had no leisure to think of it now. Figures were called so rapidly in succession that there was danger of a breakdown, but they bravely persisted. Jeremiah kicked off his boots and brought forth applause from the audience as he rattled off a jig in his stockinged feet. Jonas swung his partner twice around with an ease that would have been impossible at any other time, and as the music increased in quickness the rest gained strength from the excitement, and amid the cheering and clapping of hands by the onlookers, the dance ended with a promenade that exhausted every participant, and between breaths Jonas challenged his younger guests to do as well, while Jeremiah, who needed assistance as much as his partner, staggered with her to a seat, where she sat speechless and unable to use the fan that was handed to her.

"Now, then, young man," said Jeremiah as he pulled on his boots, to the one who brought them to him, "We've sot ye an example. If ye can beat it, do it." Then still weak, he rose and crossed the floor to the barroom, where he found the other graybeards still panting and proclaiming their superiority.

Jonas soon added his presence to the company, and passing from one to another of the old fellows, whispering a word to each he seemed to create a mysterious understanding between them, for as he passed out of a door at the rear end of the bar, tipping a wink to Silas as he went, he was followed so closely by those who were in the secret as to cause one young man to remark to his neighbor, "Wonder what them folks 's goin' to do now." Nor, to his satisfaction, did he solve the mystery when they returned with twinkling eyes and smacking lips soon after.

The dancing was varied, as country dances are. There had been a turn or two at "Virginy reel" and the "lan-ciers," but the latter was hardly a success, owing to the inability of the musicians to play it correctly, and it ended much like a "plain quadrille," or a "cotillion," as the floor manager was pleased to term them, though where the difference existed was better known to himself than any one else. However, it mattered little to the company, who seemed to derive as much pleasure from one as the other.

For the benefit of a half dozen or so of those who made some pretense to a higher order of calisthenics, a waltz and a schottisch was once or twice essayed, but as these barred out the rest whose knowledge extended no further than the ordinary square dance and took up the time that was thought might be better employed, there was no encouragement for repetition and the amusement continued to the end of a particularly lively hornpipe, when Jonas entered from the kitchen, bringing with him a savory odor of cooking and stood waiting to be heard.

When the time came he stepped forward, drew the lapels of his coat together and assuming as dignified a manner as he could command said: "Gentlemen and ladies, ahem, I'll hev t' ask ye ter give us the dinin' room a spell. Ye'll find plenty o' room in the parlor 'n' the bar-room, 'n' I hope ye'll enjy yerselves the best way ye kin until we're ready for ye. We're going to hev supper naow." And with a graceful bow he returned to the kitchen, while the company dispersed to other quarters, leaving a few of the elder and some of the younger ladies, who were delegated to the work to draw out the tables from the walls and cover them with their snowy white cloths, and the rattling of plates and knives and forks furnished sweeter music to the fiddlers, at least, than they had been able to supply. And so well had the host and hostess regulated their plans that it was not long until Mrs. Askem entered the parlor and announced that supper was ready, and Jonas the barroom to say, "Come, men, git yer wimin 'n' come to supper."

If the company had not before given any thought to the inner man, there was enough in the complete transformation that had been made in so short a time to remind them of it. Two long rows of linen-covered tables extended from one end of the room to the other. Before each chair, that was pushed closely up to the table, were a crossed knife and fork and a glass holding a white napkin, while promiscuously through the center stood covered tureens and holders of celery, cake and preserves, and conveniently near at one end was a large table presided over by Jonas, who stood with a long apron covering his whole front from chin to feet, attended by a bevy of young ladies in aprons ready to carry away the plates as they were filled by the host. This was the sideboard, loaded with large platters of carved meats, principally turkey, chicken and roasted coon, and as if to promote

Natural History.

AN ADIRONDACK DEER HEAD.

Editor Forest and Stream:

WHILE I was on the headwaters of the West Canada Creek, Hamilton county, N. Y., in September, 1890, my guide told me of a wonderful buck which he had seen at Deer Lake or pond, in the same county, just before the season opened. He said that when seen it was feeding in the edge of the lake, and near it stood another deer, which their party supposed to be a fawn on account of the great difference in size, but upon near approach they found the smaller one to be a full-sized deer, the difference in appearance being accounted for by the great size of the larger deer.

The horns, which were in the velvet, he described as the largest he had ever seen, and palmated. While not very positive about it, he was evidently of the opinion that it was a cross of our common deer either with the moose or caribou.

After my return to civilization I visited the gentlemen

A NOTABLE ADIRONDACK HEAD.

who composed his party and had seen the deer, but got no further information. They were both of the opinion that they had seen a caribou, though neither had ever seen one before, or, at the very least, that it was a cross. Very shortly afterward I read in the daily press of the killing of a supposed caribou at North Lake, in Herkimer county, by Mr. M. M. Mayhew, and that the head was at a taxidermist's in this city. Having no doubt but it was the same animal I went at once to see it. I was there informed that the deer weighed 325 lbs., but I could not discover that it was ever actually weighed, and I have no doubt it was "estimated." I have taken photographs of this remarkable head, which I send you herewith.

There is no doubt it is our common deer, and I have seen larger heads, but never such a pair of horns. At the widest part of the palmation a rule may be placed diagonally so as to touch the horn for ten inches, and the symmetry of the entire horns is wonderful in such an abnormal pair.

Many people here, including the taxidermist who mounted the head, called it a caribou, but such is not the fact. It is a Virginia deer with a remarkably developed pair of horns, such as occasionally occur in all of this family.

EGBERT BAGG.

Vizcacha and Prairie Dog.

DENVER, CO.—In reading Mr. Edward A. Robinson's interesting article of Feb. 2 in FOREST AND STREAM, I find that he makes reference to the vizcacha. From his description they must be of the same genus as our prairie dog, so common on the plains. Aside from the thieving propensities credited to the vizcacha, their habits seem to be identical with our little rodents. The latter, however, are rarely found in the immediate vicinity of a ranch house, and this may account for their integrity.

L. B. FRANCE.

[The vizcacha (*Lagostomus trichodactylus*) is not very unlike the prairie dog, and bears much the same relation to the delicate chinchillas of South America that the prairie dog and the spermophiles of North America do to squirrels. The vizcacha, however, is much larger than the prairie dog, being nearly or quite 2 ft. long from nose to root of tail. Darwin, in his journal, says: "In the evening the vizcachas come out in numbers, and then sit quietly on their haunches. They are at such times very tame and a man on horseback passing by seems only to present an object for their grave contemplation. They do not wander far from their burrows. They run very awkwardly, and when hurrying out of danger, from their elevated tails and short front legs much resemble great rats. Their flesh when cooked is white and good, but it is seldom used." Much of this quotation would apply very well to the prairie dog.]

South Shore Notes.

THE CEDARS, Oakdale, L. I., Feb. 4.—Editor Forest and Stream: We have been visited during the past week by a great many robins and tiny little yellow birds, whose cheerful notes sound so welcome, and yet so in contrast to the fearfully cold weather we have passed through and are still having. It is really wonderful how the little fellows keep alive. The yellow birds sing from tree and bush as sweetly as if it were summer time. Where can they have come from, that they have lived through such a severe winter.

There were a large number of larks here during the cold spell, but every one has disappeared. A great many have been found dead and the crows feeding on them. Could they all have died from cold and hunger, or did they leave us for what was once the Sunny South? I think they must have perished, as they were too weak to make a long flight. We miss their sweet notes, as we always had them with us all winter.

My neighbor, Mr. F. G. Bourne, of the Singer Co., is the owner of over four hundred acres of land, on which he has a kennel of St. Bernards. The dogs are fed on stale bread sent in barrels from the city. When the dogs are being fed a bevy of nineteen fine large quail come every day to the kennel to get their share of the crumbs. One day while his superintendent, Mr. McKenzie, was feeding dogs and quail a full grown possum climbed over the sides of the kennel to get a share of the feed, when he was quickly despatched by one of the big dogs. He must have been very much in need of food to enter the kennel in presence of man and dogs.

The bay here is breaking up, many large holes having formed in the ice. The gunners have been eagerly looking for the ducks to return, now that there is plenty of water, but the ducks do not show up. I think the feeding grounds further south have greater attractions for them and I don't look for much shooting until they return in the spring. A few half-starved black ducks sit off on the ice all day and at dusk wing their weary way to the spring holes at the head of some creek, where they are forced nightly to witness an exhibition of fireworks.

ALFRED A. FRASER.

The Hard Winter in Iowa.

FORT DODGE, Ia., Feb. 8.—Game in this section of Iowa is having a hard time this winter. Heavy snow fell on Dec. 7, and has lain on the ground ever since, with occasional additions to the seven or eight inches which fell on that date. Quail were plenty during the season, and everybody, from the sportsman who pursued them in legitimate manner to the game-hog pot-shooter, who "found four flocks of 'em along one hedge and got all but one quail at four shots," had good shooting. It will be many years before such quail shooting as we had this fall will be seen again in northwestern Iowa. The intense cold and difficulty of obtaining food and water has left many a fine bunch of birds under a pall of snow.

Prairie chickens have wintered well, and where safe from trappers, will come out all right. I saw over one hundred of these birds along the I. C. track, just west of this place, apparently filling their crops with gravel for "millstones." It takes a well equipped gizzard to grind Iowa corn, and the chickens have not yet learned to take theirs in liquid shape.

Rabbits are scarce from some reason or other, though there is generally an abundance of the cotton-tailed pests.

Iowa needs new game laws, some that will "hold water," and a rigorous enforcement such as is given in Illinois and Michigan. She needs it now, not twenty years hence, when a woman with a broomstick can protect all the game that will be left under the present system.

CONVIS.

A Philippine Snake.

MINNEAPOLIS, Minn.—One of the largest snakes has been mounted at the State University. It is 25 ft. long and over 2 ft. in circumference. The snake was killed in the Philippine Islands by Profs. Worcester and Burns, of the Menage expedition. The explorers were told by the natives of a large snake in a hollow log. They closed up the ends of the log, chopped in the center, put rattans around the snake's body and pulled. Then the fun began. The snake had no idea of coming out of the log, but it was either come out or come into. After a fierce struggle the natives and explorers succeeded in getting him out of the log, and then it was nip and tuck. The snake was at last crowded into a stream of water, where the men had the advantage, and at last the snake was stretched on the bank with a rifle ball through his body. The skeleton is being mascerated, cleaned and mounted by Mr. James Hobson, of Ann Arbor, who came here for the purpose of mounting the specimens secured by the Menage expedition.

W. F. D.

Fur Seal Migration.

Mr. W. A. Wilcox writes from San Francisco that fur seals are now between Cape Mendocino and Point Reyes, the fleet not being over 100 to 200 miles from San Francisco.

The unusual occurrence of the seals in large numbers so far south at this season is supposed to be due to a protracted and uncommon cold spell and rough weather.

A large sealing fleet has been fitting out and continues to leave daily for the grounds. Most of the vessels are prepared for a nine months' voyage, and will not follow the seals north as heretofore, but will go to Japan, where the seals are taken from 125 to 250 miles from land.

Pinnated Grouse in Western Massachusetts.

Fish and Game Commissioner Lathrop, of Massachusetts, recently distributed 100 pinnated grouse or prairie chicken in the neighborhood of Springfield. They were brought from Dakota by the Massachusetts Game Association. W. W. Colburn and R. O. Morris took forty of them to Longmeadow, Hampden and Wilbraham to be set at liberty.

North Carolina Quail and Snow.

A SALISBURY, N. C., correspondent reports that in the recent snows quail have been caught by the hundreds. "I think that if the snow had remained a week longer there would not have been a bird left in the county."

confidence that there would be no lack of bounty, another table stood near containing piles of plates and other platters of uncarved turkey and coon, the latter lying lengthwise with head complete and legs turned under, much after the manner of a roasted pig, deliciously browned and garnished with parsley.

After all were seated and while the attendants were taking orders, Jonas was filling the plates with hands so trained and quick that it was all the waiters could do to take them away fast enough. Some had their preferences and others didn't care. Jeremiah Wixon said he "wanted nothin' but coon." He had all the turkey he wanted to home." Pretty Cynthia Stoll, Hank Bender's partner, would take a little of the dark meat, but, with a little shudder, "didn't want no coon." "Well, ye needn't hev any if ye don't want it," said Jonas, who overheard her, "but I tell ye it's good," dextrously slipping a piece of the animal in with the turkey, as, in fact, he had been doing with all the other orders, and as an excuse for so much dark meat put upon the plates he added to Mrs. Askem, who stood beside him, "I tell ye what, Phoebe, these turkeys 's uncommonly dark this year; wonder what they been feedin' on." And Mrs. Askem, who had observed the sleight of hand performance, fearful that some might be offended if they discovered the trick, could only say, "I d'no, I aint fed 'em nothin' but corn and buckwheat; maybe its on account o' runnin' wild so much."

"Well, wild meat 's better 'n tame meat any way," said Jonas, driving his fork into another piece of the coon which he placed beside the turkey on Mrs. Wixon's plate. But no one did take offense and many plates were refilled with as many compliments on the goodness of their contents, and before the supper was over Jonas was obliged to cut into the uncarved turkeys and coons held in reserve.

When all were sufficiently served and there were no more calls for anything from his quarter, Jonas filled plates for himself and wife, and they seated themselves in the two vacant chairs kept for them, Jonas remarking, "Ye'll hev to eat fast naow, Phoebe, fer we've got a long ways to go to ketch up."

As an indication that the company were about satisfied, they were now more daintily picking at the remains on their plates and there was more time for talking, which in the beginning was not thought of. Some one said in the hearing of Jeremiah that "he never eat coon before and if it was always as good as this he wouldn't mind havin' it every day." "Wal I guess ye wouldn't," said Jeremiah, "n' 's for me, I'd rather have it 'n' any meat 't I ever e't, unless it might be mushrat 'r possum, but the 'ain't no possum in York State 'n' ye hev to go down south 'r to Pennsylvania 'f ye want 'em, so, I guess I'll hev to be satisfied with mushrat 'n' coon."

"Did you ever eat muskrat?" inquired his neighbor across the table.

"Yes, once, 'n' I'd eat 'em agin 'f I hed the chance."

All the ladies shuddered and gave a little "ugh" as his questioner inquired when.

"Ye know old Shack 'at comes 'round here 'most every fall trappin'? Wal, two three year ago I was huskin' corn down in the field near his camp, 'n' as it was a good ways from home, I had a basket o' dinner with me. So at dinner time I went over to the old man's shanty jist for company like, 'n' found him ready to set down to his own dinner. He had a kettle full o' sumthin' 't smelt mighty good while it was cookin' 'n' he asked me to hev some. He said they was rabbits, 'n' give me a plate full, 'n' I e't it 'n' it was so good 't I e't some more. I give him a piece o' pie 'n' some cake out o' my basket 'n' we had a real sociable kind o' dinner; but somehow I thought 't his rabbits didn't taste like them 't we got 'round home, 'n' I said sumthin' 'bout it, 'n' the old feller grinned 'n' asked me to have some more, but I'd e't all I could 'n' then he told me they was mushrats. It didn't make no bad feelin' between us, only I didn't like to be tricked that way 'n' like Jonas 's been a trickin' yer all to-night, givin' ye coon meat when ye asked for turkey. I got only one thing agin ye, Jonas, 'n' that's because ye put that piece o' turkey on my plate when I didn't want nothin' but coon."

A dozen little feminine screams and a loud shout of laughter from the men folks attested the fact that Jonas's little joke was understood as he intended it should be—after the supper was over, only he wanted the satisfaction of telling it himself; but Jeremiah had thought it out so nicely that he could only sit and chuckle heartily, as one of the ladies said: "I thought there was something funny about that turkey all the time," and another added "So did I, but I didn't want to say nothin', 'n' it was pretty good after all."

"Wal, there's more of it if ye want it," said Jonas, but they all had enough, and so had Jonas, for, seeing that he was the only one who was still eating, he arose from the table, followed by the rest, and preparations were begun to clear the room again for a continuance of the dancing, for country dances never end with the finishing of supper, usually continuing till the gray of the morning, and as this was no exception, there were several hours of merriment for the company and hard work for the fiddlers to be had before the final breaking up. Only a few of the elder ones, who lived at a distance, showed any inclination to leave, and as their teams and three-seated wagons were brought around for them they were bidden a merry good-night by those who remained. So many promises were made to have "a party at aour house soon," that frequent good times were assured for the whole coming fall and winter season, but no one would promise as much as Jonas had furnished, only Jeremiah Wixon said: "When ye come to our house I'll get Old Shack to ketch ye some mushrats." McKee's Rocks, Pa.

"Nessmuk."

I want to make a suggestion. How would it do to limit the amount of each subscription, make it small, so that a greater number may have an opportunity to express their love and appreciation of our dead friend? You have fixed the cost at \$200. Why not call for 200 subscribers at \$1 each? The money is no consideration, but the privilege is everything.

F.

Inclosed find draft, which please add to the "Nessmuk" subscription. I very often look over the little book "Woodcraft," and though I have no opportunities of following its teachings, it always brings back to me pleasant thoughts of the woods and lakes and I feel grateful to the kind, gentle "Nessmuk." E. E. MILLARD.

Game Bag and Gun.

"Game Laws in Brief," United States and Canada, illustrated, 25 cents. "Book of the Game Laws" (full text), 50 cents.

TOLD IN A LETTER TO A FRIEND.

KANSAS CITY, MO.—*Dear Murray:* If you had only been with me my hunting trip would have been perfect. I have been very impatient since my return for a chance to write you all about it. You know how all our lives we have had such fun talking, reading and planning about hunting, and had never a chance to enjoy the reality. Well, I just tell you, it even goes way beyond my dreams. Three hundred and fifty miles may seem a long way to go for a day's hunt, but it was more convenient for me than fifty.

I started Wednesday at 9 P. M. and reached Mammoth Springs, Ark., at 10 Tuesday. Mr. Ford gave me a letter to the president of the Mammoth Springs Bank, which I presented. The president said that his cashier was quite a hunter and knew all the ground, and that he might have Friday to go off with me. This greatly pleased me, of course, the more so as everybody was off that day and had all the dogs of the town with them, thus leaving me practically "in the soup" for Thursday, as I did not have any idea where I could find any game near the town. In company with a freind and an old codger we knocked about the woods, enjoyed the warm air, shot a couple of quail, saw three wild turkeys which I would have chased for three or four counties but the other fellows said it was no use.

Friday was the great and glorious day. At 9 o'clock the cashier and I with three dogs (rather we had two and the young village smithy who joined us an hour later brought one) jumped a local freight and went down the road eight miles to a one-house city. We walked a few steps from the station, and letting the dogs loose stood on the hillside a few moments to watch them. It was a sight that sent a thrill of pleasure through my whole being; to think that I was actually out for a hunt and to see the dogs, if possible more pleased and interested than we, trailing about in the cornfield below us. After standing a minute we started on into the corn. I took pains to be a few steps behind my companion, also to note carefully all his moves, for I had not given away the fact that I had never shot a quail or in fact even shot over a dog, for fear that I would not be considered a desirable companion. We had walked a couple of rods into the corn, when a covey of about ten birds rose and flew off in front of us, only giving a very poor shot to the cashier, which he missed. We marked them down in some very thick scrub oak, when a hawk scared them in different directions, some three settling in a cotton field. After these we scrambled, and in a few minutes the cashier said, "Here is a point," and sure enough there stood old Raven, a piece of black statuary with its head turned to one side and his eyes fixed on something on the ground near him. We soon came up and flushed the bird, which, rising on the cashier's side, obeyed the loud call of his hammerless. One quail bagged, a starter made, and now for business, for I was "on to" the way now.

On recrossing the cotton Don (a pup, but a good blooded animal) flushed a big covey, which divided, part settling in the scrub oak and part on the hillside. On the hillside the cashier got another bird, and then I got my first. Responding to my whistle old Raven came running down a wagon road, when, quick as if by air brakes, he stopped, turned his head to one side almost at right angles with his body and pointed a bird. This bird flushed and the back pocket of my hunting coat had a nest egg. By this time the south-bound passenger had come and we were joined by the young blacksmith with Snap, the oldest and best dog. A few birds were next flushed in the thick scrub oak; this was mighty hard shooting, but as the shots fortunately fell to the experienced ones, the cashier and the smithy, each bagged one.

After we had walked a short distance down the corn double reports from the cashier told that something was up. Responding to his call and listening to his instructions, we found that a covey had settled on hillside near us, and right here luck helped me by establishing for me a little reputation. Old Snap made a point. It was a sure thing. You could tell by his absolute motionlessness and by the fixedness of his gaze. As we all came up to it smithy said, "Garnsey must take this one" (it usually depended which side it flew toward who took it). I said, "Yes," but inwardly doubted whether I would or not. We put up the bird, which whirled straight away till about shooting distance and then suddenly jerked to the left (very unusual move) and was about to pass behind a tree, when I shot. The dog brought me the bird, and the cashier, who had his gun all ready for it when it should come by the tree after my shot, was pleased and surprised. So was I. It was simply and solely a lucky chance shot, but was very fortunate for me, as my companions took it more for skill, and therefore early in the day put me on the list as a shot.

By this time it was the dinner hour and our good appetite made the corn-dodger and sorgum and chicken and hot biscuits, which were ready for us at the house, taste mighty fine.

After dinner we came on a nice covey, but, making some very poor shots, did not get a bird out of it. Then we went some distance up the valley to another cornfield, out of which we got some, and from which we marked down a few that we all started for, all three walking together and the dogs behind us working in the corn. We came to a rail fence and from just the other side a covey of at least thirty quail rose and scattered off on the bank near by. At the first rise, as bad luck would have it, my left barrel failed me and the cashier and I each took the same bird. We got three out of it and could see the fun ahead. Here came the best shooting of the day. The birds had settled all along the hillside and one by one the dogs pointed them and rapidly our coats grew heavy. Smithy turned to the left and had the best of it, but we were all a little rattled and did not do first-rate work, although the fun was perfect.

Just in the midst of this we found it was ten minutes of train time, so we were obliged, though reluctantly, to stop. We reached the station just in time, and at 5:30 a tired but happy fellow walked into the hotel perfectly happy to lay off his hunting coat, heavy with part of the thirty-two quail; and to sit before the open wood fire and think the matter all over till he was called to supper.

We could have gotten any amount of cottontails, but would not shoot them on account of the dogs. They never do when the bird dogs are along, as it would make them feel that they had a right to run them. I never saw so many rabbits though; every ten minutes one would jump up from under our feet.

The pup made one of the prettiest stands of the day; he was running over a fallen tree and had his front feet on the ground and his hind feet on the tree; and there he stood and made a point. The habits of the birds and the intelligence of the dogs were all so interesting that I love to talk and think it over.

Some time we will be able to have one of these great times together. Yours affectionately,

OLD DAYS IN THE BACKWOODS.

I WAS born in Franklin county, Massachusetts, January, 1812, and in the month of May following my father and mother emigrated to Erie county, New York, and as I was too young to leave, they decided that I should be taken along. It required thirty days of hard travel with an ox team to make the journey. Perhaps the same distance could be made now in sixteen hours.

About the first of my recollections takes in the log cabin with a bark roof; and I remember my grandfather leading me out in the evening by candlelight to view a dead bear, which an old hunter had just hauled into the dooryard. The appearance of the claws, head and ears is indelibly stamped on my memory yet. The next that I can remember distinctly is of my mother feeding me bear's grease as an antidote for croup; it was hinted in after years that bear's grease was the remedy that saved me. Is it a wonder that I took to the woods early?

While I was in my fifth year my father moved a little further into the woods where some new settlers had lately come in. Here a substitute for a district school was established. At that early period the educational advantages of this portion of the State were extremely limited, schools of any description were scarcely known, and the instruction of children was mostly confined to such information as the parents were able to impart, or as might be secured by their own unaided efforts. In the little school I went to reading and spelling were taught, also the names of New York State officials. I learned that Daniel D. Tompkins was Governor; and the next term of school it was DeWitt Clinton. The third term of school ended with the winter of my seventh birthday and also ended the most of my school privileges. Later on, however, I think that I studied old Murray's Grammar the bigger part of one evening.

In the month of May, 1819, our provisions and household goods were packed into two ox wagons and we started through the woods thirty miles to the Allegany, where we arrived on the fifth day of the start. The Allegany Indian Reservation was represented by a strip of land forty miles in length, averaging a mile in width, including each side of the Allegany River, consequently following the devious course of the stream. The Cornplanter tract, a sort of individual reserve, lay also on the river a short distance below in the State of Pennsylvania.

On the banks of one of the northern tributaries, three miles from the mouth, was the place selected for a permanent home. It was then a comparative wilderness, whose primeval beauty of hills and valleys and heavy forest, with its unobstructed water courses, had suffered but little waste from the hands of men. The surface of the country was dotted here and there with occasional clearings, but in general, nature reigned in undisputed sway.

Here the Indians were living very much in the manner of their ancestors. Their wants were few and were easily and abundantly supplied. At that early day they had not come into contact with the white people very much and the curse of intemperance had not blighted their prosperity nor decimated their numbers as it did in after years. Their temporary camps that were near our dwelling I visited quite often, and was frequently loaded with venison, which I packed home with immense satisfaction.

Later in life I hunted deer for myself, and had eaten venison until I might safely say that it had been a leading factor in the making up of my bone and muscle; yet the peculiar rich flavors of those first venison stews and juicy broiled steaks were never forgotten.

It was in the beginning of the second winter of our residence here that twenty-four deer and three bears were killed near our cabin by a half dozen Indians, the result of two or three days' hunting, during a light October snow. They made a temporary camp a half-mile from our place on a small brook, near where it emptied into the main stream. The camp consisted only of a pile of hemlock boughs, which were spread at the foot of a large hemlock tree, whose limbs branched out with a slant downward instead of upward. Such camps make a good shelter against ordinary light storms of rain or snow. The morning after their three days' hunt the snow was mostly gone and the squaws and superannuated old Indians from the Reservation were passing up the trail. I knew by this that the hunt was ended, and that they were after meat. I could wait no longer, so I started along up the trail, to the camp, where I remained through the day watching the process of skinning, cutting up and packing. It appeared that they had killed all the deer and the bears not very far from camp and had dragged the entire lot into camp, whole except for the entrails, which were left in the woods. There was a medley of hoofs, heads and horns, which were promiscuously lying around the camp ground. More Indians from the river arrived during the day, and the skinning and packing went on like clock work, each making up his or her own pack, and starting back down the trail. By sundown the meat, heads, horns, hoofs and claws were gone, and a dog could not have satisfied his hunger around that camp.

At the time of which I write it was said that the Indians on the Allegany Reservation numbered 1,500, old and young, 300 of whom were adult males, mostly heads of families. Now at the lowest estimate those 300 killed fifteen deer each every year, some more, some less, amounting to 4,500 deer killed annually. It is not unlikely that twenty deer to each man would be nearer the mark. How long this had been going on no one knew. There was no perceptible decrease in the number of deer killed during the next three or four years. When the settlers began to come in the deer began to disappear, and they decreased in the same ratio to the increase of population, and the settling up of the surrounding country by the white people.

ANTLER.

A NIGHT IN PINOS ALTOS.

YES, we came near freezing to death in camp, right at our very doors, said my friend, Joe Schlosser, one evening as we were relating our experiences and adventures, at Georgetown, New Mexico.

It was near Christmas, and all of us miners wanted a taste of fresh meat, but didn't know just where to get it.

My friend, Jack, came to me about noon one day, and asked if I didn't wish to go out hunting wild turkeys with him that evening; he knew where there was a fine turkey roost, among the tall pines at the head of a branch of Shingle Cañon, in Pinos Altos Mountains, about six miles northwest from Georgetown. Shortly before sundown, we shouldered our rifles, and started up the cañon.

The altitude here being high, the air was very cold, and the surrounding mountain peaks and the higher portions of the valleys and gulches were covered with snow.

As we hastened along the cañon, stumbling over rocks and fallen tress, Jack assured me that we were destined to meet with great success, in capturing the turkeys; as the recently fallen snow would drive them all out of the surrounding mountains and cause them to seek their roosts among the pines.

Finally about dusk, we reached a heavy growth of these trees way up at the head of the gulch; and I was informed that this was "the place." We cautiously approached, craning our necks, and straining our eyes in the gathering dusk to peer up into the tall tree tops for the turkeys. We circled around and in and out for some time among the pines in search of the birds. But none were there; they had sought some other roost in the mountain, the location of which we did not know.

We had circled around under the trees so long that we discovered, on our abandoning the search to return home, that we had entirely lost our bearings, or at least Jack had. I was about to return down the cañon by the way we had come; but Jack would have it that the right way lay up the cañon to the west, instead of to the southeast, which it really did.

So in spite of my remonstrance, he started up this cañon. For a long time we followed it in the darkness and the snow, stumbling over rocks and stumps, and occasionally running into a tree, which would bring us up "standing."

After we had traveled about three or four miles in this direction, we concluded that we were on the "wrong scent;" and then turned around and trudged back to the turkey roost.

I again insisted on our taking the back track toward home, by the route over which we had come; but Jack was sure that the right direction lay up another side cañon which extended off among the mountains to the southwest. So I finally accompanied him, although not without strong protestation.

For at least three miles we kept on up this cañon, which proved rougher and more difficult to climb, if anything, than the first we had been. After we had nearly reached the end of this rough gulch, Jack came to the conclusion that we were again on the wrong trail; and so we trudged back again, as we had done before, to the turkey roost; the location of which we were becoming quite familiar with.

I made up my mind that I would let Jack do as he saw fit; for I felt quite confident that I could stand as much hard mountain climbing and cold weather as he could. Jack now thought that the only way to reach home was to "cut straight across the mountains," and "cross at right angles" every gulch and cañon we came to. I determined to let him have his own way; and so we struck out through the timber and over the mountain to the south.

A person who has never traveled over a region like this at night when the snow loosely covers every stray stick and stone, so as to make the footing the most uncertain possible, can at all appreciate the difficulties we encountered.

We traveled on in this way until we were completely exhausted and tired out.

A little after midnight we reached the top of a high and bleak mountain; and after traveling around here for a little while, came out on the brink of a great deep gulch, which yawned black and forbidding below us. Jack was sure we were on the Rio Sapillo, twenty-five miles northwest from Georgetown; and now became thoroughly discouraged and disheartened, and thought that we were "going to die." Having followed Jack's "lead" so long, I was myself now also thoroughly "turned around" and lost. We concluded that the best thing for us would be to camp here until morning. So we secured a small supply of branches and twigs from under the snow, as we had no ax with which to chop wood, and soon had a little fire blazing.

But we were unable to find a sufficient amount of "down stuff" to keep the fire going well. The night was bitter cold, and biting wind, sweeping over the Continental Divide from the northwest, struck us fair and square in our rude camp, and made it very difficult for us to keep the fire burning. It was the worst and most disagreeable night I ever experienced. While our faces and hands were scorching, our feet were freezing; and so it was with the opposite side of our bodies, which kept us continually turning, like a pancake on a griddle. This condition of things had perhaps this advantage about it, that our blood was kept in healthy circulation through our own exertions, even though the fire did not help us much.

Jack was very glum, and said but little.

After what appeared like an age to us, the first gray streaks of dawn appeared in the east. I chanced to glance down into the gulch below us, and there, in the dim shadow of the early morning, I saw that which of all things else in the world I had least expected to see here.

There Georgetown lay at our very feet, and here we were nearly freezing to death in camp at our very doors.

I called Jack's attention to it, who, on his part, was too surprised to utter a word.

We hastened down to town as soon as possible. Jack was for not "letting the story out," but it was too good to keep, and so it went all over town next day.

But Jack, who was a better talker than I, got out of it, and laid it all on to me, and, what was more, they all believed him. Jack said that he on purpose led me all over the mountains, "just to take the conceit out of the Dutchman."

We were greatly laughed at because of our adventure, and in fact we haven't yet heard the last regarding our "turkey hunt."

NATIONAL PARK GAME.

YELLOWSTONE NATIONAL PARK, Jan. 26.—Editor Forest and Stream: A few days ago a snowshoe scouting party returned to Fort Yellowstone from a six days' trip looking up the buffalo in Hayden Valley. The party consisted of Elmer Lindsley, Second Lieutenant Sixth Cavalry; Scout Felix Burges, and Privates Crisman and Morrison of I Troop, Sixth Cavalry. The party started from the Mammoth Hot Springs on Monday the 16th and made Norris Station the first day, 23 miles.

Elk.

They saw a large number of elk in the Swan Lake country, and a few scattered along the upper Gardiner River. They found elk wintering along the road by Obsidian Cliff, Twin Lakes and about the Geyser Basin. From Norris to the Grand Cañon, they saw elk on the Gibbon above the Virginia Cascade, and sign in several places from there to the hotel. The country about the hotel and Cañon is paved over by the large bands wintering about there. From the Cañon, the party went up Alum Creek and across country to the "Scout's Cabin" on what is known as Little Trout Creek. They found buffalo scattered all through the valley, in bands large and small, the largest band contained fifty animals. They did not see any large bands of elk. The snow not being very deep, the elk are scattered out over the country, and are not herded in the open valleys by deep snow as they were last year.

Buffalo.

From the cabin Lieut. Lindsley and one man went over Mary's Hill down Nez Percé Creek to the Lower Geyser Basin. Burges and the other man spent a whole day in the valley, hunting up bands of buffalo and counting them. Once they met with an adventure. Seeing a band of about fifty, and in the direction they wished to travel, they continued on, thinking the buffalo would get out of the way, they did go some distance down the gulch, but soon came charging back, for they had run into deep drifts, and did not want to be cornered there. Fortunately there was a small grove of trees close by, and Burges and the soldier lost no time getting up out of the way, just as the animals passed under them, running as only buffalo can, and in a way that makes it best for a man afoot to politely give way, unless he thinks he can stand a shock from a 2,000lbs. animal going at something less than a mile a minute. Burges counted twenty calves in this bunch. The buffalo ran only to a hill and then stopped. Once, while in sight of the Violet Creek section, the men saw several small bands of buffalo, all traveling over the same trail. As they passed one point Burges counted 150, it was too far to tell just how many calves there were in the whole string. He was sure only of thirty. In all he counted 275 buffalo, this in Hayden Valley alone. A number of buffalo have been seen, and are wintering on Shoshone Creek. These are seen by scouts and soldiers passing from the Upper Geyser Basin to the winter camp on Pole Cat Creek, where Captain Anderson has stationed three men to look after the southern part of the Park. The men who travel between stations strike across country in place of trying to travel the long way by trail.

Besides the buffalo mentioned above there is a large band that is known to winter in the country east of the Yellowstone River and Grand Cañon. These have not been seen as yet this season. No snowshoe parties have been in there. There is no doubt of there being at least 400 buffalo in the Park, even allowing for all those reported to have been killed along the borders. The buffalo in the Park at this time are well toward the center, and with the men stationed at Pole Cat Creek to the south, Riverside on the west, Soda Butte on the north, impassable mountains on the east, and scouting parties out very often along the border, I believe they are as well protected as possible. All the officers and men stationed in the Park take great interest in preserving these buffalo. Very few outside of the mountains know of the trouble, work, and exposure necessary to keep track of the game in the Park and watch the poachers.

Elk are wintering on Shoshone Creek with the buffalo, and along the Upper Firehole, in the hills east of the Yellowstone, and hundreds of places where snow was too deep for them last year. The scouting party returned via Norris Basin. They saw a number of foxes and other small animals along the trail. They report the snow not over two feet deep in the timber around Hayden Valley, a little deeper west of the Cañon. This makes it easy for the game to live, as no snow has fallen to speak of since before Christmas, while the old snow is settling every day. They found the snow rather hard in the open country and "shoeing" good.

Foxes and Coyotes.

Foxes are quite numerous; coyotes, two to one fox. They are very thick, especially about the Mammoth Hot Springs. I saw nine in one pack a few days ago. They were very large, fat and quite light-colored.

A Morning Ride.

About two weeks ago Captain Anderson, the superin-

tendent of the Park, road around Mt. Everts with Scout Burges. Without going out of the road, and passing through valleys where one could not see all the game, he saw seventeen elk, several mule deer, hundreds of antelope and a band of mountain sheep. Just before reaching home he saw three deer close by the transportation company's stables. Elk and deer travel all over the Hot Spring formation.

Tracks in the Snow.

In a recent snowshoe trip of three hours over the Hot Springs Terraces with Captain Scott, we saw elk and deer beds within 300yds of the old troop quarters. Game trails were everywhere, snow was pawed over where there was any grass under it. Beside the large game trails, tracks of small animals form a network of trails over the country about the springs. One can easily distinguish the tracks of rabbits, porcupine, foxes, squirrels and other small animals. Several people living at the Mammoth Hot Springs and Fort Yellowstone claim to have seen white

NATIONAL PARK BUFFALO.—I.

wolves. One man says he saw a pack of seven very early in the morning.

Fearless Mountain Sheep.

I was riding up through the Gardiner Cañon last Wednesday on the stage, and at a narrow place we saw five mountain sheep. Two large rams were close down by the river bank. We passed within 60ft. of them. The others were higher up, under the Eagles' Nest. As the stage was passing, a four horse freight team came down past. The sheep paid no attention to us. Later, a party walked out from Gardiner to see the sheep. They were

NATIONAL PARK BUFFALO.—II.

still feeding when the people returned to town. They are remarkably indifferent, caring nothing for the sight of men, dogs or teams.

One can ride closely by the large bands of antelope on the flat east of the Gardiner River. They watch one pretty sharp, but usually do not run off more than a short distance. One, two, or even three hundred can be seen within less than a mile and a half of the town of Gardiner.

The Line Repairer's Adventures.

Peter Nelson, "Snowshoe Pete," who has charge of the telephone lines in the Park, and who is often over the roads between stations, tells of an adventure with a mountain lion a few days ago. He says he was coming down from Norris, when, along by the Soda Spring in Willow Park, he heard an awful noise like a cat spitting. Looking to his right he saw not over ten feet away a large mountain lion and two young ones, about the size of a 30lbs. dog. The old one was spitting, growling and lashing its tail about. Pete lost no time in getting to the other side of the road and worked his way sideways along a log with his snowshoes. As they were fastened to his feet he dared not take time to loosen them, but got out his Norwegian knife, and holding on to a tree with one hand, watched the lion. She walked back and forth along

the snowshoe trail, growled, hissed, swung her tail about, walked to a tree, reached up it as far as she could, and at last, much to Pete's relief, walked off with her young out of sight into the heavy timber. Pete started on, but had only gone a short distance along the road and was watching back, when the big cat made a rush at him along the trail, getting close to his snowshoes. She then went back a little way, while Pete got to a tree, but could only use it to hold to. He says he was wanting to settle the thing there; if she was going to fight him to come on or leave him alone. She soon went off again, while Peter hastened away from such unpleasant company.

Pete tells of another adventure. While going down Alum Creek on his way to the Cañon Hotel, he started up a band of about forty buffalo. He paid no attention to them until he noticed that one was very lame; he could not use one of his front legs. The other buffalo were leaving him behind, and Pete was getting closer, when, whirling around, he started back for Pete, shaking his head and hobbling along at his best pace. Pete got out of the way by running over the deep snow on the side hills. The buffalo stopped, looked at him a while, shook his head and snorted a few times, and then turned and limped off after the others. Pete gave him time to get out of the way, and then proceeded, the buffalo going over a hill out of sight.

Three mountain lions have been killed on Bear and Crevice creeks, only a short distance north of the Park line. One of these had just killed a large blacktail buck when Mr. George Phelps came on it. The lion ran off. The deer was dressed by the man, and later the lion was shot when coming back after his meat.

Parties traveling between Cooke City and Gardiner report the East Fork Valley and country about there as full of elk. From a letter received from Jackson Hole, Wyoming (south of the Park), I learn that there is very little snow down there, that the great bands of elk are still back in the mountains, the snow not being deep enough to drive them to the lower valleys.

The past month has been very pleasant, with so many bright, warm days that the fishing has been very good in Gardiner River. Fifty-four trout is the largest number taken in one day by one man. Most of the fish are taken with flies, those anglers whose use bait use what is known as "devil scratchers" in this country.

Mr. George Gray caught in the Yellowstone, at the mouth of Gardiner River, a brook trout, the first ever taken out of Gardiner River or the Yellowstone. It was 12in. long and weighed 8½oz. The red spots were very bright. This fish must be from the plant made by the U. S. Fish Commission in the waters of the Upper Gardiner River. It must have come down over the falls of either Glenn Creek or the Middle Gardiner, and worked down through a mass of rock under which this creek is lost for 100yds., or over the Middle Gardiner Falls, which is a fall of 150ft. There is no doubt about where the fish came from except as to the particular stream. I think it came down the Middle Gardiner from the plant made at Indian or Willow Creek, ten miles from where it was captured. H.

Colorado's Needs.

WE are making strenuous efforts to get a good game and fish law through the present Legislature, the time seems to be right for it. There were a dozen members at least from the House and the Senate in attendance at the last meeting of the League, and they manifested no little interest, even taking part in the discussions and openly favoring the efforts of the League. It is quite time. Routt county, for instance, is two hundred miles long by eighty miles wide, and the finest game district in the State. It is hard to protect from both Indians and market-hunters because of its vast area. The Indians destroy the game (elk, deer and antelope) away up to the thousands, for hides alone. They do not save

half the meat. We have satisfactory evidence that meat has been shipped out by way of Wyoming, directly into Denver, by the thousand pounds. One shipment of between eight and nine thousand pounds alone, and from that down to three and four hundred pounds a month. All this in direct violation of the law, consisting mainly of saddles, the remainder of the carcass being left for coyotes and other wild beasts. The same slaughter has been maintained all over the western part of the State, from the north line to the south. The Indians come off their reservation after the game, and I presume that nothing short of taking the scalps of the geniuses in Washington, who can stop the destruction, will avail. If the Interior Department would control its agents and wards, the State could, and I believe will, cheerfully look after the market-hunters and bring them to book. F.

"Nessmuk."

We are glad to contribute our mite in memory of one whose writings had more individuality, and a deeper charm and insight in nature and man than any I ever knew. He was one of nature's truest noblemen. Let us keep his memory green; he has done a great deal of good in the world in his own peculiar way.

JULIUS THE FOX HUNTER.

A NOVEL BEAR HUNT.

In the early history of Maine, long before it was organized under independent State government, two of the early settlers, a Mr. Brown (father of George H. Brown, of the town of Mason, Me.) and a neighbor, Samuel Sawin, were out in the woods hunting after pitch pine for light-wood, which was then very generally used by the early settlers for lights instead of candles, and, discovering an old pine stub, they rapped on it with their axe to see if it was hollow. They at once got a response from the inside in the form of a scratching noise, which appeared to be working up the tree, and looking up they soon saw a bear's head protrude through the top, and in three seconds the beast emerged and came down by the run, the boys having just time to jump back when the bear struck the ground.

They had a small cur dog with them and he took after the bear. They had no gun, but, being spunky fellows, followed with all speed, giving the bear a sharp chase, and the bear, not being limbered up from his cramped position in the pine stub, could not make his normal speed, so that the boys hard pressed bruin.

After about a mile of lively contest they approached a ledge where hedge hogs had a den, into which the bear tried to crawl, with the dog at his heels and the boys close up. The hole becoming suddenly small the bear had to stop, after wedging himself in solidly. One of his legs stuck outside, which he couldn't draw in. Otherwise he was out of sight. On coming up the boys held a confab as to what was best to do. They could chop his leg off, but could not reach him in any other place, and, as they had no gun and it was growing dark and they were about two miles from home, it was out of the question to think of going for a gun.

It occurred to them that if they could only fasten him in where he was until morning they could thus dispatch him; and the carcass of a good fat bear meant something to those poor settlers who lived a great distance from any village and had no money to spend.

Whatever they should do must be done quickly. One proposed rolling a lot of rocks against the hole, and the other proposed falling a big tree against the den, but they agreed that if they stopped to do that they would not find their way out of the wood, for it was getting dark fast. At last on discovering a young birch growing near the den, which they could bend down by their united strength and heft they formed the novel idea of fastening the creature's leg to the top of the tree, making a spring pole of it. But they had no rope, so they took a silk handkerchief that one of them had and twisted it into a stout string; and tying this to the top of the tree they found it was not long enough to go round his leg near the foot. So they made a slit in his hide up and down his ankle and pulled up the main cord and tied the string to that, then started for home, as it had become quite dark. The dog knew longitude and struck a bee-line for home, which helped them out.

The next morning several of the two families went with the boys for the game and found the bear jumping about very lively, being held up by the stiff spring pole. They soon dispatched him and lugged him home. It was late in the fall, he was fat and had a beautiful coat of nice black fur on him. J. G. R.

A DOG THAT JUST BROKE HIMSELF.

THE "jest broke himself" bird dog appears to be about as numerous as the exuberant individual who didn't strike Billy Patterson. In every community you find this inoffensive creature, and a query flashed at the owner of the canine as to his training invariably elicits the information that he can down any other dog in town on birds "and he's a dog as what just broke himself, too." I ran up against, and had a very solemn experience with one of these "jest broke himself" dogs a short while ago, and since then I have carried a carefully loaded sample of small arms in my inside pocket, trusting that some time before I grow dim of vision and shaky of nerve, I may chance across the exhilarating character who advised me to go afield with Ole Bill and his "pinter" dog Gib. I had taken a run up to one of the interior cities of Michigan, thinking to brace up a bit after a hard summer's work, and as quail shooting was said to be at its best about the time I arrived there, I was naturally anxious to have a turn after the birds. My solicitous brother-in-law who, unfortunately, was not a shooting man, soon turned me over to William, who promised, on our first meeting, to show me "some shooting as was shooting, sure." And Gib—yes, Gib was mentioned, and thrice mentioned, as "the smartest pinter on quail in several counties." A short chat with William on that occasion convinced me that he was living in the past, and his present existence was measured simply by his ability to eat three square meals a day and to smoke, at very many odd intervals during that period of time, a strong briarwood pipe with an outdoor flavor.

Many large and radiant misgivings weighted my mind when, a few mornings after our first conference, I accompanied "Ole Bill" and Gib out to the dun-coated meadows in the teeth of a stiff west wind. My suspicions as to Gib's worth as a quail dog were actively excited before we reached the first field. His calm, reposeful countenance, his lumbering, lazy gait and his enervating air of suspended animation, all denoted a quality that was to be seen at its best only when undisturbed quiet, a palatable bone or two, nicely garnished with meat done to a turn, and a degree of exertion not worth mentioning were the governing conditions. But my suspicions were, in a measure, allayed by the small talk of William, who was persistently bubbling over with Gib's bird sense, stanchness and other commendable virtues.

Reaching the grounds where it was reasonable to infer that the birds were to be looked for, an unexpected call from a mottled piper directly ahead of us instantly transformed Gib, who up to this time couldn't be made to range far enough ahead to keep from under our feet, into a pretty alert chunk of a dog, and at the second whistle rising from a patch of ragweed fully a hundred yards in advance, a streak of brown dogskin lunged out in the direction of the wary whistler, followed by such an outburst of rare and resolute English from William, as is possible only when a man with a varied experience is deeply and profoundly agitated. But Gib had loosened the air brakes, as it were, and he didn't stop running until he had flushed from the ragweed patch a big bevy of quail, and had chased it quite a good eighth of a mile in the direction of Grand River.

It is perhaps needless to add that when they met, "Ole

Bill" and the "pinter" that "jest broke himself" engaged in a protracted and charmingly engrossing melee, from which Gib finally emerged with an unmistakable limp.

Our next effort was to get within gunshot of the frightened birds. William and Gib, who, by the way, once more lapsed into a semi-comatose state, swung round close to and worked up along the river, while I worked on a line parallel to but some 75yds. from them. Gib's work was limited to abbreviated casts extending straight ahead far enough just to escape the far-reaching toe of his owner's boot. Suddenly the dog shot ahead into a tangled mass of high weeds, the hoarse, earnest entreaties of William deterring him not, and an instant later birds darkened the air in every direction. I managed with my second barrel to pull down a single quail, and while retrieving it I heard sounds over the bluffs by the river that told me there were warring factions in the household of William and Gib. Regaining a point where an unobstructed view was obtainable, a whirling vision of dog-man-and-gun was unfolded, and for the time at least my wild, savage desire for vengeance was satisfied. The line of battle was again straightened out and we proceeded to beat out meadow and marsh thicket and timber, only to see quail always getting up out of range, with the "pinter" in hot pursuit. The dog that "jest broke himself" was out to show what he could do, and the opportunity was not neglected.

Our return home was not enlivened with conversation of an animated sort. Even "Ole Bill's" turkey reminiscences and the "shooten days that used to be" grew as ragged as the coat tails of a prize tramp. When we at last reached home William managed to murmur, as though the name of Gib still lingered in his affections, "Well, the old dog didn't do so bad after all, seeing it was his first day out this season." I am sorry to say my reply was not so flattering as it might have been.

An injury received that day laid me up until after the close of the Michigan quail season; so that, with a score of one quail during a stay of two months in a pretty good quail country, I think I am justified in carrying a small gun and able-bodied determination to get even with a relative who, with suppressed glee and malice aforethought, coldly put me for seven hours in the care of an idolatrous worshipper of a reeking briarwood pipe and a "jest-broke-himself" dog. M. C. H.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, Ill., Feb. 11.—Game Warden Bortree gracefully landed on the form of Mr. Baldwin, a Fifth avenue restaurant man, shortly after the close of the selling season (Feb. 5) and captured 107 illegal quail. Mr. Baldwin now knows even more about the expense of quail on toast than do any of his customers. A North Side restaurateur has also suffered in like fashion.

Mr. C. D. Gammon, one of the well-known Chicago sportsmen, lately fell on the icy walk and broke his leg. The wicked stand on slippery places, but Charlie couldn't.

On Feb. 6 the floods broke open the fish pond of Mr. Sid Cox, County Commissioner of Bartholomew county, Ind., who lives at Columbus, Ind. The pond was ruined and 6,000 carp, some of the largest in the State, were swept into White River.

At Albuquerque, N. M., on Feb. 6, where T. J. Lewis and T. J. Martin were out target shooting, the rifle of the former was accidentally discharged and Mr. Martin was instantly killed.

At Lincoln, Neb., on Feb. 6 Lem and Orlando Lemon, 13 and 16 years old, were playing with a revolver thought to be empty. Orlando in sport snapped it at his brother. The weapon was loaded and the boy received a wound from which he died that night.

Unique Game Law Ideas.

A bill has been introduced into the Wisconsin Legislature this session proposing to "make shooting and fishing absolutely free on all lands in the State of Wisconsin." It is probably just a trifle too unconstitutional to pass, no matter how general may be the legislative hatred for the club preserve. The law of trespass is as firm in principle as any on earth. The wise legislator might as well propose to throw open the homes of Wisconsin, so that he who chose might do as he liked therein.

A Good Out-Door Club.

Calumet Heights Club, which subscribes itself as "the best outing club of the country," is out with a circular announcing improvements at the grounds of this pleasant organization and expressing a wish for a few additional members. One could do far worse than spend a summer day occasionally at this club house on the lake with its opportunities at trap-shooting and other forms of sport. The membership fee is only \$20 and the annual dues are \$15.

A Governor's Ideas.

It is reported that Gov. Altgeld, the newly elected Governor of Illinois, will abolish the Illinois State Fish Commission as a board worthless and expensive to the State. On this head the following extract from a letter written me by Mr. Geo. Kamper, a prominent and very active and successful fish warden resident at Danville, Ill., will be found of interest. Mr. Kamper says:

"The Governor has an idea that there are a number of useless boards in this State, and that the Fish Commission is one of them. I have it from the very best authority that Gov. Altgeld is seriously considering the advisability of abolishing the Commission. You will readily admit that such an act would be a serious calamity to the fish interests of Illinois, and I appeal to you for a contribution of a little of your time in an effort to convince the Governor that Illinois needs a Fish Commission and that the Commissioners should be fishermen and not mere politicians looking for a place.

"A little newspaper discussion will probably convince him of these facts. Inclosed find a clipping from one of our local papers to start the ball rolling. Can you, or will you, assist a little? Very respectfully,

GEO. KAMPER."

The clipping in question is from the Danville Daily Press, and it points out in a plain and logical way the damages and dangers which would ensue were the people of the State deprived of the services of one of the State's most useful officers. Of course FOREST AND STREAM and all its readers can only condemn a movement looking toward either an abolishment or a curtailment of the Illinois Commission. The Commission should be built up. It should have an appropriation large enough to enable it

to do practical work. Meantime, Gov. Altgeld is absent in Florida for his health, and perhaps these rumors may be unjust to him. Upon his return I shall take pleasure in an endeavor to obtain from him an expression of his intentions on this head, or rather those intentions in the matter of his recommendations, and I hope that the reply will be a denial of any thought injurious to the Illinois State Fish Commission. E. HOUGH.

175 MONROE STREET, Chicago.

SOME NOTABLE SHOTS.

III.

MOHAWK, N. Y.—*Editor Forest and Stream:* A recent issue of the New York World contained this note: "The most memorable shot that is recorded in the annals of sport is that made by Sir Francis Chantrey, the sculptor, or Nov. 20, 1829, at Holkham, in Norfolk, England. On that occasion the famous artist while visiting his friend, Mr. Coke, of Holkham, brought down two woodcock at one shot. The whole shooting world was paralyzed for a time by this feat, and it has been more or less of a wonder ever since. The woodcock, it is hardly necessary to say, is a very difficult bird to shoot even singly. Its flight is rapid and twisting, and it always keeps to trees and bushes, making its detection a difficult matter. So when it was announced that Chantrey had killed two at a shot he was immediately made a hero and congratulations began to pour in on him in great multitudes. The sculptor himself, much elated by his good fortune, decided to erect a monument to the fallen game, of which he should be the designer. Inscriptions were invited from the men of letters of the day, but in spite of the fact that some very celebrated writers were among the contributors none of their efforts were considered worthy of adoption. Later in life Sir Francis acknowledged that the shot was a scratch and that he saw but one bird when he aimed. The carved effigy of the woodcock which he made was a very poor work of art."

There was nothing special for "paralysis" of "the shooting world" in that. One day in last November my uncle, Seneca Duell, and myself went out for a few hours' hunt, and he shot two partridges at one shot. Both had left the ground and were some distance apart. He got them in line and shot them both dead, which is a much more difficult shot than the woodcock shot. G. H. T.

The Passamaquoddy Indian Treaty.

THERE is an interesting bill introduced into the Massachusetts Legislature and telling its own story:

Resolve relating to the Passamaquoddy Tribe of Indians of the State of Maine.

Whereas, The Indians of the Passamaquoddy tribe residing in the State of Maine, heretofore, by treaty and otherwise with the colonies and the Commonwealth of Massachusetts, were secured in their ancient rights of hunting and fishing at all seasons of the year, that being their principal means of support; and

Whereas, In the act of separation it was provided that the State of Maine should assume and perform all the obligations of Massachusetts toward said Indians, and for a valuable consideration paid by Massachusetts the State of Maine agreed to obtain from said Indians a release of all claims they might have, by treaty or otherwise, against the Commonwealth; but it appears that the State of Maine has not obtained such release; and

Whereas, The Legislature in the State of Maine in the year eighteen hundred and sixty-nine enacted a law prohibiting hunting and fishing in certain seasons, and by decisions of the courts of Maine this law was made to apply to said Indians, thereby depriving them of their said ancient rights and principal means of support during certain months of the year; and

Whereas, Said tribe, relying upon the obligations of Massachusetts aforesaid, has petitioned the Commonwealth for assistance and relief; therefore, in order that the rights of said tribe in this regard may be properly and finally determined, be it

Resolved, That the Attorney-General be and he is hereby authorized and instructed to remove by writ of error, and try before the Supreme Court of the United States, at the expense of the Commonwealth, the case of the State of Maine against Peter Newell, a member of said tribe, now pending in the courts of Maine.

The Cold Winter in Ohio.

The Jefferson, O., Gun Club was organized Feb. 7 with Hon. A. C. White President, D. S. Downing, Vice-President; G. L. Henson, Sec. and Treas. There were fifteen members to begin with. Petitions are being circulated in the State asking that the Legislature pass a bill prohibiting the killing of quail in this State for a term of five years. The severe weather since before Christmas has been very hard on the quail. W. D. H., Jr.

J. B. H., writing from New Paris, O., and describing a "cotton-tail" hunt in the western part of the State, says: The afternoon was spent tracking and killing rabbits, in all nine nice ones, and one big coon, which, as we were over five miles from home, made a big load. On our way home we ran across a covey of quail, seven in number all frozen to death, and if the severe weather continues long the noble little bird will have a hard time getting through the winter. Game in this region is confined to quail, rabbits, a very few woodcock, squirrels and raccoons, but the farmers are so bitterly opposed to hunting, as a rule, that the highways will be about all the place left in another year for the lover of sport to hunt on.

Miss Quist's True Aim.

FLORISSANT, Col., Feb. 7.—Out in this scenic mountain region there are many crack shots, both male and female, but Miss Selma Quist, a charming and handsome belle of Florissant, just now wears the palm. She is handsome of face, slight of build, and of age just sweet sixteen.

During the past week she was visiting a friend of hers, Mrs. W. C. Vermillion—the last ranch down the Platte River before that romantic stream enters the Nellie Cañon and Blind Cañon, in the Lost Park region.

Saturday Mrs. Vermillion noticed a large wildcat prowling along the hill among the rocks above the house, and called Miss Selma to see it. While Miss Quist was watching the bobcat, he climbed a leaning bush and perched himself to watch for a stray chicken. Miss Quist went into the house, picked out a .50-110 Sharps rifle, came out, and said, "Just watch me knock him." She is so slight

and the gun so heavy, that she had to exert her utmost strength to hold the young cannon up; but she took aim off-hand, and when the gun fired Mr. Bob tumbled from the tree. Fearing he was only wounded, Miss Selma put another shell into the gun, and though it was about all she could carry, lugged it with her up the hill. When they reached the cat he was as dead as Hector, the huge ball having passed clear through his neck close to the head.

Considering the weight of the gun, the tremendous charge it carries, the smallness of the cat, the distance—over a hundred yards—and the frail arms which held the gun, this is considered a remarkable shot even here, where men kill deer 300 yds. away. But the pretty young heroine of the episode don't seem to regard it as at all wonderful.

The Steuben County Sportsmen's Club.
BATH, N. Y., Feb. 6.—The "Steuben County Sportsmen's Club" has been organized with the following officers: President, Gen. N. M. Crane, of Hornellsville; one vice-president from each town and city in the county to be appointed by the executive committee; Dr. W. H. Phillips, of Bath, Sec. and Treas.; and the following executive committee: Trevor Moore, H. O. Fairchild, Hammondsport; O. F. Marshall, Wheeler; Jas. A. Drake, Corning; C. D. Wylie, W. H. Phillips and Z. L. Parker, Bath. Application blanks for membership will soon be in circulation on the back of which will be the constitution and by-laws. One dollar is the membership fee which is required to join the club.

Standart Shooting Club.
DENVER, Col., Feb. 11.—The Standart Shooting Club held its tenth annual meeting Monday evening, Feb. 6. The following officers were elected: President, S. H. Standart; First Vice-President, Henry Saers; Second Vice-President, S. M. Perry; Secretary, L. P. Appleman; Treasurer, Edwin Quentin. The Standart is one of the oldest clubs in the State, and now has a membership of 75. It is not a trap-shooting club, but has several large lakes leased near Denver, and controls some of the best duck shooting in the State. The boys are beginning to get ready for the spring wildfowl shooting. The ducks usually get here about the last of February, but if the present mild weather holds we can expect them earlier.

ALBANY FISH AND GAME BILLS.

[Special Correspondence Forest and Stream.]
ALBANY, Feb. 14.—Senator Richardson has introduced a bill making the open season for deer hunting in Sullivan county from Oct. 1 to Dec. 1; and the open season for possession of the same, Oct. 1 to Dec. 15. The bill repeals the game code wherever it conflicts with the above.
Assemblyman Foster has a bill amending Section 136 so as to forbid purse nets in the Hudson River above Poughkeepsie.
Assemblyman Higbie has an amendment to Section 164, providing that the close season for woodcock shall be from Jan. 1 to Oct. 1; and for possession of the same, Feb. 1 to Oct. 1.
Assemblyman Thornton has introduced a bill amending Section 271 of the game code so that Section 5 will read: "Angling" is defined to mean taking fish with hook and line or by rods and lines (held in hand) and does not include set lines.
Assemblyman Rice proposes to amend Section 141 so that suckers may be caught by means of rake hooks, and pickered with set lines or tip-ups, in any of the waters of the State not inhabited by trout.
Assemblyman Avery has introduced nineteen amendments to the game code, the request of the Fish Commission. The numbers indicate the order of their introduction:
554 amends Section 138 so as to read: "Richmond county and New York Bay, regulations as to nets. Nets of the kind commonly used for catching fish shall not be placed, drawn or used in New York Bay, Raritan Bay, nor in any of the waters in Richmond county, except for the purpose of catching shad; nor shall any fish, except shad, be fished for or caught by any means or device except angling, except as provided by Section 145."
555 adds a new section as No. 249, reading, "The officers and directors of a corporation shall be jointly, severally and individually liable upon any and all judgments which may be recovered against said corporation for a violation of this chapter. And whenever a corporation shall violate any of the provisions of this chapter the officers thereof shall be guilty of misdemeanor and subject to the same punishment as if they had violated it individually."
556 amends Section 238 so as to read: "Recovery, how disposed of in actions by the people. The amount of fines imposed or penalties recovered and collected in all actions, settlements, compromises or proceedings heretofore or hereafter brought under the direction of a Commissioner or upon the order of the Chief Protector, the name of the people, shall be paid to the Board of Commissioners, to be disbursed by said board, as hereinafter provided. Any officer or person failing to pay over any such money recovered by him shall be guilty of a misdemeanor, and shall be removed from office, and a civil action may be brought against any such officer or person for the recovery of any such money received by him in the name of the people, under the direction of either of the Commissioners."
557 amends Section 102, relating to unlawful devices, so as to strike out the words "No fish shall be fished for, caught or killed" and substituting "Nets and devices of a kind ordinarily used for catching fish shall not be placed in, drawn or used" in any of the inland waters, etc.
558 amends Section 115 so as to make the size of meshes 3/4 in. bar instead of 1 1/4 in. bar.
559 amends Section 49 so as to make the close season for black and gray squirrels from Jan. 1 to Sept. 1.
560 amends Section 145, relating to the taking of minnows for bait, by rewording at the end: "This shall not authorize the placing or use of nets, or any other device of a kind used for catching fish in streams inhabited by trout, nor the taking of trout by means of nets or other devices, except angling, in any waters."
561 amends Section 191, relating to dredging for oysters and clams, by adding: "No rakes, dredges or other devices shall be used in catching clams with spaces or opening between the teeth or prongs of less than 1 1/2 in., and no hard or round clams less than 3/4 in. in thickness shall be caught, and if caught shall be returned to the water without injury."
562 amends Section 189, relating to oyster beds, so as to prohibit the catching of clams or oysters between half an hour after sunset and half an hour before sunrise.
563 adds a new section, 121, prohibiting the catching of whitefish in November; also a new section, 122, prohibits the catching of weakfish, sea bass, blackfish or striped bass under 8 in. in length.
564 makes the close season for wildfowl from March 1 to Oct. 1.
565 amends Section 78, relating to the protection of wild birds, so that the words "possessed after the same have been killed" shall read "are dead or have been killed"; also amends Section 79, relating to the close season for meadow larks, so as to make the same substitution.
566 adds the following to Section 20, duties of protectors: "And shall have full power to execute all warrants and search warrants issued for the violation of the fish and game laws."
567 amends Section 70 so as to make the close season for wildfowl March 1 to Sept. 1, and strikes out the words at the end of the section: "And said birds may be pursued and killed from sailboats, steam launches and boats propelled by hand."
568 amends Section 24, compensating protectors, by adding at the end: "After all the expenses of recovering said fines and penalties have been paid."
569 amends Section 5 so that the regular meetings of the State Board shall be on the second Tuesday of January and July.
570 amends Section 217 so as to make a minimum penalty of \$15 "in addition to the actual damages sustained by the owner or lessee."
571 amends Section 240 so that the expenses incurred in the imposition or collection of fines or penalties shall be deducted before one-half of said fines or penalties goes to the informer.
572 amends Section 271 so as to add a new subdivision, No. 11, reading: "Inclosed lands is defined to mean lands the outlines or boundaries of which are marked by water, by a wire ditch, hedge or fence, road or highway, or partially by one or more of said means, or any visible inclosure or distinctive boundary which indicates a separation from the surrounding or contiguous territory of whatever nature."

Sea and River Fishing.

The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.

INDIAN HALIBUT HOOKS.

Or the accompanying illustrations Fig. 1 is a halibut hook used by Indians of British Columbia. The hook was obtained at Victoria by Dr. T. H. Bean.
Fig. 2 is used by the Kadiak natives for the capture of halibut. The specimen was collected at St. Paul village by Dr. T. H. Bean in 1889.
Fig. 1 is made from the tough root of a spruce; the

FIG. 1.

shank is somewhat elastic in order to allow the halibut to get the barb well into its mouth. The barb and head of the hook are wrapped with splints of spruce root; the barb is sometimes bone, and sometimes iron or copper.

FIG. 2.

bend and shank are made of soft wood and the lashings are common cotton twine. The barb is iron. The illustration is about two-fifths natural size, while that of the Victoria hook is nearly one-half natural size. These hooks are said to be much more killing for halibut than the American hooks, for the reason that the mouth of the fish is forced wide open and drowning follows speedily.

The Lake Trout.
DALLAS, Tex.—There is a fish caught in the Great Lakes, among others Ontario, which attains the weight of 25 lbs., and which I have always heard called "salmon trout." It is very plentiful, and like the regular salmon, except, I believe, that it has no scales and the flesh is of a paler color. I have been told that there are no "salmon trout," except in salt water. Is this a fact, and the name "salmon trout" a misnomer when applied to the fish mentioned?
A. H. S.
[The salmon trout of the Great Lakes has many common names, the best known being lake trout. In Maine, New Brunswick and Canada it is called togue and tuladi. Indian names are mackinaw or namaycush. In some parts of New York the fish is known as red trout, gray trout and black salmon. The so-called trout of salt water south of Virginia is not one of the trout (or salmon) family at all, but a weakfish. The lake trout has small scales. In the report of the Pennsylvania Fish Commission, recently issued, you will find a color plate of this trout.]

ANGLING NOTES.

Homeric Fishing.
A FEW evenings ago, during a pause in a game of whist, Mr. F. F. Gunn, who was associated with Dr. Jordan as an instructor in the Indiana University, said to me: "Had you lived in Homeric times you would have found it better form to saw wood than to go fishing; therefore be thankful that you live now even if this game is going against you." When a man makes a statement of that kind, particularly at a time when I am a tail-ender in the game, I want proof of it—documentary evidence, so to speak, and when I asked for this proof on this occasion, I found Mr. Gunn was loaded, and had cartridges in his belt besides. He quoted from this introduction to Homer by Prof. R. C. Jebb: "In the Homeric world fish is not mentioned as a delicacy—rather it is regarded as the last resource of hunger. The similes from fishing point to the use of fish by poor people who could command no other animal food." I argued that that was because the fish were caught in a net, in all probability, and no one had arisen to proclaim that "angling is an art, and an art worth your learning." Then he took a snap shot at me from Book 4 of the Odyssey, Bryant's translation:

"Now would our stores of food have been consumed,
Now would the courage of my men have died,
Had not a goddess pitied me, and come
To my relief, by name Idothea, born
To the great Proteus, Ancient of the Deep,
For she was moved by my distress, and came
To me while I was wandering alone,
Apart from the rest. They through the isle
Roamed everywhere from place to place, and pinched
With hunger, threw the hook for fish."

That, I was forced to admit, was suspiciously like fly-casting—that throwing the hook, but as my partner and I were still behind the game, I began to question the kind of hook that was used, when he gave me his left barrel, chokebored, from Book 10:

"While yet we had our bread
And ruddy wine, my comrades spared the bees,
Moved by the love of life. But when the stores
On board our galleys were consumed, they roamed
The island in their need, and sought for prey,
And snared with barbed hooks the fish and birds—
Whatever came to hand—till they were gaunt
With famine."

That left me tottering on one leg, for the ethics of the profession would not permit me to question a fish story by a brother angling writer, particularly as he was an old-timer, and the only thing left to do was to question Homer's standing in the profession. Was Homer an authority as a sporting writer? He evidently had sporting instincts, but he seems to have been a pot-fisherman, chiefly, and I do not think he deserves to rank as a first-class angling writer, and for this reason. Prof. J. D. Quackenbos, in his "History of Ancient Literature," relates the legend that "Homer, twice warned by an oracle to beware of the young men's riddle, went ashore one day on Ios, an island of the Cyclades, and there, noticing some boys who had been fishing, asked them: 'What luck?' 'What we caught we left, what we could not catch we carried with us,' was the reply. Unable to guess the riddle, the old poet died of vexation." His asking "what luck" was evidence that the germ of angling desire had been planted, but as he could not answer such a simple riddle it was proof positive that the germ had not developed, and he was not a first-class fisherman. "What we caught we left." That is, they had caught nothing in size over the legal length, and had thrown back all the little fish for fear of being pulled by a fish and game protector for having fish under six inches in their possession. "What we could not catch we carried away with us." How simple that is, for they carried away, in their imagination, the big fish which they bragged of around the stove during the winter evenings, and wrote to the newspapers about. Hence I am forced to think that as an angling writer, measured by some modern standards, Homer was a duffer.

Frozen Streams and Spawning Beds.

A few weeks ago I mentioned the probable effect of the extreme cold weather, now fortunately broken, upon some of the spawning beds of the brook trout in northern New York, where the small streams have frozen solid to the bottom. Since that note was written I have seen the representatives of two lumber concerns who have spent two and eight weeks respectively in the Adirondacks, although in widely separated regions, and they tell me that never before have they seen the streams frozen to their beds as they are this winter, forming a solid mass of ice over which the water flows and freezes. This is not promising for a crop of trout fry from these small streams next spring. To-day I had a talk with Myron Butties, the forester of the Adirondack Club, who comes from a region between the two that I had previously heard from, and while he reports much the same state of affairs as to the ice being solid in the small streams, he takes a hopeful view of the situation, inasmuch as he thinks that comparatively few brook trout run up the streams to their source from the lakes and ponds to spawn. He gives it only as an opinion, however, that most pond trout that go into the streams to spawn, spawn near the mouths of the streams. He has promised to examine some of the spawning beds on his return to the club house and write me what he discovers. Streams that are not frozen solid are full of anchor ice that has lodged on the rapids where trout make their beds, so that altogether the spring crop of fry must suffer to a greater or less extent. Mr. Butties reports "herds" of deer. He thinks in all his experience in the woods he has never known these so plentiful, and he says that they have not suffered as has been reported, because the snow has not up to this time been deep, and they could get around easily and find plenty of food.

A. N. CHENEY.

Indiana Commission.

COL. WM. T. DENNIS has resigned and Prof. Phillip H. Kirsch, City Superintendent of Schools, Columbia City, Ind., has been appointed Commissioner of Fisheries of Indiana. Prof. Kirsch has published a number of papers on fishes and will undoubtedly prove an active and intelligent commissioner.

A FLOOD OF GOLDEN MEMORIES.

"OLD DAYS IN MAINE"—What a flood of golden memories those words have unlocked as I sit here at my desk with FOREST AND STREAM before me; for be it known, that I am one of the unfortunates "chained to business." With reports, records and books pushed to one side, I seem to live over again the care-free days of boyhood. Again I am rambling among the nut trees on the banks of the Kennebec or the Carribasset; or with fish pole made from a spruce sapling I visit the fish holes, where the trout and chubs were wont to congregate; or with the old long flint lock fowling piece I am hunting again through the woods for gray squirrels and partridges. Oh! what joys were crowded into those golden days, before the cares of life began to press upon my shoulders. The memory of them come to me from out the misty past as a pleasant dream, radiant with the haze of Indian summer and the golden tint of autumn leaves.

My first introduction to hard work was on a farm where I spent three years. But the remembrance of the work is nearly crowded out of memory by the pleasures of living alone, as it were, in the fields and woods, and on the banks of a few trout streams in the neighborhood. Even now I remember the joy I felt one rainy day, when, exploring the loft over the carriage house, I found two double-sprunged fox traps. There was no hired man on the place to set them for me; but I resolved then and there to get even with that old gray woodchuck up in the back lot, who had heretofore circumvented all my plans for his capture. Slipping away quietly with one of the traps, I commenced operations at once. Arriving at the woodchuck's hole I attempted to set the trap by putting both feet on the springs, but found that my weight did not affect them much. I next stooped down and taking hold of the jaws with both hands I tugged and pulled with all my might. No go. That woodchuck I was bound to have at all hazards. Taking the trap to the nearest fence I next procured two stakes, then laying the trap down by the side of the fence I inserted the stakes under the bottom rail, having one over each spring, then bringing the outer ends together I sat down on them. My weight on the long ends of the levers forced the springs together, then leaning forward and stretching out my arms to their full extent I was able to set the trap. Then inserting one hand between the jaw and bed piece, pressing the back of the hand down and bending up one of the fingers under the trencher to keep it in place, I eased up on the levers and had the satisfaction of seeing the trap set. The next move was to insert them in the woodchuck's hole and await events. The next morning before the rest of the family were astir I had the pleasure of stretching my first woodchuck skin on the barn door, to be followed by others, also coon and squirrel skins.

From the farm I went up to the village of Bingham, where I entered a veritable "Uncle Lisha's shop" as an apprentice. It was during my stay here that I first visited the forests and lakes of northern Maine. I can speak of but one of my many fishing excursions, one that I look back on as the red-letter day of all fishing experience. There were three of us in the party. The place was Moxie Pond, time, first part of June, 1848. My companions were Melvin Bailey and Bartlett Hollis. I do not know whether they are living now, it has been many years since I have seen either. We went in by way of Moscow to the head of the bog, guided by a map of the road drawn on a shingle by Uncle Asa Parlan, an old trapper, then 70 years old, and who, I remember, was as tall, straight and active as a man of 50. At that time he had a camp at the head of the bog, three miles from the head of the pond, where he spent the hunting and trapping season alone nine miles from the nearest settlement. The first night we slept at his camp, the next day we launched a log driver's bateau that we found covered up in a thicket of young spruces, and paddled down to the pond, running the rapids at the foot of the bog. We fished at the head of the pond the first day, with fair success, taking some fine trout, running from 1 to 2½ lbs. each.

We camped at the head of the pond the second night, a dreary, desolate place it was, too, surrounded by high granite hills, over which the fire had swept a few years before, leaving nothing but blackened stubs and fallen trees in its path. We went down the shore two miles before we could find live spruce trees from which to peel bark for the roof of our camp. The sides we filled in with brush. Our fish that we did not eat for supper we salted in a trough hewn out of a section of one of the trees we peeled for roofing the camp. When we turned in I lay on the side next the fish trough. How well I remember lying awake most of the night listening to the weird cry of the loons and the hooting of an owl, not far away. Finally, near morning I dropped asleep, only to be awakened by a bear, which was making an early breakfast of our fish. There was no more sleep for me that night.

The next day we went down to Sandy Stream, on the west side of the pond, where we found a crew of log drivers waiting for water. Some of them were fishing on the stream and were catching fine strings of trout. We camped at the mouth of the stream, where in a short time we caught fish enough for supper and breakfast. The rest of the day we spent hunting and exploring.

Early the next morning before my companions were awake I took my rod and started up the stream. Before it was fairly light I could hear the fish running up over the ripples in the stream, their back often out of the water; and a hungrier lot of trout I have never seen, often leaping out of the water after the bait. I fished up the stream three-fourths of a mile, hanging my fish up on the limbs of the trees at the different pools. At a short bend of the stream I climbed on top of a large rock, where I stood spellbound at the beautiful sight before me. A few rods above, the stream was pouring through a notch in the top of an almost perpendicular cliff of rock, some 80ft. high. Midway in its descent it dashed on a shelf of rock, and spreading out in a wide sheet fell into a deep pool at the bottom of the cliff. The morning sun, just rising over the mountain on the east side of the pond, bathed the scene in a flood of golden light, making a picture which any lover of nature could not soon forget. I was soon aroused from the reverie into which I had fallen, by a splash in the pool, caused by a trout in pursuit of a breakfast. In an instant the instinct of the fisherman was aroused, and letting out my line I cast my bait far up into

the pool. Scarcely had it touched the water when there was a swirl, followed by a vicious tug at the line, and soon a 4lb. trout lay on the shore below the rock on which I stood. The beauty of the scene was forgotten in the keen enjoyment of the sport I had for the next hour, when the fact somehow got into my head that I was catching more trout than I could get back to camp. Reluctantly reeling up my line I started down the stream, gathering up my fish as I went. I laid down before the camp that morning the finest string of trout it was ever my fortune to catch. There were quite a number that would weigh 3lbs. each and some even larger than that.

Still I was not satisfied, like "Kingfisher," I had left a big one in a deep hole under the roots of a tree, larger than any I had caught. I returned to the pool after breakfast for the big trout, but try as I would, I could not hook him.

We crossed the pond and fished up Alder Brook, where we caught some fine trout, but finding the stream obstructed too much with brush we returned to the boat and fished along the east shore to the head of the pond, where we arrived about noon. Finding that we had all the fish we could carry out we started for home, where we arrived at midnight, tired and happy, as successful fishermen usually are.

In after years I visited many of the most noted hunting and fishing resorts in the State, but nowhere do I remember having such fine sport as we did on the Moxie.

It is twenty-seven years since I last visited the old State, but the memory of the happy day spent in the forests and on the lakes of Maine has often been refreshed by the correspondents of FOREST AND STREAM, and each year, as the fishing season comes round, there is a fever of unrest in my bones, and sometimes I almost think that I cannot die content without visiting the scenes of my boyhood again and catching one more trout. I often visit the old haunts in my dreams and hope that in the not far distant future I shall be fortunate enough to do so in person. Whether I do so or not, with Whittier I can truly say:

"Keep who will the city's alleys,
Take the smooth-shorn plain—
Give to me the cedar valleys,
Rocks and hills of Maine."

EMIE, Pa.

O. L. G.

ON THE NORTH SHORE.—VI.

The Trip Up.—VI.

(Continued from page 120.)

AS THE sun climbed and the sombre shadows grew less, the wind abated, and then we went to the east shore, where we succeeded in persuading three unsuspicious *fontinalis* that our feathers were food, and so benefitted by the delusion.

"The fond credulity
Of silly fish, which, wording-like, still look
Upon the bait, but never on the hook."

As every passing hour was lulling the wind, we concluded the trip to Sand River could comfortably be made, and accordingly gave word for the advance to that grittily-named stream. The dismal aspect which had greeted us in the morning was fast fading away, for bright flashes from Phoebus were falling upon the moistened earth; the glad waters sparkled, and the loftier heights that towered like sentinels over the great lake were tinged with rosy hues, while the limitless shadows, which fell upon the slopes, caught and repeated the soft azure of the sky. The Divine Artist was rapidly painting a landscape of inexpressible beauty.

On reaching the river, we at once commenced sending our flies in the big pool of dark water at the mouth, but no monster or even adolescent trout could be coaxed to the surface, no matter what fly was presented or how skillfully thrown. The trout of the mountain stream or of the icy lake were not there to be feasted or to be fooled. We therefore ascended the purling brook, and with small flies caught about fifteen or twenty that ran from 6in. up to 8 or 10, but none that would wake the rhythm of the reel.

Returning to the mouth of this beautiful little river that comes from mountain heights in a merry ripple, we there partook of lunch, and then started for the camp. Nearing the Lizards, Ned suggested, as we had almost the entire afternoon before us, to visit them, and endeavor to secure some of the ice which had doubtless been abandoned when the fishing station was removed from here in the spring to Dog River, the object of said removal being to rest the waters for a couple of years. A wise proceeding, and one which will assuredly prove profitable in the end.

Long before we got over our sails began to flap, and it was then a resort to oars. The boys always took up the ash blades willingly, and plied them with a vigor that made the water race along the sides of the sailless craft with a musical cadence. Landing at the upper end of the island, where there is a good harbor and small pier, we fastened the boat, and then walked over a short distance to the icehouse, where we found a large quantity of the glacial blocks, which we foraged upon to the extent of a basketful. The frosty blocks being duly stowed away, we took a survey of the deserted quarters, which looked as if a raiding party had just passed through them. The island was well wooded, and abounded in rabbits of which I saw several as they ambled along the path, while green lizards, so the boatmen stated, were everywhere. Everything around indicated desertion and decay—

"Their scepters broken and their swords in rust."

The boys being of a decidedly inquisitive character went through many of the shanties, overhauling and looking into every corner and cranny, and in fact were so much taken up with their tour of inspection that we had to call them to the boat. As we left a light breeze wrinkle the glittering water, and the setting sun around it was gathering fleecy folds of roseate clouds, radiant in opal and violet, amber and crimson.

"Dipp'd in the lines of sunset, wreath'd in zones,
The clouds are resting in their monarch-thrones,
One peak alone exalts its glacier crest,
A golden paradise, above the rest;
Hither the day with lingering steps retires,
And in its own blue element expires."

On nearing our quarters a dandy little yacht, having on board a gay fishing party of both sexes, was seen steaming with the speed of an antelope toward the wrecked pier at the southern extremity of the island we had but

recently left. She very suddenly brought up on the rocky bottom a little this side of the delusive pier, and it took fully two hours of hard steaming and sparring to release the staunch and handsome craft. Peter foretold the accident, as he was quite familiar with the locality and condition of the pier, which had been shorn of some 30 or 40ft. of its front during a terrible northwester last fall. The onslaught of the lofty waves which attacked it was so sudden that several loaded fish-cars thereon were lost before they could be rolled to a place of safety. It takes a heavy northwester on this lake to create consternation, for it comes sweeping its entire length, and with a violence that carries destruction on its heaving plains. It is really the only wind on this great lake that I dread to encounter in a small boat.

Our foraged ice was truly a blessing, for with it our trout were kept in fine condition. It saved the boys so much trouble that they proposed another raid on the abandoned stock as soon as our present supply gave out. It was a matter for consideration, we told them, when the ice had all dissolved, as well as a serious question of commercial honor to settle with our conscience.

The evening being warm and a camp-fire not necessary for comfort, we went to the rocks in our immediate front, and there sat watching the golden stars bespangle the light waves; the drifting clouds as they kissed the crescent moon; the dark shadows as they spread like tracery along the ragged shore, and the nocturnal whippoorwills as they sought their vesperian meal in the air. Night, the sable goddess, was displaying the splendors of her royal kingdom with a generous hand.

"All was so still, so soft, on earth and air,
You scarce would start to see a spirit there,
Secure that nought of evil could delight
To walk in such a scene, on such a night!"

Having drank to repletion of the beauties of the night, we sought our tent, and as we lay snugly wrapped in our blankets, inhaling the odor of the balsam, planned for the prospective trip; but as the unruly wind was an element of consideration, we had the significant, if as a prominent, factor for all the plans under discussion.

ALEX STARBUCK.

ODD DAYS WITH THE TROUT.

Trials of the Trout Fisher.

THERE is no vocation in this world wherein the truth of that homely but true old adage (there's many a slip, etc.) is often realized than in the life of the trout fisher, as is fully illustrated in the following sketch:

Freezy and I were restless again; after a week's inactivity we longed for the murmur of the brook and the music of the reel. At last the longing became unendurable, and one evening Freezy settled the matter to our mutual satisfaction. "Well, old man, all things being favorable in the morning, what do you say to a day's sport with the trout?" I did not need any urging, oh, no; so arrangements were made for an early start on the morrow. Boarding a freight train next morning we landed in Plainfield at an early hour and soon sought the banks of our old favorite, Mill Brook. The weather was not very favorable, but as we were not at the head of the weather department we made the best of it.

We started in at the meadow close to the big grape vine. Now, in rigging up, Freezy is usually first to get there, and I was yet tying on the leader when he made his first cast with the remark, "Now, sonny, I will show you how to land a big trout," and he did land a trout of about 5in. in length, which chum, with a sniff of disgust, dropped back into the stream. Leaving him at the head of the pool I worked in through the alders and came out at the side of the pool under the low spreading branches of an old maple, a good spot for a large trout, but a mighty poor place to land him. Making a short side cast down toward the debris at the extreme lower end of the pool, a trout of 4lb. weight darted out and seized the tail fly. I soon hooked him and drew him forth. There was not much science in that; I just reeled him in and lifted him around and out on the bank. Freezy soon hooked another and brought him safely to reel.

Just below I took a fine fish of 4lb. weight from under a clump of willows at a bend of the stream. I now followed chum, who had gone on down stream. Now, down at the edge of the woods I have a lucky spot, a beautiful little pool, where I am always sure of at least one good trout. I have almost come to regard this pool as my own, so attached have I become to it, and chum knows it. Stepping carefully up to the pool, there was chum with a provoking grin upon his face and two fine trout upon the grass fresh from the pool. "Never mind, old man, my turn to laugh next," said I, and indeed my turn came much sooner than expected.

We fished across the meadow, taking now and then a fair fish, and soon reached the old wall which separates the meadow and swamp. Here is a deep hole, perhaps the deepest on the stream. Freezy stopped here to try conclusions with a resident of that same pool (in fact, Freezy has an old grudge to settle with him). Quietly settling to business at a charming little eddy just below, I was soon startled by a wild whoop and a heavy splash in the stream, and springing up, saw chum's head bobbing around on the water like a huge cork. Now, you can safely bet there was some churning and splashing to reach shore, and he soon stood on *terra firma*, the most thoroughly disgusted looking sportsman I ever beheld (tableau), myself upon the grass, rolling and choking with laughter, Freezy with arms and legs widespread and water streaming from every thread. Glaring at me with a wild light in his eyes, at last his injured feelings found vent in these words: "Oh, laugh, you blarney idiot, laugh! Funny, ain't it?" "Pays you for poaching in my private pool above," said I, but really I was soon sorry for the poor fellow, for his teeth began to chatter with cold. I soon had him in undress uniform, and as I wrung the wet clothing I was entertained by a series of gymnastics indulged in by chum to bring warmth to his numbed body. Now, the fun was all on my side, as this all transpired in a cool wet wind in the rather scant costume of socks and undershirt. It seems in making a long cast he had overbalanced and taken a header into the pool, thereby scoring another failure to capture the big trout. At last we started, chum as comfortable as his wet clothes would permit, but it seems the end was not yet for poor chum. This must have been his unlucky day, for in clambering over the old wall he tripped on a mat of

grapevines, and turning a somers, lit on the back of his neck. Slowly getting up, with a dazed look, he relieved his feelings with these words: "Well, I'll be cussed; if I reach home alive to-night I shall be thankful."

Picking up his loose traps we again sought the stream and, the trout biting well, soon put Freezy in good humor again. Even now the nerves tingle and the heart beats fast as I think of the big trout I lost on that day (and here I had cause for sympathy with poor chum). A sharp bend of the stream caused a deep hole under the bank beneath the roots of a lordly old black oak. Many a great trout have I taken from this place, but the boss of the eddy, for all I know, still remains.

This day I determined to give him a thorough trial, and as luck would have it he was at home and hungry. Wrapping on a No. 2-0 Aberdeen hook and looping on some good worms, I soon had a dainty morsel which no sensible trout could resist. Letting it float down with the current, it settled in under the bank, when there was a mighty swirl of the waters, a sharp tug, and I knew I had hooked the big trout. Then there was business for the scribe. He ran off 50ft. of line in as many seconds, then, turning, he rushed directly toward me, but with my double multiplier I kept up the slack. Once he leaped clear of the water and shook himself savagely in his efforts to dislodge the hook. Well, to be brief, he soon tired, and as the right moment arrived I stepped back to draw him forth, when my heel caught in the roots of the old oak and in a twinkling I was reclining gracefully on my back and my line, with empty hook, wrapped around an overhanging branch.

Well, I gathered myself up and in righteous indignation cuss—blessed those roots, but finally consoled myself with the thought that chum was not there to see my ridiculous tumble. From a momentary glimpse of the trout as he described a parabola in the air when I went to grass, he looked as big as a very small whale. Whistling to Freezy, I soon received an answer, and, joining him, I found him on the sunny side of a large rock eating lunch.

"Well, did you get the big trout?" were his first words. "I came very near it," I replied, in a nonchalant way, thinking at the same time "May I be blessed if you ever will know just how near, chummy;" but I had made up my mind that some time in the near future I would have it out with his troutship.

We finished the lunch and went down to the swamp below the railroad, down where the big fellows live. Here I hooked and landed a trout of 1lb. 6oz., and, considering the difficulties under which I labored it is a miracle that I saved either trout or tackle. Owing to a recent rain the stream was greatly swollen in the swamp. At one place I had noticed an old, partly submerged rail lying across the stream with the ends resting securely among the alders on either bank. Halting a little below I turned and saw a large trout quietly rise just above the old rail and seize a fluttering miller that had fallen in the stream. Under the impulse of the moment I made a cast up stream. As the fly settled on the water the trout grabbed it and down he went, bringing the tip down across the rail with a snap. As the high water would not admit of my passage up the bank, my poor tip had to stand the racket. Try as I would I could do nothing with that blanketed trout; he just hung under that rail and pulled and yanked; but the trusty old lancewood stood the strain nobly, until, getting tired of it all, in spite of his objections I just reeled that trout in till his nose touched the tip, and passing the rod behind me, hauled him out upon the ferns. No danger of losing him, he was hooked clear down to the roots of his tail.

This wound up the day's sport, as it was getting dusk, so we unjoined our rods and started for the home train with a good creel of trout and in good spirits in spite of the many mishaps of the day.

E. M. BROWN.
PRESTON, CONN.

BOSTON AND MAINE.

The Maine Trouting Season of 1893.

BOSTON, Feb. 11.—There is about the usual interest being manifested in ice fishing, but the weather has been so extremely unfavorable that but little real fishing has yet been done. In the event of some warm days the sportsmen, with bait pails and ice chisels, would take to the ponds; but they are not going with the mercury below zero, while being well aware that the ice is thicker than for many years. The recent heavy rain has raised some of the ponds and lakes a foot or two, some of which were remarkably low previous to the storm. This will be favorable to the fishermen as soon as the warmer days come. The Maine papers mention only a few catches of trout. Doubtless there has been much less of fishing done in that State so far in February than is usually the case. All this is favorable to the summer fishing with rod and line. While on the question of spring and summer fishing in Maine, it may not be amiss to mention that indications point to a rather light trouting season in that State. I have met a number of sportsmen of late who usually calculate to make at least one fishing trip into Maine every year. Now they mention giving up their spring trips, at least, and "taking in" the World's Fair. This will be doubly the case, if the Maine Legislature passes the foolish license law, imposing a fee of \$5 on every sportsman who presumes to hunt or fish in that State. I hear more and more of indignation and disgust expressed at the bare idea of such a law. Dozens of sportsmen have already declared that they will not pay it. They will go to Canada or New Brunswick instead of Maine. A gentleman whom I met on Saturday, in speaking of the license matter, expressed it as "the most supreme piece of gall" he had heard of yet. He has spent several seasons in the Rangeley region. He allows that he shall pay the license, if imposed, till he can dispose of his camps. Then he will seek other water. Up to the present writing the license bill had got no further than the Senate, where it was first introduced.

Massachusetts Legislation.

Thus far fish and game legislation has made but little progress in Massachusetts; in fact, the amount of legislation asked for this season is less than usual. It is doubtful if the Massachusetts Fish and Game Protective Association asks for much of legislation this winter. In the first place the feeling is that the committee on fisheries and game is scarcely favorable to the sportsmen, but is more likely to favor such schemes as that of Mr. Gilbert in his endeavors to have it made legal to sell trout in close season. His hearing has come off before the committee, on the question of making the open season on trout begin

on Jan. 15, but up to the present writing the committee has not reported on the matter. In the Maine Legislature but little has yet been accomplished in the way of changes in the fish and game laws. Bills have passed closing one or two ponds in Franklin county to ice-fishing. Commissioner Stanley and several other true friends of fish and game are keeping watch against changes that are likely to prove confusing or positively dangerous.

Some pressure is being brought to bear for a change in the laws, so as to make it possible for the fortunate sportsman to be able to send out, or have sent out, his moose or deer, without the trouble of being obliged to accompany it in person. Considerable feeling on the subject has been several times stirred up of late years by what hunters have termed the hardship or injustice of having their game seized by the wardens for the simple reason that the real owner or actual shooter has not been with it. A change in the law will be asked for covering this point, and I am informed that considerable money and influence from outside the State will be used to forward the change. On the other hand, Commissioner Stanley very wisely says that to change the law so as to allow the taking of game out of the State by anybody whom the sportsman might employ or designate, would simply be to open the entire State to market-hunting. All anybody who happened to kill a deer or a moose, either resident of the State or not, would have to do would be to delegate some person or corporation to take it out of the State and it could easily be landed in Quincy or Faneuil Hall markets in a few hours. The friends of game protection in Maine will fight against any change in this part of the law. The number of Maine deer landed in the Boston markets the past season has been very small, notwithstanding the remarkably great number killed. In fact almost the only Maine deer seen in these markets have been shot by the marketmen themselves or some members of their hunting parties. To make any changes in the Maine game laws that would tend to again allow of the marketing of Maine deer, the true friends of game protection would regard as a great mistake. It has already been told of in the FOREST AND STREAM that previous to the non-export game law in Maine, over 800 Maine deer were numbered at one time in the Boston markets. That such indiscriminate marketing of game may never again be allowed, is most devoutly to be hoped.

Mr. John Bartleman, who, with his mother, has made it his summer home at the Mountain View House, Rangeley Lake, Me., for several seasons, will leave Boston for that place the first of April. He intends to be on the ground early this year. Last year he took several very large trout. His mother also has a record of a 5-pounder.

The floating hotel, John S. Danforth, has been all winter thus far in reaching her destination, New Smyrna, Fla. A special dispatch to the Maine papers the other day announced her safe arrival after a very bad passage. She arrived most too late for many guests and many excursionists this year.

Mr. R. A. Tuttle, of Boston, the well-known proprietor of Lake Point Cottage, Rangeley Lake, Me., denies the report published in the papers that he had purchased the Elmwood at Phillips, Me., once a very celebrated hotel with the Rangeley Lake fishermen. The glory of that hotel has waned. The railroad has gone through to Rangeley and the sportsmen have no occasion to stop over night at Phillips.

That Trout in Close Season Bill.

A bill, ostensibly to allow Mr. Gilbert to sell trout in the close season, has been introduced in the House of the Massachusetts Legislature, and has passed to a third reading, which really means its final passage in the House. The friends of fish protection are to oppose it in the Senate, where they hope to defeat it. Last year a bill of the same nature passed both houses, it will be remembered, but was vetoed by the Governor. Fortunately Massachusetts has the same Governor this year, and he is just as much of a sensible gentleman and as much of a sportsman as he was a year ago.

Bullheads a la Kekoskee.

THERE is great fishing at Beaver Dam, Wis. The Milwaukee *Sentinel* describes it thus: "Over a hundred men and boys are there all the time, dipping fish out of large, square holes in the ice with flat, square nets. Each time a net is lifted, which is about once in five minutes, the fisherman secures from half a peck to a bushel of the finny tribe. Ofttimes the nets are too full to lift, and have to be let down again to let some of the fish escape before it is possible to draw the net out of the water; or the owner calls for help from his nearest neighbor. The fish caught are principally bullheads, with now and then some perch, pickerel and suckers."

"The place where these fish are caught is among a lot

of springs, where the fish go for warm water. It is not every winter that fish may be thus easily captured, but only when the winter is very cold and the ice thick, the fish then flock in vast schools to these springs. It was formerly believed that they went there for air, but this idea is dispelled by the fact that in ordinary winters, other conditions being the same, when it is not so cold, no fish can be found. They are not always found at the same place, either; sometimes changing to other localities of the same nature of which there are several.

"Some fishermen, not having nets, make good catches by chopping two holes in the ice several rods apart. The holes soon fill up with bullheads and all the fisherman has to do is to scoop them out with a pitchfork. When one hole is cleaned out he goes to the other one while the first one fills up again. Sometimes the pressure from the fish below force the upper ones way out of the water on the ice. Many fishermen catch as high as fifty bushels of fish in one day, and the price they bring is from twenty to forty cents per bushel. The market is right there on the ice. Farmers come from a radius of forty miles to buy fish. Usually several farmers club together and send a man and team here for a load of fish which consists of from forty to sixty bushels. Some use double wagon boxes while others use frozen pickerel for side stakes to keep the bullheads from falling off. All day long loads of fish are seen passing through Beaver Dam. Sometimes as many as twenty loaded sleighs may be seen at one time coming off the lake on their way home. Quite an extensive business is carried on by shippers who buy the fish, dress them and ship them to the city markets where they find a ready sale at good prices; some are also sold by the basket in neighboring towns."

The Appleton *Crescent*, Feb. 8, records: "The great fish catch on Beaver Dam lake is growing greater. Three Elser brothers succeeded in catching twenty loads of bullheads in one day a few days ago with nets, which netted them \$297 for their one day's work. Many are making from \$10 to \$20 per day catching fish."

Wyoming Valley Notes.

A WILKES-BARRE, Pa., correspondent, Mr. George W. Lung, writes of the changes which have taken place in that famous angling center within the last decade:

"Wilkes-Barre has grown asphalted streets and many large buildings, and the electric cars run all about. Soon they will run from Nanticoke to Carbondale; but the growing mountains of coal culm are everywhere destroying the beauty of the valley, and, by reason of many being on fire, send into the air much noxious gas."

"Last year I spent mostly at Harvey's Lake, and although I saw fish, I was not successful in getting them into possession. Either the fish food was so abundant, or our hooks were not alluring, or something else prevented us from catching more than a few."

"About six or seven years ago Dr. Crawford and Mr. Butler put into the lake several thousand lake trout. They are often seen in the wake of steamers, and are reported as high as 3ft. long. Perhaps a dozen have been caught, one of which was 27in. long and weighed about 3½lbs. Black bass are in the lake and they too are shy of the hook."

"I was at the lake recently and made soundings, to learn the true depth of water, and found the deepest was 65ft. The usual sayings, oft repeated, of no bottom spoken mysteriously of by the old lake dwellers prompted the true measurement."

"The new railroad route to North Mountain is completed, and trains will soon run from here via Harvey's Lake to Towanda, and a link is soon to be done when trains will come from Williamsport by the same route. This will open up a vast forest retreat to city people, who may hide away where pure water and air may be enjoyed in the midst of little lakes sparkling in their pristine beauty and trout streams not yet robbed of their treasures."

River Cruises for "C. J. L."

STAUNTON, Va.—*Editor Forest and Stream*: Your correspondent "C. J. L.," of Detroit, seeks information in regard to an eligible fishing and canoeing stream for a two or three weeks' outing in the spring. There are so many fine streams near him that he may well be embarrassed in his choice. Permit me to suggest a few. The great Miami River, in Ohio, will furnish him a delightful two weeks' cruise from Sidney to Hamilton or Lawrenceburg, Ind. In the Ohio, just below the mouth of the Miami, the river is swift and full of little rifts, and the Miami Valley is beautiful. The Wabash River, in Indiana, from Huntington to Terre Haute will also furnish a lovely two weeks' trip, or he may embark at Warsaw and descend the Tippecanoe to the Wabash, and thence to Terre Haute. The White River (West Fork) from Muncie to the Wabash will profitably employ from two to three weeks, as will also the East Fork of White River from Shelbyville to the Wabash. The St. Joseph River from Elkhart to Lake Michigan is also good for two weeks. The best time to cruise these Ohio or Indiana rivers is in June, as the water is better, the weather not so hot and malaria not so apt to be around. The country is beautiful and well settled with houses, and railroad stations every few miles. Good bass fishing is found in most or all of these streams also.

If "C. J. L." wants to try a little rougher water let him come East to the Susquehanna, the Delaware, the Potomac, or my own favorite, the Shenandoah, upon which I cruise every year; but I doubt if his Parker B. Field canoe would stand a trip through one of these rough mountain streams.

COMMODORE.

Objects to "Rodster."

Editor Forest and Stream:

I want to file a protest against Brother Starbuck using the word "rodster" when he means the man using the "fishin' pole." We can stand all his highfalutin' heights of poetry (quoted), but when he expects us to swallow "rodster" it is time to kick. Had he occasion to speak of a "bullwhacker" he would doubtless, and with equal propriety, call him a "whipster," or a man using a gun a "gunster," or a small boy wielding a fish pole a "polester."

Give us a word, Brother S., with a little more American sense in it. "Rodster" is a little too "English ye know" for the digestion of a plain old

Salmon Fisheries of Alaska.

The Secretary of the Treasury has transmitted to the Senate the report of Special Agent Max Pracht upon the Alaska salmon fisheries for the season of 1892. Owing to the delay of Congress in making the necessary appropriation for the protection of those fisheries, the agent did not reach Sitka until the latter part of September, and he was unable to determine accurately how far the streams had been obstructed by barricades and other means of preventing the ascent of the spawning fish. He found numerous instances, however, in which they had been partly or entirely closed by fences, dams, fish wheels or traps, all of which were removed before the arrival of the agent.

The natives violate the law systematically, and cannot be prevented by a fine, as they are almost uniformly without property. Mr. Pracht recommends that imprisonment be made an alternative punishment for this offense.

A salmon hatchery is in operation at the establishment of Calbreath & Co. at Point Ellis, on Kuiu Island. A strict application of the law, however, will prevent the use of the dams necessary for fishcultural purposes.

The pack of salmon is reported to have been 457,969 cases of 48lbs. each in cans, besides 15,252 barrels and 4,245 half-barrels of salted whole salmon, and 35 barrels and 36 half-barrels of salted bellies. The value of the pack was \$2,064,340.

Some difficulties arose between the native fishermen and a party of fishermen from British Columbia. Complaint was made to Mr. Pracht, and he referred the dispute to the Treasury Department for action. The decision of the Solicitor of the Treasury was that aliens cannot claim and hold salmon fisheries, or control streams that carry salmon in Alaska.

"Besides, Congress has reserved to the United States the exclusive right to regulate the taking of salmon, and to prevent the destruction of salmon in Alaska."

Other fishing industries in the Territory are based upon the cod, halibut, eulachon, herring and dogfish, the aggregate value of fishery products amounting to upward of two and one-fourth million dollars.

One of the curious little fish of Alaska is the eulachon or candle fish, which is said to spawn only in glacial rivers. The flesh is so rich in fat that when dried it will burn like a piece of pitch pine; yet there is probably no better pan-fish in the Pacific waters. The fat although extracted by a process of putrefaction, is pronounced sweet and is used as a substitute for butter and in place of cod liver oil.

The New Hampshire Fish Commission.

WE have received from Col. E. B. Hodge the report of the Fish and Game Commissioners of New Hampshire for the year ending Dec. 1, 1892.

One of the Commissioners, Col. George W. Riddle, retired from the Commission in November, on account of ill-health. Col. Riddle's retirement is to be regretted. He had been on the Commission for ten years, and during this time rendered valuable service.

The drought in September and October last year did great damage to the trout streams in many parts of the State.

During the past year the Commissioners have paid special attention to the cultivation and distribution of indigenous fishes, more especially the lake trout (*S. namaycush*). East Pond, in Enfield, and Mascoma Lake have been liberally stocked with this fish. A general stocking of all waters suitable for lake trout is proposed. In regard to this matter the Commissioners say: "Such ponds should have an area of not less than five hundred acres, with sufficient depth to give a temperature at bottom of not less than 55°, with plenty of small minnows, or, what is better, fresh-water smelt for food."

River herring (alewives) are mentioned as of considerable importance, and the Commissioners hope that a fishway will soon be put up at the Exeter dam to enable these fish to ascend the river, where they would find extensive spawning grounds.

The eighteen miles of coast line of the State of New Hampshire has yielded an annual catch of 140,000lbs. of lobsters. The total catch of lobsters on the whole New England coast in 1889 is given as 30,449,603lbs., valued at \$833,736.

During the last few years the decline in the number and size of the lobsters taken has been "such as to demand prompt action by the several States," and the New Hampshire Commissioners think that "there is no valid reason why all the States interested cannot unite in such uniform laws and regulations as will have a tendency to check the decline and eventually restore the fishery to its former abundance."

The work of the Commission has steadily increased. The number of eggs taken from native fish in 1889 was 125,000, while in 1892 the number of young fish handled was 2,912,000, all native fish except 125,000.

Attention is called to the pollution of streams by saw dust and mill refuse. It is stated that many of the finest trout streams in the State are now destitute of these noble fish. Rotting masses of saw dust fill the eddies and cover the bottom of the streams, sending off poisonous gases, so that even the insect life is driven from the water. As an example of what this kind of pollution will do, the Ammonoosuc River, in the northern part of the State, is referred to. Not many years ago this was a clear, limpid stream, and well stocked with trout. Mills were built and all the saw dust and refuse were dumped into its pure waters. To-day its condition is said to be a disgrace to the State.

The same fate threatens the beautiful Pemigewasset. "Steam mills are being built with the intention of dumping all the refuse into the river, to the destruction of fish life and immense damage to the riparian owners below."

There are now seven hatcheries in New Hampshire. Three of the hatcheries handled lake trout only, the others brook trout and salmon.

At the Plymouth station 2,460 wild trout have been added to the stock of breeders. These trout, which were 5in. and upward in length, cost but \$3 per hundred delivered at the hatchery. In 1892, 1,150,000 young fry were distributed from the Plymouth station. Of this number 608,000 were brook trout; 215,000 lake trout; 15,000 golden trout (*aureolus*); 75,000 landlocked salmon; 200,000 Penobscot salmon; 25,000 rainbow trout.

From Keene station 70,000 brook trout were distributed and 50,000 lake trout.

From Colebrook station, 35,000 brook trout and 25,000 landlocked salmon.

From Sunapee station, 44,000 landlocked salmon and 125,000 brook trout, also 105,000 golden trout and 25,000 Loch Leven trout.

From the Laconia station 750,000 lake trout were distributed.

From Bristol station, 550,000 lake trout.

In reference to Sunapee Lake the Commissioners say: "Some very fine hybrids were taken at the mouth of Pike Brook and also among the aureolus on the spawning beds in the lake. The fishing in the lake this season was better than last. The number of brook trout and salmon taken showed a marked increase over previous years. The aureolus, or golden trout, in size and numbers were fully up to the average."

Attention is called to the many attractions of Squam Lake. "This beautiful sheet of water is fast coming into notice as a great summer resort. The scenery around the lake is not excelled by any other in New England. * * * To meet the demand for better fishing by the summer residents it has

been well stocked with black bass." Large plants of lake trout are also being made in this lake.

Acknowledgments are made to the various railroads for the free transportation of fishes and to the U. S. Commissioner of Fish and Fisheries for donation of eggs.

In the appendix to the report is published the report of State Fish and Game Detective B. P. Chadwick; statistics of the fisheries of New Hampshire, taken from the Bulletin of the U. S. Fish Commission for 1892; report on the conference of the Fish and Game Commissioners of the New England States; report on the lobster, by S. Garman, and a list of the Fish Commissioners of the United States and Canada.

Washington Bridge.

One of the most beautiful structures of its kind in the world is the Washington Bridge. This engineering marvel of bronze, steel and stone is one of the sights of the metropolis. It spans the picturesque Harlem River and the tracks of the New York Central and Hudson River Railroad at 181st street, New York. The length of the bridge is 2,375ft., height 133.5ft. above the river. It has two steel arches, each with a span of 510ft., supported by three stone piers and two stone abutments. The piers are 98ft. long and 40ft. thick, of solid concrete, faced with dressed granite. The abutments are semi-circular arches of masonry, each having a span of 60ft. There are a 50ft. driveway and two footways, each 15ft. wide. It cost \$2,700,000. A photograph etching of the famous view of Washington Bridge, taken by Mr. W. H. Jackson, the noted landscape photographer of Denver, Colorado, has just been issued by the Passenger Department of the New York Central. The Journal has received a copy. It is a splendid piece of work, the finest example of this style of art produced in recent years. It is the work of the New York Photogravure Co., which fact alone is a guarantee of its excellence. A copy of this beautiful etching, 17x22in., on fine plate paper, 24x32, can be obtained at the New York Central ticket offices, No. 413 Broadway, No. 942 Broadway, or at Grand Central Station, New York; No. 333 Washington street, Brooklyn; or of Frank J. Wolf, General Albany Station, Albany; W. E. Brown, City Passenger Agent, No. 127 Washington street, Syracuse; J. C. Kalbfleisch, City Passenger Agent, No. 11 East Main street, Rochester; Edson J. Weeks, General Agent, No. 1 Exchange street, Buffalo; W. B. Jerome, General Western Agent, No. 97 Clark street, Chicago; or of Carleton C. Crane, Pacific Coast Agent, No. 10 Montgomery street, San Francisco, for 30cents; or it will be sent free, post paid, to any address on receipt of 75 cents in stamps or money order, by George H. Daniels, General Passenger Agent, Grand Central Station, New York.—*Albany Evening Journal*.—Adv.

The Kennel.

FIXTURES.

DOG SHOWS.

Feb. 21 to 24.—Westminster Kennel Club, New York city. James Watson, Sec'y.
Feb. 25 to 28.—East Side Close Feb. 25.
Feb. 28 to March 3.—Keystone Kennel Club, at Philadelphia, Pa. James Watson, Sec'y. Entries close Feb. 17.
March 7 to 10.—Maryland Kennel Club, at Baltimore, Md. W. S. Dillender, Sec'y. Entries close Feb. 25.
March 14 to 17.—Washington, D. C. F. S. Webster, Sec'y.
March 21 to 24.—City of the Straits Kennel Club, at Detroit, Mich. Guy D. Welton, Sec'y.
March 22 to 25.—Elmira, N. Y. C. A. Bowman, Sec'y.
March 28 to 31.—Illinois Kennel Club, first show, at Indianapolis, Ind. Chas. K. Farmer, Sec'y.
April 4 to 7.—New England Kennel Club, at Boston, Mass. J. W. Newman, Sec'y.
April 11 to 14.—Continental Kennel Club, at Denver, Col.
April 19 to 22.—Fifth Annual Dog Show, at Los Angeles, Cal. C. A. Sumner, Sec'y.
May 5 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.
June 13 to 17.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.
Sept. 7 to 10.—Hamilton, Ont. A. D. Stewart, Sec'y.

FIELD TRIALS.

Nov. 20.—Eastern Field Trial Club's Trials, at High Point, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

Don't forget that Philadelphia entries close Feb. 17, with Jas. Watson, Philadelphia Tattersall's, Philadelphia, Pa.

SOUTHERN FIELD TRIAL CLUB'S TRIALS.

The Derby.

NEW ALBANY, Miss.—There were 21 starters in the Derby, which was an excellent percentage of the entries. Quite a number of names are familiar to the readers of FOREST AND STREAM, they belonging to dogs which ran in the trials last year, and which therefore figured in the reports.

The judges were Messrs. F. I. Stone, Chattanooga; P. H. Bryson, Memphis, and Dr. M. F. Rogers, New Albany, Miss. On Sunday evening Mr. Bryson announced that Mr. J. M. Tracy, who had been engaged to act as a judge through the trials, would not be present, and that the club would leave the selection of the third judge to the handlers. The latter consulted a few moments and immediately thereafter announced that Dr. M. F. Rogers was their choice, which was a wise selection.

Birds were in abundance, and large, fine birds they were; strong, too, of wing and swift of foot. The club's care, as represented through the personal skill, attention and energy of Dr. Rogers and Capt. Bias, in planting numerous sorghum patches to provide a constant food supply for the birds, and their care in protecting the grounds from poaching, are the prime causes of the great numbers of birds which were on the field trial grounds. Dr. Rogers had caused a number of small sorghum patches, 60 or 70, I think, to be planted here and there over the club grounds. As a consequence the beaves were large, from 12 to 20 strong. Well grown birds were in each bevy, thus demonstrating what one or two energetic members can accomplish when they make the endeavor. It has demonstrated that skill and effort can make a certainty of what heretofore in field trial matters has been left almost entirely to chance.

Rabbits were in abundance and marred the competition somewhat, in that the dogs frequently pointed them and sometimes were tempted to chase. The unfavorable weather added greatly to the difficulty of the competition, the birds scattering and running from the points whenever they could safely do so.

There was a large attendance of spectators. Messrs. J. N. Seale, B. A. Parsons, J. R. Rogers, J. D. King, from Jackson, Tenn., visited New Albany in their private car. There were also Messrs. T. M. Brumby, the secretary; F. S. Ward, Oxnore, Ala.; J. Slocum, Star Island, Mich.; H. H. Mayberry and T. T. Ashford, Birmingham, Ala.; Dr. W. G. Moore and T. G. Barstow, St. Louis; B. Bedford, Whyte Bedford, F. R. King, Lighton, Ala.; Major J. M. Taylor, M. Essig, Natchez, Mich.; Mr. Coe, Baltimore; Mr. Shriver and Mr. Mundy, and many others. About fifty horsemen were present most of the time each day of the trials.

MONDAY.

First Series.

The weather was cloudy and dark in the forenoon, with threatening signs of rain. In the midday hours the sun shone forth a short while, then the clouds again gathered, and a light, misty rain set in for a short while at nightfall.

Twenty-nine beves of birds were found during the day, all full, large beves, of big, strong birds. The numerous sorghum patches afforded abundance of food, and they also made the finding of the birds comparatively easy, their homes being in the vicinity of their food supply.

The work on the whole was uniformly good, although nothing that was really brilliant was done. Each brace ran 45 minutes.

They were drawn in the following order:

Avent & Thayer Kennels' black, white and tan dog Kingston (Chance—Bessie Avent), J. M. Avent, handler,

with
R. B. Morgan's black, white and tan bitch Ruby Blade (Toledo Blade—Zulu C.), owner, handler.

H. K. Devereux's black, white and tan dog Spot Cash (Vanguard—Georgia Belle), E. Gray, handler,

with
J. W. Shriver's black, white and tan bitch Clio (Gun—Victoria Laverack), owner, handler.

Avent & Thayer Kennels' black, white and tan dog Chevalier (Jean Val Jean—Lucy Avent), J. M. Avent, handler,

with
H. S. Bevan's black, white and tan dog Paul Dombey (Chance—Nettie Bevan), owner, handler.

Avent & Thayer Kennels' black, white and tan dog Lochinvar (Chance—Bessie Avent), J. M. Avent, handler,

with
F. F. Myles's black, white and tan dog Modoc (Dan Gladstone—Princess Joy), S. J. McCartney, handler.

Manchester Kennel Co.'s liver and white dog Spot (Vanguard—Georgia Belle), A. P. Gilliam, handler,

with
T. T. Ashford's black and white pointer dog Kent Elgin (King of Kent—Vera Bang), N. E. Nesbitt, handler.

Jackson-Denmark Kennels' black, white and tan bitch Lillian Russell (Philip Gladstone—Lark), Thos. Bond, handler,

with
J. R. Purcell's black and white bitch Lady Margaret (Dick Swiveller—Countess Bang), owner, handler.

Jackson-Denmark Kennels' black, white and tan dog Rex the King (Lad B.—Phyllis), Thomas Bond, handler,

with
Blue Ridge Kennels' orange and white dog Hope's Mint (Gath's Hope—Dashing Lady), D. E. Rose, handler.

Avent & Thayer Kennels' black, white and tan dog Hamlet (Chance—Bessie Avent), J. M. Avent, handler,

with
P. Lorillard, Jr.'s white and lemon bitch Maiden Mine (Vanguard—Georgia Belle), C. Tucker, handler.

Blue Ridge Kennels' black, white and tan dog Dick Fox (Chance—Countess Rush), D. E. Rose, handler,

with
Graphic Kennels' liver and white pointer dog Ridgeview Beppo (Beppo III.—Revelation), M. Short, handler.

Manchester Kennel Company's black, white and tan dog Glean's Pink (Vanguard—Georgia Belle), A. P. Gilliam, handler,

with
J. W. Shriver's black, white and tan dog Direct (Gun—Victoria Laverack), owner, handler.

Royal Robinson's black, white and tan bitch Gaiety (Lone Jack—Gay Rhoebe), a bye, Geo. E. Gray, handler.

KINGSTON AND RUBY BLADE started at 7:58. The latter had no work on birds before last November, Mr. Morgan informed me, therefore was comparatively inexperienced. Kingston ranged with dash and fairly good judgment, casting wide and working industriously. He found and pointed a bevy well in heavy grass. As Ruby was being brought up to back she flushed, which was partially excusable under the circumstances, although she ought to have shown a recognition of the presence of the birds. On the scattered birds Kingston in woods pointed one bird well. Ruby refused to back, went in and flushed the bird. Kingston still held his point on a remaining bird and Ruby pointed the same one. Ruby next pointed a single nicely in woods, then pressed forward and flushed it. She had good speed but her performance on birds was faulty.

CLIO AND SPOT CASH started at 8:45 in the open field. Spot made a rigid point, up wind of the bevy as it afterward proved. He roared to a point on it and was steady to shot. A detour was taken to get the wind of the scattered birds. Clio made a good point on a single, an outlying bird of a bevy. As the judges rode up they flushed the rest of the bevy. Clio pointed indifferently well, starting in the midst of a large number of scattered birds. Spot pointed scattered birds in open sedge. He showed a good nose. Clio would follow for a few seconds now and then. Both drew nicely to a point on a bird which flushed wild. Spot was the better ranger and showed better judgment. Each backed and was steady to wing and shot. Spot did not maintain his dash when working on birds.

CHEVALIER AND PAUL DOMBEY started at 9:34 and ran an excellent heat, although they did not succeed in finding many birds. They worked industriously and boldly, showing skill and good training. Chevalier made three points on single birds, Paul three points on singles and one bevy. Both roared well on a bevy which flushed wild in a cornfield. Paul went to his birds the better of the two, he carrying a high nose and locating and pointing with precision.

LOCHINVAR AND MODOC began at 10:29. There were several opportunities for good work, which the dogs neglected. Both ranged well and at good speed. Some of the work on birds was good, some poor. Modoc pointed one bevy and a single bird, and made two points to which there were no birds. Lochinvar pointed three times on birds and false pointed once. Both were steady to shot and wing.

SPORT AND KENT ELGIN began at 11:19. There was little work done on birds. Sport pointed a bevy after roading it some yards, Kent joining in the roading and in the point. Kent pointed a single bird well. Both ranged well, the pointer the better of the two.

LUNCH was eaten at Capt. Bias's place. LILLIAN RUSSELL AND LADY MARGUERITE were started at 1:23. The latter showed excellent qualities. She ranged wide, carried a high nose, and went to her birds quickly and accurately, and showed work of a high order, it, however, being marred slightly by some unsteadiness. She pointed a bevy and four singles. Lillian pointed one single. Each backed well. Lillian was disposed to tag the pointer in the first half of the heat. The pointer showed excellent capabilities. It is the best one Major Purcell has shown in many years.

REX THE KING AND HOPE'S MINT began at 2:14. The former made only a fair showing. He pointed a single bird, backed well and was industrious. Hope's Mint pointed five singles and a bevy. He ranged wide and fast and made an excellent showing.

GAIETY ran a bye heat with Clio, commencing at 2:25. She made a good showing, though her work was hardly up to field-trial form. She found and pointed a bevy of birds nicely and made one good point on a single. Clio was a running mate and her work did not count in the competition in this heat.

HAMLET AND MAIDEN MINE both ran below their form of last year. They started at 3:1. Maiden flushed one bevy and pointed two. She pointed a single well. Hamlet made a good point on a single and also made a false point. Maiden had the better speed and range.

DICK FOX AND RIDGEVIEW BEPPO started at 3:48. Beppo

ranged wide and fast, but showed over-caution in the presence of the birds, although he pointed them with courage and staunchness in the beginning of the heat. Dick worked industriously and ranged fast and wide. He pointed a woodcock and made six points on quail. Beppo made a good point on a single. He had a good range and was fast and industrious.

DIRECT AND GLEAM'S PINK began at 5. The point work on birds was inferior. Pink flushed part of a bevy. Direct flushed twice. He next pointed three times and wound up the heat and day by pointing two birds. Pink made two flushes and a good point on a single bird and once on foot-scent.

TUESDAY.

In the morning the weather was freezing cold, and there was a damp rawness in the atmosphere which added to the discomfort of being out doors. A stiff north wind blew steadily throughout the day. The birds were handled in such protecting nooks and thickets as they could find, and moved very little, nor will they stir till hunger drives them forth in search of food, if the present cold weather continues long.

But one heat was run in the forenoon. It was so unsatisfactory that the competition was discontinued till after lunch. The birds were not moving, therefore the decision to return to town was a wise one.

The work throughout the day was light in quantity and inferior in quality, as might easily be anticipated would be the case under such unfavorable weather conditions, so widely different from those of the previous day.

Second Series.

Thirteen dogs were taken into the second series, and were run in the following order:

SPORT AND LADY MARGARET were started at 9:39 and ran till 10:06, the only work on birds being an excusable flush of a bevy by Sport. The judges announced the suspension of the competition till after lunch. This decision was most welcome to all, and it was promptly acted on, all riding to town. The dogs ranged well at good speed.

LILLIAN RUSSELL AND KENT ELGIN were cast off at 1:53 and ran 45m. Lillian pointed a bevy nicely in tall sedge grass and was steady to shot. Kent was not near to back. In pine woods on scattered birds, Lill going across wind, flushed a single bird. Kent flushed twice, in a measure excusable, as both handlers were rushing their dogs. Next Lill flushed a bevy of which she did not have the wind. She flushed a single, then pointed one which flushed wild; Kent at the same time standing close by, backing or pointing. Kent flushed a bird, and the heat soon thereafter ended. Both dogs were fast and ranged well. Lillian the better.

HOPE'S MINT AND MAIDEN MINE began at 2:42. Maiden located and pointed two birds nicely in open sedge, held her point for a few moments, then jumped in and flushed them, but immediately resumed a point, nothing more was found to it. Hope false pointed and next pointed a wounded bird well. Maiden pointed a rabbit. Next she false pointed. In a hollow in woods a large bevy was seen to rise and Hope was in close proximity to it, but whether he flushed it or not no one knew. He beat to and fro, following rapidly in its wake. Maiden made four good points on single birds. Hope next flushed a single. Each backed well and was steady to shot. Maiden made many points which she discovered were erroneous, but she frittered away time in so doing. Both were fast rangers. Down 49m. Neither one showed sufficient merit to remain further in the competition.

LOCHINVAR AND PAUL DOMBEY commenced at 3:35 and ran 40m. On some scattered birds of a bevy flushed by the judges Lochinvar got two points. Paul showed over caution when working on scattered birds, and also showed a preference for backing. He carried himself well and pointed or backed in dashing style. He made a bad chase on a single bird. Lochinvar pointed a single and was backed, which ended the work on birds in this heat. Each was speedy and diligent. Lochinvar was lacking in quickness in locating and pointing single birds.

MODOC AND CHEVALIER commenced at 4:24 and ran 42m. Modoc pointed some scattered birds and was backed. Some birds flushed a few yards ahead of Modoc, and McCartney ordered him on, but he held his point firmly. On being ordered on again he moved and flushed a single bird close to him in front. Chevalier was headstrong and disobedient. After beating out the ground diligently for about a half hour, both got a point on a bevy which had been located by the whistling of some of the birds in it. Sent on, Modoc pointed at the edge of the run, a few yards ahead of where he pointed the bevy. He did not have the birds located to suit him, so moved on to cross the run. In the mean time Lochinvar, nearly on the opposite side, pointed the bevy. A vent shot as the bevy rose. His gun burst the left barrel at the muzzle, blowing about 3in. off the end of it. A piece of it struck Mr. McCartney sharply on the rim of his hat, over his eyes. No injury was done to him, nor did the other pieces hit any one, which was most fortunate. On the scattered birds Modoc flushed a single, then pointed. McCartney failed to flush. He ordered the dog on. In obeying Modoc flushed the bird, which was close to him. Chevalier flushed a single, and soon thereafter the heat ended. Modoc showed positive superiority over his competitor.

WEDNESDAY.

The morning was clear and bright, with prospects of a good working day. The ground was frozen hard, but gradually thawed as the day advanced. The favorable signs disappeared in the early forenoon. Clouds overcast the sky, a raw wind set in and the conditions for good work were again unfavorable. Some fairly good work was done nevertheless. Birds were found in reasonable numbers. A late start was made, to avoid the sharp cold of the early morning.

DICK FOX AND KINGSTON started at 10:17, the latter taking the place of Gaiety, which was withdrawn on the previous day on account of sickness. Soon after starting Kingston was lost some minutes. Rabbits were so abundant that soon after Kingston was found the dogs were taken to other grounds. Dick pointed a bevy nicely in sedge. At this time Kingston was absent, he showing an intense liking for rabbit chasing, which kept him out of sight constantly. Dick ranged well, was speedy and had good judgment. Up at 10:54.

SPORT AND LADY MARGARET were the next brace, but the mules which furnished the power to haul the wagon containing Major Purcell's four dogs became gay and ran away, spilling out the two crates of dogs in a most irregular manner. It was a most fortunate circumstance that the dogs, aside from a bad fright and a severe shaking up, were uninjured. While the mules were being caught and the dogs rearranged the next brace was called.

LILLIAN RUSSELL AND MAIDEN MINE commenced their heat at 11:07. Maiden false-pointed repeatedly, greatly marring her work. Lillian pointed two bevs and two single birds. Maiden pointed one single bird. Her work was very inferior. Both were reliable backers. Up at 12:17.

The party then went to lunch.

SPORT AND LADY MARGARET were started at 1:08. Sport, at the start, ranged a bit narrow compared to his previous work, but improved as the heat progressed, and was soon going in good form. He pointed two bevs and made a good point on scattered birds. Lady worked industriously, but was not under perfect control. Sport worked his ground with judgment, displaying excellent bird sense. Lady's

work was inferior to that of her first heat in every respect. Up at 1:50.

Third Series.

Eight dogs were left in, two of which had little showing in such competition.

LOCHINVAR AND MODOC were started at 2:02. Lochinvar pointed a bevy and pointed twice on scattered birds. He flushed twice and had a half interest in a flush with Modoc. The latter pointed once and flushed once. Lochinvar false pointed twice. Both showed good speed and range. Modoc the better and more regular searcher. Up at 2:30.

CHEVALIER AND DICK FOX were cast off at 2:35. Chevalier made a point on a bevy which he had not located accurately and made two points on scattered birds, and one false point. Dick made two points on singles. Chevalier lagged after him betimes. Dick being the speedier and his range was the better. Up at 3:29.

SPORT AND SPOT CASH started at 3:32. Spot Cash ranged well and showed good speed, but when birds were found he worked poorly. Sport pointed a bevy and a single bird, and flushed once excusably. Spot Cash made a false point. Both were industrious. Sport was the more intelligent worker. Both backed well and were steady to shot. Up at 3:47.

Fourth Series.

SPORT AND LILLIAN RUSSELL began at 4:03. Sport flushed part of a bevy in woods, then pointed the rest of it. On scattered birds in open sedge Sport got three points, Lillian one and a flush. Lillian pointed a bevy after first flushing two birds of it. Up at 4:17. Both ranged well and made a good showing, Sport the better.

LOCHINVAR AND CHEVALIER were started at 4:26 and ran till 5. They ranged poorly and irregularly, taking narrow casts and coming in toward their handler when they should have remained out at work. Lochinvar flushed two birds, pointed a bevy and made a false point. Chevalier made one good point on a single.

THURSDAY.

An hour's sunshine in the middle of the forenoon evolved from a dark, drizzling, unpromising morning. Gradually the sky again darkened and so remained. A stiff wind blew during the afternoon. The temperature was comfortably warm.

Birds were found in sufficient numbers, but the work done on them was inferior. They ran so fast and far that it was more than ordinarily difficult for the dogs to do good point work or roading.

SPORT AND DICK FOX began, at 8:57, the final heat for first place. Sport was first to make game. He pointed, then roaded on to locate the birds which were running swiftly through the open sedge field. Dick was permitted to join in and both pointed the bevy. On scattered birds Sport flushed twice. Sent on to find another bevy, Sport caught scent and, Dick joining in, both dogs roaded and pointed. The handlers hurried them too much. They were cast off the scent and sent on a course away from the bevy which had been seen running on the ground and was afterward flushed by a horseman. Up at 9:32. Both dogs showed good speed and range.

The judges immediately announced the winners, namely, Sport first, Dick Fox second, Lochinvar, Chevalier and Lillian Russell equal third. First prize, \$400; second prize, \$250; third prize, \$200.

Chevalier and Lochinvar had run a very inferior heat on Wednesday afternoon, and were far from equal to Lillian Russell or Modoc in the class of work done. They, however, had made a few points which were sharp and good, but they had made a number which were uncertain and faulty. In range and judgment they were inferior, one heat with another, to Modoc, and inferior to him in point work.

The All-Age Stake.

Immediately after the Derby was finished the All-Age Stake began. The judges in this stake were Dr. Rogers, Messrs. F. I. Stone and A. M. Young, Manchester, Tenn.

The quality of the work, considering it as a whole, was poor. Errors and faulty work were common, although, in extenuation, the bad weather conditions should be considered. The work on the first day was particularly bad.

There were 19 entries, drawn to run as follows: F. F. Myles's black, white and tan dog Jesse James (Zazoo—Dimple), S. J. McCartney, handler,

Avent & Thayer's black, white and tan bitch Novelist (Rod-erigo—Bo Peep), J. M. Avent, handler.

J. W. Renfro's black, white and tan dog Gleam II. (Gleam—Tuberoise), A. P. Gilliam, handler,

Avent & Thayer's black, white and tan dog Rupert (Roder-igo—Bo Peep), J. M. Avent, handler.

P. Lorillard, Jr.'s white and lemon bitch Miss Ruby (Gladstone's Boy—Ruby D.), C. Tucker, handler,

Blue Ridge Kennels' liver and white setter dog Bob Cooper (Roy d'Or—Miss Nellie Y.), D. E. Rose, handler.

Major J. R. Purcell's liver and white pointer dog Flock-finder III., owner, handler,

H. S. Bevan's black, white and tan dog Whyte B. (Roder-igo—Florence Gladstone), owner, handler.

Avent & Thayer's black, white and tan bitch Bettye S. (Roderigo—Bo Peep), J. M. Avent, handler,

H. M. Short's black, white and tan dog Jean (Jean Val Jean—Miss Thompson), owner, handler.

P. Lorillard, Jr.'s black, white and tan bitch Lora (Gladstone's Boy—Ruby D.), C. Tucker, handler,

A. P. Gilliam's black, white and tan dog Eugene T. (Count Noble—Rhett), owner, handler.

P. Lorillard, Jr.'s white and lemon bitch Antevolo (Count Noble—Gladstone's Girl), C. Tucker, handler,

F. S. Ward's black, white and tan dog Rod Roi d'Or (Roi d'Or—Miss Nellie Y.), H. M. Short, handler.

Whyte Bedford's lemon and white bitch Zulu M. (Toledo Blade—Rhett), A. P. Gilliam, handler,

F. F. Myles's blue belton dog Jack the Ripper (Dan Gladstone—Maggie G.), S. J. McCartney, handler.

Major J. R. Purcell's liver and white pointer dog Jupiter Tom Bowline—Belle C.), owner, handler,

P. H. Bryson's black, white and tan dog Tremont (Gladstone's Boy—Speckle Gown), A. P. Gilliam, handler.

J. R. Purcell's liver and white pointer bitch Lady Margaret (Dick Swivellet—Countess Bang), a bye, owner, handler.

Lora was withdrawn when called to run, and the bye dog was run in her place. It was rumored that she had symptoms of distemper.

The spectators followed the trials with interest undiminished day after day. There were a few who were a source of

constant annoyance to judges and handlers by the inconsiderate manner in which they pressed to the front. Many times the crowd was too close on the dogs and interfered with the work simply by being in the way.

Some dogs were run unnecessarily long, and it seemed as if the trials could have been run in a shorter time, at the same time with fairness to all the competitors.

The weather was consistently bad throughout and the badness was badly mixed. Betimes it was painfully cold, or windy, or rainy, or muddy, or muggy, or damp, or many of these at the same time. The sun shone but once, then but a short time. Of course, under such conditions, the birds were more difficult to work upon.

The decisions were received with a fair degree of favor, a few being dissatisfied because they did not get more, some being dissatisfied because this few got so much, and a fair ratio being dissatisfied because they did not get anything. The man-who-will-not-come-to-the-trials-next-year was in number several. The man-who-will-not-come-to-the-trials-next-year is not a bad man at heart. He desires to make the club feel bad because it will not have any trial if he remains away. Thus they will see their mistake. But, bless you, his stern look will melt into a sweet smile by the time of the next trials. He then will run his dogs to help the club and incidentally to help himself.

The club held a kind of informal meeting on Thursday night and decided to hold the trials next year on the first Monday in February. It elected the same officers and established the same stakes for next year.

The list of officers is as follows: President, J. W. Renfro; First Vice-President, Pat Henry; Second Vice-President, W. R. Holliday; Secretary-Treasurer, T. M. Brumby.

No president or vice-president was present at the meeting. The time limit still obtains at these trials, and the same running to kill time, which is one of the peculiarities of the time limit, was witnessed. As a substitute or adjunct of brains the time limit is a failure.

First Series.

JESSE JAMES AND NOVELIST were started at 9:49. Novelist had the wider and better range, and her execution in finding and pointing was better. She found and pointed a bevy, and made a point on the scattered birds of it. Jesse pointed a bevy. He did not stay out at his work properly and pottered betimes. Up at 10:23.

GLEAM II. AND RUPELT were cast off at 11:30. Soon after starting Rupert Mr. Avent desired to withdraw him on account of his sickness, but the judges declined to admit it. Rupert had fair range and speed, but he did not remain out at his work properly. Gleam pointed and roaded running birds in sedge, doing it steadily and well. Rupert was allowed to join in the roading although he had not contributed at all to the find, and under the rules had no right to interfere. He pointed several times. Gleam, after much roading, got a good point a few yards up-wind of the bevy. On the scattered birds Rupert pointed one. Gleam roaded a swiftly running bird and pointed it. Up at 11:15.

MISS RUBY AND BOB COOPER began at 11:19. Miss Ruby's range was narrow, though she worked industriously. Bob showed good speed and range, yet his performance was of the ordinary kind. Bob pointed two bevs, a single bird and scored a retrieve. Both were steady to shot. Up at 10:04.

FLOCKFINDER AND WHYTE B. ran a common kind of heat, beginning at 11:08. Whyte pointed a bevy after having flushed an outlying bird. He made three more points, two false points and a flush. Flockfinder scored a point on a bevy, a point on a single and a retrieve. Both worked diligently. Up at 12:50. Whyte was much the better and showed better capabilities than the work done would indicate.

The party then went to lunch.

BETTYE S. AND JEAN, at 1:53, began their heat. Bettye flushed a bevy. She pointed a bird in open sedge. Jean was disobedient and headstrong, working and staying out beyond control. He flushed a bird in open sedge. He next pointed, and Bettye ran in and stopped to order when close to Jean. Sent on, some work was done on a bevy in sedge, which ended in a flush, but which dog did it I could not see. When on the scattered birds the dogs were again hidden by sedge. Some of the spectators said that Jean pointed the birds and Bettye flushed them. Up at 2:37. Jean was difficult to control. Bettye worked to the gun, and had a good range and speed.

EUGENE T. AND LADY MARGARET began at 2:44. Margaret caught scent of a bevy, took a cast to locate it, and Eugene was sent in and pointed the bevy. Eugene made four good points on the scattered birds in sedge. He was the wider and faster ranger. Lady showed speed and industry, but was not equal to Eugene. Up at 3:27.

ANTEVOLO AND ROD ROI D'OR were started at 3:31. Rod pointed, but did not quite have the bevy located. He roaded, but lost the scent and went on. Antevolo roaded and skillfully found and pointed the bevy. Each got a separate point on single birds. Antevolo made a false point. Sent on. She next was near a bevy which flushed in woods. On the scattered birds Antevolo pointed one and scored a good retrieve. Up at 4:14. Antevolo the better in every particular. She ranged well and did sharp work on birds.

ZULU M. AND JACK THE RIPPER made a poor showing in ranging and point work. They began at 4:17 and ran 45m. There were numerous opportunities, but they could not succeed in getting a point. Each flushed a bevy, and Jack flushed also a single. They beat out their ground irregularly, though they were industrious. It was a most uncanny name for a respectable dog to have.

FRIDAY.

The last day of the trials sustained the unbroken record of unpleasant weather which prevailed since Monday morning. The sky was dark with heavy clouds. The field trial party started in a light, drizzling rain which ceased soon after the running began. Toward the latter part of the forenoon a drizzling rain fell and continued more or less irregularly till a few minutes after the trials ended in the afternoon, when a cold, heavy rain fell in good earnest, and the party had a most uncomfortable five-mile ride in it over muddy roads to town. Notwithstanding the unfavorable weather conditions birds were moving and were found in fairly plentiful numbers. Had they been really scarce the trials, under such uncomfortable and obstinate weather conditions, would have been a failure. Birds were wild and ran a great deal from the dogs' points.

JUPITER AND TREMONT were started at 8:53. Neither ranged well. They beat about close in front of their handlers, Tremont slightly the better. Tremont pointed a bevy well, and afterward pointed a single bird. Jupiter pointed a single, and while roading a running bird it flushed wild. Both pointed too much on foot scent and were slow in locating single birds. Up at 9:22. Both earned a claim to a long rest.

Second Series.

Ten dogs were kept in the second series. Lady Margaret, Rod Roi d'Or, Tremont and Jupiter had not shown any competition which would indicate a possible win, and might have been retired.

BETTYE S. AND ANTEVOLO began at 9:34 and ran 27 minutes. The heat was a good one. Both dogs covered a good range and were industrious and speedy, Antevolo the better. Antevolo pointed a bevy, and made three points on scattered birds and one point to wing. Bettye made one point and one flush on singles. Each retrieved.

LADY MARGARET AND ROD ROI D'OR started at 10:07 and were ordered up at 10:36. Rod showed decided improvement on his work in his previous heat. Both beat out the ground

irregularly and with lack of judgment. Rod pointed a bevy and Lady refused to back, drew on ahead and stole the point. Lady roared about 30 yds. to a point on two birds. Rod made two points on single birds. Lady needed cautioning when the gun was fired, she not always being steady to it.

WHYTE B. AND EUGENE T. were cast off at 10:42. The latter did not work up to the form of his first heat. Both worked diligently, but failed to take advantage of many opportunities, which was due largely to too much rushing on the part of the handlers. Whyte found and pointed two bevs and a single bird, and backed well. Eugene was roading on one of the bevs found by Whyte, and he pointed just as it was flushed. He made one false point in open weeds.

NOVELIST AND TREMONT began at 11:16. Tremont pointed, then roaded down wind to a flush on the bevy. It was difficult to do a skillful piece of work under the circumstances, yet the error was made stupidly. Novelist false-pointed at the edge of woods and was backed. Tremont made a good point on a single bird and was steady to shot. Next he flushed a bird. Novelist ranged well and fast, but was wilfully headstrong and disobedient. Tremont had a narrow range.

JUPITER AND BOB COOPER were cast off at 12:21. Both flushed a bevy across wind in corn. The ground was bare. It was an excusable flush. He pointed one of the scattered birds in thick cover near a ditch, and Jupiter backed. Both were steady to shot. Up at 12 M. Bob was speedy and a wide ranger. Jupiter was slow and narrow in range.

Third Series.

Seven dogs were kept in this series. Bettie S. had shown a good competition, and was far superior to Tremont, and better than Novelist, Eugene J. and Rod Roi. Dropping her from the competition was an error of judgment.

WHYTE B. AND ANTEVOLO were started at 2:03, after lunch. Both pointed a bevy, Whyte being first to get the point. Sent on to find another bevy. Antevolo pointed a bevy and Whyte dropped to a back. It was thought from the positions of the dog that Whyte had the point and Antevolo was backing, and so the handlers thought, for Bevan flushed and shot. Both dogs were steady. Whyte next pointed three times nicely on single birds, and roaded about 60 yds. swiftly down wind to a flush on a bevy. Antevolo flushed a single and pointed once on footscut. Both were fast, wide rangers, Antevolo having in this respect somewhat the advantage. In this heat Whyte gave Antevolo a thorough beating in work on birds, but I thought her work throughout the competition was superior to any of the others. Up at 2:33. Both worked diligently and fast. The heat was a good one.

EUGENE T. AND NOVELIST began at 2:38. Novelist took a long cast and pointed a bevy in sedge. Eugene refused to back and joined in the point on the same bevy. Sent on, Novelist pointed and Eugene again refused to back. Novelist went out into the open field about forty yards and pointed. The birds were running, some of them stopped here and there, and some ran clear across the wide sedge field. Novelist drew on and the horsemen flushed two birds not far from where she pointed. The dogs drew on. Eugene pointed one in sedge and was steady to shot. Novelist was roading and her handler accidentally flushed the single. The birds were running and it was most difficult for the dogs to work on them. Novelist did some excellent roading. Eugene flushed and pointed three more singles. Novelist pointed twice on singles. She had a decided advantage in range and speed. Eugene was ordinary. Up at 3:07.

BOB COOPER AND TREMONT were started at 3:12. Tremont had fully established his claims to retirement, which he further sustained in this heat by narrow range and a heavy stride. Bob has much the speedier and wider range. Bob in a careless way flushed a bevy up wind. It was a bad piece of work. Bob pointed a rabbit; Tremont backed. Tremont pointed scattered birds; Bob backed when cautioned. Tremont flushed a single in sedge. Bob pointed a single which was hidden in a brush pile; Tremont backed. Bob pointed a single in woods and was a bit unsteady to shot. He next roaded a running bevy in a thicket. He pointed a bird just as it flushed. Tremont pointed a single, and soon afterward again pointed; nothing found. Up at 3:43.

Final Heat.

WHYTE B. AND NOVELIST were cast off at 3:52. Whyte B. thoroughly demonstrated his superiority in working on birds. The heat was an excellent one. Whyte was first to find. He pointed the bevy nicely. Sent on, he wheeled prettily to a point on a single; at the same time Novelist also pointed a single. Whyte made three more points on singles in rapid succession. The cover was heavy, high grass and bushes. Whyte flushed once. Novelist added one more point to her score. Both worked fast and industriously. Up at 4:24.

In the evening the judges announced the winners as follows: Whyte B., first; Antevolo, second; Novelist, third.

The prizes were \$300 to first, \$200 to second and \$150 to third. Major J. R. Purcell's Flockfinder III. was awarded the Pointer Club of America's special prize of \$100 for the best pointer in the trials. B. WATERS.

Winnifred.

NEW YORK, Feb. 9.—*Editor Forest and Stream:* In your to-day's issue in answer to a query by "Lah's Boy" you say "Winnifred is not registered." Now, if the Winnifred in question is my rough-coated St. Bernard bitch that is a mistake. She is registered in the A. K. C. S. B., No. 27,573. Kindly correct this, if my bitch is the one in question, which I infer she is through being mentioned in connection with Roland. Also state for "Lah's Boy's" benefit, that anything he may want to know concerning Winnifred he can find out from her owner. EDGAR J. HEARLE.

383 Bleecker Street, City.

P. S.—It is not often a mistake appears in your paper, and I hope I may be mistaken about the bitch being mine, but to settle doubts please insert this. E. J. H.

[We are glad to print Mr. Hearle's letter, though we can hardly be considered to have made a mistake in stating that Winnifred was not registered, seeing that the volume containing her registration has not yet been published.]

Gordon Setters at Philadelphia.

Editor Forest and Stream:

At my request the Keystone Kennel Club, of Philadelphia, has offered a kennel prize of \$15 for, and divided the challenge classes of, Gordon setters at their coming show, thus making prizes for Gordons exactly the same as for other setters and pointers. It is to be hoped that Gordon men will make a good showing by entering their dogs freely.

Members of our club will please not forget our annual meeting on Thursday evening, Feb. 23 (the third night of the show) at Madison Square Garden, New York city, at 7:30 o'clock. JAMES B. BLOSSOM.

President Gordon Setter Club of America.

We find the following in our mail on returning from Chicago. We hardly know what to make of it. Perhaps some of our "pug" readers can trace its origin and straighten the curl: "The show ring problem in pugs at present resolves itself into the following query for the Chicago and New York club committees to 'rattle' with: Does the bee line between Nashville, Tenn., and Wakegan, Ill., tap as good territory for pug entries as the air line between Lancaster, Mass., and Cincinnati, Ohio?"

CHICAGO DOG SHOW.

THE Windy City has had another chance to increase its knowledge of canine lore. There is no doubt that Chicago is a good show town; the best of late years outside of New York. The show held Feb. 7 to 10 must have been a great success financially, as we were told that on Wednesday night expenses had been cleared, and with the crowds that came the two last days the exchequer must be bulging. The quality in many of the breeds was quite up to former years, while in terrier and spaniel form there was a big drop from last year. Still it was a good show, and having all the entries in one building, Battery D, made the *tout ensemble* of the show much more pleasing and better to manage. This year there was little to grumble about in this respect and the regulars were loud in their praise of the treatment they received. The aisles might have been kept cleaner and swept oftener. The rings were far too small, and if there had been two instead of three, judging would have progressed just as quickly and every one would have been better suited. The building has been much improved in appearance, new ceilings, galleries, etc., and with colored banners and flags stretched across took on quite a gala appearance.

The judges were Messrs. John Davidson, John A. Long, R. J. Sawyer and Harry L. Goodman, and while there was some

MR. HARRY L. GOODMAN,
Judge of Mastiffs, etc., Chicago Show, 1893.

grumbling in the St. Bernard, collie, terrier and beagle classes, important mistakes were very few. The wretched light and small rings may have accounted for a few of the *faux pas*.

The bench show committee, Messrs. W. E. Hagans, Munson, who was managing director, G. H. Goodrich, Jos. A. Locke and M. Nathanson, sporting editor of the *Chicago Herald*, were a hard working quintet; the first four were always on hand, night and day, and I think the others will not feel displeased when I say that Mr. Locke was simply indefatigable and an invaluable man at this sort of business; he it is who works the press which in turn guides the public that make the show, in the language of the average reporter, a howling success or a dismal whine. There was some tardiness in steward work the first day, but this may have been caused by the reprehensible practice of benching the dogs of one kennel together, which leads to confusion all round. Mr. Withers

MASTIFF CAUTION'S OWN DAUGHTER.
First, Challenge Class, Chicago. Owned by Mr. C. E. Bunn, Peoria, Ill.

was the veterinarian, but we could see no badge that distinguished him as such, still he had not much work, as the health of the dogs seemed good.

Spratts benching was used and their biscuit furnished sustenance to the dogs.

Among the visitors we noticed were Dr. L. C. Sauveur, T. G. Davey, Meister & Jarvis, of the Jackson Kennels, John H. Naylor, W. A. Phelan, Jr., J. B. Lewis, D. L. and A. Carmichael, Chas. B. Carmichael, W. L. Connors, Joseph Wesekind, Chas. E. Bunn, B. R. Nurse, James J. Lynn, T. B. Fitzgerald, H. Raison, H. L. Harcourt, R. Gibson, E. W. Platte, N. Ellis Oliver, M. D., B. F. Lewis, A. Nickert, L. F. Whitman, Jos. Lewis, Ed. Booth, Henry Jarrett, H. C. Schanenberger, Ed. Sauerhering, H. R. Shirk, Tim Donoghue, L. Tichenor, A. F. Kramer, A. Trombling, Michael Hilgert, C. G. Birnstill, Jos. P. Otto, M. D., Anson Koehler, A. A. De Lue, Geo. T. Hawley, M. D., T. J. Conrad, J. F. Schnartman, Thos. Blake, L. Robbins, R. J. Withen, Capt. P. C. Pue, J. T. Quill, Felix Gehrman, Geo. E. Gale, Harry L. Goodman, E. A. Woodward, Mrs. S. E. Davis, Mrs. Polmeiter, Miss Hawley.

MASTIFFS (*Harry L. Goodman, Judge*).—There is no doubt that just now the West can put up a better show of this breed than the Eastern shows can boast of. There may be some better individual specimens, but the display at Chicago last week was so much better all round than anything we have had put before us at late shows that it was all the more noticeable. Elkson and Ormonde furnished the challenge dogs, and the decision that placed them as named cannot be caviled at, the former being so much better in head and body, but putting on a good deal of dewlap. In bitches two real good ones came forward, Caution's Own Daughter and Lady Dorothy, both well known, the former we never saw in better flesh, and barring a few spots on head and legs was in good coat. Lady Dorothy also looked well, but loses in head and body and size. The open dog class was made up of

eleven with one absentee, and a very much improved dog, in Cardinal Beaufort, gained the verdict; his head has filled out and he has become strong behind; he is a little light in middle piece yet, and feet and pasterns are not quite as they should be, still he just won over Prince Cola, that we spoke so well of last year, and whom we were pleased to see the judge give credit for his good all-round make-up if he is a "ginger" dog. His head has improved and is very much on the C. O. D. order; has good legs but shortness in body and lack of size are his faults, but for quality and expression I think he beats Beaufort.

Sraosha, reserve, was the winning puppy last year, and is just a fair dog with good bone and some character. Melrose Caution, vhc., is leggy, feet flat and open, but his head is well formed if it is a bit long, and his ribs and chest are well developed. Alarm, vhc., is spoiled in head by a too pronounced stop, more than average good ear, ribs have not swelled enough and he should not be so straight in stifle. The judge was generous in h.c. cards, giving four; Jumbo is too long-faced and straight behind—faults enough to enumerate—while Webster Judge is not straight enough in forelegs, and lacks depth of chest, his head commends him to notice, being just fairly good. Monte is a red dog, with a plain head and ears not carried close or forward enough. Nero was the best of this division, excellent front, good body and moves well; his head is too boundy, however, and big in ear. The c. dog, Jerry, also carries his ears wide and is fiddle-headed and light in bone. In giving these tail-end-mention cards it is all very well to let the disappointed exhibitor down easy, but some regard should be taken of their relative value and grade their merits accordingly, giving the same value to these cards as the money prizes convey. In bitches (6) Ilford Cameo and Matella, both hailing from Mr. Brunn's kennel, were placed as named. The winner is a nice fronted one, having a better muzzle than Matella; she would do with more substance, and her pasterns and hocks are not quite as they should be; Matella is dark in head, but of good shape, with a nice ear, throws her elbows out a little, is small, but with a well formed body. Ethel, h.c., loses so much in head to the others that while she might have had another letter still she was in her proper place. Melrose Portia, reserve, while she is good in body and legs, her feet are open and flat; head nicely shaped, but lacking in character. The other two got all they deserved with c. cards, being light in bone, and Jumbo is pinched in muzzle and straight behind. In bitch puppies first went to Persia, who stood on good legs, is of nice size and quality, but head would be better had she more stop. Queen Spara's ears are set on too high and her head is too long; she was lucky.

GREAT DANES (*Harry L. Goodman, Judge*).—The Windy City always comes out strong in this breed, at least in point of numbers, while their owners form a distinct part of the show, which in this one was called the "Deutsche Strasse," and the echoes of the Fatherland were very pronounced. There were lots of dogs, but outside of a half dozen there was little quality; and many of them are of the heavy type, not gay or "terrier" enough in action and build. Inspirator and Melac were the only challenge entries, and though they looked at each other askance, their rivalry was quiescent for the time being. At New York, however, to Mr. Arnolt will fall the duty of deciding between them. The dog classes brought out so many that it seemed to be all tails (fourteen of them) and prick-ears, and how the judge managed to do so well is a mystery. Major McKinley showed he was still "in it" by getting first. His good, strong, lengthy, well-made head was set on a well-arched neck; a bit trophy, good bone, and better in loin than second winner; nice, jaunty carriage, although he turns one foot out. Prince Victor is too flat in loin, is a trifle dish-faced, and skull is too broad; his legs are good, though he might be stronger in pasterns, and his hocks when moving are not wide enough apart; he is a light brindle. Tiger, reserve, seemed a nice sort, but we did not think enough of him to disturb him, as he did indeed look "Dangerous." Three vhc. cards were given. Caesar is much too throaty and flat sided, but stands on strong legs and feet. Melac II. is a sort of duplicate of his dad, same color and sort of head, not so good in legs or body, though. Anderson's Sandor, though light in muzzle, is a nicely-turned dog and better all round than the others of his division. Prinz, h.c., turns his feet out and his hocks in, for which he is out of order; he is also not arched enough in loin. Uncas has a plain head, flat loin and feet, but good, straight forelegs. Siegfried, a black dog, hardly deserved his letter. There were eleven in the bitch class, and both Mr. Hagans and the Cumberland Kennel Club had some nice ones benched, but for exhibition only. That fine quality bitch Neverzell was an easy winner again. She turns her toes in slightly, but is a well made bitch all round, nice, clean cut head and neck and well formed body. Turning her toes in a little spoils her; otherwise good action. Nellie B., second, shows some quality, but is a little slack behind the shoulder and light in pasterns; head would be good with just a little more stop, and she is somewhat narrow in front. Fraulien, reserve, is too short in muzzle and also snipy and throaty—a dark brindle standing on good legs and feet. Flora, vhc., has a straight, plain face, but stands on good legs, but her condition could be improved. Spot, h.c., a harlequin with a nice, long, clean head, well turned body and good straight forelegs, would do with more bone, but I liked her as well as the second winner and much better than the other. Nellie A. is a plain sort of black with faulty pins, while Columbian Cordova did not deserve a mention. King William, the winning dog puppy, is a very promising youngster of 10 mos., splendid bone, well shaped head and good action, and will do to watch. Delia, the winning bitch, is a well-grown 6 mos. pup of good parts. The others did not interest me much. Maj. McKinley won the cup.

ST. BERNARDS (*R. J. Sawyer, Judge*).—The West is coming up fast in this breed, and the show here, while it did not contain many of the cracks, showed very plainly that some of the young stock from both sides of the Alleghenies will have to be reckoned with. Mr. Sawyer also was handicapped by having so small a ring. A judge cannot well decide on the merits of such big dogs when packed together like sardines, but he did his best to make room and quickly got rid of the weeds. Mr. Sawyer judged well in most instances, but seemed to go more for bone and size than quality. Now that he is fairly confident in the ring it would be worth his while to take a run East and see some of the well-known cracks. In rough challenge dogs, champion Aristocrat, in nice condition, was alone. He still lacks the sort of coat we first remember him having. In bitches two good ones appeared, the Lady Livingston and Gladwyn, with the verdict in the former's favor, beating in head, size, and length of body and a little in expression. The winner is scarcely so good in foreleg as she used to be.

The open dog class was a hummer and difficult to judge, as well it might be with 21 dogs in the ring. After the ruck fled out, and they were plain to spot, Altoner, Mr. Moore's new dog, and Saladin were soon put together, the issue finally lay between these two, and it did not take long to decide that Altoner was a very good all-round little dog and took the ribbon; he is about twenty months old, with a capital head, showing lots of quality, and where he fails is in body, rib principally, as he is very good in loin and quarters, he will take some beating, as his legs and action are noticeable in this day of crooked legs. Saladin loses in head, loin, quarters and bone, and is also beaten in front, but he has a darker orange colored coat in his favor. Reserve went to American Caesar, a big loafish looking dog, a son of Casper, very large, great bone, washy color in body, dark head and houndy in shape, but plenty of depth. For type and quality he should have given way to Kingstonian Count,

whose head shows much more of the latter, but is too long, though of good depth and massive; his feet spread a little but he has a good body and chest, hardly wide enough, perhaps, good height, bone and rich color. His fault lies in hindparts, though the legs are well-shaped, he turns the hindfeet out so the hocks almost touch; this may be due to the dewclaw, which should be removed and the dog "turned out to grass" for a time; he is only about twenty months old and might get better there. Lord of Richmond, vhc., has a rather sour expression, small eye, is a little flat-sided, but makes up for this in good bone and legs. Ben Maida, vhc., is growing into a nice dog, though too straight in stifle and plain in muzzle to hope for higher honors; his feet turn out a little, too, and his head should be shorter. Wyoming Hesper has not improved on his Lewiston form, out of coat and faulty fore and aft; his head is the best part, but will look considerably better when shown in shape. Mr. Booth has not had him long and received him in very poor condition. Santo, he., is also short of coat, his good legs and body deserved the card. The Colonel, also he., lacks type, has plenty of bone and substance, but his muzzle very snipy. Skamyl has a plain, common head and might well have been left out. Tenny's bone and forelegs are his best parts, no type nor quality; and Draco H. should also have been left alone, he scarcely has a stop and is snipy.

The bitch class (16) was better on the whole than the dog division. Here a new one to us came out, Mr. Lewis's Io, and she won well in body, bone, chest, action and everything barring head, where she does not show sufficient quality, has a Victor Joseph muzzle but fairly good skull; her ears are also not, as a rule, unless very excited, carried close to cheek; her coat and color are good, too, but when shown she was very tangled and rough, but later in the show she became much improved in this respect. Alta Berna, second, is another that luckily possesses good all round action, though feet turn out just a little; strong loin and quarters, not enough swell of rib but good depth of body and a well-shaped head, though muzzle is not deep or square enough, nice ears, excellent carriage of stern, and if she had a proper blaze would run the winner. Reserve went to Lady Snearwell, whose lowness of leg and Roman nose are somewhat against her, but in body, depth of muzzle and massiveness throughout and condition she can beat either of the other two. Sadie, vhc., has not stop enough and is also narrow in head; body, bone and legs are her best parts. Baroness Streatham, in the same division, is a short-bodied bitch; she dips behind the shoulder a little, head narrow and long, good legs with plenty of bone. Kingstorian Beauty has lost coat and bloom since we saw her last, but her good front and hind-quarters, pleasing expression and good head, which might be a little broader in skull, nice ears, should have put her over those just mentioned. Kingstorian Countess is not broad enough in skull and should be deeper in muzzle, but shows lots of quality; forelegs and feet good, excellent loin and quarters, and when she is developed will be better in ribs probably, nice chest, coat needs work on it, but all round I like her better than any of the vhc. El Or, he., is houndy-headed, and Rina I could not find. Shall have more to say on this score later. The c. dogs did not deserve recognition; most of them too long-headed and snipy. A houndy, snipy-headed St. Bernard is an abomination as a show dog.

The puppies were poor with the exception of Ashland Jumbo, whose splendid skull makes his poor muzzle poorer by comparison, he is a bit straight in stifle, too, otherwise his legs are good and carries lots of bone. In the novice class Altoner had an easy win over Lord of Richmond in a sort of patrician and plebeian comparison.

SMOOTH-COATS.—Old champion Victor Joseph was alone in challenge dogs. Besides holding on well to this earth, being now nearly nine years old, he has done his share toward improving the stock of the country. He was well shown. In bitches, Empress of Contoocook, more maternally than ever, did not find Miss Alton ready to meet her, and so won a bloodless victory. Nine dogs turned up in the open class and the winner was not far to find, and this was Melrose, who has come back to form again and looking as well as ever; his litter, brother, Lawrence Garza (what a litter that was to be sure, one meets one nearly everywhere somehow, and they are all good) is not so big as Melrose but of same type; he is not so deep nor massive in head as his brother and his ears are not so well hung; he would do with rib and toes open a bit. Victor Jack, reserve, had he a blaze and better markings, would take some beating, as he is a good upstanding dog, plenty of bone, good action, needs a little more flesh and swell of rib. Ben L., vhc., carries his tail high, is narrow in chest, in fact, narrow all through, plain head, not stop enough, but fairly deep and carries too much coat for a smooth. St. Michael, he., is plain in muzzle and expression, ears don't hang well, lacks quality, feet open and turn out, good body, and legs well off for bone. Liberty St. Joe, c., was probably turned down because of one side of head not being marked, his muzzle is pinched, but he has lots of body substance and good legs. Type must be upheld at any cost.

In bitches (5) Belegarde, who generally makes a pretty picture of herself on the bench, is well known, but it is a pity she tries to excel a pug in carriage of tail; but this is forgotten when you look at her from the front. Columbia Venus, second, should have more stop, and breadth and depth in head and her ears do not hang close, nice body, and though a bit straight behind she moves well. Fernwood Goldy, the winner last year, is too long and flat-faced, light in bone and carries too much coat; she got all she deserved. Reine, vhc., has a bad head and did not deserve her card, though she is a big bitch with good bone and legs, has an almost black head. Sabah, also vhc., has a long, flat, houndy head, is light in head and has too much coat round loin and quarters; at most a c. card would have done for these. In this class were entered two litters of puppies, one five months old, the other just two months. This should be stopped. E. H. Moore won the first prize for best kennel of four, while Col. Ruppert took Mr. Keick's silver medal for best four roughs. The St. Bernard Club medals were won as follows: Best smooth or rough dog, Melrose; ditto best bitch, Io, and here, I think, there was room for a difference of opinion. I cannot come up with Lady Livingston in head and quality; in forelegs only is the latter beaten by the other, while Empress of Contoocook is probably beaten in size, bone and carriage of stern, still her shape of head, quality and expression far exceeds the other. It was close, all points considered, but in the condition they were put down, there should have been little doubt in the matter, as far as Lady Livingston is concerned. Melrose won the medal for best smooth American-bred dog, and Altoner that for best rough dog, same conditions; Empress of Contoocook best smooth bitch, and Io best rough bitch, all these for American-bred.

RUSSIAN WOLFHOUNDS (Roger D. Williams, Judge).—There were six entries of these in two classes, but Mr. Hanks's dogs did not show up, and Mr. P. H. Hacke having Zloceem and Armeda took both prizes. The former is well known and was well shown, and so was Armeda, of whom we wrote at Brooklyn show, when she took second.

DEERHOUNDS (Roger D. Williams, Judge).—Only two pups shown, Alice and Veronica. The former makes up in bone, substance and coat what she loses in head and ears, Veronica being longer in head than the winner, but not so strong in "pushers."

GREYHOUNDS (Roger D. Williams, Judge).—Mr. Williams is well known as a competent and painstaking judge, and the way he gets down to his work, literally getting on his knees to it and taking his coat off, is quite refreshing to look at, though at times a bit tedious, as I don't think our Kentucky friend misses a hair in the examination of each dog. This judge has a correct idea of the importance and value of commended cards, and is chary of spreading them round, too

chary for exhibitors, probably, as there was a little grumbling. There were no challenge entries. In open dogs (10) Dr. Van Hummel showed Van's Peter, that won the Great Bend Derby in '91. He is a capital made dog, taking much after his sire, Brabazon, in appearance and color; good bone, powerful loin and quarters, nicely ribbed up, with fairly good swell; strong, short loin, stands over a good deal of ground, but still could be a little more bent in stifles, good skull, but muzzle should be stronger before the eye, and has a little too much stop; ears well carried and neck clean and long, set on good sloping shoulders; well arched close toes. Touchwood, second, I don't like so well behind, falls away in quarters too quick and does not cover the ground the other does, neither is he so good in shoulders, but is better let down in hocks. Van's O'Rell, vhc., is also a little light before the eye, and toes should be closer and would do with more rib. I don't quite like his hocks, but spread of quarters good and well clothed, with muscle right down to second thighs; good bone and strong loin. King Dick is large-sized, straight in shoulders, big ears and open feet, but otherwise a powerful hound and would be just the dog for big game, as he fears nothing. Don C. is just a fair sort. In bitches, though there were twelve shown, many of them were very faulty in construction—straight stifles, weak hocks and other grave faults in

MR. ROGER D. WILLIAMS,
Judge of Greyhounds, etc., Chicago Show, 1893.

this breed. The Nashville winner, Viola, proved the winner, and, if she had a better head and cleaner shoulders, would be hard to beat; as it is she beat no mean competitor in her kennel mate, Verdure Clad, who is also faulty in shoulders, but has splendid ribs and loin, good depth and breadth, and is also very good behind, well muscled; her head is also faulty, but she runs the winner very close. Lady Olivia, vhc., is well known; she loses in arch of loin, faulty in stifles and not strong enough in muzzle. Innocence lacks bone, is small, but shows lots of quality and has a rare spread of quarters for size. These were all the cards given. Dr. Van Hummel won the kennel prize.

SAINT BROOM, LATE DAYLESFORD BROOM.
Owned by Mr. H. W. Smith, Worcester, Mass.

POINTERS (John Davidson, Judge).—The difference in weight classification did not seem to make much difference in this breed, for the classes were all well filled, and the quality quite on a par with former years. In challenge dogs Inspiration was under the weather and prize was withheld. In bitches two good ones came forward, the winner proving to be Lady Gay Spanker, who excels her rival, Revelation, in muzzle, shoulders, ribs, loin and set on of stern. In the open dog class the winner, after much sorting and scrambling in the small ring, turned up in Duke of Kent II., who seems to hold a straight flush just at present. He was well put down and shown by Joe Lewis. Another well known winner in Glamorgan came next; he loses to the winner in muzzle; feet, which are flat and open, and hardly moves as well behind as he should do; his body and quarters are, however, good. Westminster Drake, reserve, has developed a temper, and was not shown in full London bloom; his head is getting plainer; other parts good. Among the vhc. lot we found Rock II., well known and properly shown; Bruce D. I could not find, nor Boxer in the same lot. Devonshire Don, he., is coarse, also straight behind, and is too weak before the eye, otherwise he is fairly well formed. Pluto V. stands on good running gear, but has a coarse head, plain in expression, but outline good; he is a black dog, with hardly a true enough front. Count Grover, he., stands with forefeet too close, and falls away too sharp in quarters, and should be better ribbed. Tip Top's broad skull and faulty carriage of ears, too high, and heavy shoulders put him back, though he has plenty of bone and substance.

The bitch class also contained more than the ring could comfortably accommodate. It was a difficult class to judge, as there was a good deal of quality to the fore. Mr. Davey's

capital bitch, Josie Bracket, is hard to beat, and though a little throaty and hind quarters not just the thing, or, more properly speaking, set on of stern not quite right, still she is a well-formed bitch and will find herself well up in any competition. Sall II. loses to her in head, front and body. The reserve, Ightfield Madge, has been repeatedly described. Her excellent rib development cannot be passed over, but she is plain in muzzle and her back is rather straight. Rose Le Hessen, vhc., has bad feet, a short head, but good outline, if it had a little more stop, nicely sprung in ribs, and deserved her letters. Buffalo Belle is a sort of blue belton pointer, shot all over, no solid markings. She needs more stop and is not correct in muzzle, while her ears are big and faultily carried; stands back on pasterns; good, straight bone and plenty of spring of ribs. Dutcher was another of the absent ones when we came round. Clancarty, also vhc., although not deep or square enough in muzzle, stands on good legs, possesses good ribs, but her tail is too short and thick. Fan Wildwood, he., was lucky, as she is light of bone, leggy, in fact, shelly all through. Rosy P. stands wide in front and faulty behind, but boasts some head quality. The winning dog pup had been sent home before we got to it, but there was little in the class to demand much attention. Blaize M., second, throws her elbows out in action and is a little too long in body. Scotty, Mr. Daniels's bitch, was also absent. Mr. T. G. Davey won the kennel prize.

ENGLISH SETTERS (John Davidson, Judge).—There was scarcely the entry in this breed that we expected to see, but perhaps the clashing of the field trials was in part the cause of this. Mr. Davidson was very much handicapped here by the small ring. In challenge dogs Breeze Gladstone was alone and added another to his long string of firsts. That sweet piece of dog flesh, Blue Nell, also had the corresponding class to herself; she is getting throaty but she was in admirable show condition. Eleven appeared in the open dog class, and the field trial winner, Paul Bo, captured the judge's eye for first place; in muzzle he is not deep or square enough, skull, eye and ear good, forelegs straight with plenty of bone, but he stands a little back on pasterns; he has plenty of heart room, good loin and quarters, but is a little faulty in hind parts, too straight and flat from back up; that he is a good one in the field every one knows, and the structural faults noted do not interfere with his gait, which is always a fast one. King Gladys, second, I would like better were he straighter in front, but he is a good, strongly made dog with a more than average good head; he is a trifle straight behind and shoulders might be cleaner. True Blue, reserve, is wide in front, head well shaped, but is one of those that turn their thighs out and hocks in, which is not the correct mode. In the vhc. lot Pembroke's Blue Don loses to a good one in skull, too round and full, feet should be wider apart and he should be better let down behind; he was in nice coat and feather. Dad Wilson's Boy is well known; looks good when standing but throws elbows out in motion and hocks travel too close; his head is well shaped. Max Noble is rather flat-sided, plain behind, stifle not bent enough and his head is faulty, but his forelegs and feet are good. Benzine is well known. Roger Gladstone, he., has capital legs and feet, is fairly well ribbed, a little plain in muzzle and not enough stop. Druid Hill deserved his letters and a bit more.

In bitches (10) the issue lay between Kate Noble II. and Nushka of Elms, and though the latter's muzzle is weak and long and she was out of coat, still her body and legs sufficed to put her over Nushka, who is very small but well formed, would do with more rib and a stronger muzzle; don't like her action, but floor was slippery and one can hardly judge of this. Reserve went to Bonnie Pegmatite, faulty in muzzle and front; Gay Zell, vhc., has a big, coarse head, plenty of substance and good outline. The others do not call for particular mention. Monk of Furness Drake, the puppy winner, is a well grown youngster, somewhat long-waisted, has a well shaped, long, clean head, if stop were better defined; he should develop into a fair dog. His sister, Monk of Furness Lill, winning the bitch puppy prize too, made the happy looking Tim Donoghue happier still. She is small but better made all round than her brother, and the way she was trained to show her maiden graces in the ring was wonderful to behold. The other showed little quality.

IRISH SETTERS (John Davidson, Judge).—This was one of the grandest classes of the show, both in numbers and quality. The judge's patience here ceased to be a virtue, for with seven challenging dogs in the ring and the very bad light, Mr. Davidson had his work cut out in this serious work. Eventually Seminole Kennels' old champion Tim scored again, and the biggest challenge class yet brought together tramped out of the ring. They were all in good shape, the rival kennels being out for blood. In bitches Norna again caught the judge's eye with champion Laura B. and Rose Sarsfield in the ring. This bears out Mr. Tallman's decision at Brooklyn. The dog class proved the last straw for Mr. Davidson, and he refused to go further unless the ring was enlarged, so the partitions were taken down and this allowed everyone some elbow room. It took some time to pick the winner, and Finglas proved his worth in this respect. He is a little strong in head but well shaped, quarters fall away too suddenly, but for bone, color, rib and action he is hard to beat. Blarney, Jr., second, beats Shamrock Bruce in head and hind parts. Montauk, Jr., vhc., I thought hardly treated, and seemed to be well up with second in head, legs, fullness of rib and color. Duke of Kildare, vhc., is a little round in skull, good bone and legs, well ribbed, excellent quarters, a good mover and carries his stern well. Tim's Dandy, one of Seminole's new purchases, well deserved his letters, while Young Tim I thought hardly treated with only a c.; he was reserve at Brooklyn. Spot'em has a rather coarse head and straight stifles. St. Elmo is light in loin, not enough rib, and toes are not close enough. Bunch was shown thin and out of shape, his plain head is also against him. Mark A. droops too much in quarters to be a good one, and should have more bend of stifle.

The bitch class was equally strong, with fifteen entries to fore. The nicely fashioned bitch Coleraine shows any amount of quality and her head, though it might be stronger in muzzle, is typical, she is capital in legs and body. Second went to Oak Grove's Mollie D., who is faulty in muzzle and skull is a little too broad, but in other parts she is a nicely turned bitch, a bit heavy, good color. Lady Miller took reserve; she has a plain short muzzle, but back of head she has plenty of substance and is a well made bitch, of good color. Lady Horst, from same kennel, has a rather good head, but should be better developed in ribs. Nellie M., vhc., was second here last year. Delphine, vhc., has a rather good head, muzzle could be deeper, well made in hind-parts, good legs, feet and quarters. Claremont Heather must have been overlooked to get an h.c.; she beats some of the others in head, front and color. Kate, he., is a good bitch, plain in muzzle and not stop enough.

A fair pup in Sir Elcho, Jr., won in dogs, while Red Rose, a little fine in muzzle, but otherwise the rightsort, took care of the bitches. The benching of these Irish setters was very confusing, hardly a number being in its proper place, this being on account of kennels benching together. Seminole Kennels were on top this time in best kennel.

GORDON SETTERS (John Davidson, Judge).—These made a good showing. In a class of nine Heather Lad, there being no challenge class, was placed over Ivanhoe, who has long had such an innings. The winner is a little full in skull, throaty, good tan, body needs better rib development; in this and in quarters and hindparts, especially legs, he loses to Ivanhoe. He is short in neck, and leg tan is a little mealy. Leo B. came reserve, followed by Highland Kent, who is a bit out at elbows, and stifles are too straight. Buck is rather flat-backed, but his rich tan, shape of head, etc., cannot be

denied. Gunner is faulty in muzzle and stop, and his legs are not above suspicion. A lightly made dog in Bob B. was he, so was Fitz, whose snipy muzzle and heavy shoulder are things not to be desired. Duchess of Waverly still scored in the bitch class over Fly M., whose nice typical head is enhanced by her rich tan markings; but, as in many of these dogs, the tan on legs lacks the correct markings, and the tan is mealy; she has a well made body and excellent legs. Yola, reserve, is light in muzzle; Princess Louise is also deficient in this respect, but I fancy her legs and body carry her ahead of Yola. Highland Mona is another not up to standard in head properties, but standing on good legs; but Nellie D. does not deserve two letters; she is a poor weed, snipy, and far too dark in markings. Louis S. was the winning dog pup, little long cast, shows lots of quality, rather weak in middle piece yet, but he has lots of other good points. Yola was the winning bitch. The kennel prize went to Dr. Dixon.

SPANIELS (John Davidson, Judge).—We have seen much better classes than those at Chicago, both in numbers and quality. The Irish water spaniels were poor. The winner, Trouble, has a soft, woolly coat, no semblance of a topknot, wool all over, fat, coarse tail; a big, coarse beast; no good. Second went to a small one, but with more pretension to type and color, but snipy-muzzled, woolly in coat, little or no curl, and indifferent front. Nora O'Donoghue, the winning bitch, was the best of the three; she has fair curl and stands on good legs and feet; she is well known. In field dogs (2) Newton Abbott Torso was easily the best; good length, straight front, bit plain in muzzle, shown in nice condition as to coat, but would have done with more flesh to hide a rather light middle piece. Smith's Gyp is leggy and curly coated. Dorothy was the only bitch; little short for a field, but well formed, with a fairly straight foreleg. Cocker spaniels had four in the dog class, and the Omaha winner, Bendigo, proved the winner over Donovan. He has the better head, but loses in front to the other; gains again, however, in body, ribs and coat. Pickpania, reserve, is small, too high in skull, feet turn out a bit, and is light in body. Lady Dufferin proved the winner over Norah H. in bitches (6). Her muzzle is not deep enough and skull too domed; should be better ribbed, and her forelegs are not of the best; a little long in body, but nice coat. Norah turns one elbow out, is throaty and rather fat-sided. I liked Duchess of Spades for this place; she is pretty good, barring muzzle, but this is better than the winner's, and she is much better in front and head generally and quite her equal in body. Gypsey is too short in muzzle and fat.

COLLIES (John A. Long, Judge).—Collies always seem to turn out in force at the Windy City, and Mr. Long again met with good support. There were no Christophers or Wellsbourne Charlies this time, but The Squire, Maney Trefoil, Charleroi II. and Flurry II. are not to be sneezed at anywhere. In challenge dogs (6) Charleroi II. won; he was in nice coat and carries his age well. As stated last week St. Louis will now be his home. The Squire looked well, but he is ageing fast and should be retired. Maney Trefoil, reserve, was in fair coat, in fact, it would be called good in any other dog, but we always expect to see a few more hairs on him. Roslyn Dolly seemed in good form. In bitches champion Flurry II. made another appearance, and really holds her age wonderfully, and wears a good coat. Cora II., her opponent, should not feel put out in losing to one of the best bitches America has seen.

The open dog class brought out eighteen, which made it a matter of surprise that the judge got out of it so well. By careful handling and being put down in full bloom Toronto Wonder repeated his Brooklyn victory; his trill is something surprising these later days, nothing has been seen on the bench like it since the days of Dublin Scot, Scotilla and Maney Trefoil's earlier career. This probably carried away the judge, for I think, all things considered, Curzon should have had the place; he has much better forelegs than winner, nice clean head of good length, the modern tip ear, pretty fair undercoat, short of top, fair body, travels a little close behind, a handsome light sable and white that will do better yet when in good coat. Chrysolite, reserve, loses in front to second, is short of undercoat but nicely made up; Argyle Sandy and Mac were winners at Nashville and deserved their letters; Fletcher, he, has a nice head with sweet expression, little flat-sided and light in loin, good coat and frill, nice carriage of ears and stern. Psycho has a plain head and is not correct in front. Christie I thought harshly dealt with, as, barring a rather big, coarse head, he is a capitally made dog with a good long coat of proper texture, so seldom seen out nowadays. Wellesbourne Duke has a coarse and short head, faulty in quarters and did not deserve to be ahead of some others in this class.

Ten turned up in the bitch class, and a new youngster, Donna, from Mr. Jarrett's "factory" took the blue ribbon. She is the daughter of Roslyn Dolly, to memory dear. She has a fairly long head, good carriage of ears, well turned body that needs a little filling out, nice coat and shows plenty of quality. Second went to Vanity, and this was scarcely right, as her head is short and thick, ears droop, coat short, but dense. Crissy came in for reserve and should have been ahead of the others; better head and type. Heatherwig is too high in brow and soft in coat. Chesterford Lass has not a good carriage of ear and it is too big; a plain self-colored bitch with fair length of coat but soft, good bone. Bertha II. was in nice shape. In puppy dogs (4) Yule, a prick-eared dog, nice legs, body and coat, won over Laddie, better in ears, but loses otherwise. Doctor, reserve, is not up to form, has a wall eye, but shows a good coat and lots of quality. Donna beat Fussie in bitch pups (3). The latter is a snipy little thing with good coat and legs.

BULLDOGS (Harry L. Goodman, Judge).—This gave the Illwix Kennels an opportunity to show what they could do. Harper and Bo'swain in challenge dogs, and Harper won in body. The aptly named Graven Image looked in rare form, beating Duchess of Parma in forelegs, chop, skull and body, but Duchess has better ears. King Lud and Lady Nan were the open classes entries; both were in good shape. Owing to a confusion of numbers at Nashville, the names of King Lud and Bo'swain got transposed; the criticism there given should be just reversed.

BULL-TERRIERS (Harry L. Goodman, Judge).—Not such an entry as last year, either as regards quality or numbers; no challenge class provided. In open dogs (5) the winner proved the smartly made dog Crisp, a little thick in skull and cheeky, stands on good legs, nice eye and ear; he is a son of Dufferin. Sir Monte II. is large in eye, not straight in front, cheeky, fair body and bone. Edgewood Bendigo is too much cut out before the eye, cheeky, too, and has two fawn marks on neck. July, vhc., is thick and round in skull. Only two bitches; White Gypsey awarded first; she shows a good deal of wrinkle, is heavy in shoulder and wide. Second prize withheld. One Boston terrier was shown, N. F. C.

DACHSHUNDS (John Davidson, Judge).—Taps Zur Horst and Tips Zur Horst, whatever that may mean, the specimens shown, were not up to form, short backs, not crook or chest enough, short heads and ears; both on the terrier type and in color chocolate and tan.

BEAGLES (John Davidson, Judge).—There was nothing really very startling in these classes. There were no challenge entries. In open dogs (5) Joe has gone to pieces and should have given place to both Doctor and Hawkeye; he has a fair head, but he is so out at elbow and light and weak in loin he should have had about vhc.; his coat is good. Doctor, second, though a little open in feet, has much better front, body and action; his head is the worst part, too long. Hawkeye has a fair front, and the best head in the class, a little light in quarters, tail carried wrong, a little weak in pasterns and hocks turn in a bit. Romp is wide in chest, good legs and coat, good body, muzzle plain and long. King

Trix is a low-set harrier, with a head that would balance an American foxhound. Snow proved the winner in bitches (4) and she is not in the first row, but in better shape than at Nanuet; her plain, long head and faulty front are against her in good company. Betty R., second, is better in front and has a shorter, better shaped head, though a little too full in eye, nice in feet and better all round and more typical bitch than the winner. Doty R. has a nice sweet expression, though her head is a little fine in muzzle, body long and light. Queen Gypsey is too long throughout and light and shelly. Janet G. won in puppies.

FOX-TERRIERS (John Davidson, Judge).—No challenge entries. The open classes, while well filled, did not contain much quality; in fact, they were, with the exception of two or three, a common lot. My Fellow showed most terrier, and though getting thick and heavy in shoulder and neck, won nicely from Blemton Stipend, whose light body, flat ribs and round, full skull, soft coat and indifferent carriage of ears should have been fatal to his chances. Rexford Spot, too, has a plain, common head, no character, not straight in front, good body, but he would have been good enough for him. Glendon Spark, had he been in better shape, should have been second. Dixie Tartar's head is short, feet open and coat soft, and was not well shown. Willow Grove is leggy and full in brow, good eye and muzzle, nice ear and body, and could have been reserve, at least. Dick Turpin, vhc., is too prominent in optic, but has a nice long head, but big in ear and loaded in shoulder. Paddy is wide in front and too much stop. Eight bitches came forward and the Nashville second, Venus II. properly won here. Flurry second has a poor front, is weak in muzzle and dips behind the shoulder. Fly is a capital-legged youngster by Ruby Signal, a bit coarse and short-headed, docked too close, but a pretty fair terrier, and but for head could have been second nicely. Silhouette, vhc., is too narrow throughout, good straight front, but head is very faulty. Patty is poor in general character and type. Dusky Midge is too wide in front. Mr. Gibson showed a fairly good pup in Belvoir Dan. With age ought to do no other prize or two. Fly-Fly won in bitches. The wires hardly need mention. George E. won in dogs; too thick in head, fair coat. The others do not amount to much.

IRISH TERRIERS (John Davidson, Judge).—Only two shown, and there was little difficulty in placing Galtees, well-known, ahead of the other big coarse dog.

YORKSHIRE TERRIERS (Harry L. Goodman, Judge).—Only one in the dog class, Dick York, nice coat and well shown; and Minnie York had no trouble in beating her daughter, Pinky York, who loses in coat and color to the other, but who was better in the latter respect than Bo-Peep, vhc.

TOY SPANIELS (Harry L. Goodman, Judge).—Two good ones shown and class divided, Calumet St. Cyr in dogs, and his dam Calumet Alice in bitches, were the winners. The dog is a good bodied one with a capital head, short-faced. The black and tan terrier judged by Mr. Davidson was a runt; first was withheld, and second might also have been kept back. Some fair little toy terriers were shown, but call for no special mention, the bitch prizes being rightly withheld from parti-colored dogs.

PUGS (Harry L. Goodman, Judge).—These came out pretty strong, and with Sprake and Bob Ivy in the challenge class there was some little excitement. Mr. Lewis objected to the appointed judge taking in this class, owing to his opinion given the week before regarding Sprake, and Mr. Lacy was asked to officiate, but declined, as Mr. Goodman was the appointed judge and was in the ring, and both accepted the position of judge and wrote what he did with a full knowledge of the consequences, and he should have judged willy-nilly. Mr. Goodman himself did not wish to judge the dogs, and Mr. Sidler finally was prevailed upon to adjudicate, and he did the proper thing by putting Sprake over Bob Ivy, although the former was shown too fat and the latter just right. Mr. Goodman then judged the open classes, putting that cocky little chap Seminoe Dixie rightly first. Bobbie Mac though black in head is nicely formed; rather big ear. Duke Howard, well known, was reserve. Lord Fauntleroy, third last year, was vhc.; he is faulty in muzzle and skull, has not volume enough. The others call for no particular mention. In bitches the well-known Seminoe Midget took premier honors, second going to Sprake's Patti, who was at Nashville, reserve to Toadie, who again showed too much evidence of a liking for the feed pan. Little Kate's chief point is her jet black toe nails, so seldom met with nowadays. In puppy dogs Al Von was alone, and Sprake's Patti winning in bitches accounts for the quality of the others. Mrt. S. E. Davis took the kennel prize.

MISCELLANEOUS CLASS (John Davidson, Judge).—Berri, the poodle, won in that breed, and Sir Stafford, the Skye, also had a class to himself, while Jack Shepard, the blood hound, won again, and equal second was given to a poor Maltese and Nancy Hanks, a broken-haired whippet. There were a lot of small foxhounds of American type shown, which should have been put into a separate class. H. W. L.

LIST OF AWARDS.

MASTIFFS.—CHALLENGE—Dogs: 1st, E. L. Kimball's Elksdon; 2d, Chas. E. Bunn's Orinodon. Bitches: 1st, C. E. Bunn's Caution's Own Daughter; 2d, J. J. Lynn's Lady Dorothy. OPEN—Dogs: 1st, J. J. MISCELLANEOUS.—Equal 1st, L. A. Biddle's Berri and C. A. Shin's Sir Stafford; equal 2d, M. Bushnell's Cubas and Jersey Cocker Kennels' Nancy Hanks.

Mr. C. Barrows, in writing to us about a setter of his that had been stolen, says that there seems to be a regularly organized system of stealing dogs going on at Providence, and that the thieves usually succeed in covering up their tracks. In this case, however, Mr. Barrows has been more lucky, as later advices state that the reward he offered was sufficient to insure his dog's return.

DOG CHAT.

W. K. C. Show Entries for 1893.

Mastiffs.....	50	Dachshunds.....	21
St. Bernards.....	149	Beagles.....	55
Bloodhounds.....	8	Fox-terriers, smooth.....	108
Great Danes.....	45	Fox-terriers, wire-haired.....	28
Newfoundlands.....	14	Irish terriers.....	38
Russian wolfhounds.....	19	Black and tan terriers.....	12
Deerhounds.....	16	White English terriers.....	5
Greyhounds.....	28	Dandie Dimmont terriers.....	7
Foxhounds.....	18	Scottish terriers.....	15
Harriers.....	2	Bedlington terriers.....	6
English retrievers.....	2	Skye terriers.....	14
Chesapeake Bay dogs.....	5	Glydesdale terriers.....	1
Pointers.....	112	Welsh terriers.....	4
Irish setters.....	112	Yorkshire terriers.....	18
Gordon setters.....	64	Toy terriers.....	9
Irish water spaniels.....	54	Pugs.....	24
Flemish spaniels.....	2	Toy spaniels.....	38
Cocker spaniels.....	26	Italian greyhounds.....	10
Rough collies.....	62	Schipperkes.....	3
Smooth collies.....	97	Miscellaneous.....	10
Bobtails.....	1	Total.....	1492
Poodles.....	30	Duplicate entries.....	173
Bulldogs.....	58	Actual number of dogs.....	1319
Bull-terriers.....	50		
Basset hounds.....	1		

The number of dogs entered shows an advance over 1892 in nearly every breed. Pointers have 55 more and English setters about 33, while Irish setters fall off 10, but Gordons gain 18. Bulldogs take a jump of 16; greyhounds fall off a few, but Russian wolfhounds advance a dozen; beagles also jump from 39 to 59. Fox-terriers also gain 20, Scottish terriers take a big jump from 4 to 15 and the Irishmen gain 13. Toy spaniels, however, fall off 9 points. St. Bernards gain 19 and mastiffs 17. Mr. Raper and Mr. Tallman will have a sorry time of it and the numbers of important classes they have to judge is almost too much a task for one man, especially at a show like New York. Mr. Raper will have over 500 dogs, while Mr. Tallman will have 370 where competition is sure to be keen. We hope that the W. K. C. committee will again provide large lettered cards for those handling dogs in the ring so that the public can form some idea of who is who and tell which dogs win without trouble.

Washington Dog Show.

The Washington Kennel Club's premium list is in the mail. The show will be held in North Liberty Hall, and as the hall is 375x123 long there is ample room for any amount of dogs, is heated by steam and lighted by 1,000 electric lights, roof of glass and well ventilated. The judges are: Major J. M. Taylor, New York, for pointers, setters, foxhounds, beagles and Chesapeake Bay dogs; Henry Jarrett, Esq., Philadelphia, Pa., for collies; James Mortimer, Hempstead, L. I., all other classes. This is a good list. Mr. Jarrett's *debut* in the ring as a judge should meet with every approbation from his fellow collie breeders and signified by giving him a record entry. Mastiffs, St. Bernards, pointers, setters, collies and smooth fox-terriers are given \$12 and \$8 in challenge classes, and \$12 and \$8 in open, while puppies and novices get \$8 and \$3. The other breeds get a basis of \$10 and \$8 in challenge classes, and \$10, \$5 and \$3 in open, the terriers getting \$8 and \$3. Where puppy classes are given \$5 and \$3 will be the prizes. Entries close March 6, with the secretary, 1237 Pennsylvania avenue, Northwest, Washington, D. C. The fee is \$3.

Philadelphia Show.

This is the last opportunity we shall have to remind exhibitors that the last day for entering at the Keystone Kennel Club show of Philadelphia is Friday of this week. We are requested to announce the following additions to the premium list: Another challenge class for Gordon setters and a kennel prize of \$15 for the best four; a kennel prize of \$15 for the best four, deerhounds, greyhounds or Russian wolfhounds; two classes for Italian greyhounds and one for poodles. Attention is also called to the show regulation providing for division by sex where but one class is provided, when there are seven entries.

Chicago Show.

There was much surmise among exhibitors present as to whether wins would count and the club be admitted to the A. K. C. The men who seem to compose the C. K. C. appear to be the workers of the older club, and from what we hear the business methods of the Mascoutah Club are not very commendable. The club seems so rich that members pay no dues and no one seems to know how they stand, except that bills are all paid. The new club will conduct things differently. The C. K. C. had little time to organize and less to get ready for a show. Their premium list was hardly so well arranged as it might have been. The money should have been more equally divided and more challenge classes made in the smaller breeds. This will be remedied another year. The club will claim the date Feb. 6 for their 1894 show.

Scottish Terriers.

Mr. W. P. Fraser has purchased for Mr. H. J. Ludlow the Scottish terrier bitch by Kildee out of Nettleswood Nettle. She is said to be good, and will probably be seen at New York. Mr. Fraser has also a good young dog coming, by Kilroy out of Grey, by Ashley Roger out of Fury. Grey he has sold to E. H. Newcomb, of New York.

Club Meetings at W. K. C. Show.

Paste this in your hat.

- Bull Dog Club—Feb. 21 at 8 P. M.
- Irish Setter Club—Feb. 22 at 3 P. M.
- National Beagle Club—Feb. 22 at 2 P. M.
- Pet Dog Club—Feb. 23 in the afternoon.
- Spaniel Club—Feb. 23 at 5 P. M.
- English Setter Club—Feb. 23 at 11 A. M.
- Gordon Setter Club—Feb. 23 at 7:30 P. M.
- American Kennel Club—Feb. 23 at 1 P. M.
- National Greyhound Club—Feb. 23 at 8 P. M.

New Skye.

Mr. C. Smith, of St. Stephen, N. B., will show his new importation, the Skye terrier Barnaby Rudge, at New York. Many have had a shot at Sir Stafford; perhaps it will remain for Barnaby to lower his colors. Who can say?

Associate Members' Officers.

The votes of the associate members for officers for 1893 were opened at the A. K. C. office Feb. 6, and resulted as follows: President, James L. Anthony; Vice-President, W. J. Bryson, of Chicago; Secretary, A. C. Wilmerding; Delegate, Dr. H. T. Foote.

Illindio K. C.

At a meeting of the Illindio Kennel Club, Feb. 9, it was decided to hold a show and claim dates March 28 to 31. This club should be admitted without hesitation, as it opens up a new country. Chas. K. Farmer, Indianapolis, Ind., is the secretary.

More St. Bernards Coming.

The well known St. Bernard bitches Dinorah Suisse, Survivor and Belline II, have been purchased by an American breeder,

and are now on their way over in the Bostonian. They are of the Guide blood; Survivor is of the famous Saus Pour litter. Dinorah Suisse is the dam of the crack St. Augustine and Arosa. Such an importation will be invaluable to the breed over here.

New Collies.

As reported by wire last week Dr. Sauveur's new purchase is Ormskirk Gold Dust and the price paid was \$2,500. He is by Edghastoun Marvel, out of Torryfane Belle, and at Liverpool won four firsts and four specials, including the 50-guinea challenge trophy. Along with him will come an untied bitch, Ormskirk Princess, by Ormskirk Chieftain.

Cincinnati K. C.

The Cincinnati Kennel Club has paid up all its indebtedness and has been reorganized with the following officers: President, Groesbeck; Vice-President, P. J. Heister; Secretary, Al Eberhart; Treasurer, C. W. Otter. Directors: Geo. W. Hill, J. W. Hard, John C. Hawkes. It is the intention of the club to give a show in the near future.

With over 1,300 dogs to pass on and examine, Dr. Glover's task will be no sinecure at the New York show. Dr. Glover is one of the few "vets" who really does attend to his duties at a dog show, in every sense, and New York show is about the only show where the arrangements for examining dogs are, as we remarked last week, what they should all be. Our remarks on this subject have been indorsed by several, and it is high time that the A. K. C. brought its attention to bear on this subject, and investigate this matter at shows for itself, and discipline where necessary.

Messrs. Justus Goebel and John C. Hawkes, of Cincinnati, have joined forces and named their kennel, "The Westminster Kennels," but as this may conflict with the W. K. C. the prefix may not be allowed by A. K. C. Collies will be the specialty, and in addition to Sir Walter Scott and Grange Nell others will be imported.

Mr. Pybus Sellen is to report bulldogs for *British Fancier* at the World's Fair show.

Lieutenant Peary's Eskimo dogs at the Central Park are objects of great attraction.

The Continental Kennel Club will hold its annual bench show April 11 to 14.

The Maryland Kennel Club have added the following classes, which were left out of their premium list by mistake: Welsh terriers, class \$2½, open class, dogs or bitches, prizes \$10 or \$5. Bedlington terriers, class \$3½, open class, dogs or bitches, prizes \$10 and \$5. Scottish terriers, class \$5½, open class, dogs or bitches, prizes \$10 and \$5. The St. Bernard Club medals are to be competed for by members only and are offered, one each, to the best American bred smooth dog, smooth bitch, rough dog and rough bitch. The American English Mastiff Club have offered two additional \$100 silver cups, one for best mastiff dog and one for best bitch, the property of a member of the Mastiff Club. Mr. P. Henry O'Bannon, of the Blue Ridge English Setter Kennel, has offered a handsome special prize, the particulars of which will be given next week.

At a meeting of the bench show committee, held Feb. 13, it was decided to offer a kennel prize of \$10 for the best kennel of four Russian wolfhounds (Borzoi) entered and owned by one exhibitor or kennel; also to add the following classes, viz.: Cocker spaniels (any color, not over 28lbs.), Class 51½, challenge class, bitches, prize \$10. Cocker spaniels (any other color, not over 28lbs.), Class 54½, open class, bitches, prizes \$10 and \$5.

The setter bitch Zula M., lately portrayed in *FOREST AND STREAM*, is owned by Mr. Whyte Bedford, Lake Cormorant, Miss., and not by Mr. Adams, as stated.

Messrs. L. & W. Rutherford will hold their annual sale of fox-terriers at the Horse Exchange, Friday, Feb. 24, at 3 P. M. About 63 dogs are on the catalogue.

It is rumored that Mr. W. S. Clark will judge beagles at Boston. If this is true this judge should have a great entry, especially from the New England contingent.

Mr. Jamieson's beagle Lady Lee has been bred to Mr. Kreuder's Frank Forest, Feb. 5, and as this bitch is the dam of Butterfly, Forest Hunter, Maud, etc., who was sired by a full brother to Frank Forest, this nick should perhaps do better still.

The Baltimore show people say that all signs point to a larger local entry than ever before, and many of the larger kennels have promised support.

Marvel has proved himself as sure a sire in this country as he did in England. Last Saturday Princess Florence whelped two splendid puppies which he sired. Unfortunately both died on the same day. Princess Wang, owned by Jacob Lutz, of New York, whelped seven Marvel puppies, five dogs, all healthy and strong. Mr. Lutz has another bitch, Princess Helene, in whelp to Marvel, due Feb. 26. Col. Jacob Ruppert's Baroness Cardiff, dam of Sir Hereward and Young Bute, shows unmistakable signs of her visits to Marvel, and some little cracks are expected on the 22d. The owner of Marvel has wisely limited his dog's services, but still there is every likelihood of his doing the breed good service over here. We are sorry to hear of Princess Florence's puppies dying, her stock is valuable.

Anent the Mud Slinging Trust: Stephen A. Douglass, the "Little Giant," put it just pat, when in response to an indecent assault on his character, he said: "What no gentleman would say no gentleman need answer."

Mr. W. E. Hagans will represent the Mascoutah Club at the annual A. K. C. meeting, and also the interests of the new C. K. C. He will also show his great Dane Imperator.

The A. K. C. advisory committee at a meeting held Feb. 7 decided to reopen the case of Elliott vs. Twyford, and the secretary was instructed to notify both parties.

Mr. G. W. Price, of Philadelphia, Pa., has spared no expense or pains in getting up a very pretty scarfpin, two of which will be given as specials at the Philadelphia show. A very neat picture of Belgrave Joe, the famous fox-terrier, is set under thick glass in a gold setting. Such little articles are very acceptable as specials, and we are pleased to see the divergence from the beaten track of medals, cups, etc.

There were altogether too many litters of puppies shown at Chicago. Puppies 2mos. old are bad enough, but when bitches with litters a few weeks and days old are exhibited there is no earthly excuse for the cruelty and abomination. There were lots of St. Bernard pups exhibited that should have been at home. There were also a lot of fox-terrier, cocker and pug litters that would have been better elsewhere.

Mr. J. B. Lewis was all wrapped up in his St. Bernard Io, after she won over the cracks, so the boys put up a little fun at his expense. A telegram purporting to come from New

York was handed to him, which read: "I claim Io at catalogue price; New York draft follows." We believe, but are not certain, that Mr. Reick's name was attached. Catalogue price was \$2,500 and Mr. Lewis was in a fever heat of anxiety that he would lose the bitch. After considerable chaffing and suggestions of putting the bitch up at auction the jokers took compassion on him and relieved him of his suspense.

The name of the St. Bernard bitch that Mr. Symonds cabled to England for is Lady Taylor. She has been served by Young Bute, and is for a Western gentleman. George Thomas sailed Feb. 5 and is due about the 15th.

Mr. C. E. Bunn, the mastiff man, had not a very pleasant journey to the show. At Bureau Junction, 140 miles from Chicago, he found that the train he was to connect with was snowed fast 250 miles west and he would have to wait for it ten hours on a wayside sort of a depot. This did not suit at all, with the thermometer playing dangerously near the teens below zero, so through influence on the road he secured an engine and caboose and managed to get to Chicago in good time for the opening of the show. It takes a good deal to stop some of our hustling exhibitors.

There were a number of sales at Chicago. Mr. Richard Gibson sold his winning fox-terrier Belvoir Van to Mr. Siddons, who seemed almost prouder of it than the collies he had in charge.

Mr. Jarrett will need a book-keeper to straighten out his accounts. First of all, Mr. Long, the collie judge, claimed his Charleroi II. not altogether to the owner's pleasure, as this leaves him with little to get away from his Christopher and Wellesbourne Charlie blood, and he intended breeding three of his bitches to him. Mr. Jarrett has an idea that he will start a race of black and whites, and to that end bought Mrs. Rand's Topsy, by Maney Trefoil out of Smoky, and she will be bred to Hempstead Zulu of the same color. His debutante Donna, by Wellesbourne Charlie out of Roslyn Dolly, was also disposed of to advantage, but the Chestnut Hill man has two more up his sleeve that are better, still she is a good one. He also sold the reserve puppy Dector.

Dr. Sauveur presented the pug Little Kate to Mr. Goodrich, and she is all the more valuable, being in whelp to Seminole Dixie. Mr. Davey, who was in great form, and did really as Mr. Hough said, came to town with a dog under each arm, presented a fox-terrier to Mr. J. W. Munson. Mr. Davey will show at New York, and is further intent on running some dogs next year at the English spring trials.

Leander Tichenor was busy selling dogs too, his St. Bernard American Caesar, by Casper, was disposed of at a good price to a Chicago gentleman. He also sold two puppies. Mr. Starr was also busy among the dogs as a visitor and purchased Victor Jack, by Victor Joseph, from Maple Leaf Kennels as a companion to his children. Mr. Starr owned champion Mac, the deerhound, that was poisoned last winter. Personally, his fancy runs to the rough terrier division and he is on the lookout for a good Dandie.

In conversation with Mr. R. Gibson, the well-known partner of Mr. McEwen, we learned he had a birthday during the show, and we fancy that Mr. Gibson can discount any living fancier in the length of time he has owned a fox-terrier. This well-known fox-terrier man was born under the shadow of Beaver Castle, the Duke of Rutland's seat, in Leicestershire, and 53 years ago last Friday "Old Goosey," the huntsman of the Duke of Rutland's hounds, came to his father's farm and presented "the boy" with one of his cherished strain of Belvoir fox-terriers. Lill by name, a white bitch that our Canadian friend says could win on the bench today; well-carried ears and beautiful front. This first gave Mr. Gibson the fox-terrier fever and he has always had it in different degrees to the present date.

We draw special attention to the notices of the Maryland and Washington Kennel Club shows in our business columns. Among the new ads. are the Chestnut Hill collies, and Mr. Smith's wire-hairs at stud.

United States Field Trials.

NEW ALBANY, Miss., Feb. 13.—*Special to Forest and Stream:* The Setter Derby began this morning. Judges—Col. A. G. Sloo, P. H. Bryson and C. M. Stephenson. The weather was cloudy, but most favorable for good work. As a whole the competition was good, some of the work excellent. There were thirteen starters, fourteen less than were entered to start last November, the postponement thus made a serious falling off. The starters were Glean's Pink, Cecil H., Nancy Foreman, Hope's Mint, Direct, Lillian Russell, Rex, Kingston, Dixie's Rod, Lochinvar, Sport, Dan Burgess and Dick Fox, a bye. Seven were kept in the second series; Cecil H. and Hope's Mint were held in reserve. Lillian outworked Glean's Pink on birds and showed better judgment in ranging, although Pink was industrious and made a good showing. Kingston showed better point work and skill in finding birds than Dixie's Rod, which had fallen off greatly from the form shown in his first heat. Sport and Dick Fox ran a good heat, the former better in judgment and clean point work. Lochinvar made a stronger competition than Cecil H., the latter falling off in range in the latter part of the heat. Six were kept in the third series. Lillian found and pointed birds better than Kingston. Dixie's Rod narrowed his range in the heat with Dick Fox and was outworked on birds. Birds were found in plentiful numbers. The trials are progressing finely. B. WATERS.

NEW ALBANY, Miss., Feb. 14.—*Special to Forest and Stream:* The weather to-day was dark and cloudy with indications of a heavy rainstorm, but a light drizzling rain was all that fell, and that for but a short time. Lochinvar and Sport made a good showing, the former finding and pointing the most birds. In the afternoon the final heat was run between Lillian and Lochinvar, the former thoroughly outworking the latter. The judges awarded first to Lillian, second to Lochinvar and the third to Sport. The All-Age Pointer Stake has thirteen entries, namely, Swind, Maniton, Lad of Rush, Belle, Sensation, Ben A., Rex, Heineken, Ightfield Upton, Paxico, Ridgeview Beppo, Bounce, Franklin and Jupiter a bye. Eight were kept in the second series, Lad, Maniton, Ben A., Beppo, Rex, Paxico, Jupiter and Bounce. Two heats were run in the second series and the day ended. Ben A. and Lad of Rush are making a strong competition for first. All-Age Setter Stake has eleven starters, Bob Cooper, Dan Noble, Gossip, Jean, Bettie S., Natalie II., Little Miss, Novelist, Dave W., Eugene T., Zula M. a bye. B. WATERS.

A New-Subscriber Offer.

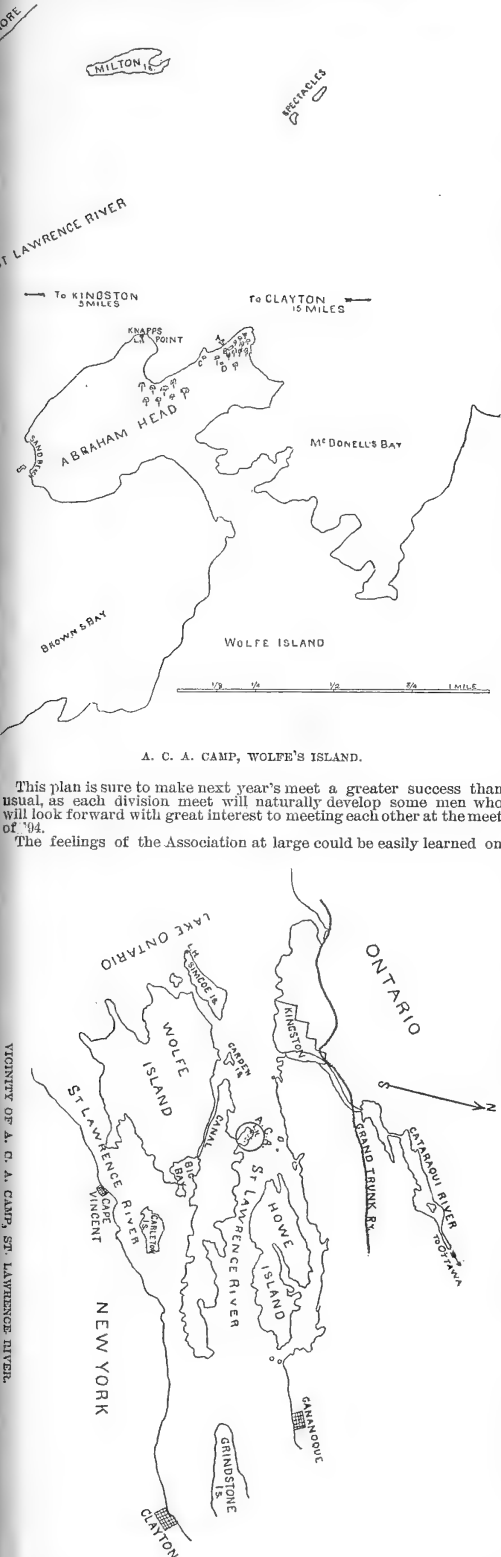

A bona fide new subscriber sending us \$5 will receive for that sum the *FOREST AND STREAM* one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the *FOREST AND STREAM* during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

As it was now about low tide we began to work on our anchor,

The A. C. A. Meet of 1893.

Editor Forest and Stream:
I fear that the Chicago Exposition will interfere greatly with the attendance and success of the general A. C. A. meet this year, few men having more than two weeks' vacation, and as most of us are determined to go to the Exhibition during our holidays, I would suggest that the A. C. A. help our Canadian friends out of the difficulty by giving the Northern Division the general meet for next year, if they will agree to hold only a division meet this year. The new officers might hold over if necessary; in other words, not to have any general meet this year, but to have one next year in Canadian waters.

This plan is sure to make next year's meet a greater success than usual, as each division meet will naturally develop some men who will look forward with great interest to meeting each other at the meet of '94.
The feelings of the Association at large could be easily learned on

the subject by the Division Pursers sending each club a letter asking what the feelings of the members of the club regarding the idea were. From what I have heard among the Atlantic Division members, I fear there are very few of them who can spare the time to go both to the Chicago Exposition and the general A. C. A. meet; so I trust that some action will be taken in the matter immediately.

A. C. A. Membership.
The following has applied for membership in the Northern Division: E. O. S. Strange, Kingston, Can.

Rifle Range and Gallery.

Port Chester Riflemen.

PORT CHESTER RIFLE CLUB, Saturday, Feb. 11.—200yds., off-hand, standard American target:

V Horn	6	6	7	7	9	8	10	9	8	75

R. McNeill, Jr., Secretary.

Cincinnati Rifle Shots.

CINCINNATI, O., Feb. 12.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores as appended below, the conditions being 200yds., off-hand, at the Standard target:

Glendale	85	86	85	Drube	79	79	71
Louis	81	72	70	Simon	82	73	73
Weinheimer	74	72	68	Steger	76	84	74
Payne	57	77	79	Hopkins	68	70	71
Copeland	73	73	71	Hauck	48	62	61
Wellinger	83	76	78	Puthoff	48	50	39

*Military.

Beideman Rifle Club.

BEIDEMAN, N. J., Feb. 11.—The following complete the weekly score of the Beideman Rifle Club of week ending Feb. 11, conditions 25yds., open air range, targets 1/4 ring, 1/2 bull, 1/2 in center, possible 250, struck by off-hand:

H Mehard	246	E L Gardiner	241
A J Yerger	246	J C Wurflin	234
J L Wood	242	W Gilbert	232

Washington's Birthday Team Tournament.
ON Washington's Birthday the Zettler Rifle Club will hold a team tournament for teams of five men, open to all rifle clubs in New York city, Long Island and New Jersey. The Zettler Club will offer four trophies for the four winning teams as well as an extra prize for the highest individual score. In the tournament last year there were fourteen teams entered, and the coming shoot promises to be still more successful than the last. Any club desiring to enter teams is requested to send in its entries to No. 219 Bowery, New York.

New York Rifle and Pistol Club.

NEW YORK, Feb. 6.—The following scores were made by the members of the New York Rifle and Pistol Club, at their last regular weekly practice shoot held on the 4th inst. at their gallery, No. 12 St. Marks place, 10 shots on Standard American target at 20yds., S. & W. revolver:

G L Hoffman	38	C B Bishop	44	82
W Walther	44	P Heeking	35	73
G E Jautzer	44	E Walz	33	82
H Oehl	44			83

F. HECKING, Sec.

Trap-Shooting.
All ties divided unless otherwise reported.
FIXTURES.
If you want your shoot to be announced here, send in notice like the following:

February.—Live bird tournament on Erb's grounds, Bloomfield avenue, Newark, N. J.
Feb. 20.—Match shoot, T. C. Wright and Thos. Murphy, at 25 live birds, Hurlingham rules, for \$50 dollars a side, at Park Hotel grounds.
Feb. 21.—H. P. Davies Co. tournament, Toronto, Canada.
Feb. 21-22.—Atchison, Kansas, tournament. Amateurs only.
Feb. 21-22.—Highland Gun Club tournament, Des Moines, Ia. Live birds and bluerock targets.
Feb. 21-23.—Onida County Sportsmen's Association tournament, at Utica, N. Y. Live birds and targets.
Feb. 22.—Live bird tournament, on Erb's grounds, Newark, N. J.
Feb. 22.—Syracuse Gun Club, "Jack rabbit" tournament, at Syracuse, N. Y.
Feb. 23.—J. L. Brewer vs. E. D. Fulford, 100 live birds each, for \$100 a side, Utica, N. Y.
Feb. 22.—First tournament of the Eastern New York Trap-Shooters' League, under the auspices of the West End Gun Club, of Albany, N. Y. Liberal purse for highest aggregate scores. H. A. Kraiz, Sec'y.
Feb. 22.—Eclipse Outing Club, annual shoot at live birds, at the Pine Brook Hotel grounds.
Feb. 22.—Match shoot, Wm. Ryan vs. Chas. Anderson, at Willard Park, for \$25 a side, at 10 live birds, old Long Island rules to govern.
Feb. 22-23.—Bloombsburg (Pa.) Gun Club tournament.
Feb. 23.—New Jersey Trap-Shooters' League, team shoot, grounds of Union Gun Club, Springfield, N. J.; also open to all tournament, beginning at 9 A. M.
March 10.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap, live bird tournament, New Jersey (grounds to be named); Hurlingham rules, Monaco boundary.
March.—New Mexico Mutual Fish and Game Protective Association, second annual tournament.
May 2-3.—Independence (Ind.) Gun Club tournament. Added money.
May 9-11.—Ohio Trap-Shooters' League tournament, Columbus, O.
May 9-12.—Saragota Spring tournament.
May 17-18.—West Newburgh Gun Club spring tournament, at Newburgh, N. Y.
May 23-25.—Knoxville Gun Club tournament, \$1,000 added to purses. Also valuable merchandise prizes.
May 30.—Eastern New York Trap League tournament, at Canajoharie, N. Y.
May.—Saragota (N. Y.) Gun Club tournament.
May 30-June 1.—Iowa State Sportsmen's Association, Clear Lake, Ia.
June 5-10.—Illinois State Sportsmen's Association, Chicago, Ill.
June 12-16.—New York State Sportsmen's Association tournament, at Rochester. H. M. Stewart, Cor. Sec'y, 412 Ellwanger & Barry Building, Rochester, N. Y.
Oct. 19-20.—West Newburgh Gun Club fall tournament, at Newburgh.

DRIVERS AND TWISTERS.
The Hartford, Conn., Fox Club has killed fifteen foxes since October. David Crary is president, Jos. G. Lane secretary and treasurer, and Geo. L. Deming master of hounds. Mr. Lane has a pack of five fine reynard chasers. J. C. Capen leads the club this year with four brushes to his credit and Supt. Goodrich of the New York and Hartford Transportation Co. comes next with three. Chief of Police Woodbridge has killed two, and the other members one or less each. The club is a prosperous and successful one, and thinks it can hold its own with the Worcester Fur Co. on any other club in New England. They expect to have several more pelts to adorn the back room of Joe Lane's store before the trout season opens.

The first of a series of five matches between the Union Gun Club of Springfield and the Boiling Springs Gun Club of Rutherford was shot on the Union Grounds on Feb. 7 each club being represented by seven men who shot at 25 targets each. The result. Union—Breintall 24, 23; total 131. Boiling Springs—Love 13, Paul 23, G. Collins 16, E. Collins 19, George 22, James 11, Griff 21; total 125. Following the team shoot were several open sweepstakes 10-target shoots, which resulted as follows: Breintall, 7, 10, 8; Van Dyke, 9, 10, 10, 8; George, 7; Griff, 9, 8, 10; E. Collins, 8; Miller, 8; James, 7.
H. H. Bates, of New Haven, who lost his hand in the Maine woods last fall while on his annual hunting trip, is doing well, and says he shall yet shoot again at the trap. Henry is one of the most popular shooters in Connecticut, and every devotee of the trap will be very glad to see him again in his old form, even if he has to support his gun with an artificial hand.
The Highland Gun Club, of Des Moines, Iowa, will hold its tournament on Feb. 21, 22 and 23. There will be two live bird events each day. On the first and third days in three target and one live bird events, the costs of pigeons and targets will be deducted from the purse, and the balance will be divided among the contestants, each receiving an equal amount for each bird killed or target broken.
The Glen Echo Gun Club will hold its initial tournament under the "Jack Rabbit" system at Glen Echo, Md., five miles from Washington, D. C. The grounds are reached by Tenallytown cars from Glen Echo Junction. Cars run every fifteen minutes. Geo. S. Atwater is captain of the club and manager of the grounds.
Next week's shoot at Utica will prove a great attraction for trapshooters. The programme is carefully arranged and every body shoots on an equality. The principal attractions will be the match between Annie Oakley ("Little Sure Shot") and Henry L. Gates, each to shoot at 50 live pigeons, and the shoot at 100 pigeons between J. L. Brewer and E. D. Fulford. These shoots will take place on the second day, Feb. 22.

"Dutchy" Smith, of Plainfield, and Frank Class, of Morristown shot a match at 50 live pigeons each for \$10 a side on Feb. 8, at Morristown. The result was a tie on 41 kills each, Class losing his last three birds. The boundary was 50yds. and the birds good. In a 4 bird sweepstakes, miss and out, J. L. Smith 4, 7, Aggar 4, 2; Smith 2, 6; Foster 3, 1, Cushman 1, 0; Leonard 3, 1; Riggott 4, 5.
J. H. Mercer, W. H. Snyder and W. B. Allen announce a live bird

and target tournament for Feb. 22, 23 and 24. On the first day the events will be at 4 live birds, \$3; 5 birds, \$4; 6 birds, \$5; 7 birds, \$6; 8 birds, \$7; 9 birds, \$8; 10 birds, \$9, and 5 birds, \$4 entry. On the second and third days the events will be at 10, 15 and 20 targets each.
The return match between teams of ten men each from the Union Gun Club, of Springfield, and the Boiling Springs Gun Club, of Rutherford, will take place at Rutherford, N. J., on Wednesday, March 8, starting at 1 P. M. Each man will shoot 25 targets. There will be a series of open sweeps from 10 A. M.

Enoch D. Miller sends us word that on Wednesday, March 15, he will hold an open sweep at 25 live birds, \$30 entry, five moneys, entries limited to twenty. The shoot will take place on the grounds of the Union Gun Club at Springfield, N. J.
W. R. Hobart has been in Hartford this week exhibiting the blue-rock target and electric pull. He gave an exhibition Monday, and the trap shots seemed to think that he had something far ahead of anything they had thus far seen.

The Wilmington Rod and Gun Club will deserve credit if they adopt the "Jack Rabbit" system for their spring tournament. The system is bound to come to the front, and the sooner the better.
A bill will be introduced before the Connecticut Legislature to legalize the shooting of sparrows. It is not thought prudent to ask for a pigeon law at the present time.
The Gasper-Willey match at 50 live birds each for \$250 a side has been postponed until Feb. 28.

The Union Gun Club, of Springfield, N. J., will hold their second monthly club shoot on Tuesday, Feb. 21, beginning at 1 P. M.
Ben O. Bush says the present "Jack Rabbit" system originated in Colorado, where it was called the "Rocky Mountain Jack Pot."
It is expected that twelve teams will take part in the opening shoot of the New Jersey Trap-Shooters' League, at Springfield, N. J., on Feb. 28.

Frank Class has live bird and target shoots on his Morristown grounds every Wednesday afternoon.
The New Haven Club gives a tournament on the 23d of February. Some time late in March there will be an open sweepstakes at 25 live birds, \$20 entry, on John Erb's Newark grounds.
Wm. J. Pierson wants to shoot another match against Howland Gasper. C. H. Townsend.

The Gasper vs. Pierson Match.

ON the occasion of the Willey-Gasper match at Erb's on Jan. 26, Wm. J. Pierson, of Plainfield, N. J., expressed a desire to meet Gasper in a match at 50 live pigeons each, for a stake of \$50 a side, each man to stand at 25yds., Pierson to allow Gasper two dead birds in addition to what he might kill, loser to pay for all the birds. To the above conditions Gasper agreed, and the match was scheduled for Thursday, Feb. 9. At noon on that day a good-sized party of sportsmen were on the "Old Stone House Grounds," and by the time the match was called there were over a hundred spectators on hand. The day was fairly pleasant up to 2:30 P. M., when it grew cold and raw.
The birds used in the race were a rattling good lot. John Erb was referee and Wm. R. Hobart scorer. Samuel Castle, the Newark Gun Club man, handled Gasper. On the first half Pierson had killed 21 to Gasper's 19. On the next round Pierson's nerve gave way, and on the 47th round he was shot out. The score:

Pierson	202201221122212212022120-21	12-33
Gasper	10102101112100111101	12-33
	1012222101201201211111-19	
	021211222212102010222-18-37	

The above day was also the Newark Gun Club's regular date, and there were eleven entries in the club shoot at 10 birds, \$5 entry, three moneys. No. 2 was at 5 birds, \$5 entry, two moneys:

No. 1.	No. 2.	Ties.
Cullon	1001001213-6	22202-4
Lindsey	11222200-5	12120-4

F Willard	2210201200100222012-12	E Reeves	0100222012101002000-9

Target medal, same day, 30 each: J. P. Watson 21 and medal, L. C. Willard 6, P. Miller 16, F. E. Willard 9, John Watson 13, A. W. Reeves 12, E. I. Reeves 15.
Feb. 10.—Live bird sweepstakes, four sweeps of 10 birds each, \$5 entrance to each, two moneys, 60 at 40 per cent., new Illinois rules:

Bingham	10	9	10	7	Thomas	10	2	3	4
Anson	6	8	9	10	Beck	6	8	6	
Eastman	8	8	5	10	Forthington	6	8	8	
Heikes	10	10	10	10					

RAVELINGG.

Parkway Rod and Gun Club.

THERE was a good attendance at the Parkway Rod and Gun Club's second monthly shoot at Dexter Park, on Wednesday, Feb. 8. Twenty-two competed for the club medal and the best averages of the year. E. Helgans and P. Kunzweiler tied with 7 each, and on the shoot-off for the medal the former won. Six tied with 6 each, the next best scores. The scores were:

D Monsees	1100222-5	E Steinhousser	1202000-3
E Helgans	1222211-7	J Lind	1111111-7
A Boty	2001021-4	F Kunzweiler	000202-2
J Blake	2222001-5	H Bramwell	110101-4
J Bennett	0012121-5	M Ellis	021202-5
A Andrews	0011110-4	H Selover	1220011-5
L Miller	1222101-6	C Rein	122202-6
G Wisel	102112-3	C Wadlin	020001-2
A Brower	1010112-5	C M Meyer	2101202-5
H Bookman	0121112-4	J Bennett	0012122-5
F Goodale	1110111-6	H LeMaire	1110112-6

Unknown Gun Club.

IT was rumored that there was a split in the Unknown Gun Club, one of the oldest shooting organizations on Long Island, but they managed to have the largest attendance at Dexter Park on Thursday, Feb. 8, than any other club shooting during the week. Twenty-three members competed at 7 birds each, H. & T. traps, modified Long Island rules:

J Bord	0221120-5	I Hyde	1001010-3
W Rankin	0002020-2	C Plate	1111111-7
J Jerry	0212000-3	Dr Little	001201-4
J Loden	1100102-3	D Soden	110202-5
F Malbrough	1302000-3	D Lynch	110202-5
W Dietrich	1020000-2	F Skidmore	1012012-5

MEPHISTO

331-333 BOWERY, BET. 2d & 3d STREETS.
New York, July, 1892.

Our "ONDINA" all Havana tobacco NEW YORK made cigar, our world-renowned "MEPHISTO" and all other finer grades of cigars made by us are superior in many ways to those made in the tropics. In addition to all the tobacco markets of the earth to which we have access, New York City always commands the best of every material as well as labor. OUR New York factory is a perfectly ventilated, clean abode. No sort of uncleanness is permitted, and our cigars, therefore, are not liable to contain matters other than tobacco, and smokers may confidently and safely use our cigars, not needing a mouth-piece or a cigar holder to prevent unpleasant consequences. To protect consumers from imposition, every "MEPHISTO" cigar is banded.

JAPANESE
VARIEGATED HOP

Admirable for Decoration. Illustration was taken from photograph of plant.

Useful and ornamental annual. Very rapid grower; leaves six to seven inches across, are beautifully and distinctly marked with silvery white, yellowish green and dark green, part regularly striped as well as marbled and blotched; in some cases leaves almost white. Not injured by insects; does not suffer from heat; retains its fresh variegated and densely packed foliage till cut down by frost. At a little distance looks like a mass of white flowers spotted among the green.

Price, 25 Cents Per Packet.

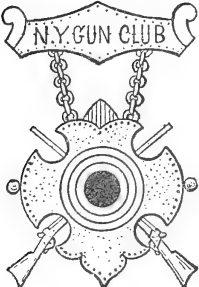

Where requested each purchaser will receive FREE a copy of THE POETS' NUMBER

VICK'S FLORAL GUIDE.

For 1893 we have combined a most novel and charming feature in the way of hundreds of beautiful and appropriate poetical quotations from the best authors, making THE POETS' NUMBER OF VICK'S FLORAL GUIDE a source of interest and pleasure the whole year. The practical part contains Colored Plates of Alpine Aster, Begonia, Dahlias, Dutchman's Pipe, Clematis, Fausies, Cannas, Corn and Potatoes, hundreds of Engravings, descriptions of the sweetest and most prolific Pea-The Charmer, The Golden Nugget Corn, which was such a favorite last summer, new Roses, new Chrysanthemums, and scores of other grand and good things. Names and prices of everything one could desire in way of Flowers, Vegetables, Plants, Bulbs, etc. Sent for only 10 cents, which can be deducted from the first order. Cash Prizes.

THE PHOTOGRAPHY AWARDS.

Owing to circumstances which have prevented a meeting of the Committee we are obliged to defer their report to our next issue.

DISTRICT ATTORNEY NICOLL AND DELMONICO.

AN esteemed correspondent, who is a well-known clergyman of this city, writes:

It seems an utter farce to have to send direct to Newburgh for infractions of the law by provision sellers of New York. There ought to be some one to look after these things in the city. All such an officer would have to do would be to provide himself with the prices of butcher stores, meat markets, etc., and in every one of these he would find game offered for sale at a regular price out of season. It is very little use in enforcing laws in the country, when there is a regular margin of profit offered to those who break them in the town.

While this picture of illicit traffic in game in New York city is overdrawn, there is no denying that the sale is extensively carried on during the close season. The business is for the most part conducted, not openly and defiantly, but discreetly, circumspectly, covertly, evasively and secretly.

The failure of the machinery intended to suppress the traffic may not be accounted for by the remote residence of the District Game Protector, Dr. Willett Kidd, of Newburgh. Dr. Kidd is an efficient, able, alert and active official. The futility of his efforts in this city is due to the fact that after he has done his duty, has secured his evidence, has provided his witnesses, served his complaints and brought his case to District Attorney DeLancey Nicoll, that functionary and his assistant functionaries take turns in putting him off with promises and balking him with silly excuses. It is simple enough and easy enough, and expeditious enough to go out and secure ample evidence that fashionable and so-called "high-toned" restaurants are illegally serving quail and partridge and woodcock, now, to-day, this very Thursday. But with such a case made out by the protector and laid before the District Attorney, heaven only knows when he would try it, if ever. The chances are that it would be smothered, as Mr. Nicoll's office has smothered the notorious Delmonico woodcock case. Protector Kidd has been kept trotting back and forth from Newburgh to New York for months and years, in shamefully fruitless endeavors to bring to punishment this Fifth avenue server of woodcock out of season. He could have done his duty no more faithfully had he lived in town.

The miscarriage of justice in such an instance as this specific Delmonico woodcock case lies not in the remoteness of the residence of the protector; it is to be found in the inaction, born of shiftlessness or incompetency, or unwillingness on the part of District Attorney Nicoll to try the case. As has been said before in these columns, the evidence is good. The District Attorney is at no disadvantage because of the protector's residence. Mr. Nicoll could not have better evidence, not even if in the course of his dining at Delmonico's he himself, with his own eyes, had there seen unlawful woodcock served to guests at neighboring tables—or at his own. Such evidence in this city is open to all. But, unfortunately, the evidence is useless, so long as the District Attorney, whose sworn duty it is to execute the law, refuses to make use of it. We repeat, and it cannot be reiterated too often nor too plainly, that in their defiance of the game laws the New York restaurant keepers are encouraged and emboldened by the record of the District Attorney's office with respect to Delmonico's. The parties responsible for this are the District Attorney, DeLancey Nicoll, himself, and the various assistants to whom the mis-conduct of the suit has been delegated.

At last accounts Assistant District Attorney Townsend had the papers in the pigeon-holes of his official desk. If Mr. Townsend had conducted a case for a private client as he has this one of the public his client would have thrown him overboard in righteous disgust months ago.

We think that the time has come to give a bit of the inside workings of this Delmonico case, as we shall next week; and it will be a revelation to some good people who do not know the ways of the dingy building in City Hall Park, but who fondly imagine that it is because we have no resident protector that our game laws are not enforced.

Our correspondent refers to the futility of attempting to enforce the game laws in the country so long as a reward is offered for their violation in town. This is true.

It is true not only with respect to the particular game killed for city consumption, but in a broader and far more important sense with respect to the demoralizing effect had upon the rural community. For there are not wanting those, who, in the unequal execution of these statutes find plausible ground for denouncing them as laws made for the poor and defenseless, not for the rich and powerful. What answer can be made to that when your grouse snarer who captures the game is jailed, and your city caterers who buy and serve the game go free?

It was the recognition of this aspect of the case that prompted the action of the New York State Association for the Protection of Fish and Game in the November meeting of its Executive Committee when it adopted this resolution:

Whereas, It is a well-known fact that the District Attorney of the city of New York has for two years failed to call the noted "Delmonico woodcock case" to trial, though supplied with unquestioned evidence of guilt, such delay being unnecessary and detrimental to the efforts which are being made for an enforcement of the game laws; therefore,

Resolved, That this committee calls upon the Hon. DeLancey Nicoll to forthwith bring such case to trial, and thereby show a willingness if not a desire to enforce the game laws as he would enforce other laws, thereby discharging a duty which he owes to the State.

THE AQUARIUM AT THE WORLD'S FAIR.

THE construction of a new pump at the rubber factory at College Point, Long Island, marks another step in the preparations for the fish exhibit to be made at Chicago by the U. S. Fish Commission. We have sketched the collection of painted fish casts which the Commission will show in the Government Building, and will now outline the assemblage of living fish and other aquatic life in the aquarium wing of the Fisheries Building.

The aquarium proper is a circular structure 125ft. in diameter. It was fitted up by the Exposition authorities at their own expense and turned over to the Fish Commission for the purpose of making its aquarial display. Tanks of various sizes, made of cement, slate, glass and iron, fill all the available exhibition space of this building. Some of them are large enough to accommodate the biggest fish that can be transported alive.

Nearly one-third of the tank capacity will be devoted to the salt-water animals and plants. The storage reservoir for salt water, located under the main Fisheries Building, is 46ft. 9in. long, 18ft. 8in. wide, and 8½ft. deep. Near the roof of the same building there is a salt water pressure tank, 30ft. 3in. around the middle and 5ft. deep.

The rubber pumps for the circulation of salt water are also under the main Fisheries Building. They will be run by electricity. All parts of the pumps and all the pipes and connections which come in contact with the salt water are either made of hard rubber or are rubber-lined, in order to prevent the pollution of the sea water by products of corrosion, which would be formed if metallic circulating apparatus were used. About 60,000 gallons of water will be required for the marine display.

A very much larger quantity of fresh water will be in circulation. It will be delivered under hydrant pressure, filtered and conveyed through fine jets in a highly aerated condition into the aquaria. The fresh water aquaria vary in size; none of them are small, and one approximates 40ft. in length.

The aquarium is in charge of Prof. S. A. Forbes, the well-known director of the State Laboratory of Natural History at Champaign, Ill. When he took possession of the building he found the pipes of the fresh water system practically wrecked by freezing in December, while several valves in the salt water apparatus were bursted in the same way. Owing to the delay caused by these accidents it is scarcely probable that the sea water can be circulated before March 10.

Preliminary arrangements have been made for the interior decoration of the building and for the introduction of rock, gravel, etc., into the tanks. Collectors are now in Florida and Alabama accumulating water plants for use in the fresh water aquaria, and additional plants will be forwarded from the fish ponds in Washington and other Eastern stations. Marine plants and other decorative material are being brought together at Wood's Holl, Mass. Later in the season additional supplies will be obtained from various bays farther south by the steamer Fish Hawk.

Fish and other aquatic animals of the Mississippi Valley will be collected chiefly by Dr. S. P. Bartlett, with Quincy, Ill., as a center. He can furnish the paddle-fish, sturgeon, dogfish, many kinds of catfish, buffalo, suckers

gizzard shad, fresh water drum, crappies, basses, sun-fishes, gar-pikes, toothed herring, pike, pickerel and numerous other species.

Mr. J. J. Stranahan is called upon to ship the lake cat-fishes, suckers, rock bass, white bass, black bass, blob, pike perch, sauger, eel-pout, sunfishes, minnows and the curious water dog.

There will be also many kinds of fresh-water fishes from Washington and vicinity, whitefish and grayling from the Great Lake region, masacalange from New York, sticklebacks from Cape Cod, and a great variety of marine fishes and other animals from Cape Cod, the Chesapeake, Beaufort and localities on the Gulf of Mexico. A wonderfully fine effect is to be expected from the display of living anemones, which are now thriving in the Fish Commission building in Washington. Commissioner McDonald has personally determined the conditions of success with these beautiful animals, and will make the anemone grottoes an especially fine feature of the exhibit. In the same way he has satisfied himself by experiments just what can be done to the best advantage in the aquarium at Chicago.

As soon as the tanks are ready for the installation of their contents the cars of the Commission will move from various collecting points to Chicago. Additional aquarium experts will be detailed for duty in Chicago, and in a comparatively short time visitors to the Exposition may look upon a very striking and effective assemblage of inhabitants of the ocean, the lakes and the streams. The marine display is to include the important food and game fishes of typical localities, besides many species conspicuous either by reason of their gorgeous colors, or their grotesque forms, or their singular habits.

WILL SPEAKER CRISP BE DECEIVED?

THE speculators who are constantly striving to wrest from the people their rights in the Yellowstone National Park, stick at nothing to accomplish their bad ends.

The Segregation bill which is now before the House has passed the Senate. If it should pass the House, only the President's signature would be required to make the measure law, and if it once becomes law the northeastern corner of the Park will be thrown open to prospectors and skin hunters. The timber will be burned off, and the game destroyed over a large section of country which is by far the best winter range in the Park for deer, elk, buffalo and mountain sheep. One of the most attractive regions in the Yellowstone country will be turned into a howling desert, absolutely without life.

While the best class of Montana's citizens are earnest for the Park's protection, a certain class of speculators there desire to have this corner thrown open, even though it means the ruin of the Park, and to bring this about they have hired a lobby, which is hard at work in Washington to-day.

To attain the results so eagerly sought for, this lobby has not hesitated to attempt to bunco the Honorable Speaker of the House of Representatives. The trick which they have used ought, when exposed, to mean the death of the Segregation bill, if not at the hands of the House of Representatives, at least when it comes before the President.

Last week a telegram was sent from Washington to a man in Helena, Mont., which reads as follows:

Have Gov. Hauser and other Democrats wire Speaker Crisp that it is important for the Democracy of Montana that the Segregation bill be passed in the House Monday under suspension. If this pressure is brought to bear Crisp will pass the bill.

(Signed)

P. J. BARR.

In other words, Speaker Crisp, a reputable gentleman, was to be imposed upon and used as a tool by these wretched speculators, the bill was to be passed by trick and device, and it was expected that the President of the United States would approve by his signature a measure, whose passage has been obtained by fraud, and whose sole purpose is to enrich a little gang of speculators at the expense of the whole public.

It is not necessary for us to explain how we learned of the desperate game that this lobby was playing, nor what measures have been taken to prevent its success. It is enough to say that the facts became known to us, and being known and made public, the fraud intended to be perpetrated on Congress, and on the people represented by Congress, is not likely to be carried out. Even if the bill should pass the House of Representatives, the President may be relied on to stamp with his disapproval the confidence game which the lobby has played.

The Sportsman Tourist.

ON THE PAMPAS OF ENTRE RIOS.—VI.

In the sixties Gen. Urquiza brought with him from somewhere in the South, a band of Indians called Christoes, or Christ's Indians, so called because they were supposed to have embraced Christianity, and become devout Catholics, but a more villainous, thieving band of cut-throats it would be hard to find. They always kept up their tribal relations, some leaving the main band for a while and working on the estancias, but always returning to their tribe sooner or later. At times thirty or more of them would start off on a kind of a raid, visiting an estancia, and hanging around as long as they could get anything to eat. At these times they would commit many thefts before returning to Flores, their rendezvous, and several times committed murders. One afternoon they met an old man who traveled around the camp in an ox cart selling bread, and thinking he had money, they murdered him. The poor old fellow had been at my house in the morning, and at that time had a dollar and a half, and probably had not more than two dollars when killed. I had an adventure with them myself that made me very nervous for a time. I had been into the town of Concepcion for three hundred Bolivian dollars which we required to pay for shearing our sheep. I took with me a trusty man and a horse with saddle-bags. On our return, and when within five miles of home, I said to Benancio that we must make a detour to the right so as to leave the pulqueria well to our left for fear the Christoes might be there. This we did, and after riding slowly along for a couple of miles we reached a high swell in the pampas, and to our dismay rode right into the midst of the very band we were trying to avoid. As soon as I saw them I spurred up the horses and passed through them as rapidly as possible, not however without having to respond to their slang phrases of greeting. One more inquisitive than the rest asked me what I had in my saddle-bags, trying at the same time to strike them with his whip. I told him they were nails, and gave the horse a pull so that his blow fell upon his rump, which caused him to prance and try to get away. This was fortunate for me, for I let him run a little, just keeping alongside, and apparently making great efforts to stop him. I was very uneasy in my mind after this meeting, for I feared they suspected I had money and might make an attempt to get it. They stopped and seemed to be having a pow-wow as we rode rapidly towards home. That night Benancio and my dogs slept in the house with me, and I had my gun and revolver where I could lay my hands on them. As an additional precaution, I put a strong pole across the room from the door to the window, both of which opened in. The night passed quietly, and the next morning I carried the money to a pulqueria, the owner of which had a safe, and acted as banker for the estancieros of the neighborhood, and I took particular pains to let every one know that I had carried the money away. These Christoes were great drunkards, and one that I had as a vaquero I discharged on that account and drove him away one night. He was so drunk that he could just sit on his horse and that was all. The next morning I went very early before daylight to an outlying puesto to count the sheep, and as I neared the place I saw some dark object in the sheep corral moving around the wire fence. I found it was the drunken Christo I had discharged the night before. His horse had broken his way into the corral through the wire fence, and had been traveling around inside all night. When the horse would stop the fellow would spur him, and he thought he was traveling across the pampa. I met with quite an exciting adventure one day while visiting one of the estancias of Gen. Urquiza. This place was managed by Nico Coronel, one of Urquiza's most trusted followers, and an officer in his army. There had been a grand round-up of the cattle, and branding and sealing was going on. I rode down to the corral, dismounted from my horse and climbed up on the cross-pole of the corral, where I could see all that was going on without being in the way. The little five-year-old boy of Coronel saw me there and trotted down and stood under me looking through the cracks of the corral. A particularly large and fierce bull had just been handled and was standing swaying himself from side to side in a perfect rage and looking for a victim. I will say here that these South American cattle will rarely attack a man on horseback, especially if he has a lasso or strap to swing around his head, but if approached on foot they are very dangerous, and will gore and trample you without a moment's warning. This bull, not seeing any victim in the corral, jumped the bar, and soon as outside saw the child and made for him. I reached down and lifted the little fellow up into my arms, and at the same time his father, knowing his danger, had also jumped his horse over the bar and rushed toward him. The bull then turned on Coronel and made a vicious thrust at him. I saw Coronel throw up his leg, and thought he had been gored, but the next instant saw him leap from his horse and stab the bull to the heart before he could recede for another charge. The horse was terribly gored just behind the foreleg, and died in a little while. This all happened in a few moments, and the result was a dead horse, a dead bull, and a badly scared boy. Coronel called for another horse, and in a short time was back in the corral working away as if nothing had happened. For my part, I did not get over the excitement for quite a while. Attending cattle is dangerous business, and many men get hurt while so engaged. They frequently meet with bad falls while running the cattle, from their horses getting into vicacha holes. Sometimes they are gored by infuriated animals that turn upon them. The lasso is apt to get foul, and many terrible hurts are caused in this way. I attended one of my men who had his foot nearly cut off at the ankle joint by the lasso taking a turn around his leg. It resulted in his losing his leg above the knee. The manager of an estancia has to act as physician and surgeon to man and beast, and he is frequently called on as arbitrator in quarrels about marks of cattle and other questions. The prevailing religion of Entre Rios is Roman Catholic, but there are no churches outside of the large towns, and religious duties are very much neglected.

Gen. Urquiza, who I mentioned as governor, was a very wealthy and independent man, frequently defying the home government, and having a great hold on the affections of the people of his province. He lived in a beautiful hacienda called Flores, where he had fine garden

filled with rare flowers, fruits and trees. As giving some idea of the vast number of sheep he owned, his secretary told me in 1863 that the reports of sealing of lambs that had come in gave the number as 300,000. In 1870 he was assassinated by several of his army officers, foremost among whom was Nico Coronel, with whom I was well acquainted, he being the man whose child I saved from the bull. They went to Flores and gained admission through the treachery of the guards and shot the old man and his daughter Lola, who defended her father when all of his troops had deserted him. The great drawback to the progress of the Argentine Confederacy is the number of attempted revolutions and rebellions they are constantly having first in one province and then in another. I see by the newspaper accounts that one is now going on in Corrientes. During my sojourn there were two, both of which put me to great inconvenience and loss from the stealing of my horses and killing cattle. The last rebellion was in 1864, and I was not only stripped of my horses, but my men also. I was left with an old sore-backed horse that it was the height of cruelty to use, one old lame man, four women and myself to look after 15,000 head of stock. I just let the cattle and horses go, and turned all my energies upon the sheep. Terrible storms sweep over the pampas called pamperos. They came from the southwest, and are most always preceded by a dust storm which can be seen coming for miles. When the storm breaks it is almost impossible to stand against it. The wind blows about fifty to sixty miles an hour, and the rain falls in torrents. The temperature becomes rapidly lower and the cold is chilling and penetrating. These pamperos frequently do immense damage to the shipping in the roads at Buenos Ayres. It is to resist the force of these storms that all the buildings in Entre Rios are made one story high. In conclusion, I will say that I went to South America with my health much impaired and weighing 115lbs, and after a life there of nearly five years, I returned with muscles of iron and a constitution that seemed able to bear anything and weighing 175lbs.

EDWARD A. ROBINSON.

BALTIMORE, JANUARY.

A DESERT HOME.

AMONG the books that charmed my boyish fancy was one known as "The Desert Home." It was by Captain Mayne Reid, an author, perhaps, unknown to the present generation of small boys, but whom I shall always remember as one of the most delightful of writers of boys' stories. His books were often exciting, but scattered all through the adventures in which they abounded were bits of information, especially on woodcraft and natural history, which were very instructive. I know now, as I did not when I first read them, that his statements on this latter subject were accurate, for he had drawn them from the best authorities of his time; and his books, though perhaps they did deal too much in Indian fights, though his villains were perhaps too vile and his heroes possibly too perfect, were yet wholesome in tone and good reading for young people. The lesson taught by them was always a good one.

"The Desert Home," to my mind, was one of the most delightful of his books. In a general way, its plan was not unlike that of the "Swiss Family Robinson." Like that book, it dealt with the adventures of a family who were separated by misfortune from the rest of the world, but while the Swiss family were cast away at sea and at last found themselves on a desert island, the adventures detailed in the "Desert Home" took place on the plains of the far West. The story, as I remember it, was something like this:

In the early days of the California excitement a family whose fortune had somehow suffered shipwreck, started with an emigrant train to cross the plains on their way to the land of gold. They were well provided with the necessities for such a journey, and the father and mother were people of intelligence, culture and perseverance. For a time all went well with the travelers, but by and by misfortunes began to overtake them, and one accident or another delayed them. They fell behind the train with which they were traveling, were unable to overtake it, and at last lost it entirely; then they got off the trail and lost themselves. Through want of water their draught animals began to die, and they themselves to suffer. Still they pushed on, heading always toward the West, toward the mountains where water might be found. By this time their provisions had begun to run low. Game was scarce and they began to suffer from hunger. Their progress was very slow, for their animals were now reduced to an ox and a horse which were unequally yoked to their single wagon. They began to despair, but still they pushed on, scorched and blinded by the fierce rays of the summer sun and parched by the sand-laden wind which, like the hot breath of some great furnace, blew unceasingly in their faces. Day after day the little company pushed on, day after day the cries of the children for water and food grew fainter, the countenance of the mother more drawn and haggard, that of the father more gaunt and hollow-eyed. Their animals, perishing with thirst, could hardly draw their wagon; death stared them in the face.

Suddenly one day, after they had given up all hope, there opened up at their feet a glimpse of what seemed another world. They had been traveling over the level, bare, waterless plain, when suddenly they saw beneath them a beautiful green valley. Through meadows rich with luxuriant grass, and dotted here and there with clumps of tall cotton woods, flowed a broad stream of living water. Scattered over these meadows, and sometimes half hidden by groups of willows, were feeding buffalo, elk and deer. There, almost within their reach, was food in plenty, and what they longed for so much more than food, water. The scene gave them renewed life; even the horse and the ox seemed to gain vigor, and stepped forward with a brisker motion. A way was soon found down the steep slope, and in a few hours they had gained the bank of the stream. Here, their immediate wants satisfied, the elders stretched their weary limbs on the ground in the grateful shade of the tall trees, the little ones, their past sufferings forgotten, romped merrily in the grass, while the animals at a little distance, browsed contentedly knee deep in the luxuriant herbage. For some days they remained in this happy valley, intending after they had laid in a stock of provisions and their animals had become strong again to continue their journey to California. This intention they never carried out. While they were camped here their ox was killed by a panther, which left them only a single animal—the horse.

After much consideration they determined to remain at least over the winter in this lonely valley, and here was established their desert home.

All this is but the prologue to the main story, that of their life in this oasis. They built houses and barns, made gardens, planting them with seeds which they had brought with them for use in California, tilled fields, sown with corn and wheat, transplanted and cultivated bushes and trees of wild fruits. They captured and tamed wild horses of the plains from the herds that visited the valley to drink at the stream; they caught and domesticated buffalo calves, which gave them steers for plowing, cows to furnish milk and butter. Gradually, too, they accumulated small herds of elk, of deer and of antelope, which fed contentedly in the wide pastures that they had fenced, and on which they could draw for food in case of need. Wild turkeys, wild grouse, and wild geese and ducks were in due time added to their list of pets, so that before they had lived many years in the valley they were abundantly provided with domestic animals, all of them drawn from the wild creatures native to the soil.

In this primitive, but comfortable home, far from the haunts of man, this little family lived for many years. The children, strong, healthy and innocent, grew up to manhood and womanhood, knowing no society save their own and with no more knowledge of the great world than could be drawn from the few books that they possessed, and from the recollections of their father and mother.

Some years ago I was traveling through the roughest mountains of the extreme Northwest. I was alone, riding one horse, and with my slender camp equipage packed upon another. For many days I had journeyed in solitude, making my way by as straight a course as possible toward the point I desired to reach. Sometimes the trail led through the dense forest, where the trees and underbrush stood so close that the horses could with difficulty force their way among them. Sometimes a narrow game trail led along the steepest mountain sides, again a rough *chevaux de frise* of piled up down timber turned me back, or I would journey over level flats yellow with ripened grass, where, here and there, the cinnamon pines raised their stately red columns toward the sky.

Day after day I traveled onward, my two horses being my only companions. At rare intervals I saw a grouse or a snowshoe rabbit. Once I saw two deer, and on one occasion a stately big-horn stood on a pinnacle of rock above the trail and looked curiously down at me as I passed beneath him. One day, after I had been traveling in this way for nearly a month, during which I had seen no human face, I rode out on a bare bench of the mountain which overlooked a river valley. There, on the banks of the stream, I saw, to my astonishment, a cluster of low log buildings. Near them a garden and cultivated fields, and beyond long lines of fence inclosing ample pastures, in which grazed horses and cattle. From the central building rose a curling line of blue smoke, showing that the house was inhabited, and through the fields I could see long, straight lines of bright green, which showed where irrigating ditches ran.

The sight caused me great surprise, for I had heard of no settlements in that part of the country. Riding down the long hill toward the houses, I soon began to see evidences that this settlement had been made many years ago. Deep trails were worn in the hillside where cattle and horses passed up and down between the rich bunch grass pasturage on the hills and the water in the valley below. When I reached the bank of the stream I made my camp, and then led my horses up to the house to ask permission to turn them into one of the fields, where they would be readily found in the morning. This was my ostensible reason for going to the house. My real one was to have an excuse for speaking with the settlers and learning something about them. As I rounded the corner of the house, looking for the door which I must knock for entrance, I came suddenly upon a group of small children of all sizes and ages, from a boy of twelve down to the tiniest of flaxen-haired toddlers. At my appearance they ceased their various occupations for an instant, staring at me in wild-eyed wonder, and then like a flock of startled birds scattered, and in a moment were lost to sight. There remained before me only one of the children, a sturdy, bright-faced boy, seemingly the oldest of the group, whose large black eyes met mine frankly and boldly, and lying on the step before the door, a great gray wolf, which, as the children disappeared, sat up on its haunches, yawned lazily, displaying two alarming rows of white teeth, and then, noticing a stranger, grinned threateningly at me. I explained to the lad my errand, and he went into the house and presently appeared at the door with his mother. To her I preferred my request for pasturage, which was at once granted. Late in the day I was invited to partake of the afternoon meal at the house, and after supper I heard the story of this settlement. This story reminded me of the book which I have referred to in the early part of this letter—"The Desert Home."

In the year 1860 the owner of this ranch, who, for the purposes of this narrative, we will call Mr. Morrison, came into these mountains as a prospector. His search for gold was only moderately successful, and he built a cabin, brought his wife here, and here she has lived for twenty-five years without having been during all this time a mile from the house.

Here eleven children had been born and reared, taught how to read and write by their sweet-faced mother; had grown up leading a free, natural, open-air life, which insured to them perfect health and strength. Their companions were the wild creatures of the mountains and the streams. They had captured wolf puppies which they had reared and tamed; domesticated deer fed near the house, and often walked into the open door begging for a piece of bread; in a little pond near the house, formed by the widening of an irrigating ditch, a tame beaver was at work, and when I came in sight disappeared under the water with a resounding slap of his tail, but soon came up again, and having cautiously reconnoitered with only his nose above water, and observed that I was in company with a familiar friend, he lost all fear and crawled out on the bank to be petted. On the waters of this pool floated a number of mallard ducks and green-winged teal, as careless of our presence and as free from fear as any barnyard fowls could be. On the ground in front of the house hopped a tame magpie, which now gave utterance to the familiar twittering call of his species, or again spoke with the utmost distinctness the names of two or three of the children. Sometimes standing on a tall fence pole, but now and then making swift dashes down into the grass to seize

some insect detected by his quick eye, was a little sparrow hawk, whose tameness surprised me, until one of the boys whistled to the bird, and it flew down to him, and after circling once or twice about his head, alighted on his shoulder. A less attractive pet was a great horned owl, which, having been recently captured, was still on the defensive, and made hostile demonstrations whenever any one approached him, ruffling his feathers, rolling his great eyes about, and snapping his bill in a manner quite alarming. All these, and a hundred other pets quite as curious and interesting, but which in the course of time had died either by accident or of old age, had been captured and reared by the children, whose fondness for, and interest in, these wild creatures was very great.

The father of this family is an energetic and successful man. His farm produces a living for his family, and his horses and cattle yield him profit. He has almost at his door a gold mine which he works in a small way, and which pays him moderate return, and half a mile from the house is a coal mine which in time, after the country has been settled up, can hardly fail to prove very valuable. A day was very pleasantly passed at this ranch, and I greatly enjoyed meeting this charming family. Then I had to pack my horse and resume my journey, leaving with regret this modern "Desert Home."

MUSK OX SPECIMENS.

Editor Forest and Stream:

NEW YORK, Feb. 20.—The comments of your correspondent, Mr. Tappan Adney, in your issue of Jan. 26, in an article on the musk ox of the week previous, are likely to mislead your readers and reflect upon the accuracy of the statements therein, it is necessary to explain the reason for the unintended omission. It was unfortunate that we did not refer to the specimen of the musk ox in the American Museum of Natural History to which he so kindly calls our attention. The omission was due to our not knowing of its existence so close at hand. That we could not have seen the specimen is quite true. That we did not know of a specimen being "not more than two miles from our shop" is also quite true. We shall lose no time in hunting up the specimen. We are indebted to our correspondent for several items of interest. His information as to the measurements of this particular specimen, in which he is so interested, are very valuable. It is also important to know by whom and when the specimen was mounted.

There is one item in our correspondent's comments that is slightly cloudy, to wit, why he refers to the month of November of the particular year of 1891 as a most favorable time when we might have seen this specimen.

We regret exceedingly that we could not, under the circumstances, have included this sixth specimen in the article, and thus do justice to the specimen and to the American Museum of Natural History, of which we are all so justly proud, and have the data of specimens accurate.

It is interesting to know the specimen in the Museum stands at the shoulder ("not including the long hair") 4ft. and has a length of 7ft. 3in. The specimen figured in the *FOREST AND STREAM* would measure somewhat more than this, if it were not for the fact that the body as well as the head of our specimen is turned from a central line very much to one side, thus making the total measurement much less in length. It would be very interesting if our correspondent would give the size of the hoof of the specimen in the Museum of Natural History. This feature of the animal would very likely prove or disprove the validity of our claim as to the specimen which was prepared by us being the largest at present in this country. It is a well-known fact that the general size of an animal's hoof indicates the size of the animal much more accurately than the bulk of his horns or antlers, and we shall stand by our assertion that this specimen is the largest until some other more convincing proof is given than that recorded by our correspondent in his comments. If he shall do this we will gladly step aside and yield the palm to the greatest.

FREDERIC S. WEBSTER.

The Pine Grosbeak.

BETHEL, Maine.—In your issue of Feb. 9, a well known naturalist, Mr. William Brewster, of Cambridge, Mass., makes inquiries regarding the pine grosbeak. I have been much interested in that bird for many years, and have observed its habits here, in the northern part of Oxford county, Maine. They make their appearance every year in the month of October—sometimes in large flocks and at other times in small squads—a few pairs, and often one or two pairs are seen. They remain with us during the winter and leave us as spring approaches. They feed on the buds of trees, seeming to prefer the poplar to all others. They are very fond of apples, flying from tree to tree in our orchards in search of some remaining apples left on the trees. For the past three weeks a few pairs have lived in the village of Bethel, occasionally alighting in our streets in front of the stores, picking up the waste of fruit etc., accumulated there. They seem to be very tame, and can be approached within a few yards.

Their markings are of various hues—slate-brown tinged with green, yellow, red in almost every shade, the old males being quite brilliant with scarlet on their backs, with always a white feather in the wing.

I have never seen them in the deep forest, miles away from human habitation, although my occupation as a trapper and hunter for more than forty years has given me the opportunity. They seem to love the open country with occasional woods. Where they breed is a mystery to me, as they do not summer in this part of Maine. From the 20th of December last past to the 20th of last month, was the coldest weather known in Maine for years, the mercury never appearing above zero during that time, even at noon, and often being 20 to 26 below in Bethel, yet these birds have been frequently seen. I think they change places frequently, moving from place to place, perhaps in search of food.

J. G. RICH.

Newspaper Unnatural History.

[From Harper's Weekly.]

WHEN the boa constrictor fixes his glittering eye on the

canary bird, the canary bird becomes exceedingly restless, and flutters and tries to get away. But it does not succeed. It cannot escape the boa constrictor's fascinations, and in spite of all its shuddering struggles, it stays where it was and gets swallowed up. * * * The canary has wings, to be sure, but once the boa constrictor's eye is on it, it cannot fly away. It cries out and flutters and struggles, but in the end the serpent makes a meal of it, and smiles and wipes his mouth.

ANOTHER MOOSE IN HARNESS.

PRINCETON, N. J., Feb. 4.—I noticed in the columns of the *FOREST AND STREAM* an account of a cow moose which was being driven at a fair in Maine; the note also said that this was the only individual to be found under similar conditions. I inclose you a picture of a cow moose, which was one of a team exhibited at the Trenton Fair

MOOSE IN HARNESS.

From an amateur photograph by A. H. Phillips.

last September by Mr. L. H. Fitzgerald, of Winnipeg. The mate was a two year old bull, with apparently abnormally-shaped antlers, otherwise a well-developed specimen. Both these were very gentle and easily managed, either single or double.

Mr. Fitzgerald also exhibited a team of elk (a picture of which I inclose) under the same conditions; both of them were fine specimens, though of course they were not so much of a rarity. These animals were procured in the section of country just northwest of Winnipeg. A. H. P.

A BEAR'S FREAK.

PROVIDENCE, Rhode Island.—One day more and we must turn homeward. For ten days we two "sportsmen," with a guide and his helper, had been camped on the shores of a beautiful little lake among the Canadian mountains near the Maine boundary. We had killed a fine caribou soon after our arrival, and our larder being amply supplied, we had taken life easy, enjoying the woods, now bright in the glory of their autumn coloring, the mountains rising in gentle slopes about us, the clear pure air, and the sense of freedom. But now we wanted some wild meat to take home, and arranged that the guide and myself should hunt on the morrow.

The cold fog of morning lay heavy on our little lake as our guide paddled me across at early dawn. For two miles I followed a logging road, then turned off for a mile to a little pond where I had found our first caribou. Quiet it lay in the forest bed, with not a ripple on its surface nor a sign of life on its shores. I looked along the margin for fresh tracks, but seeing none, turned back, retracing my steps slowly, thinking where I should go next, when across the pond a spot of white caught my eye. It moved, and soon I could plainly see a small caribou walking away from me. Quickly as possible I placed myself behind a point of rocks out of sight of the animal. Then I hurried to the point, and crouching low, worked my way over the rocks and looked along the shore. The little caribou, a yearling, was about 200 yds. away, and fifty yards nearer was a much larger one, a full-grown cow. The cow was feeding and walking slowly almost directly away from me. On one knee, with rifle cocked and ready, I waited, hoping she would turn so as to give me a quartering shot, and she did turn just enough to give me a narrow view of her side and neck. Then I fired. The 45cal., hollow-pointed ball struck the hind leg about six inches above the gambrel joint. The animal seemed crazed by the shock, falling partly down and jumping in and out of the water till I could fire again, putting a ball through her neck, when she fell dead in about eight inches of water. I was not able to move her from the place where she fell, so I went to work taking off the skin and dressing out the meat, standing in the water.

Before I had been long at this work I heard some animal make two jumps in the bushes about three rods from me. Quickly I secreted myself behind a tree with rifle ready, thinking a bull was following the tracks of the cow and might show himself. Again all was still, and I resumed my work. Just a little noise occasionally came from the bushes, a slight rustling of the leaves or the breaking of a little stick. I removed the skin with the head attached, and as it was too heavy to carry, placed it over a big log at the water's edge. Then with my skinning knife I separated one ham to carry to camp, and placed the rest of the meat beside the skin. Back to camp I went, and before noon our guide and his helper started to bring in the skin and as much meat as they could carry.

They returned loaded with meat, but could not find the skin. It had disappeared, the meat by its side being undisturbed. The men thought they had misunderstood me,

and that I started with the hide and had left it somewhere on the way because it was too heavy.

There were fresh bear tracks near the meat, but they supposed these were made before the caribou was killed.

We had no time to investigate this mystery, as we must make fifteen miles over a bad trail the next day. This was in the fall of 1892.

Our guide recently writes that he went back to the place where the hide was lost, and by hairs on the roots and bushes was able to follow where the hair had been dragged till he found the bones of the skull and pieces of skin with quantities of hair where a bear had torn up the skin.

The bear must have been watching for me and waiting for me to leave so that he could help himself, and it was him I heard in the bushes. But why did he take the skin and leave those fine caribou steaks? Strange, was it not?

F. T.

INCIDENTS IN MY HUNTING LIFE.

Editor Forest and Stream:

Looking over some old diaries, I come across things which may be of some interest to your readers, and for my part I would be glad if some one would explain two or three of them.

In July 1888, while fishing a small trout stream in the Eastern Townships, not far from Shelbrooke, I saw some rather peculiar things happen. I was carrying a .22 rifle with me, and had given it to one of my companions while I crossed the stream on some rather slippery rocks. I had just reached the other side when I heard something rustling in the leaves near my companion. He heard it at the same time, and seeing a movement in a heap of brush, fired the rifle at it. When we got to the brush heap, we found, much to our regret, that he had shot a hen grouse. I said, "Of course it can't be helped, but never shoot till you see your game." My other companion was sitting on the ground and gave the unwitting law-breaker no quarter. He felt it, too, but said nothing. Just then his accuser got up, and there beneath his seat was a poor little chick, crushed flat. "Now," said D., who had shot the grouse, "talk about murdering game out of season; Jack has not got courage enough to face a full grown grouse, but sits unmercifully on the poor chick and smothered it before it can fly."

"Well," I said, "he deserves some credit for his attempt at incubation, but he was rather too previous."

In the same year and month I was in the woods near Quebec, and found a very peculiar nest with two young and one egg in it. I saw a black-eyed cuckoo fly out of a bush near me and shot it, as I wanted to study the bird, and to have convincing proof that this bird was a native of our woods. It then struck me that there might be a nest in the bush out of which it flew. There was, as I have stated. Now can any one explain these statements:

I. The birds were young "cuckoos," as nearly as I could judge, and the egg was nearly hatched.

II. The bird was a female, and flew only a short distance from the nest.

III. Birds generally lay eggs in the morning, and it was then 3.10 P.M. And, though the bird might have been laying at the time I disturbed it (had it been morning), it was scarcely likely to be doing so at that time of day.

IV. Both the young birds and the egg were quite warm, so the bird was probably sitting on the nest when disturbed.

I have always understood that the "cuckoo" laid its eggs in other birds' nests, and have even found eggs of other birds thrown out of the nest when they, by their number, prevented the cuckoo from depositing its own. I fear I am trespassing too much on your valuable space, and will therefore defer my other anecdotes to a later date.

L. D. VON IFFLAND.

A SCRIMMAGE IN THE CORN.

OTTAWA, Kan., Feb. 13.—*Editor Forest and Stream:* I promised to write you of our wolf hunt as soon as I could obtain information. Well, the fact is we have had three appointments during the winter, a round-up of coyotes on paper. The appointments were all kept—boys, men, tin horns and dogs were on the ground; even the coyotes were on time and did not disappoint their company, except in not allowing themselves to be caught. At one of the hunts it was claimed nine were seen, though it is more than likely that there were three which were seen three times. There was always some open place through which all escaped. The only successful round-up that I have heard of in this vicinity was taken part in by Henry G., a German farmer, his wife and dog and one coyote, and was not advertised—in fact, was quite an impromptu affair, occurring shortly after midnight one moonlight night in the early part of winter. I give the farmer's version:

"My wife she vake me up. She say, 'Henry, Henry, vake up. The tog after someting.' I shump out of bed, pull on my boots—not vait for pants—and take my shotgun and two shells and run out. Dere was my tog—hair all turned de wrong vay. I say, 'Sick em Tige,' and he runs to chicken house and dere was a coyote, and dey fight avay troo der cornfield—corn all out off. Pretty quick my tog he gets tired und coyote start off. Too far, but I shoots anyway und cripples his hindleg; den my tog fight him some more und I try for load my gun, but de shell too big, so I call to my wife, 'Bring me some shells quick.' Und I not likes to see my tog all chawed up so I runs up mit him, und der coyote lets go Tige und shumps at me. I swing my gun round und hit him like tunder mit der gun, und hit him so hard I break off der butt of my gun. Then Tige fight him some more again und den my vife comes running troo der corn-stocks—falls down some times—but brings me der shells, und I have the gun barrels und locks all right so I loads again, und der coyote gets avay from Tige und I gets a good shot at his side, und fills him full of shot and he goes dead, und den my vife und me goes back to bed, but no go sleep for long time."

I suppose not—would you? What a picture this would have made.

F. B.

A Factor in Man Making.

"AZTEC" writes from Mexico: "Of course I like your new clothes, hat and all. I have been sending the paper to a nephew in Missouri, and my sister, who has just come from there, says it is an important factor in rapidly making a man of him."

CALIBERS AND CARTRIDGES.

OTTAWA, Kansas, Feb. 13.—*Editor Forest and Stream:* I have read the various articles in your valuable paper on the sporting rifle, and it seems that both the large and small calibers have good advocates, but it appears to me that the problem has not yet been solved. Thirty to forty years ago I used a sporting rifle a great deal. Then it was the muzzleloader—the old-fashioned, long-barrel Kentucky rifle—usually of uniform twist, loaded with powder and a well patched round ball, and for the range it was capable of, no more accurate arm has ever been invented. People in those days were not rich, and a single gun was made to answer almost all purposes, simply varying the charge of powder. In this way rifles of quite small bore were often successfully used for quite large game. A rifle taking a 40z. round ball was frequently made use of to kill squirrels and grouse, and for shooting the hogs and beavers in the fall butchering, by using a small charge of powder, while for target a larger charge was used, and a still larger charge was used for deer and wild turkeys. Later, the arm was made smaller and handsomer and with a gain twist, and after the deer were gone very small bores were used. The modern breechloader has been a great improvement, and yet its users have been somewhat handicapped by being compelled to use the same charge, or nearly so, for all kinds of game. Lately some of the manufacturers are making rifles that will use two or even three different sized cartridges—this is a step in the right direction, but I believe can be still bettered by taking in the cartridge maker as well. I may not be right, but it seems to me that a breechloader to be first class should be chambered for but one size cartridge or shell, but why not make the same shell answer for different sized loads as is done in the shotgun. A small charge of black powder with a round ball for short range and small game. I suppose a wad could be used if it was necessary to fill up the shell. A larger charge with a conical bullet for medium range, while the same shell with some good smokeless powder and conical bullet—split if need be—would answer for large game at long range. Some arrangement of this kind would make the modern breechloader a much more valuable arm than it now is, and for most purposes would not need to be either very large bored or heavy—a .28 or .40 caliber of 7½lbs. weight would be ample, if strongly made. It might be that the sharp twist of the modern rifle might not do so well for the quick burning powder, but here a gain twist would answer. If I remember right the new military rifle of Germany and some other countries use the sharp twist but, I believe, case their bullets. Now I have no doubt this may all have been thought over by the manufacturers, but I have not noticed their idea in print. I do not see why the users of the shotgun should have so many advantages over the rifle shooter in using the same weapon for so many different charges, smokeless powder, etc., all with the same sized shell. W.

NO POETRY IN THIS SOUL.

Editor Forest and Stream:

I have noticed in your paper from time to time, expressions "true sportsman," "game hog" and "butcher" and vainly tried to ascertain just what they mean. So far I have only been able to find that the "true sportsman" is the one who, when he can not get away for a day or a week to do some killing himself, devotes his spare moments, they must necessarily be many, judging from the length and number of his articles, to stigmatizing his more fortunate fellows as "game hogs," "game butchers" and other fitting titles, and severely arraigning the "farmer" and his "hired hand" and insisting that they kill all the game, especially quail.

The brush piles, fence corners, huddled quail and farmer are vividly painted by a master hand as the fore ground of a picture in which the deep snow serves to fill in the general surroundings.

Armed with his traditional "musket" or "cheap breech-loader" he is accused of slaughtering the "brown beauties" by the dozen, but does he? How many of your readers know for a certainty, who has unimpeachable evidence of the fact?

I have in mind one of these much trodden upon farmers, who, during the recent heavy snow and terribly cold weather, took his ax into the woods, cut small pine trees and piled them, together with brush and logs along the fences for the quail to find shelter from the cold, and fed them every day it lasted. He not only did this on his own farm, but going to others told them what he had done and assisted two of his neighbors to do something for the birds. He hunts, owns a dog, and shoots a W. Richards gun which he claims he paid \$25 for seven years ago, and which, when I saw it last fall, was so loose that he was compelled to put paper under the fore-end to make it tight enough to use. He hunts almost every day of the open season, invites his best friends to come early and often and killed over 200 quail last season. Whether he killed them all on the wing or not I cannot say, but I am certain that, during the six days I hunted with him, he killed them all fairly and also killed 11 out of 13 shots one day and 10 straight the next, while I killed 7 in the two.

Is he a true "sportsman" or a "game hog"?

Who has the better right to kill the game, and why should he be styled a "game hog" and "butcher" for doing so?

Two or three fair shooters and a good dog kill more game in one day than all the farmers, hired hands and farm boys in the whole season, don't you agree with me? and that too, whether they be called "true sportsmen," "game hogs" or "butchers."

Will some of our true sportsmen arise and inform us what they have done, and are doing this winter, to protect the birds? As a general rule they are figuring on where to go next season for good shooting.

Some of your correspondents try to impress the idea upon us that they do not invest \$75 or \$100 in a dog and a like amount or more in a gun for the purpose of hunting game to kill it, but do so for the "thrilling sensation" which a booming pheasant or buzzing quail is supposed to impart. My thrill has always been greatest when, as the gun spoke, I could see the bird falling. These gentlemen I would like to ask, why the expense of gun and dog, why not do your "hunting without a gun?"

My observations have been that men do not go afield simply to muse on the beauties of nature, or to lose themselves in silent contemplation of the wonders worked by an unseen hand, but do so with the "low impulse" and "savage desire" to kill something.

Will the brothers of the gun please rise, one at a time, and truthfully state to the readers of FOREST AND STREAM, the predominating impulses that controlled them at the beginning of their hunting career.

How very seldom we hear of men going for the second time to a country in which, no matter how grand, beautiful or sublime the scenery, they found no game to speak of.

I for one, and there are probably others, am free to confess that while I enjoy a few days or a week in the woods as well as any one, I do not try to delude myself with the belief that I am doing so for my health or the pleasure of being near to nature, as a first and prime reason.

Be candid, folks, and say you go hunting because you wish to kill something. KUSKUSKI.

P. S. I am not a farmer, although I may write like one. ALLEGHENY, Pa., Feb. 14.

PATTERN AND PENETRATION AGAIN.

IN your issue of Feb. 9 Mr. Armin Tenner gives the results of some very interesting experiments made to determine the gas pressure of different powders at different places along the gun barrel, and the effect of same on the pattern and penetration of the charge of shot. Although the deductions Mr. Tenner draws from his experiments are different from the theories advanced by me, I am no less interested in them for the facts, and facts only were what I was searching for, and I trust that that is just what Mr. Tenner was after too.

It appears from the sum of Mr. Tenner's tests that the results from black and nitro powders were practically the same except that one gun did better with black and another with nitro powder. Suppose we consider only the guns that made the closest pattern with nitro powder: how does Mr. Tenner account for the closer pattern? Is it not an answer to say it is the way the gun is bored, for we use the same barrel and get different results from the two powders, which shows there must be a different action between the two powders. Just what this difference is and how it produces the difference in the shot pattern is what I want to know and is what I would be glad to hear Mr. Tenner explain. I would also be glad to have Mr. Tenner explain how it is possible for the initial velocities of all his charges to be about the same, when the pressure of the Walsrode powder was less at all three of the tested points, than either of the other nitro powders, and the average pressure of the Schultze powder was about 50 per cent. greater than the Walsrode.

Mr. Tenner says: "The merits of a gunpowder must, to a great extent, be judged from the uniformity of the gas pressure, since evenness of pattern is governed by a regularity of gas pressure." It is not clear to me whether he means regularity of pressure and evenness of pattern, comparing one charge with another, or whether he means that a uniform pressure from breech to muzzle will spread the charge more evenly than if the pressure was irregular. If he means the latter I am unable to see how anything but initial velocity and pressure at the muzzle should affect the shot in any way. In other words it could make no difference at what point in the barrel the initial velocity was obtained. I did not advocate the theory that the pellets from a chokebored gun cross each other, as Mr. Tenner infers, but only asked if it was supposed they crossed. I put a piece of stiff paper in a shell, dividing it in equal sections, and put No. 6 shot on one side of the paper and No. 8 on the other. The paper was then withdrawn and the shot covered with cardboard wad and crimped in the usual way. The target showed both sizes of shot all over it. If they did not cross, how did they get all over the target? That they were found all over the target is accounted for by their interference in crossing, so that some of them did not cross.

Mr. Tenner says that the pellets next to the sides of the barrel are the ones that scatter the widest and show least penetration. Now, as all the charge leaves the gun at the same speed, why should not the outer pellets continue to fly as fast as the others? I think they do, and that the uneven penetration is caused by the rear pellets pressing against the forward ones and imparting part of their force to them. I think if Mr. Tenner will try some charges loaded so they will give a high pressure at the muzzle, he will find more unevenness of penetration than when the muzzle pressure is a low one, unless the muzzle pressure be so low that friction causes the outer pellets to lag before they get out of the barrel.

I hope Mr. Tenner will continue his experiments and favor us with full reports. O. H. HAMPTON.

QUAIL SHOOTING IN FLORIDA.

READING an article in the *Times-Union* last week about the splendid quail shooting at Enterprise, Fla., I was fired by a spirit of emulation and a desire to enroll my name among the noted nimrods of to-day. Why should I not bag sixty-five quail in one day or even more and even equal or excel the now famous record made by Mr. F. H. Cozzens when wearied; but triumphant withal he counted out the day's bag upon the Brock House counter under the admiring gaze of the assembled guests. I asked myself why if Mr. Cozzens got sixty-five and Mr. Cory sixty-three quail in a day, why should I not do likewise, and musing thus I then and there decided I would make the attempt; so I hired me to a ticket office and the next day found me gun in hand, at Enterprise. At first I was afraid I might be too late for the cream of the shooting, as I could not but think that where so much hunting was indulged in, game must perforce eventually become scarce, but my mind was at once put at ease on that score. "You see" remarked F. M. Rogers, the genial proprietor of the Brock House, "the extent of country is so great that the same grounds may be hunted over day after day with no apparent diminution in the quantity of game killed, and a large portion of our best hunting grounds has not had a gun over it this season." With this lie on his lips and looking seventeen ways at once to see that everything was done properly for the comfort of his guests, Mr. Rogers left me with a hasty apology to greet some people who at that moment entered the hotel office.

The following morning at daybreak I was up and dressed and found a substantial breakfast awaiting me in the dining room. Everything had been arranged for me, and I found a horse and wagon at the door containing a man who was to act the dual role of driver and guide, and a large and good-looking but somewhat thin bird dog. A drive of a few miles took us to the "flat woods" (why they call them flat woods I could not imagine at first. The man told me there were Florida jays out there,

too; but I did not see any, and did not grasp his meaning at the time). Hardly had the dog, which rejoiced in the peculiar name of Violin, been let out of the wagon when he came to a stiff point in some thick grass about 50yds. from us. "Them's quail," remarked the guide, so I climbed down and walked toward the supposed covey; but before I could get within fair shooting distance Violin concluded I was near enough and sprang merrily into the middle of a fine covey of birds. I fired both barrels at once in my hurry, and by supreme good luck one of the birds fell and was immediately pounced upon by Violin, and eaten before I could get near enough to interfere. He then came running to me wagging his tail so happily that I had not the heart to administer the chastisement which I felt his action warranted. My driver told me that breaking shot was an old trick with Violin, and that one gentleman who had used him tried to break him of the habit by tying a rope around his waist and attaching the other end to Violin's collar. This scheme had worked well on quail, but one day while shooting snipe Violin made his usual spring forward; the man's feet had got tangled up somehow, so that he fell on his nose in the water and buried his gun out of sight in the mud.

Ten minutes later Violin made another point and flushed the birds before I could get to him, although I ran as fast as I could. This time three of the birds lighted in the trees and I killed them one after the other without any trouble. When the first one fell to the ground Violin reached him before I did, although I made a tremendous spurt, and he only beat me by a neck. I tried to take the quail from him and between us we tore it all to pieces. I gave Violin the fragments and did not beat him, as I made up my mind the poor dog must be hungry. He got the next bird also, and as I could not see another bird anywhere where we moved on. I made a silent vow that I would have the next bird I killed or die, so when Violin pointed again I sprang from the wagon and by a magnificent burst of speed succeeded in getting within about 20yds. of him before he made his spring. I killed a bird, and throwing down my gun ran for my life. Violet beat me as usual, but in his haste overran the bird, and the next instant I threw myself at full length upon the quail and covered it with my coat, while Violin bounded about me barking in a delirium of happiness and excitement. Hardly had I deposited my game safely in the wagon when Violin made another point. This time it proved to be a rabbit and away he raced it over the hill. We waited for nearly an hour, whistling and shouting, but as the dog did not return to us I drove back to the Brock House, having made up my mind that, under the circumstances I had killed enough quail for that day. At the hotel we found Violin. The dog seemed very glad to see me, and wagged his tail as though he considered his leaving us and coming home a most stupendous joke. What my opinion was I kept carefully to myself. That night my quail was added to the pile of game exhibited on the Brock House counter, but by special request my name and score did not appear in the "game book."

The game exhibit that evening was really splendid. Quail, snipe and various small game in numbers, while in the center was a 9 and 10lbs. bass which had been caught with others that day by ex-Alderman Kiernan of New York. F. T. H.

FERRETS AND RABBITS.

AUBURN, Susquehanna Co., Pa., Feb. 17.—*Editor Forest and Stream:* I would ask, at the risk of becoming tiresome, space in your columns to reply briefly to Mr. Decker's communication of Feb. 9.

He refers to me, in parenthesis, as a true sportsman. He never laid claim to so honorable a title. But if he means one who has respect for the laws of the commonwealth even though they may conflict with individual interest, who is satisfied with an occasional bag of game taken in a legitimate and sportsmanlike manner, and who derives as much pleasure from observing and studying the habits and peculiarities of game as from the act of killing them I plead guilty to the charge.

Mr. Decker's mathematics are correct when he says that if, after killing ten rabbits, I had killed ten more there would have been twenty dead rabbits. But no such thing occurred. It might have easily been done. I think I know when I have killed enough, and slaughter is no sport by any means. I have never killed fifty rabbits in an entire season, yet I have killed enough.

Some one has undoubtedly imposed upon Mr. Decker with stories of his preserves. I have made inquiries of the dealers who handle the game killed hereabouts, and have interviewed the party named as bringing in the most rabbits, and he claims less than fifty. He has a first class dog, is a good shot, and was out nearly every day of the open season.

In writing of the habitat of the ruffed grouse, I do not from theory, but from observation in the covers. One of the many nests I have found and the flocks of young chicks I have surprised, not one was on a ridge or in heavy timber. I can at present locate three old nests in single piece of bottom land, where the cover straggled along both sides of a stream. Two of the nests are of recent date and still contain shells. Can Mr. Decker do well "in the woods on top of our hills"? When deer hunting on Dutch Mountains, I have tramped day after day over the ridges of heavy timber without starting a single grouse. At the same time I could go into the numerous old choppings found there and find birds plenty. I have not "talked with several gentlemen" to know whether I am right. I simply express my honest convictions, arrived at from observations extending over a period of twenty years. I would quote from one authority in support of my observations. A. H. Bogardus, author of "Field, Cover and Trap Shooting": "A well watered timber country, with plenty of thick underbrush among the rifts and gullies, is the place to look for them as a common rule, though they are also found in the great woods and heavy-timbered bottom lands."

Mr. Decker complains that I doubt his assertions. I claim the right to call in question unsupported assertions coming from one who advocates an utter disregard for law of the commonwealth made for the good of all when it seems to conflict with his individual interest.

A petition is being circulated asking the Legislature to amend the present law as to make it easy to suppress the use of ferrets.

Mr. Decker, in one of his advertising circulars, says "The ferret is a splendid animal for hunting rats and rabbits. It is their nature, like the weasel, to hunt and

kill." Surely a splendid animal with which to flood the country for the preservation of rabbits.

I am in receipt of a personal letter from Mr. Decker thanking me for the publicity given him, stating that it has been worth more to him than a paid advertisement in *FOREST AND STREAM*, thereby verifying my conjecture that advertising was his object in provoking the discussion and not a better understanding of the habits of game and its preservation. BON AMI.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

Feed the Birds.

Mr. A. B. Gill, of Surry Court House, Va., writes me under date of Jan. 25 as follows:

"There seems to be a plenty of deer down here. The season closed on the 15th inst. I saw a herd of five a few days since. The extreme cold weather caused our birds to suffer, but the most of the farmers strewed grain around in clean places, so that they saved some from starvation."

The action of the farmers of Mr. Gill's section should be emulated by farmers and others all over the country as far as possible. This winter has been a horrible one, even in the Far South, and the birds are suffering badly. Many a bevy has frozen outright, and many another is weak and feeble to the last degree. All over Illinois, Iowa, Indiana and Ohio the loss among the quail will be extreme. This is the worse in places where sleet or ice has formed so that the birds are prevented from getting at their feed. Let the charitable ones who have the chance throw down a little brush and straw, and put out some wheat screenings or other feed, so that the plucky little fellows can have a fair chance at least in their fight with the unkind elements. Their fight is hard enough, even when the elements are kind.

Spring Shooting.

Horicon Marsh is the greatest argument I know of in favor of the abolishment of spring shooting. Some of us may like to shoot in the spring, but no matter what we may believe or try to believe about it, this argument lies open and unanswerable. There are thousands of ducks every fall on Horicon Marsh, where spring shooting is not permitted. Nowhere else in this State, which has other marshes once equally good, is this the case where spring shooting has been practiced. It is plain as two and two make four.

When I was at Galveston, Tex., last month, I shot with Billy Griggs, whose home is at Browning, Ill., who follows the flight of wildfowl from Dakota to the Gulf, who was the first man to shoot in the once great New Madrid marsh, and whose opinions on wildfowl matters are worth more than those of any man now shooting for the market. I wish that every man I ever shot with had been as gentlemanly as Billy Griggs, and as considerate of game. I will just say that much in the matter of market-hunters and "gentleman" shooters. Griggs told me that there was no evasion of the fact that the ducks were growing scarcer every year, north, south, and at points between. He told me also that in his opinion a general stopping of spring shooting would make the wildfowl again abundant. He spoke with unqualified disgust of the useless slaughter he had seen among the weak and worthless ducks flying north in the icy days of early spring. His opinion is the second best argument I know of for abolishing spring shooting. These two arguments are enough to cause any fair man to do some serious thinking.

A Wisconsin Game Bill.

Among the divers game bills introduced in the Wisconsin Legislature this winter is one which has passed its second reading and reach the committee on fish and game and which it is hoped will eventually become a law. In nearly all its features it is excellent, and it is moreover simple and clear in its wording. This bill abolishes spring shooting of all game birds absolutely and make the uniform open season on all game birds extend from Sept. 1 to Dec. 1. It provides an open season of thirty days, Nov. 1 to Dec. 1, on deer, forbids dogging and night-hunting, and forbids rabbit-hunting with dogs in the deer season. It forbids the export of game and forbids the sale of any kind of game, no matter where killed, during the close season. Trespass on posted grounds it makes a misdemeanor. It forbids all netting or trapping of game, forbids sneak boxes, swivels and night-shooting of wild fowl. Moreover, it gives the wardens police powers and instructs "any officer of the law" to arrest, "at any time," when a violation of it is suspected. This law would be a good one for Illinois, though it is thirty days early on quail. I would rather see Oct. 1 the opening date for all birds in both States, but it seems to me that a liberal give or take might be allowable if so might be reached a law identical for the two States.

An Illinois Bill.

The Chicago *Evening Post* of Feb. 14 contained in its telegraphic news from the State capital an article showing a cheerful ignorance of almost everything in connection with the subject treated. It seems that the Illinois River market-fishermen want everything abolished but themselves. The gist of the article is below, and it is so full of self-evident, rotten foolishness that sportsmen will not need comment on it. It says:

An effort will be made in the present Legislature to abolish the office of State fish and game warden and secure an abridgment of the game laws. To-morrow Senator Barnes, of Lacon, will introduce a bill abolishing the wardenship and amending the statutes regarding the protection of game so that they will not be so severe on the woodsmen of Illinois, who depend largely upon the fruits of their hunting expeditions for food. The movement began to-day when Senator Barnes introduced in the Senate a petition signed by numerous citizens of Putnam county complaining bitterly of the hardships imposed by the game warden and the laws under which he acts.

The signers of the petition declare that while the fashionable rod and gun clubs can at certain periods of the year wantonly destroy all the fish and game they can reach without interference of the law, the poor men, as they call themselves, are punished for taking a fish or two out of season if it is only for food purposes. The petition denounces the better members of the finny tribe. Members of the aristocratic petition says they are "bloated" anglers and organizations throughout the State have caught loads of valuable fish just for sport and left them to rot on the banks of the streams. Of all the spawn placed in the waters of Illinois by the Fish Commission, the petition claims, only the German carp remain, and the German carp, the signers declare, are not so good as the native buffalo fish which they have

caught for the last forty years, but which is now protected by the game laws during most of the year. The natives of Putnam declare that the game warden and his German carp should be taken away, and the good old times and customs restored.

In connection with the recent report that Gov. Altgelt intended to abolish the State Fish Commission, this is pleasant reading. It is so absurd, however, that it can cause small trouble. In the first place, there isn't any such officer as "State Fish and Game Warden" in Illinois, and then again there isn't any "woodsmen" who depends on his hunting expeditions for food. But there are a lot of irresponsible river men who live the laziest way they can, and who don't care how much, how often, or how publicly they violate the common truth, or how ridiculous they make themselves before the world. This bill will never pass. It's too funny.

The president and several members of the executive committee of the Illinois State Sportsmen's Association will appear before the legislative committee on Fish and Game at Springfield, next Thursday, the day of the committee session having been postponed. E. HOUGH.

175 MONROE STREET, Chicago.

Pennsylvania Game Laws.

Editor Forest and Stream:

I have been interested in the several articles appearing in the *FOREST AND STREAM* the past few weeks concerning the proposed change in our game laws, and I am in full accord with "Penn," whose letter was printed in your issue of the 9th inst. The open season should begin Sept. 1 on woodcock, and not later than Oct. 1 on grouse. If this will not meet the approval of the sportsmen of the southern portion of our State, and the present law must be changed, then divide the State, having the season open for the northern portion on the above date.

I shall earnestly oppose any move to make any portion of October a close season, and I hope the sportsmen of northern Pennsylvania will write their members of our State Legislature, setting forth their views and asking their co-operation in the matter.

The season is much too short now for the lover of dog and gun, who goes into field and cover not for the large bag, but for the pleasure and good health it brings.

I inclose my mite for the "Nessmuk" memorial fund.

MOREAU.

Connecticut Sportsmen, Attention.

HARTFORD, Conn., Feb. 18.—The Committee on Agriculture has set next Friday (Feb. 24) afternoon as a special for the consideration of the various measures now pending for the amendment of the game laws. One measure prohibits shooting ruffed grouse, quail and woodcock for three years. Another measure prohibits shooting these birds in December. The sportsmen of this State should be at Room 50, Capitol, Hartford, Conn., Friday, Feb. 24, at 1 P. M.

A. C. COLLINS,
President Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish.

Sea and River Fishing.

The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.

ICE-FISHING AT PUT-IN BAY.

FISHING through the ice with hook and line is becoming quite an industry in the archipelago at the upper end of Lake Erie, which embraces the Bass Islands. In the main it is pursued for profit, but there are quite a number who are pleased to call themselves anglers who take keen delight in seeing a 15-pound pike-perch come up through 30ft. of *aqua pura*, almost as clear as the proverbial spring, and who fish for sport as persistently as do the market fishermen; and the writer pleads guilty to the soft impeachment that in the absence of better sport, and to while away dull care in this isolated solitude, he finds much enjoyment in holding his two lines, working them gently with the hope that the next fish will make things hum when brought into the shanty.

He has two fish houses, the Black Prince, which is roomy, so that two or three can fish comfortably, while they are kept warm by a small coal stove, the floor being placed on the runners and boards to slip down to fill the space at the ends; and the "three-ounce shanty," as the fishermen call it—although it weighs 52lbs., including floor, runners and end boards—the Arctic Queen. It is 3x34ft. and 6ft. high. The frame is of 1-inch pine, covered with common factory cloth, to which was applied two coats of ironclad paint. Two can fish in it, but it is intended for only one, and is warmed by a common kerosene lamp.

As no fishes which are really classed as "game" in the strict sense—although the truly royal pike-perch should be—are caught through the ice, the angler cannot justly object even if twenty to thirty barrels of fish a day are shipped from this immediate vicinity, all caught with hook and line.

It is no uncommon thing to count one hundred fish houses from one point of view. They are all on runners, and warmed by small stoves or gasoline burners, generally large enough for two or three persons—though generally the market fishermen fishes alone—and some are so commodious that the fishermen sleep and cook in them, going ashore only to dispose of their catch and procure provisions, coal and bait.

The fishes caught are pike-perch (*Stizostedion vitreum*), sauger or sand pike (*Stizostedion canadense*), fresh-water herring (*Coregonus artedii*), yellow perch (*Perca flavescens*) and lawyer or ling (*Lota maculosa*). All except the herring are caught near the bottom in 30ft. of water; the bottom for hundreds of square miles, aside from reefs and shoals, only varying a few inches in this part of the lake.

The bait used is the ordinary small lake minnow, which is generally strung on the hook as one would an angle worm, which is not the best way, unless the fish are biting very freely, the writer always having had better success by keeping the minnows alive and hooking them lightly through the lips.

The main catch consists of saugers and yellow perch, both of which will average nearly a pound apiece, and the take runs from a few to several hundred a day per man. Comparatively few pike-perch are taken, and the large ones are rare. If a fisherman catches two or three

which will weigh from 5 to 10lbs. each he is well satisfied, for he gets about 10 cents a pound for these, while the saugers bring him 5 cents and the perch but 2 cents, while the market for the lawyer or ling, the only fresh water representative of the codfish family, and an excellent fish, owing to some of those unaccountable prejudices of the human animal, is of slow sale at low prices.

The market fisherman often goes five or six miles to reach his grounds, moving his house from time to time as the fishes change their feeding grounds. He generally goes on foot, drawing his hand sled; sometimes in sleigh loads, paying a nicker for the ride each way; more frequently on an ice boat, which covers the distance with fair wind and good ice at the rate of a mile a minute, or on skates, assisted by a three-cornered sail, which he manipulates with much dexterity.

Now I know your readers will laugh, but I have never enjoyed more sport fishing—and I have whipped streams for brook trout in nearly every State that claims them, and angled for black bass and mascalonge in nearly as many—than in "angling" for that grand little salmonoid, the herring, through the ice, with a half-ounce rod 18in. long, a line of the same length and a small pearl shirt button for a "fly." "Pot-fishing," did you say, "with no skill required?" Well, hardly! It requires much skill and a fine touch just at the right time, to the fraction of a second, to be a successful herring angler.

You sit in your shanty peering down into the blue depths for something when all at once along comes a school of lake minnows close to the ice and going as if to catch a train. Now get out your rod and be quick, for in a moment the water under your shanty is alive with herring, which, magnified by the water and ice, and your eyes, look as large as whitfish. You drop them a button, land, or rather shanty, one, place a hook just forward of his big dorsal and let him down as a decoy. The water as far as you can see is soon alive with herring, they are up in the hole in the ice so that their fins often appear above the water. Now be careful about noise. You have a suitable box, with a piece of old carpeting in the bottom so as to deaden the sound, to drop your fish into; keep your feet still and pray that no ice boat will come within a mile of you. The button goes in and out of many a herring's mouth before you "catch on" and get the exact touch that brings success.

There, you hook a big one in the lip and let him drop into the hole and then grab for him, and your more experienced companion gets off some words to be found in the good book, but not always applicable, and you, seeing the school gone, ponder on the uncertainty of things mundane and the idiocy of a fellow who cannot so far control his emotions as to obey orders and wish for a machine that will kick the first person singular, and that your heart would not pound your ribs so when, "There they are again!" and you go at it anew, very likely to repeat your former experience. But you finally become an expert, and you say that all depends on where we are and what our previous education has been when it comes to the definition of the word sport.

You can now fish herring through the ice successfully. Your decoy keeps your school until you have captured the last biter, and the others will stay about until another school comes along, and so the fun goes on.

It has happened that one man in the bay in this place has caught half a ton of herring in a day.

The herring never came in quantities until the latter part of February or early part of March, and then they are caught only in the bays, and never in the open lake.

A herring of about 1/2 lb. weight, caught through the ice, has much the taste of a brook trout, and is nearly as fine in flavor. Let us not forget that he is a salmonoid and cousin to the trout; let us remember that he is despised by the more fortunate of mankind, only because he is so abundant that he is a cheap food for those less favored; in short, let us dispel all our foolish prejudices about fishes and eat those which are palatable and wholesome and reject the rest. The fresh-water sheephead, whose scientific name ought to kill him, *Haplodonotus grunniens*, and the sturgeon (*Acipenser rubicundus*), are both now valuable fishes, while a few years ago they were used only for oil, and thousands of tons of them were thrown out on the beaches of the lakes to rot and pollute both air and water.

In conclusion, if any reader of the *FOREST AND STREAM* would like to try his hand at winter fishing, we extend to him a most cordial invitation to come and partake of our rugged hospitality. He will find the market-fishermen as kind-hearted and as generous a lot of men as he ever met, who will do all they can, even to sharing their shanties and take, and if need be their bed and board—and a drop of snake-bite cure—to make his stay a pleasant milestone on his pilgrimage through life.

With some ice yacht experience, running a mile a minute, Put-in-Bay has the finest and fastest fleet of ice yachts in the world, barring of course only the Hudson River, and running more than one mile with only two runners on the ice, the windward one not touching it for miles at a stretch, we stake our reputation for truth and veracity (we have just read "Lorna Doone") that he will agree that all the winter sport for the ardent angler is not confined to tarpon and the glades of the beautiful but miasmatic South. Come and see us. FLY-FISHER.

The Mechanicville Case.

Editor Forest and Stream:

Again please allow me to reply to Messrs. Cheney and Johnson asking the points demanding answers serially. Mr. Cheney says "the statement (my former letter) bears the earmarks of having been drawn by a lawyer." I assure the gentleman that such is not a fact. I drew the statement, and am not a lawyer, therefore he is wrong again. Why? It takes no legal training to reply to Mr. Cheney. He states that during seventeen years "no one has successfully questioned any information that he has furnished *FOREST AND STREAM*." I will admit that few successfully question him and I am proud of being one of the few. Mr. Cheney says that the fishway at Thomson and Dix Hill is filled with driftwood. Who fills it with driftwood? A reply to this question may be made public later, if he does not know. Of course this subject, however, is by way of parenthesis. I assure Mr. Cheney, I am abundantly able to take care of myself, consequently will safely guard my official head.

I now come to "most reliable A. C. Johnson." Of course the men will endeavor to agree with him, and they will, and I am willing to give him one better not worse than the average. I am glad he concedes that he did not misrepresent myself to him; that settles the main question. It looks suspicious that the employee he refers to will "swear positively" that the statement he makes is true, but on a cross examination they might be found wanting. I now repeat that my statement published in *FOREST AND STREAM* (edition of Jan. 12) is the only true one, and the case so far, therefore, is at a deadlock. I am willing to give him one better. I use the word "chemical" and "chemical refuse," not "dye stuff." He may make all he can of that concession. In conclusion will say, I have no time or inclination to split hairs with either Mr. Cheney or Mr. Johnson through *FOREST AND STREAM*.

CHARLES H. BARNER,
Game and Fish Protector, 17th District.

ON THE NORTH SHORE.—VII.

The Trip Up.—VII.

(Continued from page 140.)

The east wind, bright sun and gentle breezes were the introductory openings of the dawn, and the trip to Grand River was decided upon as the most promising. Long before we were up we heard our boatmen in converse with some party aboard a passing sailboat. It was, the boys informed us at breakfast, Mr. John Schilling, a Hudson Bay agent stationed at Aguawa, who was returning with his party from a visit to Michipicoten. He had just engaged with the company for three years' more service and was considered one of the best officials of the half-breeds employed. He is the one we spoke of in our last letter on the "North Shore" as having the three handsome daughters, who are so much admired, particularly by the young bucks of the Chippewa tribe. Peter, who was a widower, was very elaborate in speaking of their charms, and it looked to me as if he would like to lay siege to the heart of the tall beauty of the raven tresses and sparkling eyes, who—

"Looks as clear
As morning roses newly wash'd with dew."

Breakfast over we started for Grand River, of which we had heard so many marvelous tales of the trout therein, and therefore were exceedingly anxious to make the investigation on our own account. On ascending the sinuous stream we found one thing to be a fact, and that was a party of half-breeds from Michipicoten has been there the day before and gleaned the river near the mouth of nearly the entire finny tribe that had previously dwelt there in fancied security. We saw their rude forest poles on the shore and the embers of their smouldering fires. They had doubtless left early in the morning.

After going up as far as we could with the boat, we landed and then took a tramp through the thick bushes for the first rapids. I was in the lead, but getting my line badly tangled in the overlapping bushes was compelled to stop and release it, and while doing so Ned and the boatmen went by me with a rush as if they were bent on catching everything at the pool before I got there. The haste was unnecessary, for Ned caught only one lilliputian trout, which had doubtless strayed from its mother's watchful eye, while I did no better, when I put in an appearance, for my trophy was an exact *fac-simile* of his. We went up a pace further, as much to see the sparkling stream as it came cheerily along with its melody of ripple over the rocky shallows as aught else. A light tumbling fall or two, a stretch of murmuring rapids, a pool yonder, another there, and all glowing under the tints of the sun with weird touch of foliaged shadows and the carol of some woodland warbler, completed the pretty little landscape of a flowing river that

"Came tumbling from the height,
And struggling into ocean as it might.
Its boundless crystal frolic'd in the ray,
And gushed from cliff to crag with saltless spray."

We lingered a while along this lovely stream, which had given us such poor returns for our toil, and endeavored by way of compensation to revel in its sylvan fascinations until we felt the account balanced. Ned was not so much taken up with its poetic beauty as with the daintily winged butterflies which fluttered from flower to flower. They were silver, purple, roseate, lustrous-eyed creatures of woodland waters and blossoming forests, and just the thing to nestle in the flowing curls of a peerless beauty.

Noon saw us still idling our time along this mellifluous stream, when some one feeling the lack of nourishment, suggested a move to the boat and lunch. The word went along the line of pale-faces and half-breeds, and then the speed was accelerated, and poetry took its flight to make room for the hungry nature, which dominates in man and beast. We took the river route, and when we could not get along dry shod, plunged in the cold waters and waded like genuine troutmen—that is, Ned and the boatmen did, for I made a pack horse of Peter, who carried me on his back when necessary. The lake being the only resource for trout of respectable size, we tried it after lunch with great expectations, as everything was very favorable for the angle.

I had a silver-doctor for my dropper and a brown-hackle for my stretcher, and when I came to the first inviting ground where I thought some hungry trout lay poised, I let them sail to the water with as light a hand as I could and then fluttered and danced them along in hopes of a response. This I repeated fully a dozen times before attracting attention, and then in the next cast an arrowy gleam and a wicked splash came, and ever alert, the twitch went out from wrist, and a red-coated dandy made the reel sing the tune of delight. He was a fighter and a strategist of the first water, and held me to a gallant fight which was long in doubt. After he had completed his repertoire of tricks, I thought it high time for an unconditional surrender, and commenced coiling in line around the silver spool until he was immediately under the net, and then Peter encircled him with the meshed twine and lifted the pride of the icy lake into the boat. He was a full four-pounder, glowing in richly tinted colors that would rival the skill of the painter. Ned, who was quite ambitious for a share in the lovely spoils, began to grow a little uneasy, and wondered after all if his flies—the careful handiwork of hours—had no attraction for the painted fins. He persevered, however, and soon a broad glow illumined his bronzed countenance as an old patriarch in faded spots made for one of his choice lures. He struck in good time, and the second grand battle of the day was on. Every desperate rush and plunge of that wily old trout was skillfully met by the active rodst. Ned was a patient waiter, and let the stricken fish have all the braided line he wanted, but when he came to vaulting and somersaulting he, for a moment, felt a little trepidation, and then was again the merry manipulator of rod and reel. Finally, after a gallant struggle, he killed the fish by a simple adherence to the artistic rules which govern every gill-edge angler who prizes one fish so captured to a hundred in the greedy tactics of the pot-hunter. One is an art and an honor, the other maladroitness and a degradation.

The waters were now going over we had never before fished, and they looked as if they were a fine habitation for the radiant trout. The shore line was composed of high bluff banks, and notwithstanding their almost perpendicularity, a small forest of balsam, spruce, etc.,

had sprung from the clefts. The walls, like mighty buttresses, ran up hundreds of feet, and with the bright sun gleaming upon them and the shadows that lingered around, it was a grand and impressive picture which nature had finished in her own way. In looking at this towering pile, tipped and edged with gold under a declining sun, the music of the good old abbot's evening meditation, in Longfellow's "Golden Legend," floats into our memory:

"Slowly, slowly up the wall
Steals the sunshine, steals the shade;
Evening damps begin to fall.
Evening shadows are display'd.
"Round me, o'er me, everywhere,
All the sky is grand with clouds,
And athwart the evening air
Wheel the swallows home in crowds.
"Shafts of sunshine from the west
Paint the dusky windows red;
Darker shadows, deeper rest,
Underneath and overhead.
"Darker, darker, and more wan
In my breast the shadows fall,
Upward steals the light of man
As the sunshine from the wall.
"From the wall into the sky,
From the roof along the spire;
Ah, the souls of those that die
Are but sunbeams lifted higher."

In my meditative mood, as I gazed at this towering and massive grandeur, I had lost sight of the gentle art, but was recalled to it when I heard a terrific splash that fell around one of Ned's seductive flies. It came from another hungry warrior that had lain for years under the shade and shimmer of the creviced cliffs and flinty rocks, and who doubtless in this isolated place had never before been made acquainted with the duplicity of the angler. He had now an emphatic introduction, and was striving with frantic fury to solve the mystery of the little braided thread that held him so fast and was so rapidly causing him the loss of so much vital force. To think that such a tiny thing should bring him all this worry, when, if he could only get a square strike at it with his broad tail, or even a wild dash or two with an unrevolving reel, it would assuredly separate and he again be a free rover in the great lake. He tried both methods, but the rodst. above was always ready to foil him. He finally grew desperate, and raced and jumped and cavorted around at random; but do what he would that slender thread clung to him with a tenacity that was driving him to destruction. The angler, who now felt the quarry secure, had a glow of supreme delight radiating his rugged face. He was richer than a barbarian king, for happiness was his. The freckled warrior of the rocky bluff had now made his last struggle, and went into the net as slain by a crafty angler with a braided thread and whiplike willow. He was a shade over 4lbs., and was not weighed in his own scales, as some wit puts it, as a check to elaboration of the avoidupous.

We fished along these tinted masses of declivitous and scarified rocks till we had lain in state two more of the daintily-hued dwellers of the aqueous realms, and then reeled up, and started with an increased speed for the camp.

Ned for the past few days has been annoyed with a bruised leg, which he severely hurt by endeavoring to fracture some granite with it. It proved too hard for him, and as a consequence the leg suffered.

A sailboat, with a party of anglers, is seen to enter Sand River just as we arrive at camp. I don't think they will remain long if they intend to angle there, for they will catch nothing but a limited amount of very small trout.

The sun that evening sank in a rift of leaden clouds, while it rose the next morning with anything but unclouded joy upon its rounded face. A cold east wind came along with it, that gave the waters an ugly and foreboding look, while the waves had an unpleasant moan suggestive of ugly weather.

The prevailing wind giving us a fair lee on the east side in the adjacent waters, we concluded, despite the dismal aspect, to try our fortunes there. It was cast, cast, cast, from the time of departure till we reached the jutting point, and only one little trout was raised to the surface. Turning into the bay the waters improved, and soon one of 2lbs. paid forfeit of his life in endeavoring to investigate the character of my silver-doctor. Ned had a rise immediately after, which he impaled, but which got off with its first break for liberty. Of course he was a "big fellow," as those are the ones that generally disappear from your hook. Arriving at the Titanic rock we had fished before, we got ashore and commenced an industrious search with our feathery conceit for the radiantly dotted and brilliantly-dyed *fontinalis* of the genus *Salvelinus*. I made a few casts and then left Ned monarch of the giant rock, as I preferred the ragged shore further down the bay. I caught one within sight of him that was a good 2-pounder, and a moment after I saw Ned busily engaged with another of the tribe. It swiftly dashed some 50yds., and then leaped high in air, shaking the beaded spray from its golden sides, and, on striking the water, desperately breaking away with the fly as a souvenir of the event. I listened to hear the angler's loud lament, and it soon welled forth, and I think all the fly-makers in Christendom, good, bad and indifferent, came in for a questionable blessing that was in language lurid and highly emphatic. This was the second trout that had played him the same daring trick, but the fault was altogether his, as he was using some old flies he had had for years, and which, of course, were impaired just where the shank of the hook ended. The fish was of noble size, for I saw his lordly proportions as he vaulted from his element and escaped. The loss of that particular trout was Ned's theme the remainder of the day, with some echoes of the same the day following.

My path by the shore was over a tumbled mass of huge and scraggy rocks, which required sure footing, or, as a failure, a slide into the lake. Having my rubbers on I was quite secure along the route, and every foot of water that I could reach found my flies dancing o'er its surface. The trout were not rising savagely nor abundantly, and the result was a limited score. I killed two along here that were a shade over 2lbs. and then, as it was near meridian, hurried to Ned and the boat. He had secured

the same number, though he stated it took very hard work to entice them. Back to dinner we went, it not being over 15 miles to camp. The weather still had a bad look and the wind was shifting around to the west, which would give us, if it breezed heavily, a pretty rough sea in the bay. Our prophet, who had not ventured an opinion about the elements for the past two days, now stated that there would be no fishing that afternoon and that the big combers would be rolling in with an appalling violence ere nightfall. We accepted his report in good faith, being inclined that way ourselves.

After dinner Ned scanned the horizon, which displayed dark and dingy clouds slowly breaking and drifting along, while vapory masses were forming, as if to soon shower the earth. Despite the ominous signs, Ned was for another trip to the bay, which I was confident would be of short duration. We all, however, good-naturedly boarded the boat and were soon breasting through the little white caps, that were just beginning to show their snowy feathers.

Our flies were in constant work as we progressed, but nothing disturbed them but the foaming spray as it spitefully broke. Once more on the famous rock where Ned lost that noble fish, and again went the flies in the teeth of a head wind. It was difficult casting, and as I had never been taught that art of whipping against such a wind, I compromised by sending them out at right angles. This was a decided improvement and so I adhered to it. I saw at once that the fishing was to be a failure as the sea was beating the shore heavily and with a force that would militate against the sport. I at last succeeded in catching a herring that weighed near a pound, and which fought fiercer than any trout of that size I had ever caught. It seemed the little fellow would never strike his colors, and when Peter netted him he was still full of fight. The silver-scaled and slender fish of bones innumerable, was returned to the waters that he might relate his visit to another element, and then I returned with my beachman to Ned and asked him if he had had enough of fruitless casting. He answered in the affirmative, and declared the "living rainbows" were not to be tricked that afternoon by any artfully arranged feathers. We head for our quarters at once and over a sea decidedly lumpy. On the way Ned complained of great pain from his bruised and inflamed limb, and declared that he must remain in camp for a few days and give it complete rest. I had advised this course several times, but his inveterate love of trout-ing would not permit it, nor did I think his assertion of remaining in camp of any weight whatsoever. When I started for the quarry he would undoubtedly follow, that I would wager.

The next morning was a royal one; a cloudless sky, west wind, bright warm sun, and a clear, exhilarating atmosphere were the elemental greetings. The effulgent summer has at last practically come upon the great lake. It is here with its "fanning breezes," its snowy clouds and its light mists; it is here with its drowsy smell of flowers, its white sweet clover and its stately golden rod; it is here with its hum of bees, its carol of birds and its locusts' tune; it is here with its rustling trees, its grateful shade and its symphony of peace; it is here with "its air sweeter than wine," its morning brightness and its sunset shadows. All nature proclaims it with its mellow trumpet from a thousand hills, in the valleys and in the seas—

"From bright'ning fields of ether, fair disclos'd
Child of the sun, refulgent Summer comes;
In pride of youth, and felt thro' nature's depth,
He comes, attended by the sultry hours,
And ever-fanning breezes on his way."

Having had much delightful sport of late, we are not so eager for the knights of the reeds in their sunset colors as when we first sought them. The silken edge has been somewhat frayed, but still the pleasure of coaxing, impaling and killing these finny scions of royalty remains, and will so continue to the end. We now go upon our raids with a luxuriant ease and nonchalance, but give more attention to the aesthetics of the gentle art than formerly. To my surprise, Ned has ceased his architecture of flies and is now using some of those daintily-constructed conceits with which I presented him, and which every trout with an eye for the beautiful struggles to possess.

With such a glorious morn it was impossible to withstand the temptation of seeking the finny breed, and therefore the word went out to embark and once more seek the home of the iridescent beauties that

"In the waters wildest play
Lie in wait for floating prey."

We went to the west side of the camp and fished as high up as Blind River, succeeding in catching only three—two of which weighed 3lbs. each—and in missing two magnificent rises, which we thought a severe reflection on our accomplishments as anglers.

Trout as a table attraction is now beginning to pall upon the appetite and such delicacies as we have in store are being drawn upon to tickle our fastidious palates, as

"The same state viands serv'd up o'er and o'er
The stomach nauseate."

After dinner there was the low lullaby of a scarcely audible surge, a bright sun and a sky with its noonday blue, all foretelling of an unruffled surface for the lake and indolent trout, that the very *chef-d'œuvre* of a lure could not attract. Of course, with such conditions angling was out of the question, so we lay around camp, like veritable lotus eaters, and whiled away the afternoon with our books and cards, and a defensive attitude toward the mosquitoes, sand flies, etc., which the warm weather had brought around us in dense clouds.

Toward evening a half-breed with his family, who were passing in a canoe, stopped at the camp to chat with the boys. He stated to them that the party of fishermen he had seen entering Sand River a day or two ago had a drag net, and the probability is the pot-hunters used it. It may be as well to state while on the subject that as we crossed Pan Cay Bay going up we saw a half-breed putting down gill nets for trout without as much as an attempt at concealment. Of course where there is such lax administration of laws on this lake there is no fear. This, too, when there was a deputy official belonging to the Fisheries Department employed, so our boatmen informed us, at the very fishing station where these illegal trout are generally purchased. I have written heretofore on this subject, but it received no attention, and I suppose it never will until some efficient supervisor has charge of it. I is shameful, very; but I don't propose to weary

myself any more about it; but some day, and ere long, the important question will arise, "What has become of the trout?" Ask the State Commissioner of Fisheries; he can solve the conundrum, if he is sincere, but it will not be to the credit of his administration, I assure you.

As Ned's wife and his rosy-cheeked children at the "Soo" floated in sweet visions before him he began to look homeward. He could imagine, as he gazed into the dying embers of the camp-fire, his hearthstone with the elfin romps around it, the kitten in its playful gambols or asleep on the rug, his old arm chair in its accustomed corner, and his dear old pipe ready to send forth its soothing incense. He spoke not of these images, but his sigh and heaving bosom, as he traced these delightful home-pictures, were more impressive than language.

"Home is the resort
Of love, of joy, of peace and plenty, where,
Supporting and supported, polish'd friends,
And dear relations mingle into bliss."

I suggested a return, with stoppages at Twin Sisters' Islands for a week's sport, and also a few days at Gros Cap. He acquiesced, and the next morn was set for our departure, and with this I will close this series of papers, with a promise to give, in a short time, the details of the return trip, which was not only full of eventful incidents, but of some glorious battles with the ever beautiful trout, which we found in great abundance.

ALEX. STARBUCK.

CINCINNATI.

THE MEGANTIC CLUB DINNER.

THE sixth annual dinner of the Megantic Fish and Game Club was held at the Hoffman House, New York, last Tuesday evening. The club is largely a Boston institution and previous dinners have been given there. On this occasion, then, of the first reunion in this city, the New York members were animated by a generous emulation and an ambition to make the annual gathering as enjoyable as those which had preceded it. Chairman Frederick L. Gilbert and the other members of the committee of arrangements have abundant reason to be gratified with their success. The dinner was attended by about 100 members and guests from Boston, New York and elsewhere and was most happily conducted throughout.

The banquet hall was richly decorated with trophies of the chase. The collection, especially rich in American pieces, and representing all the great hunting grounds of the world, was notable for variety and beauty. The arrangement was intrusted to Mr. Frederic S. Webster, of the firm of Sowdon & Webster, to whose artistic skill was due the effectiveness of the display. Among the trophies were mounted heads of moose, elk, buffalo, pronghorn antelope, mountain sheep and mountain goat; horns of black-tail deer, white-tail deer, koodoo and gemsbok; handsomely mounted specimens of the short-eared owl and the snowy owl, white pigeons, Japanese rollers and peacocks; cases of California quail and of tropical birds; game panels of green and copper pheasants, ruffed grouse and Virginia quail; skins of black bear and brown bear, Himalayan tiger, African lion and leopard; skins of buffalo, musk ox, cheetah, wolverine and gray, red and white foxes; rugs of wolf and ocelot skins, and numerous other specimens, in all making up a display aggregating \$7,000 in value, and prompting to hunters' yarns and tales of forest and cover.

Much regret was expressed at the enforced absence of President Heber Bishop, who was to have presided, but was detained by illness in his family. His place was filled by Mr. Frederick L. Gilbert gracefully and acceptably.

Members present were: Abbott H. Rollin, C. L. Roos, W. S. Burnaby, W. R. McLaughlin, Thos. W. Bryant, L. H. Mullen, R. M. Stelle, Geo. C. Merriam, W. C. Bower, W. P. Stevens, J. A. Beall, Frederick L. Brown, H. W. Sanborn, Mr. Schweizer, John W. Mason, Thos. Darlington, Robt. F. Tilney, J. M. Stewart, J. A. Exton, P. W. Barber, A. Ettlinger, J. Voorhis, J. J. Mayhew, A. W. Kelley, J. F. Andrews, Chas. H. Peckham, L. Dana Chapman, A. W. Robinson, Master Harry M. Peckham, C. Cottier, Jr., W. H. Williams, C. A. Keene, E. R. Graves, H. A. Carr, Joseph E. Brown, J. H. Lake, E. H. Barnes, J. Porter, L. B. Palmer, A. V. Nolin, W. I. Brower, J. O. Woodruff, C. H. Harvard, A. W. Gleason, Wm. B. Smith, Chas. B. Peet, Robt. C. Alexander, S. Asham, Jr., Geo. E. Coney, W. B. Faxon, J. N. W. Cutter, Dr. E. W. Tiffany, Mr. Vondevore, R. N. Seyms, Geo. H. Burt, R. F. Way, J. H. Bidwell, J. E. Woodruff, W. K. McClure, E. D. Honken, Alfred Hopperath, H. O. Wilbur, C. L. Davis, Henry Pratt, Mr. Campbell, Charles Kilham.

The guests of the evening were: Hon. Robert B. Roosevelt, president of the New York Association for the Protection of Game; Hon. Warren Higley, president of the Adirondack League Club; Hon. Eugene G. Blackford, late of the New York Fish Commission; Dr. F. R. Sturgis, president of the Quaspeake Club; Mr. Henry P. Wells, of the Parmahenee Club; Mr. F. S. Webster; and Mr. Chas. B. Reynolds of the FOREST AND STREAM. Letters of regret were read from Hon. Theodore Roosevelt, and from Gov. Russell, who wrote:

COMMONWEALTH OF MASSACHUSETTS, Executive Department, Boston, Feb. 18.—Dr. Heber Bishop, President Megantic Fish and Game Club. My Dear Doctor: I thank you very much for the kind invitation of your club to attend its banquet in New York, on the evening of Feb. 21. Important and peremptory engagements here will prevent my being with you; otherwise I should be glad to enjoy your hospitality and to meet the members of your club. Please express to them my appreciation of their courteous invitation, and my sincere regret that I cannot be with them. With best wishes for the continued prosperity of your club, and for a pleasant evening to all, I am, Very truly yours, WM. E. RUSSELL.

Speaking for Dr. Bishop, who was to have responded to the toast "Our Club," Mr. Gilbert presented some highly interesting statistics, setting forth the magnitude of the Megantic domain, its wealth of fish and game, and the improvements made for the comfort of members. During the past season there were taken from club waters more than 8,000 trout, of which the registers show, 3,200 were killed, and the remaining 4,800 were returned to the water. Deer killed, 35; caribou, 6; moose, 4. No record was kept of black bass and ducks. The improvements during the year have included the building of a piazza on three sides of the club house, provision of bath rooms, water works, sewerage, etc.; new camps have been built on Spider River at the head of navigation and at Arnold Bog, the best in the preserve; a new boat house has been built at the club house; the camps at Big Island have been repaired, and new trails have been cut—all this at

an outlay of about \$2,400. Forty-three new members have been added. The preserve covers 160,000 acre, or 250 square miles, and has 28 lakes and ponds, with 6 rivers. There are 31 club houses and camps. The running expenses were about \$4,000; assets (report of last May), \$15,933, and liabilities, \$2,358; present surplus (in valuation of camps, club houses, etc., and cash \$4,100), \$13,577. Improvements proposed for this year will include fish hatcheries at Spider River, Chain of Ponds and Seven Ponds.

Responding for the "Protection of Game," President Roosevelt, of the New York (City) Association, reviewed the history of that organization and its work in this city, and contrasted the game and fish supply of fifty years ago with that of the present. Hon. Warren Higley, of the Adirondack League Club, in discussing the "Relation of Protective Game Clubs to Forestry," related the financial success which has rewarded the League's system of scientific forestry in the Adirondacks. Spruce timber on the League's preserve is cut without impairing the forest; a large income is derived from this source while the woods remain practically in their primeval condition; and the League, in demonstrating the practicability of forest preservation with forest revenue, is pointing the way to the solution of the great forestry problem in America.

Speaking on "Fishculture" Hon. Eugene G. Blackford

PRESIDENT HEBER BISHOP

extolled the United States as the leader in fishcultural progress; we have better methods here than anywhere else, and successfully propagate more species. Commissioners come from all parts of the world to America to learn our methods. Among the achievements in this line Mr. Blackford instanced the stocking of Pacific waters with striped bass and shad. "In your Megantic waters do not attempt to introduce foreign fish; choose the native stock; breed the trout indigenous to Megantic waters. Don't try brown trout; they will grow to be monsters, but they devour the speckled trout, and you will wish yourselves rid of them. Trout culture is now almost an exact science; its successful prosecution may be assured by securing the services of experienced men. The time has come when State enterprise should be directed to propagating food fish, and the breeding of trout should be left to individuals and such clubs as the Megantic."

Dr. F. R. Sturgis gave a graphic portrayal of field and stream incidents of "A Sportsman's Vacation," and made an eloquent plea for moderation in the taking of fish and game. Mr. Andrew W. Gleason added to the gaiety of the occasion by relating in a humorous vein the hardships and misadventures afforded by the club's 250 square miles of wilderness, and Mr. William De Vere gave a number of humorous recitations which kept the company in a perpetual good humor.

The incident of the evening was the presentation of a complete angler's outfit—Leonard rod, line, fly-book and landing net—and with it a check for a substantial sum to ex-Treasurer Frederick L. Brown. The gift came from the directors and was a testimonial of regard and of appreciation of Mr. Brown's services to the club. Speaking for the directors Mr. Chas. Kilham said in happy phrase:

We have with us this evening a member who for five years served you as treasurer and director, during which time he received no remuneration for his services, yet devoted a large portion of his time to the corporation's interests. At a critical period, too, in our history, he, with others, came to its support by subscribing to bonds that it was deemed advisable to issue, to enable us to build a club house and make other needed improvements. In figuring on the needed quorum for a business meeting, one could always count on the presence of our worthy ex-treasurer; earnest and faithful ever, he was sure to be on hand, and no labor was counted too arduous where the corporation's interest was concerned. In his accounting to the directors as treasurer he was exact to a cent, and always had a balance sheet in his vest pocket, as well as any needed figures at his command. Those who were members of the board during his term of office will remember how earnestly and constantly he advocated conservatism in the administration of affairs, and was always striving to keep the balance on the right side. Of the healthy condition of the treasury at the time he resigned his office you were all informed by the last annual report. It is needless to say universal regret was felt by the board when it was learned that other duties so demanded his time as to necessitate his tendering his resignation.

In behalf of present and past members of this corporation, I tender you, Mr. Brown, this Leonard rod and tackle as a slight token of their esteem for you as a man and friend, and may you derive much pleasure from their use.

I find here also from the same hands, a bit of paper that I warrant you is as good as gold, which metal we regard as a fit emblem of your sterling integrity. Please accept this also as a further token.

The directors, too, feel that as a corporation they should recognize your long and faithful service; your dues will therefore be remitted for the present year and at the annual meeting they will recommend the incorporation of a by-law whereby we may extend the courtesy of life membership, and you may feel assured that your name will be first on the list, if the wish of the present and past boards is recognized.

And now, brother, when wending your way to some promising pool or stream, give the Megantic boys a thought, and believe that long after trout or salmon cease to rise for you, your memory will be held in the esteem of those who are proud to honor you to-night.

In accepting the testimonial, Mr. Brown said he would always cherish it as a token of the kind feeling of his fellow members, whose confidence so uniformly accorded him during his official service, had been the highest reward he could have asked.

BOSTON AND MAINE.

The Gilbert Trout Bill.

BOSTON, Feb. 20.—What is known as the Gilbert Trout Bill is the all-absorbing topic of discussion among rod and line sportsmen in this part of the country. It seems that this bill met with a hitch the other day in the Massachusetts House of Representatives, and came to a halt there. Through some technicality or flaw it did not pass the House, but was referred back to the committee. There was to be another hearing on the bill on Tuesday of this week. The bill now is hardly all that Mr. Gilbert asked for originally, since it proposes to make the open season on trout in the Bay State begin on Feb. 1 instead of Jan. 15, as at first proposed. But the very idea of opening all of the trout waters of the State on Feb. 1, instead of April 1, as now, has greatly alarmed the lovers of trout all over the State, and now that there is a general awakening, the measure is to be thoroughly fought in the Senate, even if it again gets by the committee. It is well understood that the only desire of Mr. Gilbert is to sell his cultivated trout in the close season, and failing to obtain this right last winter, through a bill specially prepared for his own interests, he is trying to accomplish his purpose through a general law, though such a law would lead to the destruction of all the wild trout in the State.

The Massachusetts Fish and Game Protective Association met on Friday evening, and after passing resolutions condemning the Gilbert trout bill, the resolutions to be forwarded to the Senate, where it is proposed to fight the bill, a committee was appointed to take the matter in hand, and to attend the hearing. A protest something like the following was also drafted, and is being thoroughly circulated and numerously signed.

To the Honorable Senate and House of Representatives in General Court assembled:

We do most earnestly and emphatically protest against the passage of the new "Gilbert Trout Bill" opening the close season on Feb. 1 instead of April 1 as a measure which, for the private profit of a single individual, will exterminate our wild trout, nullify State expenditures and be an opening wedge for the abolition of all protection on fish and game.

Good work has been done with this remonstrance. It was circulated at the Chamber of Commerce on Saturday, as well as in the tackle stores and in the shops and stores of many of the friends of the trout in Boston. At the Chamber of Commerce the petition was numerously signed; even men not interested in fishing signed when the enormity of the new Gilbert Trout Bill was explained to them. By Saturday evening there were more than 1,000 names on the protest, with still more to come forward.

The Old Colony Club, of which Actor Joseph Jefferson is president and Mr. Charles F. Chamberlayne secretary, is also circulating a remonstrance exactly like the above. A circular letter accompanying the remonstrance reads as follows:

Boston, Mass., Feb. 15.—Dear Sir: Are you aware that a bill, completely and disastrously reversing the settled policy of the State by opening the close season for trout on Feb. 1 instead of April 1, is in its final stages in our House of Representatives? If not, such is the fact. Mr. Walter L. Gilbert desires, for his private profit, to sell trout in this period at once to write to your representative and Senator, and persuade others to do so. It is also hoped that you will recognize the fact that efficient work is necessarily expensive, especially when done in a short time, and that any contribution you may remit to our secretary will be of value in forwarding the work.

EXECUTIVE COMMITTEE OLD COLONY CLUB,
Charles F. Chamberlayne, Sec'y.

Now that sportsmen are being aroused, there are great hopes that the bill may be defeated in the Senate, where the fight is to be made.

Gov. Cleaves of Maine seems to have thoroughly grasped the situation in his State, so far as special fish and game legislation is concerned. When some half a dozen special bills affecting trout fishing in as many ponds were presented to him the other day for his signature, he made a study of the matter and found that the bills already passed and before him were only a part of some 20 or 30 already before the Legislature of the same nature. He immediately sent a communication to the Legislature respecting this mass of bills and suggesting that a law be passed referring them all to the Fish and Game Commissioners, as well as all future petitions asking for special legislation of this kind. His recommendation has been very promptly acted upon in both branches of the Legislature, and a measure providing that when 10 or more persons, residing on or near a pond or stream, and interested in preserving the fish in the same, shall petition the Commissioners, they shall grant a hearing and take the matter under advisement. If the Commissioners deem proper they may provide special restrictions affecting the taking of fish in the waters mentioned, and these restrictions shall be equally binding with the general fish laws of the State, and shall be enforced the same as the general laws. Should this measure pass, and it is in a very fair way to do so, it will do away with a mass of special legislation in Maine, affecting the inland waters, that was fast tending to get her fish laws into such a muddle that their enforcement would have been impossible.

Great is the ingenuity of the Maine hunter or buyer of game who desires to ship his venison out of the State illegally and into the Boston market. A good friend of the FOREST AND STREAM was shown a very pretty little dodge the other day. In the stall of a well known dealer in game he saw what seemed to be the carcass of a young bear, very neatly done up in cloths, and just received from Maine. There were the paws of a genuine bear, sticking out of the cloths, but alas, for the honesty of the good sons of Maine! The paws were very nicely fitted on to the carcass of a deer. Following the false bear meat came a letter requesting that the paws be returned. They would answer for further shipments, though the letter did not state as much. Fortunately for the deer in Maine, where it is now close season, the paws have fallen into the hands of an honest Boston game dealer, who does not care to do that sort of business, and though bear's paws may not be very plenty in the game shipper's neighborhood, the paws that have been used to cause the Maine game wardens to pause, will pause here in Boston. SPECIAL.

The Massachusetts Association.

HON. GEO. W. WIGGIN occupied the chair at the meeting of the Massachusetts Fish and Game Protective As-

ociation, held at Young's Hotel, Boston, Friday evening, Feb. 17.

The Association unanimously voted to oppose the bill now in the Legislature to change the opening of the season on trout from April 1 to Feb. 1, and adopted the following resolutions:

Resolved, That it is the belief of the Massachusetts Fish and Game Protective Association that the proposed law to open the fishing season for trout on the first day of February would, if passed, prove extremely injurious to the interests of the people of this Commonwealth, and that it is our further belief that the season should not be opened any earlier than is now provided by law.

Mr. Benj. C. Clark, chairman fund committee, reported a total fund deposited of \$1,636.51. It was voted to favor the bill for opening the season on black bass June 15.

The Association voted to co-operate with the Old Colony Club in their efforts in the Legislature.

Messrs. Edward E. Allen, Edward H. Best, Dr. G. L. Marshall, Frank W. Whitcher, Chas. Vose and Lewis C. Marshall were elected members of the Association.

RICHARD O. HARDING, Sec'y.

A Card to Massachusetts Clubs.

The Old Colony Club would be very glad to receive at the earliest possible moment the names of all persons or organizations for the protection of fish and game in Massachusetts who would be willing to assist in the work of procuring signatures in remonstrance against the Gilbert Trout Bill opening the close season for trout Feb. 1 instead of April 1, as at present provided.

CHARLES F. CHAMBERLAYNE, Sec'y.

60 DEVONSHIRE STREET, BOSTON.

BAIT-CASTING FOR BASS.

Editor Forest and Stream:

I note what Mr. A. N. Cheney has to say in your issue of Feb. 9 in regard to "pickerel favoring pike," but I cannot for the life of me see how any person can mistake one for the other, much less a "local fisherman." I am not familiar with the pickerel or pike of northern New York, but there is certainly as great a difference between the pickerel and pike of Illinois, Wisconsin and Iowa as there is between a dogfish and a bear.

"Eurus" very graphically describes a day's black bass fishing in the same issue. "Eurus" certainly must have struck pretty good water if he hooked thirty black bass and a good pickerel in five hours. We of the World's Fair city see no such fishing, especially nowadays, but if I did find such ground I should hardly spend the time in trolling.

I would like to inquire if "Eurus" has ever tried taking the bass by bait-casting. I think he has not or he certainly would never go back to trolling. In my time I have tried nearly all the methods of taking bass (except spearing, shooting and netting), and, frankly, I can get more keen satisfaction and enjoyment out of one bass taken by bait-casting than I can out of twenty taken while trolling. I would advise "Eurus" to try it, and I believe, from the spicy manner in which he writes, that he is a true sportsman, and I will guarantee that when he has got his hand well in he will never go back to trolling.

In bait-casting, as in all other methods of fishing, much depends on the nature of the body of water and not a little on the fish. The greater majority of Chicago fishermen I find are bait-casters, and many of them are very expert at it, too. I also observe that 99 out of every 100 do their casting from a boat. Where the water will admit of wading, is in my estimation the only way to bait-cast. In some of our lakes and rivers, of course, wading is out of the question, and the sportsman must take to the boat if he would fish, but the greater majority of the lakes in the neighborhood of Chicago offer excellent facilities for wading. Silver Lake, Wis., Channel, Maria, Catherine, Long, Crooked and Round lakes, Ill., all offer excellent opportunities for wading. Of all these lakes perhaps Silver Lake has the best shore for wading. The bottom is firm and the water shallow for at least 100 feet from shore. Reeds, perch and pickerel weed are plentiful on all the shores.

A good pair of hip boots (or wading pants of oilskin if you prefer), a frog bag and a creel or bass bag of oilcloth and the pole that you prefer completes the outfit. You have no leaky boat to bail or sponge out, no oars to float away quietly while you are fighting your fish, and no heavy boat to row home after a day's sport. And this is not all. Those of your readers who, like myself, happen to reside in Chicago, or any other large city for that matter, can readily tell you of the difficulties often presented in securing a boat at all on many of the lakes adjacent to large cities. It is always "first come first served," and the hindmost fellow or the comer on the late train often finds himself without the means of transportation on water when he gets there. This is particularly true on many of the lakes on the line of the Wisconsin Central Railway. To estimate it roughly, I should say that this road carries from 800 to 1,200 fishermen to the lakes of Lake county and southern Wisconsin every Saturday afternoon, rain or shine. These 800 to 1,200 persons must find accommodations and boats on about twelve lakes, and very often many of them are sadly disappointed in both respects. I have seen one small farmhouse having but eight sleeping rooms and only four boats besieged by thirty hungry fishermen who came fifty-six miles by rail for the privilege of sleeping (some of them) in a barn and going to "third" table to dine. Those who knew the country best and were acquainted with "mine host" succeeded in getting a boat, but the larger majority amused themselves by waiting until some one got tired before they succeeded in casting a line at all. The man who goes prepared to wade, however, is independent of all these annoyances, and he generally succeeds in bagging a goodly number of bass.

The man who is prepared for wading seldom meets with the hundred and one annoyances that the "man in the boat" is subject to. If he snags hard and fast in a good plump reed he does not have to back water or dive down for the obstreperous hook. He has no oars to lose, no jolly companion to run amuck with his line by slapping an oar on it just at the critical moment when he is landing his "lordship," or "catch a crab" while you are standing up for a long cast with your back toward him. Next to seeing a fine four-pounder shake himself lose fifty feet to windward is the sensation one feels while lying face

downward in a moist boat with both arms in the water midway between the elbow and shoulder, the result of a "boon companion" "catching a crab" while your back was turned. I assure you, gentle reader, I have been there, and know the sensation.

Now, friend "Eurus," take my advice, purchase a pair of hip boots, get your wife, sweetheart or sister to make you a good long frog bag with a strong puckering string, a bass bag one foot wide by three long, made of oilcloth or duck with a strap for the waist or shoulder, long enough to allow the bag to rest in the water, and then go you and try a hand at bait-casting from off shore. Select a lake such as you have described, and I warrant your experience will be such that you will not be averse to repeating it as often as circumstances will permit. Should you prefer to use shiners as a bait, a tight closing bait can of the gauze variety may be substituted for the frog bag, although in our western country the frog bag is the favorite casting-bait in most localities. Circumstances, however, alter cases, and in fact in some of our western lakes the bass strike more readily at a four-inch perch than they will at the most tempting frog or shiner. At some future time I will relate my experience in this regard, which has been somewhat ludicrous. A BAIT-CASTER.

CHICAGO, Feb. 16.

An Early Fishing Spoon.

Editor Forest and Stream:

It has been claimed that Mr. Henry R. Carnes, of Rochester, N. Y., is "the inventor of the fishing spoon about forty years ago." Mr. Carnes may be the inventor of the spoon, but if so it must ante-date forty years back, for it is nearly fifty years ago since I saw my brother, Dr. James Davison, of Theresa, N. Y., use a fishing spoon, which he made from the bowl of a solid silver tablespoon by soldering a Limerick hook on the point of the bowl and by turning three-eighths of an inch of the shank nearly at right angles toward the shallow of the bowl. Through the shank was a wire with washer between upset end and shank, on which the spoon revolved. On the other end of the wire was a swivel to which the line was fastened. This spoon was rather a crude affair when compared with one of W. D. Chapman's trolling baits of to-day, which are also manufactured at Theresa, but it served its purpose by taking many a mascalonge from Indian River, until one day an old "mossback" pitched himself on to it and broke the line, and probably was the only mascalonge in his day that was the possessor of a solid silver spoon.

J. L. DAVISON.

A New-Subscriber Offer.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals.

For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

The Kennel.

FIXTURES.

DOG SHOWS.

Feb. 28 to March 3.—Keystone Kennel Club, at Philadelphia, Pa. James Watson, Sec'y. Entries close Feb. 17.
March 7 to 10.—Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderfer, Sec'y. Entries close Feb. 25.
March 14 to 17.—Washington, D. C. F. S. Webster, Sec'y.
March 21 to 24.—City of the Straits Kennel Club, at Detroit, Mich. Guy D. Welton, Sec'y.
March 22 to 25.—Elmira, N. Y. C. A. Bowznan, Sec'y.
March 28 to 31.—Illinois Kennel Club, first show, at Indianapolis, Ind. Chas. K. Farmer, Sec'y.
April 4 to 7.—New England Kennel Club, at Boston, Mass. J. W. Newman, Sec'y.
April 11 to 14.—Continental Kennel Club, at Denver, Col.
April 19 to 22.—Fifth Annual Dog Show, at Los Angeles, Cal. C. A. Summer, Sec'y.
May 5 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.
June 13 to 17.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.
Sept. 7 to 10.—Hamilton, Ont. A. D. Stewart, Sec'y.
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y.

Don't forget that Baltimore entries close Feb. 25, with W. Stewart Diffenderfer, Central Savings Bank Building, Baltimore, Md.

THE UNITED STATES F. T. C.'S TRIALS.

THE postponed trials of the United States Field Trials Club commenced on Feb. 13, at New Albany, Miss.

One stake, the Pointer Derby, was run at the place fixed for the trial, Elizabethtown, Ky., in November last, and the circumstances of scarcity of birds at that place and the bad weather and other objections which obtained at Columbus, Ind., to which place the club transferred owners, dogs and handlers by special train to there compete, were all fully chronicled in FOREST AND STREAM at that time, and are doubtless still fresh in the memory of the readers.

The postponement injured the trials. Indeed, no one expected that it would be otherwise. The postponement and change to grounds in another section of country more or less upset the plans of owners and handlers. The trial last year had become a fixture in a series of trials, all the details of which were considered by owners and handlers, not only in relation to the club itself, but in relation to the regular order in which they would fit in similar events. In short, the trial as a November fixture was a part of the field trial circuit, and many of the entries were made with a view to competition, one trial after another, throughout the circuit. To thus take the trial bodily out of a carefully arranged circuit was to break up the web of a multitude of plans of owners and handlers. Some of them could attend at Elizabethtown, but not at New Albany.

The club could not add to its support from such patronage as it could command in the South. The entries were closed. The club therefore could not readjust to meet the emergency.

The trials were injured, but not ruined. There was a good trial held. There was quite as much competition as could be finished readily in one week, which is as long as any field trial should last. The club is too powerful and popular to feel other than transient effects from the set-back and hardships of last November. Hard work and liberal expenditure have not been spared to fully carry out the club's promises.

While on the subject of hard work it is but just to mention that the accurate and prompt manner in which the affairs of the United States Field Trials Club progress is an important part of its strength. The systematic arrangement of the infinity of business detail does not come by chance. To Mr. P. T. Madison, the secretary-treasurer, belongs the praise due to merit. He does not have to apologize at a club meet-

ing for forgetting his books, for he does not forget them. He does not read the minutes of the last meeting out of some newspaper, for he has them on record himself. His correspondence is kept up in a businesslike way. Those who have any money claims, prize money or debts are paid promptly. It is one of the instances where all the business details are arranged so nicely that it seems easy. But it is not. Both knowledge and hard work are necessary; \$2,600 in purses.

The grounds of the Southern Field Trials Club were used. They are mostly open, with a strip of woodland here and there, and are several thousand acres in extent. The search for beavies was almost exclusively in the open fields, a large part of the scattered bird work was also in the open, the rest being woods.

A dance and supper was held on Wednesday night in honor of the field trial party. The judges were Col. A. G. Sloo, Vincennes, Ind.; P. H. Bryson, Memphis, and B. M. Stephenson, La Grange, Tenn.

The weather was about as unpleasant as it could well be. The judging was on the whole good, the absolute competitions being the unsatisfactory places.

The club held a meeting on Wednesday, Feb. 15. The usual formalities of reading the minutes of the previous meeting were observed.

A clause in Rule 9 was changed to read as follows: "Any dog absent for more than twenty minutes after his number is called may be disqualified from competition."

Rule 12 was expunged, it being practically a repetition of part of Rule 9.

The rule was so amended as to leave all kinds of unsteadiness to the discretion of the judge, the following clause being expunged: "The second chase, however, loses any further opportunity of competition in the stake."

The following new rule was adopted: "Rule 12. Any handler who is objectionable to the Board of Governors from any cause whatever shall be excluded. Entrance money in all cases of this kind shall be refunded."

The club recognizes winnings in the Eastern Field Trials Club, Central Field Trials Club, Southern Field Trials Club and the Philadelphia Kennel Club.

The treasurer's report showed a balance of \$1,084.50. Out of this was to be deducted the running expenses of the trial.

The Board of Governors are: Dr. N. Rowe, Chicago; Paul H. Gotzian, St. Paul; Hon. J. E. Guinotte, Kansas City, Mo.; J. M. Freeman, Bicknell, Ind.; Wm. M. Kerr, Indianapolis, Ind.; Col. A. G. Sloo, Vincennes, Ind.; H. Hulman, Jr., Terre Haute, Ind.; H. J. Smith, Louisville, Ky.; Norvin T. Harris, St. Matthews, Ky.; C. G. Stoddard, Dayton, O.; J. M. Avent, Hickory Valley, Tenn.; B. Waters, Chicago; R. Merrill, Milwaukee, Wis.; W. H. Child, Philadelphia, and P. T. Madison, Indianapolis.

The club meeting then adjourned. The Board of Governors immediately thereafter held a meeting.

Following is the list of officers elected: Dr. N. Rowe, President; C. G. Stoddard, Vice-President; H. Hulman, Jr., Second Vice-President, and P. T. Madison, Secretary-Treasurer.

The club will hold two trials, one at Bicknell, Ind., Nov. 6, and one south of the Ohio River, in January, February or March. Mr. Madison was empowered to select grounds and make arrangements for conducting the spring trials south of the Ohio River. The president and secretary were appointed a committee to fix the date of the spring trials.

The stakes are the same as last year, excepting that in each stake the absolute winner gets \$100.

Dr. M. F. Rogers asked for a hearing, and explained the advantages which could be secured in transportation, grounds, etc., at New Albany. He also gave a description of his efforts to stock the Southern Club's grounds with the Mongolian pheasant.

The entries were arranged as follows: Derby (Bicknell) first payment, May 1; second payment, Aug. 1; to start Derby (South), first payment, July 1; second payment, Oct. 1. All-Age stakes (Bicknell), entries close Oct. 1. Other All-Age stake entries close Nov. 1. The entrance in Derby are \$10 first payment, \$10 second payment and \$10 additional to start. All-Age, \$10 to nominate, \$20 additional to start. There will be nearly \$5,000 in prizes in the two trials. For each setter Derby there will be \$1,300. For each All-Age stake \$1,100.

The Board of Governors met again on Friday after lunch. The president and secretary were appointed a committee to select judges. A vote of thanks was passed to the American Field Trial Club and to the Southern Field Trial Club respectively for courtesies extended to the club.

The energy and enterprise of this club in arranging for a fall and winter meeting should commend it to the most cordial support of field trial men. The soundness, liberality and energy of this club are not equalled by any other.

The Derby.

For pointers and setters whelped on or after Jan. 1, 1891. Each breed to run separately.

THE SETTER STAKE.

The postponement of the club's trials was most unfortunate, so far as this stake, in respect to the number of entries, was concerned. The circumstances which caused the postponement were all mentioned in FOREST AND STREAM in the report of the trial and its postponement at the time of the occurrence in November last. The starters then numbered twenty-seven.

Inasmuch as the stake could not be run satisfactorily on the date first advertised, the final payments were returned to the respective owners. The stake was opened again and remained so till the evening of Feb. 12. But thirteen starters filled. A falling off in the number of starters was naturally expected. In the time intervening between November and February some dogs would on further trial prove unequal for the competition which they were sure to meet if started, others were run in the fall and winter trials, and their abilities in competition were thus fully determined, while a few others have died. The club lost none of its popularity with owners or handlers, and indeed there is no reason why it should be otherwise, since the postponement was brought about by force of circumstances. No club is more popular, competent or honorable than the United States Field Trials Club.

The dogs were drawn as follows: Manchester Kennel Company's black, white and tan dog Gleam's Pink (Vanguard—Georgia Belle), A. P. Gilliam, handler.

J. L. Adams's black, white and tan dog Cecil H. (Dr. MacLin—Cossette), L. W. Blankenbaker, handler.

A. J. Gleason's black, white and tan bitch Nancy Foreman (Dan Foreman—Hope's Lucille), owner, handler.

Blue Ridge Kennels' lemon and white setter dog Hope's Mint (Gath's Hope—Dashing Lady), D. E. Rose, handler.

J. W. Shriver's black, white and tan dog Direct (Gun—Victoria Laverack), owner, handler.

Jackson-Denmark Kennels' black, white and tan bitch Lillian Russell (Philip Gladstone—Lou K.), Thomas Bond, handler.

Jackson-Denmark Kennels' black, white and tan dog Rex the King (Laddie Browder—Phyllis), Thomas Bond, handler.

Avent & Thayer Kennels' black, white and tan dog Kingston (Chance—Bessie Avent), J. M. Avent, handler.

W. G. Peter's & J. E. Guinotte's dog Dixie's Rod (Rod—erigo—Dashing Dixie), A. J. Gleason, handler.

with
Avent & Thayer Kennels' black, white and tan dog Lochinvar (Chance—Bessie Avent), J. M. Avent, handler.

Manchester Kennel Company's black, white and tan dog Sport (Vanguard—Georgia Belle), A. P. Gilliam, handler,

J. M. Freeman's black, white and tan dog Dan Burgess (Dan Gladstone—Lilly Burgess), G. A. McLin, handler.

Blue Ridge Kennels' black, white and tan dog Dick Fox (Chance—Countess Rush), a bye, D. E. Rose, handler.

MONDAY.

The weather was comfortably warm. A gentle wind blew most of the time. The heavy clouds which overcast the sky once showed signs of breaking away, but only for a few moments, when it resumed its solid dark color for the remainder of the day. Birds were found in plentiful numbers. The work done was mixed, as commonly happens in a Derby, yet as a whole it was fairly good.

First Series.

GLEAM'S PINK AND CECIL H. began at 8:11 and ran an inferior heat. They ranged badly, though they showed speed, and their work on birds was very faulty. Pink opened the work by drawing prettily to a point, and Cecil backed well and promptly. A sparrow was all which could be produced to the point. Next, Cecil pointed and was well backed; nothing found. Sent on, Cecil again false pointed. He next pointed a woodcock. After some ranging Pink pointed a bevy nicely, and Cecil, 30yds. away, dropped to a back. Each made a point on the scattered birds. Pink was steady to caution. Up at 8:50. Cecil appeared a bit too high in flesh and was heavy in his stride. He came in unnecessarily at times to get orders from his handler. Pink was more regular in speed, and was a wider ranger. Each backed promptly and well. The handlers managed their dogs skillfully and quietly.

NANCY FOREMAN AND HOPE'S MINT were cast off at 8:45. The heat was inferior and full of errors. Mint drew steadily to a flush on a single bird in open sedge. Nancy potted on the footscent and frittered away time and effort repeatedly. She flushed twice up wind in the open, the dogs being among a bevy of scattered birds feeding in open sedge. There were numerous favorable opportunities to point, but though the dogs were among the birds they failed to point and the birds were flushed here and there by the horsemen. After a half hour of the heat had been run, Mint potted betimes. He false pointed in a thicket in a hollow. Both pointed a bevy. Mint was lost during some minutes. When found, the dogs were again sent on, and soon Mint found and pointed a bevy. Mint had narrowed his range in the last part of the heat while Nancy had widened hers a little, though not covering much ground. Both were steady to shot.

DIRECT AND LILLIAN RUSSELL started at 9:58. Lill pointed a rabbit and next roaded nicely to a point on a bevy. She made a good point on a single near the edge of woods, and Direct backed when cautioned. He showed some jealousy. He flushed a bird. Lill pointed a rabbit. Up at 10:33. Lillian was the wider and faster ranger. She exhibited better judgment and a better knowledge of the work. Direct ranged close and beat out his ground without any plan or system. Both were steady to shot. Direct is young comparatively, and will improve.

REX THE KING AND KINGSTON, at 10:40, started. Nothing was found to Kingston's first point. Sent on. He soon took a cast to the opposite side of some timber and pointed a bevy nicely. Each secured a good point on a single, and Rex next made a flush. Next, both made game but failed to find. Up at 11:31. Kingston was faster and ranged better. Rex tagged betimes and his casts were irregular. The heat as a whole was ordinary.

DIXIE'S ROD AND LOCHINVAR were cast off at 11:49. Lochinvar was first to find; he pointed a bevy nicely in a plum thicket. Rod flushed a single. Sent on, Lochinvar pointed a bevy in wet ground. He next made a point; nothing found. Rod flushed a single bird. Next both pointed scattered birds at the same time. Lochinvar again pointed and there was nothing. Up at 12:28. Both were fast, wide rangers; Rod the wider, but faulty in point work. Both were steady to shot and wing.

DICK FOX during the heat ran a bye. Mr. Stephenson took charge of his running. Gossip was a running mate. Dick pointed a bevy and made two backs. He ranged well.

SPORT AND DAN BURGESS began at 12:30. Sport showed decided superiority. He pointed two bevies and two singles. Dan backed well. Sport showed a knowledge of intelligent searching and he ranged well at fair speed. Both were steady to shot and wing. Dan ranged irregularly. Up at 1.

Lunch was eaten at Capt. Bias's place. After lunch the judges announced the names of the dogs which were left in the next series.

Second Series.

Seven were left in, with two, Cecil H. and Hope's Mint, ordered to be held in reserve to be ready if wanted.

LILLIAN RUSSELL AND GLEAM'S PINK were ordered on at 2:09. Pink made a good find and point on a bevy, and Lill soon squared matters by pointing a bevy herself. Sent on, Pink found and pointed another bevy. Lill got two points on scattered birds. Both were steady to shot and wing. Both worked industriously. Lill was the better.

DIXIE'S ROD AND KINGSTON were started at 2:46. Both began roading. Rod roaded a bird which flushed wild. Rod pointed a bird. Next he flushed one. Mr. Gleason objected to Mr. Avent's calling to Kingston, he claiming that such interfered with his dog. Kingston flushed a bird. Up at 3:03. Rod had settled down to a narrow range, while Kingston was ranging well, but was hard to handle.

DICK FOX AND SPORT started at 3:10. Sport soon picked up a point on two birds in sedge and plum thicket. A bevy which flushed wild was marked down in woods. At the edge of woods both pointed singles. Sport flushed a bird. Dick made a point which proved worthless. Sport made game and pointed twice. The birds were flying very close and Gilliam failed to flush them. Next, Sport pointed a bird, and nearly snapped it as it flushed close in front of him. Next he pointed a single, was a trifle unsteady to wing, and Dick backed. Up at 3:33. Sport had the better of the heat.

CECIL H. AND LOCHINVAR commenced their heat at 3:36. Cecil pointed and there was nothing. Lochinvar soon made a similar point. Sent on. Next, Cecil flushed two outlying birds of a bevy, and then pointed the bevy, which soon flushed wild. On the scattered birds, in heavy sedge, Cecil pointed a single. Next, Lochinvar pointed one. Up at 4:06. Cecil ran better in the fore part of the heat than in his previous heat. In the latter part of the heat he contracted his range. Lochinvar maintained good speed and industry. Up at 4:08.

Third Series.

LILL AND KINGSTON at 4:21 began their heat. Lill pointed a bevy in very thin, open cover. The birds were huddled close together in a bunch on the ground. Lill made two good points on single birds and an excusable flush down wind close to her handler. Kingston made a point on scattered birds, and next he made a false point. Lill next found and pointed a bevy well in scrub oaks, and afterward she pointed a single. Up at 4:45, with the heat decidedly in Lill's favor.

DICK FOX AND DIXIE'S ROD began at 4:47. Rod had hardly shown merit enough to continue in the running after his second heat. He flushed some birds in open sedge. Next he false pointed. Dick pointed a woodcock. He sprang at it as

it flushed and barely missed a capture. Some birds were flushed and marked down, but the effort to get some work on them was unsuccessful. Dick showed a disposition to pother now and then. Up at 5:29, with the heat largely in Dick's favor.

TUESDAY.

The weather was not unfavorable for good work, although it was unpleasant. A mild wind blew from the south. The sky was completely hidden by dark clouds. A sprinkling of rain fell during an hour, more or less, in the forenoon. Birds were in ample quantities. They did not run much from the dogs' points, therefore they were easier for the dogs to work on than they were in the trials of the previous week.

LOCHINVAR AND SPORT were started at 8:59. Lochinvar in this heat did nearly all the finding and pointing. He roaded to a point on a bevy in open sedge. Sport pointed a single bird; Lochinvar flushed one, and he stood listlessly to the flush, when more birds flushed all around him. It was a poor piece of work. He next pointed a single, then moved around and pointed it from the opposite side. Sent on, he next pointed a bevy. He, when sent on, potted some and showed over-caution. He pointed a bird, next he flushed one and stood to wing. The rest of the bevy flushed wild. Sport at that time was lost. Lochinvar pointed a single in open sedge. Up at 9:52. Lochinvar had the advantage in this heat most decidedly in bird work, but Sport's work throughout the trial was better and of a higher class. He beat out his ground with better judgment at all times. Lochinvar was hard to handle.

The All-Age Pointer Stake was next taken up. The Derby running was postponed till afternoon.

LILLIAN RUSSELL AND LOCHINVAR were started at 3:06 in the afternoon, and their heat proved to be the final one of the stake. A detour was made to get the wind of some scattered birds which had been marked down in sedge. Lochinvar pointed a single, and Lillian going across wind flushed it. Lochinvar next pointed a single, and soon afterward flushed one down wind, and was a bit unsteady. Lillian pointed nicely a bevy in woods, and Lochinvar brought up to back pointed the same bevy. Lill made three good points on scattered birds and Lochinvar one. Each backed well and was steady to shot. Lill outworked her competitor most decisively, she showing better judgment, greater quickness in locating and pointing, and much better obedience to orders. Up at 3:36.

The judges consulted a few moments and announced the winners. Lillian Russell won first, Lochinvar won second and Sport won third.

The prizes were \$250 to first, \$200 to second and \$150 to third. Absolute winner \$200.

While Lochinvar did some good work in his heat with Sport, he hardly deserved a place over him, inasmuch as that heat was his best in the whole stake, while Sport did his poorest. Sport excelled him in judgment in beating out his ground, ranged with greater skill and did a more uniform grade of work, of a higher order than Lochinvar's, considering the work throughout the stake. Lochinvar was far more difficult to control within proper limits. In the opinion of your reporter, Sport had made a better competition and had shown himself a higher class worker than Lochinvar, and should have been second, with Lochinvar a fair third.

The All-Age Stake.

For pointers and setters which have never won first in an all-age stake in any recognized field trial in America, each breed to run separately.

THE POINTER STAKE.

This stake made an excellent showing in the number of starters. There were thirteen, drawn to run as follows:

J. N. Neely's lemon and white dog Swind (Dan—Fanny), G. R. Howse, handler.

J. W. Munson's black and white dog Manitou (Luck of the Goat—Clary), W. B. Stafford, handler.

J. L. Adam's liver and white dog Lad of Rush (Rush of Lad—Topsy L.), L. W. Blankenbaker, handler,

M. C. Wiles's liver and white bitch Belle Sensation (Frank—Nellie Girl), G. R. Howse, handler.

Dr. D. W. Randall's black and white dog Ben A. (Stoddard—Jet II.), Ed. Garr, handler,

G. A. Castleman's liver and white dog Rex (Mainspring—Dell), W. B. Stafford, handler.

Drake-Sefton Kennels' liver and white dog Ightfield Upton (Ightfield Upton—Polly Peacham), Dr. Otto Moebes, handler,

Maj. J. R. Purcell's liver and white dog Heinikin (Flockfinder—Iron), owner, handler.

A. J. Gleason's (agent) liver and white dog Paxico (Ossian—Nellie E.), A. J. Gleason, handler,

The Graphic Kennels' liver and white dog Ridgeview Beppo (Beppo III.—Revelation), H. M. Short, handler.

G. W. Amory's liver and white dog Bounce (Bob—Sal), T. H. Poindexter, handler,

J. L. Adams's liver and white dog Franklin (Robin Adair—Blossom), L. W. Blankenbaker, handler.

Maj. J. R. Purcell's liver and white dog Jupiter (Tom Bowline—Belle C.), owner, handler; a bye.

The pointers made a most commendable competition as a whole compared with the work in other pointer stakes of the past season and the work of past years. There was a decided gain in range and speed. The work as a whole was from very ordinary to first-rate. There was a gain also in the quickness and accuracy in locating and pointing birds. In fact, there was very little of the tiresome pothering and loafing which has so often marred the work of pointers in field trial competitions of the past.

The club arranged for similar pointer stakes in future events, thus giving the pointers opportunity for competition which they do not enjoy elsewhere in the West.

First Series.

Birds were found in plentiful numbers for the purpose of a competition.

SWIND AND MANITOU were started at 9:57. Swind pointed a bevy in heavy sedge. On scattered birds, Manitou made three sharp, clear points and was steady to shot and wing. Swind came in to his handler unnecessarily for orders. Both ranged fairly well. Up at 10:27. Manitou tagged Swind sometimes. Both were industrious.

LAD OF RUSH AND BELLE SENSATION were cast off at 10:37. The latter had been in Mr. Howse's charge since the day before only, and he had not handled her any; therefore, as would be anticipated, she made a poor competition. On scattered birds marked down in the open, Belle flushed twice. At the side of a creek in woods, Lad pointed staunchly. Belle stole the point, drew on across the narrow creek and flushed the bevy in a thicket. Up at 11:02. Lad ranged wide and fast, and beat out the ground with good judgment. He had improved greatly on his form shown in the fall and winter trials.

BEN A. AND REX began at 11:09. The dogs had not well straightened out for ranging when Ben pointed a bevy nicely in the open sedge. Rex made a good point on two birds and Ben flushed a single. Thereafter each got two points on single birds, and Rex one false point. Both were steady to

shot and wing. Ben was the wider and better ranger, and was sharper and more accurate in pointing. Up at 11:30.

HEINIKIN AND IGTHTFIELD UPTON began at 11:47 and ran 35 minutes. An innovation was introduced in this heat in the embellishments of handling, the purposes of which I have been unable to divine. Before the heat began Major Purcell fastened his handkerchief to a stick, thus making a kind of flag, which he carried aloft with grave decorum throughout the heat. It is not a reasonable supposition that it was a device to gain the confidence of the birds by approaching them with the emblem of peace, the flag of truce. But whether it was that, or a sun shade or a wind-indicator, or whether it was in the wind for an airing, it nevertheless waved aloft throughout the heat. Upton was not well, he having a bloody diarrhoea. Upton pointed just as the bevy flushed, some said, some said he flushed it. I did not see it myself. On the single birds Upton made two points on singles, a point on a bevy, which Heinikin, going down wind flushed, and a false point. Heinikin made a point on a single and a flush on one. Both were steady to shot. Both were narrow rangers. Upton had a decided advantage in work on birds. Up at 12:22.

PAXICO AND RIDGEVIEW BEPPO began at 12:27 and ran 27 minutes. Paxico pointed nicely two birds, but marred his good work by wilfully flushing them. He then roaded to the middle of the bevy and flushed a single. A number of opportunities were favorable for points, but were lost. Sent on, Beppo in woods pointed a bevy. Both dogs were steady to shot and backed well. Their range was good.

FRANKLIN AND BOUNCE were started at 2:11 and ran till 3:03. Neither one ranged wide. Their speed was about alike. Franklin pointed a bevy at the edge of woods, then roaded about 40yds. up wind and flushed. Bounce pointed a single nicely. He next pointed a bevy and soon thereafter got a point on scattered birds. Franklin pointed a single. He next pointed, then moved on, roading. A bevy flushed near him.

JUPITER ran a bye alone at the same time the heat between Franklin and Bounce was run. He started slow but gradually improved as the heat progressed, though he at no time ranged wide. He made a point on a bevy and three points on singles, though two of them were on the opposite side of woods and could not be clearly seen by judge or reporter. On the footscent of one bird he pointed and flushed the bird.

This completed the first series.

The final heat in the Setter Derby was next run.

Second Series.

Eight dogs were kept in this series, one-half of which could have been left out without any harm being done.

LAD OF RUSH AND MANITOU began at 3:54 and ran 20m. Lad first pointed a single. Next he pointed a bevy and Manitou, 40yds. away, pointed prettily. Lad was speedier, a wider ranger, and superior in point work.

BEN A. AND RIDGEVIEW BEPPO began at 4:17 and ran twenty-three minutes. Ben pointed a bevy in sedge in woods. Sent on, he next pointed a bevy in open sedge. On the scattered birds, each pointed a single well. Short killed and Beppo retrieved.

This ended the day's work. At night a heavy rain storm set in.

WEDNESDAY.

The weather was too rainy for any attempt at field trial work, therefore there was none.

THURSDAY.

The same leaden sky, the same signs of rain, more mud, water and dampness, and drizzling rain betimes made up the day till 4 in the afternoon, when a heavy thunderstorm set in and stopped the running. The miles of mud and water to town were traveled most of the way in the rain storm, it ceasing shortly before the party reached town. That honored member of every well-ordered town, the oldest inhabitant, shakes his head and says in *res adjudicata* tones that there never was any weather like it since some other time. Birds were found in sufficient quantities. The dogs as a whole displayed a very ordinary lot of ability. Lad of Rush and Ben A. were the only ones which worked with any approach to good working form.

REX AND PAXICO were started at 10. Rex pointed a bevy and was steady to shot. In the open field Rex pointed and Paxico backed. Nothing found. Mr. Gleason at this juncture asked that the running be suspended for a moment while he asked for information. He objected to false points, as they engaged his dog's attention and prevented him from hunting, and he cited a case which occurred last year in which he said his dog made 36 backs in one heat. No one seemed to have any conjuring power in respect to false points, and the heat was resumed. Next Rex pointed a bevy in woods, and Paxico coming in from the front, flushed a single bird, which flushed the whole bevy. The heat could have very properly have ended here, as Paxico had done nothing at any time to show a chance for a place. Sent on, Paxico pointed a single. Rex next made a point and soon thereafter he made a flush. Pax flushed a bird and roaded next to a flush on a single in open sedge. Up at 10:41. Both ranged poorly and the work on birds was lacking in sharpness, accuracy and spirit. The heat was a poor one, Rex, however, much the better of the two. Each backed well and was steady to shot and wing.

BOUNCE AND IGTHTFIELD UPTON began an indifferent heat at 10:47 in woods. Bounce pointed a bevy on a side hill in woods and Jupiter backed unsteadily. Sent on, Jupiter flushed a bevy in woods. He was found on point on top of a hill. A single bird flew from his direction. Bounce went by him and flushed a single a few yards away, then pointed scattered birds. Up at 11:04. The heat was a poor one.

Third Series.

Six dogs were kept in this series.

LAD OF RUSH AND BEN A. were cast off at 11:30, and the heat proved a good one, both displaying a superiority over all their competitors. Ben nicely pointed a bevy, or part of one, in sedge, while Lad at the same time on a side hill in open sedge pointed a bevy. Both were steady to wing. Ben pointed in woods; nothing found. Ben roaded to a flush on a single in open sedge. Next, in woods, he pointed and two birds flushed wild from the point. Lad at the same time pointed, moved on, roading and flushed the bird. Ben made three good points in succession on single birds. Lad pointed in open sedge by a wire fence and nothing was found. Up at 12:07. Lad was the wider ranger and his speed was a bit more uniformly sustained. He showed good bevy work. Ben, however, showed much greater sharpness and knowledge of work on scattered birds and was equally good on bevies. The heat was a good one. Both were steady and worked well to the gun.

BEPPO AND REX were started at 12:13. Rex nicely pointed a single bird in open sedge. Beppo pointed a bevy in open sedge; Rex backed, caught scent and pointed. Rex pointed a single bird. A few yards further on the dogs had stopped at the end of a pathway among some birds, but the horses ahead of the reporters cut off the view. It looked as if each had a point. Up at 12:50. Neither ranged well, though Rex sustained his the better. This ended the running till after lunch.

BOUNCE AND IGTHTFIELD UPTON ran from 2 to 3. At the end of the heat Bounce roaded to a point on a bevy down wind and Upton, on top of hill, pointed footscent or backed. Neither ranged well, and were only moderately fair in speed.

The judges then announced the winners: Lad of Rush first, Ben A. second, Ridgeview Beppo, Rex and Bounce divided third. The prizes are \$200 to first, \$175 to second, \$125 to third. The absolute winner of All-Age Stake \$200 additional.

THE SETTER STAKE.

This stake was begun immediately after the judges announced their decision in the preceding stake.

The manner of running it was somewhat novel, as in three series but three dogs were dropped out, still the winners were placed quite well. There was a good number of sportsmen in attendance.

Some ladies graced the trials by their presence each day when the weather was pleasant enough for them to venture out.

Following is the order of drawing:

Blue Ridge Kennels' liver and white dog Bob Cooper (Roderigo—Miss Nellie Y.), D. E. Rose, handler, with

Ad. J. Klofanda's black, white and tan dog Dan Noble (Gladstone's Boy—Fannie M.), T. H. Poindexter, handler.

Blue Ridge Kennels' black, white and tan bitch Gossip (Roderigo—Belle of Piedmont), D. E. Rose, handler, with

Philip M. Essig's black, white and tan dog Jean (Jean Val Jean—Miss Thompson), H. M. Short, handler.

Avent & Thayer Kennels' black, white and tan bitch Bettye S. (Roderigo—Bo Peep), J. M. Avent, handler, with

Bert Crane's black, white and tan bitch Natalie II. (King Noble—Natalie), N. B. Nesbitt, handler.

Dr. J. N. Maclin's and T. H. Poindexter's black, white and tan bitch Little Miss (Vanguard—Rhett), T. H. Poindexter, handler, with

Avent & Thayer Kennels' black, white and tan bitch Novelist (Woodhill Bruce—Novelty), J. M. Avent, handler.

Gen. W. B. Shattuck's black, white and tan dog Dave W. (Gath's Mark—Daisy F.), G. R. House, handler, with

A. P. Gilliam's black, white and tan dog Eugene T. (Count Noble—Ruby's Girl), owner, handler.

Whyte Bedford's lemon and white bitch Zulu M. (Toledo Blade—), A. P. Gilliam, handler, a bye.

First Series.

BOB COOPER AND DAN NOBLE started at 3:10. Dan pointed a single bird, and Bob coming in flushed it. Bob pointed a bird in a fallen treecrop. Bob was lost for a while, and when found he was pointing a bevy in the open. As Rose walked toward Bob, he flushed a bevy which passed over the bevy Bob was pointing and flushed it, and both bevies flew away together. Dan false pointed in high sedge. Both ranged and hunted well. Bob was a bit wider in range and faster in speed. Up at 3:32.

ZULU M. ran a bye at the time of the preceding heat. She started at 3:11. Her range and speed were good, yet she came in to her handler unnecessarily at times to get orders. She pointed as a bird of a bevy flushed in heavy sedge. She held her point and the rest of the bevy flushed to wing of the first bird. In briars, she pointed scattered birds. Sent on, she soon found and pointed another bevy on a sidehill in sedge. On the scattered birds, she made two points and two flushes in heavy grass. Up at 3:59.

GOSSIP AND JEAN started at 3:55 and ran about ten minutes, when a heavy thunder storm began, and the work was declared ended for the day.

FRIDAY.

It can be said, in favor of this day that it did not rain. However, a terrific thunder storm and steady rainfall thereafter during the night made the grounds heavy, the low places wet, and the streams in a state of overflow. The dark solid mass of cloud gradually broke, the sun shone through the breaks in the clouds betimes, and a stiff wind blew from the north, gradually growing colder till at nightfall it was uncomfortably cool. Birds were somewhat harder to find, and also were difficult to point, owing to their restlessness and running from the dogs' points. The work of dogs, on such days as the birds run swiftly from the dogs or their points, always appears inferior. No sharp, accurate work can be done on a running bird.

GOSSIP AND JEAN started at 8:21 and were run 37m. Gossip pointed a bevy. Both roamed on the scattered birds in woods and made a number of points on footscut. A few good points were made on the running birds. Gossip showed hesitation and pointed too much. She ended her bird work by a good point on a single. Jean outworked her in range and speed.

BETTYE S. AND NATALIE II. were cast off at 9:01. On the scattered birds of a bevy flushed by one of the handlers, each made a good point on single birds. Bettye retrieved a bird killed by Nesbitt. Natalie made a false point. Bettye made a good point on a single. Natalie was dropped nearby because she could not see Bettye through the sedge, and a single flushed close to her when sent on. In woods, Bettye pointed, moved on, roading. Natalie joined in it and both pointed the scattered birds. Natalie made a point on two birds in woods. Bettye was quicker and sharper in bird work. Up at 9:54.

LITTLE MISS AND NOVELIST were cast off at 10:02, and ran forty-four minutes. A bevy flushed from near Novelist, but it was not seen whether she flushed it or not. On the scattered birds, Miss pointed to a flush on a single. Novelist pointed and Miss backed. The birds were in open sedge, an easy place for pointing, yet both dogs showed poor work on them. Novelist roaded to a flush on a single, and then the rest of the birds flushed wild. The horses flushed bird after bird which the dogs had passed. Sent on, Miss pointed a bevy in open sedge near the edge of woods. Poindexter shot. At the same time Novelist, some distance away, pointed, but at the report of the gun she moved on and birds were afterward flushed when she pointed. The next bevy was found by Novelist near the edge of woods. Miss flushed a bird. Both ranged well and were fast, but the work on birds was inferior. Up at 10:46.

The judges announced that the creek would be crossed before the running was resumed. On the way, Col. Sloo, while riding along the sharp top of an embankment built along a creekside to keep the water within its banks, had what might have been a serious fall. The top of a small tree lay on the path, thus forcing the rider to turn his horse off the top of the bank on to the side of it. It was steep and wet. When Col. Sloo's mule stepped off the top of the ridge to the side he slipped sideways to the bottom, a distance of 6 or 7 ft., then rider and horse fell over sideways flat into a foot or more of water. While the cold water was most unpleasant, it was fortunate it was there, for had it been bare ground a broken leg or worse might have resulted. Col. Sloo wisely returned to town for dry clothing, the other two judges going on alone till lunch.

DAVE WARD AND EUGENE T. began at 11:29. They ran 35m. In a plum thicket Eugene pointed a bevy. Dave pointed the scattered birds and was backed, after which Dave made a good point on a single bird. In open sedge Dave caught scent of a bevy, when Eugene, coming in from the opposite direction, pointed the bevy. On the scattered birds Dave pointed twice. Eugene pointed on two birds and flushed a single. Dave made a difficult piece of roading down wind in woods on a single bird, which he excusably flushed. Dave showed excellent bird sense in all his work, ranged wide and fast and did good point work.

Second Series.

BOB COOPER AND ZULU M. were started at 12:10. Bob took

a wide cast and false-pointed. Zulu pointed a bevy, and next pointed a woodcock. At this time the dogs were separated. Bob pointed a bevy on wet ground in sedge. Zulu pointed one of the singles and Bob flushed one. Next Bob pointed a bevy and each got a point on singles.

The dogs were all kept in the second series, which practically left matters as in the beginning. It would have been better to have run some of the heats longer and sifted out some of the dogs. It is hardly a skillful way to run an entire stake twice in the beginning.

Final Heat of the Derby.

LAD OF RUSH AND LILLIAN RUSSELL started at 2:00 to contest for the Derby absolute victory. Lad was keen to go and he ranged wide and fast. He opened the work with a good point on a bevy, and was steady to shot and wing. On the scattered birds Lill made two points, one of which was on a wounded bird, made one flush up wind and two down wind. The handlers were rushing their dogs. Each dog made a point to which nothing was found. Lad pointed a bevy of which he did not have the wind direct. The birds were running. Lad lost the scent, took a cast the wrong way and lost the birds. He made an awkward job of it but no doubt would have pointed the birds again if given more time. He had been on the point quite a while before starting on to locate. Lad flushed a bird in open. Lill pointed; nothing found. Lill pointed a bevy and Lad backed. On scattered birds in heavy sedge Lad pointed a single and Lill backed. The dogs were then hurried on in high grass and made flush after flush, and what the dogs did not flush the handlers did. It was poor work. Lad at last pointed, then roaded to a flush. Next each flushed a single. On scattered birds of another bevy marked down in sedge, Lill made a point and a flush. The judges ordered the dogs up at 3:21, consulted a few minutes and sent the dogs on. Lill flushed twice. Lad pointed a bird and jumped at it as it flushed. Lill in sedge pointed a single. Up at 3:42. Lad was much the wider ranger. He remained out at his work, carried his head better on birds, and beat his ground with better judgment. Lill was speedy but she did not range with the judgment of Lad, nor did she remain out at her work so well as Lad. The work of both was quite faulty, yet it was, taken in its entirety, in Lad's favor. Lill won the heat and was thereby absolute winner of the Derby.

The All-Age Setter Stake.

JEAN AND BETTYE S. ran a most unsatisfactory heat, beginning at 3:48—unsatisfactory because a large part of the work was done out of sight of the judges. Jean pointed a bevy. Next he pointed as the bevy flushed. The handlers worked their dogs on scattered birds across a small creek which the judges could not cross. Point after point was called, but the dense cover prevented a view of it. After a while the dogs got where a point for each could be seen. Jean worked well to gun and whistle. Up at 4:08. Each had good speed and range.

GOSSIP ran a bye at the same time as the above was run. NATALIE II. AND NOVELIST started at 4:11. Novelist pointed a bevy in sedge in woods. Next she made a point and nothing was found. Natalie pointed, Novelist backed. Both then roaded on; Novelist got to bevy first and pointed. The bevy flushed wild. Up at 4:45. The dogs were ordered up. Nesbitt discovered her at the same time on point and flushed the bird. Both were industrious and ranged well. Up at 4:45.

SATURDAY.

A delightfully pleasant day, the first one during the trials, improved the working conditions of the competition, yet birds were not moving far from cover. The grounds were soft and, in the low places, muddy and wet.

After the first heat had been run Col. Sloo felt too ill to judge further, he therefore retired for the day. The wetting and exposure incident to the accident of the day before produced the unpleasant results. It is gratifying that his illness was not serious. At night he was much better.

The board of governors met and invited Mr. P. T. Madison to judge in Col. Sloo's place, which invitation he kindly accepted.

DAN NOBLE AND DAVE W. began at 8:23. They ran 27 minutes. Dan pointed, then moved on and drew about, then false-pointed. At this time the dogs were separated. Dave was found pointing a single bird. He moved on and pointed a single. The birds were spread about feeding. Dave pointed the bevy. A single bird of it flushed, then the rest flushed wild. Each pointed a separate bird and was steady to shot. Dave was the better ranger and better worker on birds. The heat was ordinary.

LITTLE MISS AND EUGENE T. started at 8:59. Up at 9:30. Miss pointed a rabbit. Eugene false pointed. Miss ran across wind into a bevy in open sedge and flushed it. She dropped instantly. Eugene pointed the birds in high sedge. Miss pointed, moved on and flushed a bird. Eugene made the better showing of the two.

GOSSIP ran a bye. It was said she pointed three bevies and two single birds.

Third Series.

Six dogs were first taken into this series, and soon after commencing the running of it the judges took in three more, Natalie, Dave W. and Gossip.

BOB COOPER AND JEAN were cast off at 9:32. Jean pointed prettily a bevy in open sedge. When the bevy flushed, one of the birds flew over Jean and he started to chase, but stopped promptly to order. Bob at the same time had made a point to which nothing was found. Jean next roaded in the open sedge, carrying a high nose. He was following accurately the trail of a bevy. Bob passed close to him, but did not recognize the scent, and at last flushed the bevy. It was a bad error. Up at 10:45. Jean was much the better performer.

ZULU M. AND BETTYE S. began at 11:26. Up at 12:14. The dogs were often separated. Bettye pointed a bevy in a plum thicket. Zulu going up wind flushed a single and Bettye pointed one. Bettye was better in range, speed and point work.

NOVELIST AND EUGENE T. began at 12:20. They ran 34m. Novelist pointed close to a bevy in open sedge. Next, she roaded down wind to a point on a bevy. At the same time from the opposite direction, Eugene was roading up wind on it. He next pointed scattered birds, he then 200 yds. away. Then he roaded twice up wind to two flushes. Novelist pointed; nothing found. Soon afterward, she again pointed and nothing was found, but the horses flushed a bird a few yards down wind of where she pointed. She was the better ranger and the more skillful performer on birds.

The party then went to lunch. GOSSIP AND DAVE W. began at 1:51 and were ordered up at 2:07. A bevy was seen to come from open sedge and Dave was suspiciously near when it flushed. He flushed three times birds in woods. Gossip pointed twice and flushed once. Gossip's work was the better of the two. Dave appeared to be off his nose.

Natalie ran a bye.

Final Heat of the All-Age Stake.

BETTYE S. AND NOVELIST ran together 5m., apparently to comply with the rules requiring the first and second prize winners to run together. They started at 3:09. Both ranged well. No birds were found.

The judges then announced the winners. First, Novelist; second, Bettye S., and third divided between Eugene T. and Zulu M.

NOVELIST AND LAD OF RUSH began at 3:18 one of the most interesting heats, if not the most interesting, of the trials. It was one of the heats also in which the judges held the dis-

tinguished position of being alone in their official views as set forth by their decision. After carefully considering wherein the short-haired dog was inferior to the long-haired dog in this competition, I am still unable to comprehend the grounds of the decision. The heat began with a good bevy point by Lad in sedge near the edge of woods, Novelist at the time being absent, as she was many other times in the heat. The scattered birds were followed. Lad pointed a single. He was then held up till Novelist was found, on the hypothesis, the judge said, that Novelist might be on a point. It did not occur to them that she also might be hunting for birds, that it was her own fault if she did not work to the gun, that Lad was not in the competition to play to her convenience, and that he had a right to keep on working on birds he had found. Why one dog which was doing something in sight should be held up on the assumption that his competitor, which was out of sight was also doing something of the same kind can only be explained on the ground that the rudiments of the competition were not understood. Mr. Avent claimed at the time that there was no competition. However, Novelist was seen on the other side of the woods roaming cheerfully and it was then announced that there was a competition. Had Novelist found a bevy and pointed while Lad was held up, what would it be then? Novelist made two points on singles. She next pointed and nothing was found. She next pointed a single. She false pointed next and next flushed a bevy in sedge. In open sedge, and in the same sedge under the same conditions, Lad pointed a bevy, Novelist flushed twice and pointed twice on singles, next she pointed scattered birds. Lad got two good points on singles, one in open sedge, one in woods. Novelist pointed a bird. Lad pointed; nothing found. Novelist, going up wind, flushed a single. Lad pointed a bevy. The handlers and dogs were now brought together, they having been widely separated on account of Novelist's willfulness in selecting her own course and the necessity thus occasioned of her handler following her. Lad pointed a lark. Next, he pointed a rabbit. Next, going across wind, he flushed a bevy. Novelist pointed a bird in open sedge. At the same time Lad pointed. His handler did not beat out far enough ahead; he sent Lad on and the latter unhesitatingly flushed two birds. Next, he made a point to which nothing was found. The weak place in his work was within five minutes of the end. Up at 4:32. The judges held a consultation of some minutes duration. It seemed as if they did not arrive at a decision with unanimous certainty, but this was only judging from appearances. Lad was the better ranger in that he worked his ground out well, took as wide a range as the character of the ground required and worked voluntarily to the gun. He backed well, pointed with quickness and certainty, and did more work on birds than his competitor. Novelist was headstrong, broke away several times from the course, thus causing wide separation of the handlers, and her class of work was inferior to Lad's, although she did some good work on single birds. The decision was not well received.

This ended the trials.

B. WATERS.

POINTS AND FLUSHES.

The American Field Trial Club.

NEW ALBANY, Miss., Feb. 13.—In fitting about through the hunting grounds of the South, I failed to receive my mail promptly, which will explain the lateness in sending this report of the American Field Trial Club's meeting. In a letter, dated Feb. 5, from the secretary, Mr. W. J. Beck, I learn the following:

The club elected Mr. A. B. Reeves, President; Mr. U. R. Fishel, Vice-President, and Mr. W. J. Beck, Secretary.

The club for the next trials guarantee purses aggregating \$1,200, divided as follows: \$150 to first, \$100 to second and \$50 to third; alike in both All-Age and Derby.

The separate stake for Irish setters is eliminated. There will be separate stakes for setters and pointers.

The trials will be held in Indiana.

The time limit and instructions to judges were cut out of the running rules, thus the judges are left free to go in any direction or run the competition without the oppressive feeling that is necessary to refer to the instructions to judges to see what constitutes a point, flush, break-shot, etc. As Mr. Beck says: "Everything is theirs when the dogs are turned into the pasture."

The membership fee was raised to \$10. The entrance fee is \$25, \$5 to nominate, \$10 second forfeit and \$10 to start.

A vote of thanks to Messrs. Robinson, Freeman and Thompson, judges at the club's trials, was passed.

It was voted that the secretary correspond with myself in respect to whether I would join him in looking for grounds at Carlisle, Ind. It will afford me genuine pleasure to comply with the club's wishes in the matter and I appreciate the honor which the club, through its secretary, has conferred on me by the invitation.

The Weight Classification of Pointers.

I have read Mr. Muss-Arnolt's reply to me on the weight classification of pointers. I am glad that he presented the subject from the defensive point of view. I am so busy at present that I must defer answering his arguments till a later time, but I will promise to answer them fully.

The name of the Manchester-Wartrace Kennels has been changed to the Manchester Kennel Company. The address is Manchester, Tenn.

At the U. S. F. T. Club's trials Mr. J. W. Shriver sold the setter dog Direct to Mr. J. L. Adams, the owner of the celebrated pointer Lad of Rush.

The Manchester Kennel Company sold the setter dog Sport, a winner in both the Southern and U. S., to Mr. P. L. Atherton, Louisville, Ky.

Fox Hunting and Drags.

Some most interesting sport was furnished by Mr. J. M. Avent on several evenings after the field trial work for the day was ended. His hounds were the medium. One live fox which was captured and turned loose was murdered expeditiously. The drag hunts were most enjoyable, and were particularly so when Mr. D. E. Rose laid the drag course, for he always sustained his reputation as a swift rider, and he laid out the course skillfully when he undertook it. About the best run was on Wednesday evening. Every one rode as if fleeing from the wrath to come. One rider took a cropper in sedge grass. The horses came in with heaving sides and plenty of perspiration. The fields were wet and heavy. The owners of the horses sent word to whom it may concern that they did not care thereafter to let horses to those who rode after the 'ounds. It is strange how fussy some men are. After carrying a heavy man over wet fields all day following the field trials, it is a mere nothing for a Mississippi horse, in the pink of condition produced by plenty of corn fodder and sleeping in the open air, to run in the mud across country, up hill and down, three miles to town. The price per horse is \$1 per day. No horses ever earned a dollar more copiously.

B. WATERS.

The Philadelphia & Reading Road will carry three dogs free when accompanied by owner or care-taker to Philadelphia for the Keystone show, and the same privilege is extended to those desiring to exhibit at Baltimore the week after. Identification forms will have to be shown as usual.

AMERICAN KENNELS.—V.

Wankie Kennels.

ONE could find no better illustration of the advance of kennel interests in America than the possibility of writing up a kennel of Scotch terriers. A few years since this breed had to take its chances among the variety division and their appearances on the bench at all were few and far between. The year 1893, however, will see some of the keenest competition in this breed, and as a natural consequence increased attention will be drawn around these shaggy little customers.

"Whom to know is but to love."

So their owners say. Several exhibitors have had a shy at the breed in a desultory manner of late years, but Mr. John H. Naylor, of Chi-

SCOTCH TERRIER KILROY.

Owned by Mr. Henry Brooks, West Medford, Mass.

cago, is probably the oldest exhibitor, and to him due credit must be given for their introduction at our shows. "Scotch" Baillie brought over one or two, such as Meadowthorpe Donald. Then Mr. Symonds began to dabble in a little of everything, which included some "Diehards"; but until Mr. Henry Brooks started his kennel no serious attempt had been made to show a kennel of both sexes.

Recognizing the growing interest in "Scottie," FOREST AND STREAM determined to help the good cause along by visiting Mr. Henry Brooks's fine collection at West Medford, Mass. Some people may think it an easy matter to find this place, but like the gentleman in the classical song, "You've got to know it first." I tried three different stations, in all of which I was told I would find a train for West Medford, but each time found that the real place was two streets further on. It does not take long to reach West Medford when once started on the Boston & Maine Railroad, and a short walk brought me to the kennels.

After cautiously prowling round for a few minutes on the lookout for some human being, and with that feeling of uncertainty as to whether there might be a stray "Diehard" roaming around ready for a morning nip, I encountered the person sought. A hearty shake from Mr. Green, the manager, and I was soon introduced to Mr. Brooks, who, not feeling quite himself, had to remain indoors.

We did not waste any time, but walking straight to the kennels we were met by a chorus that might have included "ye banks and bonnie braes" for what I know. I was at once struck by the neatness of everything around the kennels, and perhaps before enumerating the inmates of the kennels I had better describe the latter. The illustration

WANKIE KENNELS NO. II.

West Medford, Mass.

will convey some idea of the neat-looking buildings of which there are two devoted to the dogs. One is apt to associate the housing of a Scotch terrier with a barrel in some corner of a cowshed or under the hayrick, but however they are housed in their native Highlands, at Mr. Brooks's place their kennel is a comparative palace, and well calculated to impress the "emigrants" with the possibilities of this glorious country. In one building there are seven kennel compartments, 5ft. 6in. x 4ft. 6in., the sides of which are in matched pine and oil finished. In one corner is a collapsible kennel bed tipped with brass sheathing. The bed can be folded against the wall when not required. The kennel windows face the south and each kennel opens into a passageway and is fitted with double doors whose fancy hinges and brass door knobs do much to enhance their appearance. The system of ventilation is very good and worked by cords from the passage. At the end of the passage a door leads into a large yard which may be used for exercising purposes. A closet in the passageway provides room for the collars and chains, etc. Each window in the kennel is covered by fine mosquito wire, so that in summer no flies or mosquitoes can break in and cause annoyance. A small door leads from the kennel to the yards, which are 14ft. x 4ft. 6in., and inclosed by fine galvanized square mesh wire which adds greatly to the appearance of the fencing, and even the snipiest-nosed

terrier cannot get his nose through. It is tacked on solid finished wood framework about 5ft. 6in. high.

In these yards an excellent plan has been pursued. About 2ft. of the earth was taken out and then filled in with rough gravel, which thus affords perfect drainage and dries the yards up quickly. When we were there, extending from the kennel building, were several solid wooden frames covering about half the kennel yards; these are always kept there in rough weather. In summer they give place to an awning. This is a description of kennel No. II., and passing on to kennel No. I., a few feet away, we found the arrangement of kennels very similar, but as this is the breeding kennel the compartments are 6 x 5. In the hallway is a handsome hot-water radiator, which regulates the heat in the kennels. Under each kennel-bench runs a hot-water pipe to a small radiator set on the floor in the middle of the kennel, which warms that individual kennel. By taking the bottom of the kennel bed up the straw for the young litter may be set directly on the hot-water pipe, affording the puppies warmth even if the mother should leave them in the coldest weather. This arrangement will probably bring a smile to the face of the average Scottish terrier breeder and we think that in time it will be found better to accustom the breed to more hardy treatment. Coats will get soft, and in this changeable climate pneumonia and the various "itis" diseases will get in their fine work, if these pups are coddled too much. Large windows face the south; in fact, we never entered kennels where the light and airy appearance a kennel, and especially one devoted to puppies, should have, has been so well attended to. In summer the little door leading to the kennel yards is made of the stiff, square mesh wire, but covered with mosquito wire, so that while down plenty of air can come in, but no objectionable insects. In one corner of the hallway is an ornamental sink and tap for casual washing purposes, and at the end is a closet, where stands the expansion boiler to regulate the heat in the hot-water pipes. On the walls, in neat array, are hung the chains and collars. I forgot to say that at the foot of each door is a tap, whereby the heat in each kennel can be regulated. Everything about the kennels was as neat as a new pin and very solid in arrangement and appearance.

Perhaps in the present interesting status of the breed in America it would not be out of place here to say something about the origin of the Scottish terrier before reviewing the dogs. This, at first glance, may seem superfluous, for perhaps there is no name so commonly used by the dear American public to designate the nondescript than Scotch terrier. Nearly every terrier with rough hair on it comes under that cognomen with the general run of undogly educated folks.

Although the Scotch terrier is undoubtedly an old breed in its native Highlands, still, even in England and at English

MR. JAMES E. GREEN.

Manager Wankie Kennels.

shows, the past decade only has witnessed its advent into the English catalogue as a breed sufficiently known to find place among the regular classes. Mr. James B. Morrison, in "The Book of the Dog," finds reason to believe that it was the original terrier of Scotland from the fact that the hard, short coat could not have been produced from the Skye or any other long-haired variety without the aid of a smooth dog, and there was no smooth dog known in the Highlands except the Blue Paul, bred at Kirkintilloch, and which is almost extinct. Speaking of the antiquity of the Scotch terrier this writer says that they were known and better known than they are to-day at a time when we were indebted to the ballad singers for rescuing our own history from oblivion. From the old crofters and keepers we learn that these terriers were found in considerable numbers all over the islands and mainland in the northwest of Scotland in the beginning of the present century. One has but to glance at the pictures here given to see that this terrier is peculiarly adapted to the work for which he was bred, in unearthing such vermin as the fox, badger, otter, wildcat, etc. Such animals in their native cairns and rocky strongholds are not the most delicate subjects to tackle, but the Scotch terrier, with his unerring nose and indomitable pluck proves equal to the occasion. Striking the scent he will follow it up to the lair with spirit and working in on his belly, or side, if need be, nature having provided for this by giving the terrier a flat side but deep chest, it is not long before the owner hears the sounds of the conflict within. Of course in such a combat the nature of the ground and the weight and size of the vermin often makes the conflict an unequal one and "Scottie" sometimes pays for his termerity with his life, being either overcome by the enemy, or in his excitement and eagerness going so far into the earth or cairns that it is impossible to get back again. This gameness and never-say-die quality has given him the soubriquet of "Diehard."

As a rule the terrier man will have a pack of three or four and if the game is heavy he will be made to bolt and will pass in his cheeks through the help of those on the outside. Whether on duty or off the Scotch terrier is always a gay, vigorous companion, full of life and vivacity, and the slightest attention from his owner receives most demonstrative acknowledgment. Though, with all his ferocity when in front of the enemy, he is naturally a mild-tempered dog and not at all quarrelsome, though, when occasion demands, his strength of jaw and hard coat enable him to give a good account of himself to whatever dog is foolish enough to meddle with him. One of his chief charms as a companion will be found in his being a good follower, seldom losing his master's heel, however crowded the thoroughfare may be. The ears contribute much to the smart appearance of this terrier, the prick ear being more generally met with nowadays. A semi-erect ear is allowable, but a drop ear, however, is not to be considered. To further explain the build and make-up of the "Diehard" it would not be out of place to give the standard, but the pictures must suffice this time.

The first dog to make his bow was Kilroy, and he showed

his contempt for modern kennels and water pipes by indulging in a real good roll in the snow. It is not my object to criticize these dogs; that has been done in regular reports. In form, hard coat and general make-up he beats Kilree, who came out next. Kilroy (25,089) was whelped June 2, 1890, and his sire is the celebrated Ch. Kildee and dam Bitterweed. Kilroy is the winner of twelve firsts, five specials and the 30 guinea challenge cup twice in England, first and special Boston, Toronto and Brooklyn, 1892, and first and special Gloversville, 1893.

Another good one is Kilree (26,242), whelped July 12, 1890, also by Ch. Kildee, out of Zembra, and is winner of six firsts, four specials and the 30 guinea cup once in England. Having to meet his more favored kennel mate his record here is composed of seconds at the above shows, omitting Boston.

Kilbar (22,573) soon joined the others and it was amusing

SCOTCH TERRIER KILREE.

Owned by Mr. Henry Brooks, West Medford, Mass.

to see their perfect amiability toward each other; at least, until one or two of the dames made their appearance, when the talk seemed to savor more of duels, and not *à la Française* either. Kilbar is a brindle and loses to the other in head, bone and straightness of front. Then Mr. Green turned out a clever looking little nine-months bitch pup, Wankie Diana, a capital made one that will obtain recognition in the ring without doubt; good long head, bone and plenty of style; she is by Kildee ex Thistle-down, which was imported last fall by Mr. Brooks and was heavy in whelp at Brooklyn show.

Wankie Ted, a brother of Diana, made his bow wow, but he is not as strong behind as his sister and is smaller throughout. Wankie Daisy then joined the crowd; she was out of coat, but in great spirits, not having recovered from her exhilaration in defeating her superior kennel mate Culblean at Gloversville show last month. She is by Rambler out of Rosebud and was whelped Aug. 6, 1890. Her other win in this country was second at Brooklyn 1892.

A good, strongly-made bitch in Zembra, not shown here yet, then came out. She is the dam of Kilree and seemingly a rare brood bitch, and her list of prizes in England, which includes six firsts, four specials and the 15 guinea challenge cup, proves that our estimate of her was deserved. She looks a little matronly now, having just had a litter by Kilroy, all which, unfortunately, died.

One or two others had to be fastened up and then the crack Culblean darted out. She looks better than at Gloversville and by New York show will be probably all right. She is by Ch. Kildee out of Ula and was whelped March 10, 1891. Her winnings include three firsts, one second and two thirds, and two specials in England, first and special Toronto and same Brooklyn 1892, and second Gloversville

SCOTCH TERRIER CULBLEAN.

1893, when she was second to Wankie Daisy. This bitch is particularly strong in head, almost, if not quite, the equal of Kilroy in this respect.

Going to the next lot of yards a capital little, or I should say big, four-months-old bitch pup by Kilroy out of Daisy, with all the carriage of an old 'un, tried to make friends with everything at once; her ears are well-carried, good bone and head particularly long and strong looking. Two inferior "Japs," boarders I think, were in the next kennel. A litter of four by Kilroy out of Brenhilda, whelped Sept. 25, 1892, next attracted notice. They do not compare in size to the other two spoken of above, though a little bitch promises well, and Kilroy II., of the same lot, has a head just like his dad, on smaller lines, of course, and with his bone and evident quality will make a hummer if lucky. Thistle-down was then turned out; she is by Ch. Alister out of Hegthistle and is winner of three firsts and five seconds in England. Brenhilda was the favored one up at the house and with Kilbar was the first show terriers Mr. Brooks possessed. She was whelped May 4, 1887, and is by Ch. Dundee out of Glengogo.

This with a large-sized racy looking Boston terrier or business bitch with a litter of them cuddling up to the water pipe, completed the lot of dogs. By the way, thinking so much of the terriers we lost sight of two spaniels that Messrs

POINTERS—CHALLENGE—*Dogs* (under 5105s.): 1st, Hempstead Farm's Duke; 2d, Hempstead Farm's Duke (5015s.); 1st, G. W. Davey's Lady Gay; Spanker; 2d, Hempstead Farm's Queen Fan—*Dogs* (under 5105s.): 1st and com. Chas. Heath's Arthur and Ben; 2d, Rinada Pointer Kennels' Ridgeview Donald; 3d, A. G. Smith's Saint Brittle; 2d, R. Lyon's Tense; 3e, A. M. Young's Brittle Brat.

IRISH TERRIERS.—**CHALLENGE.**—**Dogs:** 1st, W. J. Comstock's Boxer IV; 2d, Toon & Symonds's Jack Briggs. **Bitches:** 1st, W. J. Comstock's Dumurry.

ENGLISH SETTERS.—**CHALLENGE.**—**Dogs:** 1st, G. F. Taylor's Breeze (Glenstone); 2d, Rockingham Kennels' Count Howard. **Bitches:** 1st, Rockingham Kennels' Princess Beatrice; 2d, W. B. Wells's Cambria. **OPEN.**—**Dogs:** 1st, J. Brett's Real English; 2d and 3d, Roscroft Kennels' Sheldon and Glendon; 4th, Blue Ridge Kennels' Antonio. **Reserve,** W. B. Wells's Matane. **Very high com.,** F. E. Lewis's Sam C. E. O. Damon's The Corsair, Rockingham Kennels' Rockingham, Jr., J. L. Wells's Reverdy, Forest Kennels' The Sultan, Victoria Kennels' The Earl and Prince Ben. **High com.,** Bronx Valley Kennels' Pride of the Bronx, F. M. Smith's Joker. **Com.,** Bronx Valley Kennels' Bronx Valley Dick. **Bitches:** 1st, J. Brett's Myra II.; 2d, G. F. Taylor's Katie Noble II. **High com.,** Roscroft Kennels' Doretta, W. B. Brush's Eastern Queen, Philip Daly, Jr.'s Virginia Rockingham, W. B. Wells's Daphne. **PUPPIES.**—**Dogs:** 1st, Bronx Valley Kennels' Deceir; 2d and 3d, H. Pape's Critic and Cactus. **Reserve,** W. S. Boody's Druid's Dick. **Very high com.,** L. H. Alberts, Jr. & C. T. Alberts's Alberts's Druid, J. Brett's Robin Goch.

The W. K. C. Dinner.

THE annual dinner to judges, exhibitors and press took place at Delmonico's on Tuesday night at 7:30 P. M. Nearly all those whose names are given as present at the dog show partook of the good things provided. Mr. Tom Terry sat at the head of the table, with Mr. Buchanan, Commissioner of Agriculture at the World's Fair, on his left, and Mr. W. C. Reick on his right. When cigars were lighted, Dr. Rowe proposed the health of the Westminster Kennel Club and Mr. Terry responded, and then called upon Mr. Buchanan for his views on the World's Fair show.

Mr. Buchanan reviewed briefly the progress made in the arrangements of the Exposition and the progress made in the mechanical construction, and the condition of affairs at the present time. Notwithstanding the impediments to the work this winter—the heavy snow, severe cold, etc.—the buildings were nearly finished. Five thousand men were employed each day. No work of similar magnitude had ever been undertaken before. Forty-three foreign nations will participate. Many exhibits were now in Chicago and on the ocean en route.

Speaking directly of kennel interests, the management at first doubted the value of the dog show as a feature of the exposition. Much assistance was given by the A. K. C. and related bodies. The challenge class was disapproved and all dogs will compete in the open class. The zeal, skill and fidelity with which Mr. Mortimer will superintend the show were earnestly mentioned. He thanked the A. K. C. for the kindness shown in the past.

Toasts to Mr. Buchanan and the World's Fair, and Messrs. Sherwood, Cleather and Vredenburg were given. Mr. Vredenburg, in response to calls for a speech, said that the A. K. C. must be very grateful to Mr. Buchanan for the kindly way in which he met the wishes of the A. K. C. When he first met Mr. Buchanan, he thought that the World's Fair and Mr. Buchanan would never agree. At a later meeting all differences disappeared. The plan of Mr. Buchanan, in respect to classes, was a sweepstake. He thought the plan would meet the views of exhibitors. The World's Fair deferred more to the A. K. C. than to any other body representing the interests of live stock. It was due to the World's Fair that each specialty club do something to make it more valuable.

Mr. Anthony, Dr. Rowe and Mr. Reick made brief speeches. Dr. J. Frank Perry, in response to calls from every one, spoke briefly, and ended with a toast which contained a very pretty sentiment. "Here's to our humble friends. When we climb the golden stair, may we find them awaiting us."

Gordon Setters at Shows.

Editor Forest and Stream:

A letter to me from Mr. Stelmets, president of the Washington City Kennel Club, dated Feb. 13, says: "I assure you that it was not the intention of our committee to slight Gordons in any way, but the error made in the premium list will be corrected by giving a separate challenge class for Gordon setter dogs and bitches."

This should call out a good exhibit. Gordons are less numerous than English or Irish setters and are necessarily shown in smaller classes; but I cannot see the wisdom of inviting a small exhibit by cutting down the inducements to show them. I take it that shows are intended to call out all breeds of dogs. If any managers chose to have an incomplete exhibition and leave out the handsomest of all dogs, I doubt their wisdom. But the New York show does not take that view, and in consequence, gets fifty-four Gordon entries against sixty-four Irish.

For one, will not exhibit any dog in any show where Gordons are not put upon precisely the same basis as other setters; and I own some good Irish setters, too, some of which may be shown soon. JAMES B. BLOSSOM, President Gordon Setter Club of America.

New York, Feb. 15.

Type and Working Spaniels.

Editor Forest and Stream:

In nine cases out of ten the man who argues against fashionable type is under the suspicion of interested motives either he is praising the type of his own dogs in general, or was before the dispute as to type came up. But in this case I got the bitch Busy F. not as the kind that wins, but as the kind that ought to.

At the last Rochester show I saw a very handsome black and tan cocker bitch, one of the real old sort. I gave her first prize, and at once opened correspondence with her owner about buying her. He would not sell until the season was closed (and right here I wish to remark that last season the bitch had 392 birds killed over her). I was mad when I heard she was sold. It seems my friend Mr. Wade heard about this working spaniel. Of course, some one will say he does not know a good spaniel; but, all the same, he was a charter member of the Spaniel Club. The bitch was entered at Gloversville in our kennel name, and I was surprised to receive her by express, with card on collar, "Xmas to 'Uncle Dick' from his Nevev." Did I feel glad? You bet; and I feel good still, notwithstanding the remarks made about her. To read the comments one would think she had legs like a crane; that her hocks were turned the wrong way like a modern mastiff or St. Bernard; that her muzzle was like a woodcock and her eyes like gooseberries. But that all amounts to nothing, for I know that she is the true and most desirable type for the field, and any one who ever uses that type is convinced that it is just what the fancy wants.

A beagle and cocker are both required to do hard work; in fact, to be goers and stayers. Why don't the breeders for fancy shorten the beagle's leg about four inches, so his brisket will touch the ground the same as the modern cocker? The best beagle in America stands just under 13in., my cocker bitch is just under 14in., but forearm girths 1½in. more than the beagle, and they say the cocker is light in bone.

I have bred, trained and worked cockers for thirty-five years; in that time I learned a few things. Big bone means a big head, and a big-headed cocker is positively no good. You must keep the type of field and cocker spaniels distinct. I can prove that in the whole of America there are not twenty-five true cockers, *i. e.*, bred from cockers for five generations. I have as much Obo blood in my kennel as any one, but I know it is not cocker blood by any means, but just field spaniel, bred from field spaniels, and when they are bred down to 22lbs. and just a bit cobby (that is, only in the last year or so), then they are cockers, but the shape of the head is just the same.

I do not know about field spaniels in England, but I have owned the best that came to America. I never knew one that was worth a cent afield. Benedict, one of the first and best imported, could not be trained. Capt. McMurdo tried it, so did I, but the dog never had any hunting sense. The first bitch he was bred to was Madcap, a real old-style cocker. One of the produce was Wilmerding's champion Black Prince; he is a worker, but no one will ever believe that he got his hunting instinct from his sire; and you will find it so all down the line the further you get from the field spaniel; or, in other words, the smaller and more aristocratic you get the heads the better they are for the field. The field spaniel can be compared to the plow horse, while the cocker is like a thoroughbred racer. No one ever saw a cocker, a horse or a man with a big head that could go and stay.

J. OTIS FELLOWS.

HORNELLSVILLE, N. Y., Feb. 4.

For Detroit Dog Show.

Editor Forest and Stream:

I am pleased to announce to intending exhibitors at the coming Detroit show that the management of the Chicago & Grand Trunk Railway have kindly consented to carry all dogs free in baggage car when accompanied by owners or caretakers.

This offer is from Chicago to Detroit on main line or any branches of the Grand Trunk connecting therewith. And should it become necessary a special car for carrying dogs will start from Chicago Sunday night, March 19. Exhibitors on any branch roads can arrange to connect with such main line and have their exhibits transferred to the special baggage car.

Now, gentlemen, I hope the action of the Grand Trunk in this matter will be appreciated not only by exhibitors at Detroit, but by dogmen at large. This offer by the Grand Trunk is certainly very liberal, and the only way exhibitors or their friends can reciprocate would be by giving such roads as the Grand Trunk, who assist exhibitors, and in this way further the interests of bench shows and help to make a success, the preference of travel over other roads when such can possibly be done. Such concessions like this should not be forgotten by all friends of dogs and dog shows. I am not at all interested in the Grand Trunk more than other roads. Nor do I receive any annual pass. But I do think that whenever a chance presents itself said road should have preference over others less liberal in their actions toward transportation of dogs.

It would be well for intending exhibitors at Detroit to notify the secretary as soon as possible what exhibits will be going over the Grand Trunk road and branches, in order that he may advise me in time in regard to the special baggage car, as it will be unnecessary to start one if there are not sufficient to occupy the same. JOHN H. NAYLOR.

MOUNT FOREST, Ill.

The Handler Knows Why.

Editor Forest and Stream:

The remarks by "Cynic" on field trials are quite interesting reading, and the greater part of them are literally true. But I do not believe that that every handler "knows" in his own mind just how he was beaten in "competition." I, for one, have got the least remark to make as to the spotting out of my bitch Ruby Blade in the late Southern trials, and knowing her as I do, I think none the less of her for the showing she made, as she has had less than three weeks' actual work on game. I also wish to add that the Southern trials, as long as they conduct their meetings as they have so far, are deserving the patronage and support of all lovers of the setter and pointer. They play no favorites; the best dog wins, as he should always. R. B. MORGAN.

MEDINA, Tenn.

Boston Terrier Club.

Editor Forest and Stream:

The following officers were elected at the last meeting of the B. T. C.: President, Dr. W. A. Powers; Vice-President, R. Weiner; Secretary, George H. Huse; Treasurer, W. C. Hook; Executive Committee (in addition to above), J. W. Newman, Dr. J. S. Saunders.

Will you kindly make correction in next issue to premium list of City of Straits Kennel Club? The specials offered by the B. T. C. are open to competition, and not restricted to the members of the club, as stated in their list.

G. H. HUSE, Secy.

Boston, Mass., Feb. 16.

J. L. Batchelor's dog circus at Chicago was really good and very amusing. Many of the tricks were new. Jumbo, the somersault dog, does his backward twist over the back of one of the poodles, another waltzes to the "music" played by "Grover Cleveland" on a miniature piano. The poodle is a staunch Democrat and knows his business.

DOG CHAT.

Detroit Dog Show.

The premium list of the above show to be held March 21 to 24 has been received. Its compilation shows care and a practical knowledge of the wants of exhibitors. Cash, and plenty of it, is the keystone on which the new club will build their entry. Such a list appeals to every exhibitor. Mastiffs and St. Bernards get the best treatment, \$10 challenge prizes and \$15, \$10 and \$5 in the open divisions. Great Danes, pointers, setters and collies get \$10 in each challenge class and \$10 in open. Great Danes are also divided by color. The rest get challenge prizes of \$10 and open \$10 and \$5, while spaniels are provided with classification No. 1, which also carries with it \$20 of that specialty club's money for specials. There are in all 111 classes provided and we are pleased to remark that puppy classes are conspicuously absent. The club offers \$10 kennel prizes in many of the breeds. Seven pages of the premium list are taken up with a list of the specials, which are peculiarly attractive, ranging as they do, in cash, from \$10 to \$5 for nearly every breed. In fox-terriers in addition there is a \$100 cup given for four or more, to be won twice in succession by the same exhibitor at the Detroit show. Great Danes get \$45 special money. St. Bernards also get a silver cup and plenty of money and the Mastiff Club is doing much better this year, putting up their \$150 challenge cup for best American bred dog or bitch, entry for this to be made by March 7, entry for \$5, one-half of which goes to winner of cup, the other to the club. The usual arrangements have been made with the express companies. The show will be held in the Detroit Auditorium. Entry fee is \$3 and entries close March 7 with Guy D. Welton, 56 Cadillac square, Detroit, Mich. All dogs coming from Canada must be consigned to E. B. Welton, Detroit, for bonding through customs. As announced before, John Davidson will judge all sporting classes, bloodhounds, Russian wolfhounds, foxhounds, deerhounds, pointers, English, Irish and Gordon setters, collies, dachshunds and beagles, and Chas. H. Mason great Danes, mastiffs, St. Bernard, greyhounds, poodles, bulldogs, pugs, terriers, toys, spaniels, whippets, miscellaneous. Mr. Tom Blake will superintend, and to his knowledge of dog affairs is due such a good premium list.

Washington Dog Show.

Mr. WEBSTER writes us that the following express companies will carry all dogs without extra charge from the Washington City Kennel Club show, to be held March 14, 15, 16 and 17, when going over their lines to their original shipping point, which were forwarded charges prepaid one way, and certificates are furnished showing that they are being returned by their original owner from the exhibition: Adams, United States, American, Wells, Fargo & Company, National and Long Island.

Arrangements have been made with the several railroad companies mentioned below to carry three dogs free for each ticket, at owner's risk, when accompanied by owner or care-taker, who presents for inspection the necessary identification papers. The Trunk Line Association have issued instructions to all the members of the association to this effect and which are included as follows: N. Y. C. & H. R. Grand Trunk, West Shore, N. Y., O. & W., N. Y., L. E. & W. D. L. & W., Lehigh Valley, Central R. of New Jersey, P. & R., Pennsylvania, B. & O., and C. & O.

The Michigan Central R. R. will carry one dog free for each passenger. If exhibitor should have crated one or more dogs not exceeding 25 lbs. weight no charge will be made, but beyond this amount extra freight will be required. There are a number of other roads yet to report and as soon as possible information will be given. Every thing is moving on finely and great interest is manifested by exhibitors, many leading kennels of important breeds having made application for entry blanks and entries are already coming in. The bench show committee is doing every thing to make exhibitors comfortable and happy and feel greatly encouraged, and have every reason to believe that they will have double the number of entries before received. The special prizes list is increasing rapidly and will soon be published. It will be attractive and embrace many valuable prizes.

Uniform Field Trial Rules.

One of our most respected field trial judges writes the following letter, which seems very much to the point and should receive attention at the hands of field trial men. As it is in the form of a private letter we do not care to give the writer's name without permission: "I am in receipt of several letters relating to field trial rules from clubs wishing to make changes, etc. The thoughts suggest itself to me, why would it not be a good plan to let some person, or a number familiar with the requirements, to form a set of running rules and publish them for criticism, and then when completed to satisfy the majority let all the clubs adopt them and have a uniform set of rules. I can see no reason why they should not be uniform, and let owners, handlers and all persons interested be familiar with them. The interest in field trials is growing and clubs becoming more numerous, and as all trials are run practically the same, and on quail, it would seem to be the best plan."

New St. Bernards.

Mr. Walbridge, owner of the Contocook Kennels, is the St. Bernard breeder who imported the smooth St. Bernards Survivor, Dinorah Suisse and Belline from Mr. Betterton's kennels. The importation is an important one to the smooth division of the "Holy breed," and as the Keeper and Guide blood predominates in these animals, perhaps Mr. Walbridge will succeed in producing another Empress of Contocook. The dogs arrived in good condition on the Bostonian, but will probably not be shown till Boston. Survivor is a litter brother to Watch, and Dinorah is a sister of champion Keeper, and has already produced a dog, St. Augustine, that is considered about the best in England.

Los Angeles Show.

At a meeting of the Southern California Kennel Club, held Tuesday, Feb. 7, the following were appointed as a committee for the coming bench show of dogs: J. F. Holbrook, President; S. K. Benchley, Treasurer; C. A. Sumner, Secretary; J. H. Kiefer, T. S. Casey, J. C. Cline, F. W. Ingalls, T. S. Walker, J. W. Mitchell, A. P. Robinson, W. Llewellyn and E. Templer Allen, with Tony Bright as general Superintendent. All members are requested to do their utmost in procuring special prizes for the show. The dates for the show are April 19 to 23 and the present prospects are very favorable for a successful exhibition.

Benching at New York.

For the instruction of secretaries of dog shows, etc., and as affording a record of the actual dogs benched and the number in each breed, we publish the order to Spratts Co. for the New York show benching, with size of benches for the different breeds:

Large 40 in.—Mastiffs 42, St. Bernards 145, Great Danes 43, deerhounds 19, bloodhounds 7, Newfoundland 14, Russian wolfhounds 19, unclassified (miscellaneous) 2; total 285.

Small 30 in.—Greyhounds 28, foxhounds 18, pointers 120, setters 190, Chesapeake Bay 5, collies 75, bob-tailed sheep 1, retrievers 2, harriers 3; total 441.

Small 20 in.—Field spaniels 25, Clumber spaniels —, Irish

water spaniels 2, poodles 30, bulldogs 48, bull-terriers 46, whippets 1, unclassified (miscellaneous) 2; total 154.

Small 20 in.—Cocker spaniels 50, basset hounds 1, dachshunds 21, beagles 47, fox-terriers 107, Irish terriers 38, Welsh terriers 5, Dandie Dinmont terriers 7, Bedlington terriers 6, Skye terriers 14, black and tan terriers 12, white English terriers 5, unclassified (miscellaneous) 3, Scottish terriers 15; total 331.

Cage dogs.—Yorkshire and toy terriers 27, King Charles spaniels, pugs, etc., 73, miscellaneous toys 5; total 104.

Grand total, 1318.

In a conversation with Mr. Rackham he informed us that the coming Philadelphia poultry show called for 1,200 ordinary poultry pens, 200 bantam pens and 646 for pigeons.

P. K. C. Members Enjoy Themselves.

The Philadelphia Kennel Club gave the initial supper of the series to the members on Tuesday last at the Aldine Hotel. Mr. S. Murray Mitchell, the genial proprietor of the Aldine, who is as well the treasurer of the club, has placed a pleasantly located room at the service of the members in which to hold their meetings and entertainments. In this room, decorated with the club's art collection, the table was spread, and at 7 o'clock the members sat down to what was named in the secretary's notice a "nice little supper," but which turned out to be a veritable banquet, as the appended menu will show. Twenty covers were laid and a jolly party participated. The meeting broke up at 11 P. M. The idea of spending the money for the members' entertainment instead of for rent was voted a happy one. These pleasant reunions are henceforth a fixture of the club, and are a most agreeable manner of bringing dog men together. The Philadelphia Kennel Club has long been noted for the geniality and good fellowship of its members. We have a standing invitation to participate and hope to be present at the next supper. The menu of Tuesday's entertainment is as follows:

Beef broth à l'Anglaise.	Blue Points.	Rockfish Hollandaise.
Fillet of beef aux truffes.	Pot natural.	String beans.
Wine.	Roasted potatoes.	Champagne.
Sweet bread paté.	Punch Lalla Rookh.	
Roquefort and Neufchatel cheese.	Roasted grouse.	
Fruit.	Celery salad.	
Aldine Hotel, Feb. 14.	Assorted cake.	Vanilla ice cream.
		Coffee.

This social idea seems to be becoming more general, and is certainly the best and most enjoyable way of getting members to attend meetings and take active interest in the club.

Spaniel Club Dinner Menu.

The spaniel men get a good deal of amusement and jollity out of their club and pursue a policy that binds the members together fraternally. The club dinner will be on as we go to press, but as a special favor we are enabled to give one side of the menu card, which is excellently gotten up, and will appeal directly both to the stomach and the risibles of these jolly good "fellows."

Hotel Bartholdi.

"HAIL FELLOWS (J. OTIS), WELL MET!"		Feb. 22, 1898.
EIN COCK (ER)TAIL.		
(AMERICAN SPANIEL CLUB SPECIAL).		
OYSTERS	BLUE POINT (ER)S	SHERRY
SOUP	NOODLE, DOODLE AND POODLE. (Who's in it?)	AND EGG (LESTON).
	CELERY, from the West (Wm.)	
	OLIVES.	
(From the branch always held out by our cousin—the Club across the Water.)		
FISH	DOG FISH ON TOAST (Mason's style—make no bones of it).	
ENTREES	CALVES' BRAINS à LA BOWWOW.	BORDEAUX.
	BETHUNE POTATOES. Spinach.	"A good wine needs
	Havana Cabbage, cream sauce.	no Bush (Geo. H.)"
	(Very new—from Morris (E. H.) County).	
	PUNCH (Roman—the noblest of them all. Brewed by Kirk).	
	CIGARETTES, Old(ham) Judge.	
ROAST	SADDLE OF DEERHOUND done up Brown(ing).	
SALAD	LETTUCE (Collared by Kitchel at Perth Amboy).	
SWEETS	ICE CREAM (Hollow Bricks, à la Keasbey).	
	ASSORTED CAKES (V. H. C. H. C. and C, the kind Bell and Willey never take).	
CHEESE	OLD ENGLISH (Filled with active members).	
	SPRATTS BISCUIT (Doggone good).	
FRUITS	PLUMS AND OTHER THINGS. (Fostered at Tuxedo).	
	CAFE (Black—the kind that wins).	
	CIGARS (Watson's "Long and Low.")	LIQUEURS
	PRAYERS: by WILMERDING.	(A la Rende, who will a tail unfold).
	MUSIC:	
	"Where, oh where is my little dog gone?"	

Beagle Champion Lonely.

Mr. H. L. Kreuder intends to surprise some of us this spring. He has, we understand, purchased the celebrated beagle bitch champion Lonely, having cabled for her Feb. 9. She is considered one of the very best, if not the best, in England. She was whelped July 13, 1896, and is by Careful out of Lovely. Her wins have been made at the best shows in England. It will be remembered that FOREST AND STREAM published a picture of this bitch some time since. Mr. Kreuder does not look upon his high office in the Beagle Club as a sinecure, but intends to uphold his position with a strong kennel.

Mr. Kreuder's beagle bitch champion Lonely arrived on the Aurania in charge of Mr. Elliott and will be seen out at Philadelphia next week perhaps.

Bulldogs.

Mr. John E. Thayer was asked to judge bulldogs at New York, but declined, thinking seriously that he would import a pair. Mr. Thayer's re-entry into the bulldog fancy would lend a still further fillip to the breed. Mr. Woodward told us at Chicago that he was busily engaged in getting up a diploma which will be given to every mentioned bulldog in the New York show as a sort of souvenir. This is a happy idea and might be extended to other shows as well.

New Bull-Terriers.

Mr. H. A. Harris has changed the name of his kennel to Cedar Brook Farm Kennels. He is importing the bull-terriers, Prince Gully, by True Blue ex Polly by champion Como, and Mermaid, by True Blue out of Camelia. Both are under a year old and said to be very good. A fox-terrier bitch is also coming and is also an animal of merit, but we cannot as yet give particulars of her. It will, therefore, be seen that Mr. Harris is still "in it" and will show his Ruby Pallissy at New York this week.

Important Importations.

Dr. James E. Hair and Mr. Bulled are importing quite a number of good dogs. In pointers Devonshire Sancho, winner of third at Birmingham when 11 months old; Devonshire Fan, second open class Birmingham and first Cruft's show, 1892, second Birmingham two years in succession. The Devonshire Pearl is the other pointer, and she won first Bir-

mingham 1891, and is by Nero out of Devonshire Fan. Roy of Colehill, the English setter, is also coming. He won first prize only time he was shown. These were shipped on the Italy Feb. 8, but have not yet arrived. Devonshire John and two others will come over for the World's Fair.

Accident to Cæsar Hansa.

The Hempstead Farm Kennels sustained a sad disappointment, for the time being at any rate, in the accident that befell their great Dane Cæsar Hansa, on the Aurania, coming over in Mr. Raper's charge. The voyage was very stormy, and in some way this poor dog's thigh was broken. The leg will be set, but probably his show career may be cut short. This dog won first at Berlin, and is said to be a very handsome animal.

A number of the dogs were delayed by snowstorms in coming to the W. K. C. show. Perhaps Joe Lewis had the roughest experience. Starting no less than four different times on Monday to drive to the station with his load, he got tangled up in a snowdrift each time and was forced to return. Out of one snowdrift it took two teams of oxen to drag the wagon, a stone wall having also to be pulled down. He finally started at 3:30 A. M. Tuesday morning and this time succeeded in reaching the station, arriving at the Garden after hours. Mr. E. H. Moore's train also got stuck in a drift for three hours, but as his dogs are St. Bernards the incident seemed peculiarly appropriate.

The owners of good dogs at Grand Rapids, Mich., are tired of having dogs stolen and shipped away, so they are forming an association for the purpose of capturing dog thieves and seeing that they suffer the penalties. Mr. C. H. Annin is one of the prime movers in the organization.

Rochester, N. Y., has, or rather had, a clergyman, a Rev. Mr. Perry, who resigned his pastorate on account of dog shows held by members of his flock in the church. In speaking of the matter he said that the dog shows held in his church "worked in direct opposition to the highest aim of Christianity and I could not work harmoniously in such surroundings." Reminded him of the Tower of Babel probably.

Mr. Mahler, of Pittsburgh, in addition to buying the black and tan English Lady, has purchased Iroquois from England.

Another letter comes saying: "Do you suppose we will ever receive medals from the Lewiston show? Have never received mine." The A. K. C. should attend to this matter.

Mr. B. S. Turpin is just home from a week's fox-hunting at Popple Cam, Phillipston, with Mr. R. D. Perry. He has an ideal hunter's home. The floors and walls are covered with trophies he has shot himself—grizzlys and black bear, deer, mountain goats and sheep, etc., etc. In the kennels are twelve fine hounds of many celebrated strains. Mr. Turpin reports having a good time.

"As a matter of news," we may say that Mr. George Raper will report the New York show for *British Fancier*, and Mr. R. F. Mayhev will do the same for the *English Field*. No helpers need apply.

Mr. Usher, owner of the Manatang Kennels, wishes us to state that some letters forwarded to him while away from home in answer to an advertisement in our business columns have not reached him, and those who have not received answers will now know the reason why.

Mr. G. Bell, of Toronto, sent his black cocker bitch Realization with E. Barde Elliott, on Jan. 8 last, to England to be bred to Mr. Farrow's crack cocker dog Ben Obo, and also to compete in Cruft's great dog show. Mr. G. Bell received a cable Feb. 9 stating that his cocker bitch Realization had captured two equal thirds, and of course our Canadian friend feels jubilant, as Realization, being a puppy, could not compete in the regular classes for cockers, but had to take pot luck with puppies of all spaniel breeds. This Mr. Bell was not aware of when he sent his bitch, but he is none the less pleased. Mr. Geo. H. Bush bred Realization and she is half sister to Fascination. She will return with Mr. Elliott in time for New York. Mr. Bell will show about thirteen at New York.

Mr. L. A. Julian, of New York, has imported the Irish terrier Castlemartyr Con from the Earl of Shannon's kennels. Two Irish setters also came on the same vessel, City of New York.

Mr. Geo. Bell corrects us in the matter of pedigree of the cocker Man in Black, owned by Mr. Gurney, of Kansas City, Mo. This dog is by King of Obos out of Snow II., and not as stated before.

Boston is to have a banner show this year. The local people will be catered for in the way of local classes and specials for those not having won a prize before. This is a good move, as many of the prizes are gobbled up by the "expert" kennels, so that the local exhibitor feels it almost a hopeless matter to exhibit with any prospect of getting the highest honors. We will just make a little forecast of the Boston list of judges, to see how near we hit it: Mastiffs, Arthur Trickett; St. Bernards, perhaps Mr. James Green, probably Mr. Mason; sporting classes, such as pointers and setters, Mr. John Davidson, and Mr. Mason spaniels and pretty nearly everything else.

Cruft's great show has come and gone once more and was the greatest ever held. We are crowing here in New York over the W. K. C. entry of nearly 1,500, but what should we think of 3,000, the figure that Mr. "Barnum" Cruft's venture reached this year. This means a benching of 2,000 dogs. In this lot an entry of 400 fox-terriers was a decent sized show in itself. *Stock-Keeper* is gradually grabbing up all the doggy literature on the other side in the way of periodicals. The *Fox-terrier Chronicle* will now be issued from 169 Fleet street, and will appear in improved form.

Mr. Baguley, according to *British Fancier*, has sold the wire-hair Daylesford Bush to go to Canada. Wire-hairs seem to be living up on both sides the bridge.

A Gully the Great bull-terrier, Lord Gully, has just been sold in England for \$500. Mr. Dole owns the sire, Gully the Great.

Spratts Co. is unfortunate with its Chicago benching. Last year some of it was delayed en route and ever so much bother ensued. This year, although started off a week or two ahead of time, the cars got snowed in somewhere and were seemingly left by the railroad people to thaw out in the spring some time. Mr. Erbmann had to get an engine and go on an exploring expedition, finally finding the car and hauling it to Chicago, where they arrived just in time to get the dogs benched. On the return journey there was another delay, and when finally heard of, somewhere beyond the Suspension Bridge in Canada, it was only to find the charred remains, the whole business having been burnt up. This means a loss to Spratts of about \$2,500, but will not affect their benching for other shows, as they are amply provided to meet any such emergency.

This year, instead of having to pay for a box in Madison

Square Garden, the W. K. C. management very kindly allowed every kennel paper space gratis for their displays. This little attention was very kindly commented upon by those most interested.

Mr. Hanks will give a \$100 cup at Boston show for best four Russian wolfhounds.

Judges at Elmira will be Messrs. H. L. Kreuder, beagles and foxhounds, and J. Otis Fellows for all other breeds.

Mr. F. W. Chapman sold his beagle bitch Fanny Reed, second in open bitches, 13in. and under, for \$100.

The catalogue of the New York show excelled, this year, every effort hitherto made in that direction. It is embellished by pictures of noted dogs, and the cover is striking and very pleasing in color.

Mr. F. C. Phoebus, the well known beagleman, purchased, on Tuesday, the Somerset Kennels from Mr. G. B. Post. The kennel contains about thirty beagles, fifteen collies, two pointers and two setters. Mr. Phoebus has long been the manager of this kennel, and we are sure his many friends will join us in wishing him every success.

Mr. Watson tells us that Philadelphia will have about 480 entries. Following right after New York, there should have been a larger entry than this.

Col. L. Victor Brughman, of Maryland, who was in attendance at the New York show, purchased a pair of foxhounds from Dr. Thurbur's prize winning hounds at the show.

Get Your Dogs in Order.
If you'll read Polk Miller's advertisement in another column, he'll tell you how to keep off disease at "Bench Shows" and prepare them for "showing up" well.—*Adv.*

THE launch of the Carroll boat Navahoe was followed by the laying of the keel of the first syndicate defender, the Morgan-Iselin boat. Lawley is at work on the Paine boat, but the final completion of the Boston syndicate is not yet announced. Sufficient money has been pledged to assure the construction of the yacht, but more is needed to cover the heavy cost of running in such a class. This amount is likely to be forthcoming; if not it will be a reproach to the many wealthy and spirited yachtsmen of the East that the upholding of local interests is for the third time left to one individual.

ALL difficulties in the way of a challenge from Mr. Royal Phelps Carroll for the Royal Victoria Y. C. cup have probably been removed by the action of the New York Y. C. at a special meeting on Feb. 20, when the report of the special committee on the matter was accepted and the club decided to indorse the challenge. It is almost certain that the holders of the cup will meet Mr. Carroll in the same sportsmanlike spirit which he has shown and will make terms which will be fair to the challenging yacht.

COMMODORE MORGAN, who was not present at the annual meeting, met with a most enthusiastic reception on Monday night when he took the chair for the first time, the cheers of the members stirring the dust on the highest tier of models.

GEN. PAINE'S connection with one of the Cup defenders has led to his resignation from the Cup Committee, and Commodore Morgan has appointed in his place Mr. J. Frederick Tams, an old member of the club who has served with credit on the Cup Committee of 1881 and others of more recent date.

Tarpon Springs Y. C.

TARPON SPRINGS, FLA.

THE Tarpon Springs Y. C. was organized on Nov. 15, 1892, by a number of Northern yachtsmen who spend the winter in Florida, the officers being: Com., James P. Phinney; Vice-Com., Jacob S. Disston; Rear Com., G. E. Noblitt; Sec. and Treas., Leandro T. Safford; Fleet Capt. and Meas., E. N. Knapp; Reg. Com., James P. Phinney, Chairman, Jacob S. Disston, G. E. Noblitt, E. N. Knapp and R. W. Clemson; Mem. Com., Leandro T. Safford, Chairman, G. E. Noblitt and W. A. M. Richey. The club has a fleet of small sailing boats and very exciting races are held every week. The winning boat thus far, Imp, was built by Lawley & Son for Com. Phinney and is 15ft. over all, 14ft. l.w.l., with a silk sail of 193 sq. ft.

The first regatta was sailed Jan. 14, six boats taking part, each skipper trying to win the silk flag given by Com. Phinney, the boat winning to hold it until beaten. The regatta was sailed in a bayou one and one-half miles from the Gulf of Mexico, the regular course being about three miles, with three turns. Imp soon went to the front and won, the times being:

	Start.	Finish.	Elapsed.
Imp, Com. Phinney.....	2 32 25	3 17 25	45 00
Lucy B., Capt. Noblitt.....	2 31 40	3 20 40	49 00
Dennis, Capt. Disston.....	2 33 10	3 25 45	52 35
Topsy, Capt. Clemson.....	3 29 40	3 39 40	50 00
Lucy B., Capt. Reed.....	2 31 15	3 23 10	50 55
Lizzie, Capt. Topfitt.....	2 31 15	3 29 15	57 50

On Jan. 21 the second weekly regatta was sailed over the regular course. As there was a good fair breeze the boats went over the course twice. Imp was delayed some ten minutes replacing her centerboard, that had dropped out and had to be fished out of the mud. Many skippers would have pulled out of the race, but the Commodore always sails over the course, and has won many races by never giving up a race until he is beaten. Capt. Disston sailed the Dennis with good judgment and won the flag for the first time, and now talks of changing his boat's name from Dennis to Dispatch.

	Start.	1st round.	Time.	2d round.	Elapsed.
Dennis.....	2 03 32	3 02 38	53 51	3 42 31	1 32 29
Topsy.....	2 10 19	3 05 19	55 00	3 48 45	1 33 27
Lucy B.....	2 02 30	3 04 41	55 11	3 46 32	1 37 02
Imp.....	2 10 47	3 09 35	58 48	3 49 55	1 39 08
Tacony.....	2 10 31	3 09 22	58 51	3 55 50	1 45 19

The regatta of Feb. 4 was sailed in a brisk N.E. breeze, the starters being Imp, Com. Phinney; Topsy, Capt. Clemson; Tacony, Dr. Tom Reed; Safford, Capt. Safford. As Mr. Disston was not feeling well his

sailing master, Capt. Cook, an old skipper from Naushon Island, went in the Tacony to give Dr. Reed pointers and handle a job that he had rigged on and used reaching and running.

At 2 o'clock P. M. a large part of the townspeople were on hand to see the poor little Imp beaten, and all were asking what sail will the Commodore carry to-day. That question was soon settled for the Imp came to the starting line with the big silk sail on. A huge smile spreads over Capt. Cook's face as he tells Dr. Reed that Clemson's Topsy is the only boat they have to fear. One lady, who had often won on the Imp, asked an old shellback friend of the Commodore to advise him to reef. "Wait an' see," says the old man.

Off they go, Tacony, closely followed by Topsy; then Imp comes over the line, looking for a favorable chance to pass the leaders. Around the first point and all are off for the first turning stake before the wind with the foam boiling around the bows. Here comes a hard puff, which strikes Imp on the end of the boom, and jibes the sail like lightning, but a quick pull on the sheet prevents the sail goosewinging. This performance was repeated five times in going 500 yds., yet for all that Imp is right side up and gaining on the leaders.

All make a neat jibe around the first stake and trim flat down for a dead beat to the next mark, no one praying for wind. Clemson's new boat was going splendidly and Dick was sailing her well.

When the Commodore takes the first stake the Commodore takes a heavy pull on the sheet and tells his shipmate that Imp must go in first boat or go under. The devil on Imp's sail lights his cigar with the end of his tail and looks on with a smile on his black mug. Capt. Cook now puts in half a plug of Navy and spurs Dr. Reed up to do his best, but it is no use, for Imp rounds the last point with a safe lead and again wins the flag, proving she can carry sail in a blow.

	Start.	Finish.	Elapsed.
Imp.....	2 20 32	3 04 50	33 28
Tacony.....	2 25 25	3 05 30	40 05
Topsy.....	2 26 08	3 07 05	41 57
Safford.....	2 27 20	3 19 45	52 25

Capt. Kendall was out in King Fisher to assist if needed. On Feb. 11 the regular Saturday regatta was started with a light southerly wind blowing. Lucy B., with her old schooner rig on, started ahead, Imp bringing up the rear, the long battle making the silk sail sit firmly. Around the first turn they go, then harden the sheets for a dead beat to the first stake. Disston had Capt. Cook to tend sheet and give pointers, and hoped his favorite sail would bring the Dennis to the windward stake first and win the flag again; a vain hope, as all he gained going to windward was lost running off. Lucy B. caught her favorite puff and came in second, Imp winning the champion flag again:

	Start.	Finish.	Elapsed.
Imp.....	2 11 18	3 39 19	1 28 01
Lucy B.....	2 09 10	3 40 25	1 31 15
Dennis.....	2 09 46	3 41 45	1 31 59
Topsy.....	2 10 22	3 43 41	1 33 19

American Model Y. C. Trophy.

A COMMITTEE of the American Model Y. C., Messrs. Geo. W. Townly, Herbert Fisher and F. Nichols, has prepared the following rules to govern the American Model Y. C. trophy, just established by the club:

ARTICLES OF AGREEMENT.

Article I. A trophy to be open to all recognized model yacht clubs of the United States.

Article II. The trophy must be sailed for on July 4 of each year when challenged for.

Article III., Sec. 1. All challenges must be received by the secretary of the club holding the trophy sixty days before said date, as per Article II. Sec. 2. Such challenge must be accompanied by a voucher as to the existence of the challenging club, this not being necessary if having previously challenged for trophy.

Article IV. In case no challenge be received as per Article III., Sec. 1, the holder of the trophy shall not be subject to challenge until the following year.

Article V., Sec. 1. In case of disbandment of any club holding trophy the said trophy is to revert to the donors, subject to challenge, as per Article III., Sec. 1. Sec. 2. In case of disbandment of donors and having said trophy in possession the trophy shall be placed in care of some yachting journal to be perpetuated.

Article VI. Any club holding the trophy shall be disbanded after the donors have ceased to exist shall place the trophy as per Article V., Sec. 2.

Only one yacht shall represent a challenging club. Owners only must sail their yachts in all races for trophy.

Length—Yachts shall not be less than 35in. or exceed 45in. on l.w.l. Time Allowance—Time allowance shall be as follows: The larger yacht shall allow the smaller yacht time, in which the square root of actual sail area, plus the length of yacht on l.w.l. divided by two, this result to be corrected length, it to be taxed at the rate of ten seconds per inch over a mile course.

Objections—If any objection be made as to the sailing of any yacht in a race, such objection must be made to the regatta committee as soon as the race is finished or otherwise it will not be recognized.

Limit of Time—Limit of time for making a race over a mile course shall be fifty minutes.

Course—All races shall be sailed over a triangular course of one-half mile, going over the course twice, making in all one mile. If it is not practicable to obtain such a course, a course to windward and return of same distance shall be in order. The mark buoys in this case are not to be less than one-quarter of a mile nor exceed one-half a mile apart.

Order of Starting—All yachts shall be started a reasonable distance in rear of starting line and cross said line by the aid of their sails only.

Buoys—The setting of stakes or buoys and the direction in which all yachts shall sail around said marks shall be left to the discretion of the regatta committee. They must notify all contestants before the start is made.

Starting—There shall be a preparatory signal given and shortly after that the signal for starting shall be given.

Time Limit—A limit of two minutes shall be allowed for yachts to cross the starting line after the first yacht has crossed.

Time—The time of each yacht is to be taken as she crosses the line within the time limit. The time of all yachts that cross after the time limit shall be taken as having started at the expiration of the limit.

Fouling—Should any two or more yachts foul during a race such race must be sailed over again unless in the opinion of the regatta committee the yachts did not stand a fair chance to win the race.

Dead Heats—Should any two or more yachts reach the finish line foul of each other in advance of all others, it shall be considered a dead heat for those yachts, and they only shall sail over again, provided either are winners under the rules.

Right of Way—Yachts on port tack must give way to those on starboard tack. Also yachts on a wind must tack to avoid those down the wind. (This for obvious reasons.)

Pushing or Towing—When yachts are sailing a race no person or persons shall be allowed to push or tow any such yachts, either when sailing a leg, going about or down the wind, and if any person push or tow said yachts, such yachts shall be ruled out of the race.

Numbers—Numbers supplied by the regatta committee must be fastened to the fore and aft ends of the mainsail, and of sufficient size to be seen plainly 100 ft. distant.

Referee—The decision of the referee shall be final.

Navahoe.

The close secrecy which has attended the building of the Carroll cutter at Bristol was not in the least relaxed on the occasion of her launch, which took place on Saturday last. The statement had been circulated during the week that the launch would take place on Monday morning, but in spite of it and of the heavy snowstorm which prevailed on Saturday the representatives of several daily papers were on hand. The doors of the shops were closely guarded as usual, since the yacht has been begun, but as the jurisdiction of the Herreshoff Manufacturing Company does not extend over the high seas of Narragansett Bay, the ubiquitous photographer and reporter was early aloft in boats, and several views of the yacht were obtained as she left the ways and laid aloft afterward.

Mr. Carroll had of course been notified, and had come from New York to Providence on Friday night with his father, Hon John Lee Carroll, his sister, Miss Helen Carroll, who was to christen the yacht, and Mr. Philip Schuyler, uncle of Mrs. Carroll. The party, and also Captain Charles Barr, were to take the first train from Providence to Warren, leaving at 7:45, but on account of the heavy snow the train did not start, and they were detained at Providence until 9 A. M. When they reached the junction at Warren at 9:45, there was no locomotive to take the Bristol car over the four mile branch, and sleighs were obtained to avoid further delay.

Meanwhile the yacht had been held until the tide was on the ebb and it was evident that if not launched at once there might be a delay of some days, so at 9:10 the shores were tripped and the yacht slid rapidly into the water without the formality of a christening. There were present beside Mr. N. G. Herreshoff, who as usual superintended the launch, only a few of the Herreshoff family, and Mr. Gouverneur Kortright. The following description is given by Mr. W. E. Robinson, of the Boston Globe:

"Now that the boat is afloat a little description of her is in order. The dimensions given are not warranted as correct, but they approximate closely enough to the true dimensions to show something of what the boat really is.

"Her principal dimensions are 190ft. over all, 84ft. waterline, 23ft. beam and 13ft. 7in. draught. In model she is an improved Wasp, with rather more displacement in proportion to her size, and less depth of keel. She has the same long overhangs as the 46-footer, the same low quarters and full body both forward and aft, and the same abundance of hollows in the water lines. Her midship section is, however, somewhat larger, and the floor has more dead rise, while at the same time the bow is a bit sharper.

"In fact both in midship section and lines the boat is rather a return to the Dilemma model as being still the fastest the firm have in mind. "The sternpost has only a normal rake perhaps 30°. The keel from the heel of the sternpost to the forefoot is about 45ft. long, and the slot for the centerboard is placed well forward in it. The keel is widest in the centre, being about 3ft. in width there, and tapers away to about a third of that at each end. The lead ballast can, therefore, be stored inside at the lowest possible point and to the best advantage.

"The line of the stern takes an easy sweep from the forefoot to the waterline and thence curves upward in an equally easy sweep until it meets the line of the deck. The effect is that of a long bow, but in reality every foot of that forward overhang is of value when the boat is in a seaway.

"The run is a duplicate of that of the Wasp, but the stern is elliptical instead of square and the extreme end is much thinner. A look at the midship section shows that its line comes straight up from the bottom of the keel for the first 4 or 5 ft., and then makes a slight turn at the garboard into the floor. The floor has a good deal of dead rise and it straight up to the turn of the bilge. This turn is an easy one and finishes in the straight topside common to about all the Herreshoff boats.

"The beam at the waterline is about 2ft. less than the extreme beam, and the effect of the midship section is that of power as well as ease. The sheer of the boat is a very good one, and its effect is heightened by the gradual tapering of the rail from a foot or more at the bow to nothing at the steepest part of the stern.

"Taking the boat as a whole it may be said that she shows power and speed in every line. She is a clean and clever model, right in line with the other Herreshoff productions, and will prove a hard nut for any other 84-footer to crack.

"Her construction is of the best and the plating is very smooth and even. She will be handsomely finished inside and out much more of a cruiser, so far as interior fittings are concerned, than probably any others of her class on this side of the water. The carved work for the cabin is very elaborate and was made by specially skilled workmen in New York.

"The boat's centreboard will be of steel, not over 14in. in thickness, and will not be as large as the wooden board of the Volunteer, which was 30ft. long. It will not be raised by hydraulic power, but by an improved windlass. The writer does not make a weight, but it is evident that it does not play so important a part in the boat's stability as would a hollow board of greater thickness loaded with lead.

"The spars for the boat are on the dock at Bristol, and The Globe has their lengths in its possession, but does not make them public on the ground that the sail area and not the dimensions and general form of the boat is the most important thing, and that since international racing is in vogue, yachtsmen and the public generally should let a most natural curiosity rest for the sake of victory.

"The Herreshoffs have to all appearances turned out a boat for Mr. Carroll which will be fast and able, and swing aloft a bigger area of canvas than even the famous Volunteer."

Corinthian Mosquito Fleet.

THE Corinthian Mosquito Fleet, with which was amalgamated last summer the Corinthian Navy, has now an active membership of 100 and is working to make the most of what promises to be a prosperous season for all yacht clubs. Efforts are being made to secure a permanent station and house on the Sound so as to bring the members more closely together. Three regattas will be held, and probably more. The officers of the fleet elected at the annual meeting this month are: Com., Dr. Frank S. Grant; Vice-Com., T. T. Taber; Sec., C. Chamberlain; Treas., J. A. Stow; Executive Committee, F. S. Grant, T. T. Taber, C. Chamberlain, J. A. Stow, W. P. Stephens, Oswald Sanderson, Harold S. Forward; Committee on Admissions, Charles A. W. Sleigh, Theodore Regatta, Jr., W. C. Burt; Regatta Committee, C. M. Connelly, chairman; F. B. Jones, S. A. Cooper; Measurer, John Hyslop.

A New 80ft. Schooner.

THE addition of a second steel schooner to the 80ft. class promises to make it a dangerous rival for the 90ft., with Marguerite and Ironquels, the Maxwell boat, and still another. The latest is now building by Harlan & Hollingsworth from the designs of Mr. A. Cary Smith, the owner being ex-Com. G. H. B. Hill, of the Seawanhaka C. Y. C. She will be of the general type of Ironquels, but deeper, 10ft. over all, 21ft. fin. beam, 10ft. draft, with a centerboard and a large sail plan, though intended for the usual summer work of mixed cruising and racing.

YACHT NEWS NOTES.

In an interesting article on "Yachting Prospects," the *National Observer* of Jan. 28 discusses the chances of Valkyrie against the other 85-footers building, and alludes to the erroneous statements which have been circulated that the best of the quartette will be chosen to cross the Atlantic and compete for the America cup, should Valkyrie be beaten at home. Of course nothing of the kind could possibly be done. The club which is now with a perfect right to challenge her could be substituted. An owner might decline to follow up a challenge, but even that would be an unsatisfactory contingency, and lay the challenger open to taunts of pusillanimity, if nothing worse; but the idea that the challenger could name one vessel and run another is a proposition too absurd to express in words. The Britannia, the new Revere, and the Glasgow vessels will try the Valkyrie and find out her worth. The club which is now with a perfect right to challenge her could be substituted. An owner might decline to follow up a challenge, but even that would be an unsatisfactory contingency, and lay the challenger open to taunts of pusillanimity, if nothing worse; but the idea that the challenger could name one vessel and run another is a proposition too absurd to express in words. The Britannia, the new Revere, and the Glasgow vessels will try the Valkyrie and find out her worth. The club which is now with a perfect right to challenge her could be substituted. SAIL PLAN OF EGRET.

DETAILS OF GOOSENECK, EGRET, $\frac{1}{8}$ FULL SIZE.

SINGLEHANDER EGRET. DESIGNED BY H. K. WICKSTEED, ESQ., FOR DR. J. F. WRIGHT, 1891.

A company has recently been organized in London under the title of the World's Water Show and Maritime Exhibition Co., for the purpose of giving an exhibition of everything connected with boating, water sports and the sea. The Arena, formerly used for the London exhibition of the Wild West Show, has been secured and remodelled; a large

Notes from Delaware.

Reading Shooting Association Tournament.

The second "spring" tournament of the Reading (Pa.) Shooting Association, held on Feb. 14, 15 and 16, was an enjoyable and successful affair throughout. The new grounds of the association, situated within the hamlet track at H. C. W. Matz's Three Mile Horse, at Shillington, about four miles from Reading, are well adapted for the purpose and had been placed in splendid condition for this shoot, but the heavy snow and rain of Monday and Monday night transformed it into a quagmire, and Harry Matz was obliged to use several loads of lumber in improvising walks and platforms.

The weather Tuesday, the opening day, was delightfully mild and the attendance was so large that the grounds were the scene of a grand display. The following were the winners: Harry Matz, E. D. Miller, G. E. Greiff, Greener N. Angar, Parker E. D. Miller, Wilkes Barre W. K. Park, American Wood Powder Lindsey, Recoll Pad W. T. Tredway, David Brothers, W. S. Garvin, W. S. Hothersall, of Philadelphia; H. E. Buckwalter, Royer's Fork; Howard Gasper, New York city; Trego from Manheim; Johnson from Royer's Fork; Rehrig from Williamsport; Giechter from Little Kill; S. G. Spots from Birdsboro.

Everybody was in a good humor and in condition for shooting, the result being that close to 5,000 targets were thrown. There were ten events on the regular programme, targets costing 3 cents each, of which 1/2 cent per target was paid as average money; 25 per cent. to highest average, 25 per cent. to next best and 25 per cent. to third best and 25 per cent. to the shooter having the lowest average in all regular events. First average was won by Harry Matz, 94.28 per cent., Neaf Angar got second on 93.57 per cent. and H. E. Buckwalter got third on 92.14 per cent. The scores of the day will be found below:

The First Day's Scores.

No. 1, 10 singles, \$1 entry:					
Matz.....	1010110110-6	Courtney.....	100111111-8

On Wednesday the sun shone all day but there was a dampness in the atmosphere that made it uncomfortable to stand about unless well bundled up. There was quite an accession to the ranks, among the new comers being Wm. H. and Jas. Wolstencroft of Frankford, R. T. Clayton of Tamaqua, Wm. G. Clark of Altoona, Sullivan of Harrisburg, Cleaver of Camden, Del., Dr. Bell of Altoona, W. J. Ives of Norfolk, Va.; McMullan, Mahan, Clark, Pa.; and Thomas of Cleveland, O. The averages for the day were won as follows: First, Howard, 94.28 per cent.; second, McMurchy, 94.28 per cent.; third, Cooper, 90.71 per cent.; lowest, David, 73.57 per cent.

Forester Winter Annual.

DAVENPORT, Iowa, Feb. 16.—The annual winter tournament of the Forester Gun Club of this city, held Feb. 14, 15 and 16, was fairly attended. The weather on the first day was very disagreeable, as it rained most all day. The last two days it was clear and cold, with a stiff wind to help the birds and targets along. The live birds were a fine lot and in the double bird shooting were very difficult to kill in a 50yd. boundary. Among the shooters in attendance were Messrs. R. O. Helges, Chicago; Wm. Harbaugh, R. O. White and Barr, Geneseo, Ill.; G. W. Rexroat, Virginia, Ill.; W. B. Leffingwell, Clinton, Ia.; Thos. Laffin, Milan, Ill.; H. J. Wilson and Shadboldt, Emmetsburg, Ia.; Wm. Meyers, St. Joseph, Mo.; C. W. Budd, Des Moines; Gilman, Davis, Racster, Fish, Bodenstein, Hofer, Samuelson, Harms, Schmidt, Grant, Brannagan, Lewis, Rushman, Borches and Swift, of Davenport. The office work was done by Mr. Kerker in first class style. The special matches, Gilman and Davis vs. Esterly and Shadd, Gilman and Racster vs. Esterly and Shadd—were very exciting and close, Esterly and Shadd winning two out of the three. Following are the scores.

C. W. Budd.

First Day.

Ten singles, entrance \$1: Budd 8, Shadd 8, Esterly 9, Harbaugh 8, White 7, Kemper 8, Rex 7, Barr 7, Laffin 8, Myers 6, Gilman 5, Davis 8. No. 2, 7 single live birds, entrance \$7: Esterly.....1123112-6 Myers.....0121122-6 Shadd.....1210111-6 Harbaugh.....1201100-4 Kemper.....1210111-6 Davis.....0002000-1 Gilman.....1111110-5 Helges.....2112221-7 Budd.....2111111-7 Rex.....1122111-7 Barr.....1112301-6 Laffin.....2111111-7 White.....1110101-4 Schmidt.....0001100-3

No. 3, 6 pair targets, entrance \$1.50: Esterly 6, Budd 11, Barr 9, Gilman 8, Shadd 8, Helges 9, White 8, Davis 5, Harbaugh 7, Rex 9, Schmidt 7, Myers 6. No. 4, 6 single live birds, entrance \$6: Esterly.....101202-4 Shadd.....100121-4 Budd.....1232121-6 Gilman.....1212111-6 Harbaugh.....100001-2 Hofer.....21011-5 Barr.....011000-2 Kemper.....212010-4 Helges.....122220-3 Rex.....121101-5 Meyers.....121000-3 Scott.....121101-5

No. 5, 15 single targets, \$1.50: Esterly 13, Shadd 11, White 14, Harbaugh 12, Rex 13, Budd 15, Hofer 12, Bodenstein 13, Kemper 11, Schmidt 15, Helges 15, Barr 9. No. 6, 8 single live birds, \$8: Gilman.....1101211-7 Budd.....1212120-7 Scott.....1102120-6 Davis.....1230110-5 Rex.....2011211-7 Hofer.....1112111-8 Harbaugh.....1121112-8 Helges.....000110-3 Esterly.....2212110-7 Helges.....1111021-6 Laffin.....1110121-6 Shadd.....1112021-6 Schmidt.....1012110-6 Myers.....1112021-6

Extra No. 1, 10 targets, entrance \$1: Davis 5, Esterly 6, Kemper 8, Rex 9, Harbaugh 6, Greswold 5, White 9, Shadd 8, Bodenstein 9, Barr 5, Schmidt 8, Helges 10, Budd 10, Gilman 4, Hofer 9. Extra No. 2, 7 single live birds, \$6: Gilman.....1200120-4 Harbaugh.....1200121-5 Esterly.....1011121-6 Bodenstein.....1210010-4 Davis.....0111121-6 Scott.....1210010-4 Hofer.....1202221-6 Myers.....1211117-7 Schmidt.....1202221-6 Budd.....1221212-7 Shadd.....1101121-5 Hofer.....110211-6 Rex.....1121221-7 Barr.....2112121-6 Laffin.....110101-5

Extra No. 3, 9 singles, entrance \$1.50: Budd 12, Helges 15, Rex 14, White 11, Harbaugh 10, Shadd 12, Hofer 13, Esterly 11. Extra No. 4, 10 targets, unknown angles, \$1: Helges 9, Harbaugh 5, Rex 10, Budd 8, Esterly 2, White 7, Shadd 10, Bodenstein 9. Extra No. 5, 6 live birds, \$5: Esterly.....111111-6 Myers.....222011-5 Shadd.....100212-4 Gilman.....121211-5 Budd.....112212-5 Rex.....121211-6 Hofer.....111000-3 Scott.....111002-4 Barr.....21210-5

Second Day.

No. 8, 7 single live birds, \$7: Budd.....111212-7 Bodenstein.....1101122-6 Harbaugh.....0110221-5 Myers.....2221010-5 Shadd.....120110-5 Hofer.....121111-7 Rex.....211022-5 Esterly.....202011-5 Barr.....212121-7 Helges.....021201-5 Davis.....0111001-4 Lamelson.....1101001-5 Gilman.....0110101-4 Harms.....2001002-3 Racster.....1022121-6 Schmidt.....1212110-6

No. 9, 15 single targets, \$3: White 6, Budd 15, Shadd 8, Esterly 13, Rex 15, Hofer 13, Helges 12, Bodenstein 13, Harbaugh 13, Samuelson 9, Grant 8, Schmidt 11. No. 10, 4 pair live birds, \$6: Brannagan.....01 10 01 00-3 Budd.....11 11 10 00-5 Rex.....10 11 00 11-5 Davis.....11 00 00 11-4 Gilman.....10 10 00 10-3 Hofer.....11 00 11 10-5 Esterly.....11 11 00 10-5 Myers.....00 11 11 10-5 Harms.....00 00 10 10-1 Helges.....10 11 11 01-6 Barr.....10 11 00 00-3 Shadd.....10 00 01 00-2

No. 11, 10 targets: Rex 10, Budd 9, Harbaugh 6, Shadd 8, Helges 8, Griswold 6, Bodenstein 8, Schaefer 6, Hofer 8, Rogers 4, Esterly 9, White 10, Laffin 10, Barr 7, Schmidt 5, Laffin 5.

No. 12, 6 single live birds, \$5: Budd.....12111-6 Emerson.....202121-5 Gilman.....11011-5 Rogers.....001010-2 Helges.....101112-5 Harms.....01202-4 Esterly.....02100-3 Barr.....111011-5 Shadd.....212102-5 Harbaugh.....11021-4 Bodenstein.....112010-4 Davis.....010010-2 Rex.....111222-6 Ferguson.....210120-3 Meyers.....10121-5 Laffin.....122102-5 Hofer.....10110-4 Schmidt.....10210-4

Extra No. 1, 9 singles, 3 pair targets, \$1.50: Budd 14, White 13, Barr 20, Laffin 12, Harbaugh 7, Helges 13, Wilson 12, Shadd 10, Schaefer 12, Rex 12, Grant 11, Ferguson 9, Schmidt 10, Rogers 8, Hofer 11.

Extra No. 2, 3 pair live birds, entrance \$5: Helks.....11 01 11-5 Rex.....10 11 10-4 Esterly.....01 10 11-4 Myers.....10 01 11-4 Gilman.....01 10 11-2 Harms.....11 00 01-4 Davis.....11 01 01-5 Budd.....10 01 01-5 Bodenstein.....11 01 11-5 Laffin.....10 11 11-5 Harbaugh.....00 10 10-2 Barr.....11 01 11-5 Shadd.....01 00 11-3 Ferguson.....00 10 00-1

Extra No. 3, 20 targets, \$2: Esterly 17, Helks 20, Shadd 10, White 12, Schaefer 18, Rex 18, Harbaugh 14, Budd 19, Bodenstein 19, Schmidt 15.

Extra No. 4, 6 live birds, \$6: Gilman.....220120-3 Rex.....220120-3 Shadd.....102312-5 Esterly.....101111-5 Davis.....120011-4 Budd.....102301-4 Bodenstein.....022112-5 Schmidt.....001211-4 Myers.....202200-3 Bodenstein.....121111-6

Extra No. 5, 9 singles and 3 pairs targets, \$1.50: Rex 10, Shadd 8, Helges 9, Budd 12, Esterly 8, Bodenstein 11.

Third Day.

No. 13, 10 single targets, \$1: Budd 9, Gilman 6, Davis 6, Rex 10, Shadd 5, Esterly 8, Roessler 6. No. 15, 15 targets, entrance \$2: Esterly 13, Rex 14, Budd 13, Lewis 13, Davis 8, Shadd 13.

No. 16, 6 single live birds, \$6: Gilman.....111230-5 Esterly.....111230-5 Shadd.....102111-6 Rex.....101211-6 Davis.....210001-4 Racster.....111210-5 Shadd.....00111-4

Hurlingham Rules.

RULES of the Hurlingham Gun Club and the Gun Club (London), blue and gold, vest pocket size. New edition, price 25 cents.

Enoch D. Miller promises to have some corking good pigeons for the 25 live bird sweep at Springfield, N. J., on March 16. The entries will be limited to 20 contestants at \$20 entrance per man.

Coney Island Rod and Gun Club.

On account of the sickness of several of the members of the Coney Island Rod and Gun Club, only 18 were present at the regular monthly shoot of the club at Woodlawn Park, on Wednesday, Feb. 15. Each member competed at 7 birds, club handicap, modified Hurlingham rules, for the Eppig diamond badge and extra prizes. C. L. Meyer won the badge and first money, outshooting J. Schliemann and Dr. Little. A good race took place between the ten that tied for the second money: C. Detlefsen and C. Plate out-shot all the others on the tenth round and divided. W. Lair and S. Northridge divided the third money with 5 each. F. Ibert took the fourth with 4 and Dr. Norton the fifth with 3. The scores: F. Pfander.....1111120-6 J. E. Lake.....1111012-6 W. Lair.....2021210-5 F. Ibert.....0201120-4 S. Northridge.....0111101-5 C. Detlefsen.....1210111-6 Dr. Norton.....0021020-3 D. Lynch.....0102000-2 W. Scheelge.....2110111-6 C. J. Meyer.....1111111-7 J. Cottier.....1221201-6 M. Elsassner.....2011221-6 J. Schliemann.....1211123-7 Dr. Little.....1111123-7 C. Engelbrecht.....1210211-6 H. Blattmachner.....0221111-6 L. Eppig.....0121212-6 C. Plate.....1110112-6 Referee and scorer, C. A. Dellar.

New Utrecht Rod and Gun Club.

The snowstorm did not prevent some of the members of the New Utrecht Rod and Gun Club from holding their shoot on Saturday at Woodlawn Park, Gravesend, for the live bird trophy, a diamond badge, the best averages to count at the end of the season. Nine competed at ten birds each, modified Hurlingham rules. M. Van Brunt, D. C. Bennett and A. A. Hegeman got ten straight for first and J. B. Voorhees the second with nine: M. Van Brunt.....112321112-10 A. A. Hegeman.....111121121-10 C. M. Meyer.....112321222-8 J. Koster.....11022112-8 J. B. Voorhees.....11112122-9 J. Collier.....111220200-6 D. C. Bennett.....121221211-10 J. Shields.....1102101100-6 C. A. Sykes.....121212101-8

Answers to Correspondents.

R. H. C., Providence, R. I.—The proposed law for the protection of flags has not yet been passed.

W. J. T., St. Paul, Minn.—See FOREST AND STREAM Yacht Race Extra for 1887. Priscilla was built in 1885 and Atlantic in 1886 in New York.

F. D. G., Old Mystic, Conn.—The estimate of FOREST AND STREAM Cruiser included the sail. Brass may be used in place of steel for rudder.

J. J. O., Burlington, Iowa.—Aluminum is so much weaker than steel that it is probably unsuitable for the purpose you suggest. We do not know of it being so used.

M. and A., Oakville, Can.—Verdigris has long been used as a bottom paint, but is inferior to many other patented paints. It is not used on the better class of yachts.

L. C. W., Gouverneur, N. Y.—Ammonia is commonly used to remove varnish, the wood being moistened with it and quickly scraped clean. Strong lye is not suitable for a fine boat.

J. N. M., Lancaster, Pa.—The centerboard is the more convenient; a keel to be effective must be so deep as to interfere with beaching, housing and sleeping on board. 2. The larger board may be 3ft. long, and placed with after end 5ft. 6in. from stern; the smaller board may be 15in. long, and placed to give a clear space of 6ft. or more between the two boards. 3. Two sails of 70 and 35ft. will make a good rig. The center of effort of the sail plan must be adjusted to correspond with the center of lateral resistance of the canoe with boards down. Full details of sails will be found in the FOREST AND STREAM of Oct. 17, 1889, and April 19, 1888, also in "Canoe and Boat Building for Amateurs."

For Over Quarter of a Century

Travelers have recognized in the Chicago & Alton the leading railroad in the West. The secret of this popularity with the traveling public is constant progress. Every device calculated to increase the "Alton's" superiority over every rival line, as well as to increase the safety of its patrons, finds a place as soon as its practicability is satisfactorily proven. The Chicago & Alton is the best line between Chicago and Kansas City, Chicago and St. Louis, and St. Louis and Kansas City. It is also the popular line from Chicago, Bloomington and St. Louis to Denver and all points west, and is recognized as the best line from Chicago or Bloomington to Hot Springs, Ark., "the world's greatest sanitarium." Your local ticket agent sells tickets via the Chicago & Alton. Ask him for them. James Charlton, General Passenger and Ticket Agent, Chicago, Ill.—Adv.

MEPHISTO

331-333 BOWERY, BET. 2d & 3d STREETS.

NEW YORK, JULY, 1892.

Our "ONDINA" all Havana tobacco NEW YORK made cigar, our world-renowned "MEPHISTO" and all other finer grades of cigars made by us are superior in many ways to those made in the tropics. In addition to all the tobacco markets of the earth to which we have access, New York City always commands the best of every material as well as labor. OUR New York factory is a perfectly ventilated, clean abode. No sort of uncleanness is permitted, and our cigars, therefore, are not liable to contain matters other than tobacco, and smokers may confidently and safely use our cigars, not needing a mouth-piece or a cigar holder to prevent unpleasant consequences. To protect consumers from imposition, every "MEPHISTO" cigar is banded.

A BLANK DAY.

BUT IT WAS NOT ON THE

ILLINOIS

CENTRAL

I.C. R.R.

ROUTE

CENTRAL

RAILROAD.

The sportsman of the North often has a blank day. Indeed, no Northern shooter knows much about shooting until he has shot in the South, where the superb natural conditions have left the game in undiminished plenty in the covers.

Don't Go After Bear

to the Rockies. Go to the wide river bottoms of Mississippi or Louisiana and you will get one.

Don't Go After Turkeys

to the Great West, but to the Great South, in Mississippi and Louisiana, where the unbounded woodlands hold abundance of these noble birds.

Don't Go After Ducks

in the North, and work hard for days for a dozen ducks. Go South, to Louisiana and Texas, and learn what wildfowl shooting is.

The Quail, Woodcock and Snipe

shooting of the South is such as the Northern hunter never dreamed of. A genial climate, a pleasant people, a six months open season, and birds until you want no more.

The Illinois Central Road runs direct to all this country, and is the only road that does.

Hotels for Sportsmen.

WHERE TO FIND GOOD QUAIL SHOOTING.

There is probably no place in North Carolina where better quail shooting can be had than at Mt. Airy, 70 miles from Greensboro via Cape Fear & Yadkin Valley R. R., or where as good accommodations can be found for the huntsman and his family as at Renfro Inn.

Renfro Inn is a modern, new hotel, located amid beautiful scenery and in a most healthful climate. The hotel is thoroughly equipped.

I have personally hunted in nearly every county in North Carolina, and for continuous shooting early and late I know of no place equal to this immediate section.

Having secured the exclusive privilege of the best grounds for the guests of the Renfro Inn, I feel assured that all sportsmen who desire good shooting and good hotel accommodations will find no better in the South.

I should be glad to correspond and give further particulars.

Thirty-six Pages and Supplement.

ANIMAL PORTRAIT SUPPLEMENTS.

WE print to-day the third of a series of five American animal portraits by Mr. Ernest E. Thompson. These are given as full page supplements, with the first issues of the months as follows:

Jan. 5.—THE WOLF.
Feb. 2.—THE WHITE GOAT.
March 2.—THE COYOTE.
April 6.—THE ANTELOPE.
May 4.—THE FOX.

The dates of the former series (of which copies can be supplied) are as follows: Sept. 8, 1892—The Panther. Oct. 6—The Ocelot. Nov. 3—The Canada Lynx. Dec. 1—The Bay Lynx.

THE COYOTE.

THEY call him the sneak of the plains, but the name does him an injustice. He is a sneak, it is true, but it is from necessity, not from choice. Who would not cower and hide and always try to keep out of sight if every man's hand was against him. The coyote leads a hard life; he is often hungry and still more often scared, and he depends for safety altogether on his speed and on his faculty for shunning observation.

The coyote, or prairie wolf, has not so wide a range as that of the gray wolf. To make up for this, however, he is more numerous in the country he inhabits than is his larger cousin. The prairie wolf is equally abundant on the plains of the Saskatchewan and on the dry cactus-covered wastes of northern Mexico. East and west he is found from the Mississippi to the Pacific coast.

In the buffalo days these small wolves preyed to a great extent on aged and crippled buffalo, and were always found on the outskirts of the herd. To-day they do much damage to the cattle and sheep of the stock grower of the Western plain, but their food consists chiefly of the smaller animals of the prairie, such as rabbits, prairie dogs and gophers. Of course they do not disdain birds, and destroy great numbers of grouse and small birds, as well as their eggs.

The coyotes prefer the plains to the mountains and are more often seen in open than in wooded country. They are gregarious in habit, and are often seen in companies of eight, ten or even more. Since the destruction of the buffalo, however, the large bands which used to collect are seldom seen.

Few creatures display more acuteness than the coyote. Its great speed gives it an advantage over almost any animal it may choose to pursue, but one would hardly think that this would enable it to overtake so swift a creature as an antelope. The coyotes do, however, destroy a good many of these graceful animals; not, by straightaway pursuit, but by the intelligent manner in which they relieve each other. We have often seen them engaged in such hunting. A number of coyotes scatter themselves out over the plain, while one sets himself to chase the chosen prey. The one that has started the race runs as hard as he can for a short time, trying to push the antelope to its best pace. The latter usually circles, and after a time a fresh wolf relieves the tired one, and after hav-

ing run as hard as he can until exhausted, is in turn relieved by another. So the chase is kept up until the wearied antelope can be easily overtaken and pulled down.

Nothing about the coyote is better known than his voice. This consists of such a combination of whines, barks, yelps and growls that a single animal baying the moon from the top of a hill near camp, will to the unfamiliar ear convey the impression that a hundred coyotes are indulging in a free fight.

Notwithstanding that so many of our large wild animals have been exterminated over much of the Western country, the coyote still remains a familiar feature of the landscape, wherever the land is not fenced off into farms. To us he always seems a link connecting the present with the past, and we should be sorry to have him disappear. So, even though he kills some sheep and calves, we say, long life to the little coyote.

A DELMONICO WOODCOCK HUNT.

LAST week we suggested that it might be profitable and edifying and instructive to give the public some notion of how game law cases are fiddled with and misconducted in the District Attorney's office in this city. There is perhaps no more effective way of doing this than by a plain, unvarnished relation of the experience of the District Game Protector on the occasion of one of his visits to that office.

On Oct. 25 of last year, Dr. Kidd came to New York in response to a telegram from the FOREST AND STREAM telling him of a quantity of quail unlawfully offered for sale by a poulterer. After attending to the quail man, the Protector and the present writer visited the office of District Attorney Nicoll to find out something about the notoriously delayed Delmonico woodcock case. What follows is a transcript from a memorandum made at the time, as taken down by the FOREST AND STREAM's stenographer:

THE CLERK SAYS THE CASE IS DEAD.

Oct. 25, 1892.—We went to the office of the Clerk of the City Court and Dr. Kidd asked for information about the Delmonico case. The clerks talked with one another about it and evidently recognized it as an old friend. We were told to look on the calendar. Failing to find it on the new calendar we were referred to the old one, and having obtained the old number (3,941) we were then advised by the clerk that the case had not been placed on the new calendar because the District Attorney had failed to file a new note of issue. We asked what had become of it, if it was not on the calendar? The clerk advised us that it was dead. The clerk said that District Attorney Nicoll had had the notice requiring such a filing "under his nose every day and he could not have forgotten it." We then repaired to the office of the District Attorney.

THE ATTORNEY IN CHARGE THINKS THE CASE IS "KNOCKED OUT."

While we were waiting in the ante-room Col. Townsend, the Assistant District Attorney, in whose charge the Delmonico case is, accosted Dr. Kidd and this conversation ensued:

"Why, Kidd, are you here again?"

"Yes, I have come down to see about the Delmonico case. What is the matter with it?"

"Didn't you know that there was new legislation that has knocked us all out on that?"

"What legislation?"

"Why, the new game law, doesn't it?"

"Oh, no," replied Dr. Kidd, "there is a saving clause in that, so we are all right. Suits brought under the old law are not affected by this new law."

"Is that so?" said Col. Townsend. "Well, I will see you again."

DISTRICT ATTORNEY NICOLL SAYS IT IS ON THE CALENDAR.

When we went into the office of District Attorney De Lancy Nicoll, Dr. Kidd explained that he had come to inquire about the woodcock case. "That is on the calendar," said Mr. Nicoll, "and will be reached as soon as possible. These are not preferred cases, although some d—d newspapers have been slandering me, and I have had half a dozen letters from some editor asking about the case. It is not preferred, whatever they may say, and we have no power to advance it. It will be tried as soon as it can be reached."

"But," Dr. Kidd explained, "you say it is on the calendar. They told me the opposite at the clerk's office. They say it is not now on the calendar."

Hereupon Mr. Nicoll rang for his chief clerk, Mr. Unger, and Mr. Unger also asserted that the case was on the calendar. "But," said Dr. Kidd, "they told me at the clerk's office that no note of issue had been filed and the case was dead."

"Is it necessary to file notes of issue?" asked the District Attorney. "Yes, sir," said Mr. Unger, "I filed one and the case must be all right."

Dr. Kidd, however, insisted that he had been told that it was dead; and Mr. Nicoll directed Mr. Unger to go to the clerk's office and ascertain the facts.

RESTORING THE CASE TO LIFE.

On the way out, Assistant District Attorney Townsend was seen and invited to go along. He excused himself, however, and the protector told him he would be right back to see him. On the way to the clerk's office Mr. Unger asked some one else whether it was necessary for the District Attorney to file notes of issue in such cases. He was told that it was necessary. When we reached the clerk's office Mr. Unger asked the clerk if it was too late for the District Attorney

to file a new note of issue in the Delmonico case. He was advised that it was not too late; and Dr. Kidd volunteered to stay with him until it was filed and the case was put on the day calendar.

It then became necessary to go back to Col. Townsend's office to secure the names of the defendants and the date of their answer. Col. Townsend, however, was not found. Mr. Unger promised that, if the Doctor would go back to Newburgh, he would follow the matter up and write to him the next day that it had been put on the calendar. As Col. Townsend's overcoat was observed hanging in the room, the Doctor was exhorted by his companion to wait. His patience was rewarded. The Colonel appeared, and after some difficulty found the papers in one of his pigeon holes. They were then taken down to Mr. Unger, but by this time it was so late that that gentleman protested that it would be impossible to complete the work of filing the note of issue to-day. He again promised that he would give the matter his personal attention; and would write to the protector on Wednesday, assuring him that the work had been done and a date had been set for the trial of the case.

It is to be said for the well-meaning Mr. Unger, who appears to have more than his share of worldly woes in trying to keep track of these elusive birds, that his promise was faithfully kept. The note was filed, a new number given, and the Delmonico woodcock case was hung to the tail of the calendar, where, if it has not dropped off, it is suspended unto this day—

There was an old woman lived under the hill,
And if she's not gone she lives there still.

THE "NESSMUK" MEMORIAL.

INTEREST in the memorial is widespread, and it speaks volumes for "Nessmuk" that his memory is so warmly cherished by so many men in so many walks of life. The fund subscription is steadily growing, and to-day we can report that the minimum sum named bids fair soon to be reached.

While it is a satisfaction to record this substantial assurance of success, we have the added pleasure of making a most important and most gratifying announcement in relation to the memorial. With gracefully tendered co-operation, Mr. George T. Brewster, the sculptor, recently volunteered to design the monument, and he has submitted plans which have been accepted, for an effective combination of granite and bronze. The design, in brief, is of a granite monument set upon a natural boulder, and bearing a bronze tablet, with a portrait in bas-relief. Mr. Brewster has himself modeled the bronze work, with the happiest success, and has given the design and the modeling as his personal contribution to the undertaking. Thanks to his generous impulse, the friends of "Nessmuk" will thus be enabled to provide a memorial which in form and artistic character will far exceed anything that the subscription fund alone would have made possible.

We shall present in an early issue a sketch of the memorial design and of the bronze.

The sum of \$300, which we have named as the amount to be raised, has been designated as the minimum sum necessary. While Mr. Brewster has confined himself as closely as possible to this limit, it is already seen that more money may be used to advantage; and we trust that all friends of Mr. Sears who have not already sent subscriptions, will by their co-operation assure the completion of the work. While not limiting the amount of any single subscription, we adopt the suggestion of Judge France and invite dollar subscriptions. As Judge France so well wrote, it is not so much the amount sent by each individual, as it is the privilege of participating in the contribution.

The amount already pledged is \$192. Subscriptions have been received from the following since our last acknowledgment, Feb. 16:

MR. JULIEN WILLIAMS, Waterford, Mich.
MR. F. M. PATCHEN, Covington, Pa.
MR. J. L. DAVIDSON, Lockport, N. Y.
MR. A. L. LYON, Homerstown, N. J.
MR. ARTHUR C. VAN HORN, Groton, N. Y.
MR. HENRY K. WICKSTEED, Brantford, Can.
MR. E. H. KNISKERN.
MR. WM. B. NEAL, Gardiner, Me.
MR. C. W. HARDT, Wellsboro, Pa.
MR. H. M. ORAHOD, Denver, Colo.
MR. T. S. THOMPSON, Thompsonstown, Pa.
MR. JOHN GRENVILLE MOTT, Michigan City, Ind.
MR. GEORGE HOLMES, Bowman's Bluff, N. C.

Readers of "Uncle Lisha's Shop" and "Sam Lovel's Camps," those delightful serials which entertained FOREST AND STREAM subscribers, will be glad to know that we shall very shortly begin the publication of a new series, written by Mr. Robinson, as a sequel to the "Shop" and the "Camps."

The Sportsman Tourist.

RIDING DOUBLE.

THE professional hunter is seldom a true sportsman. The peculiar dash of knight errantry which distinguishes the latter is generally wanting in the former; he seldom attacks wild beasts from a love of adventure and has no desire for the distinction of having brought down rare specimens. His business is to kill game, and, like other tradesmen, he seeks to gain the highest profit with the least possible exertion. Continual hardships and dangers blunt most men against the romance of adventure, a romance which can only be appreciated where the situation is novel. Besides, there is far less danger in hunting ferocious animals than is generally supposed. A good rifle, a steady hand and quick eye will ward off all brutes with as much certainty as the quick and precise action of an engineer will stop a train at the right moment, and practice will soon enable one to overcome all nervousness. When I descended for the first time in a New York elevator I was thoroughly frightened, because I imagined the consequences if the rope should break. When a furious rhinoceros charged me in the African jungle I was not in the least nervous, because I knew that my bullet would break his leg ere he could reach me.

In 1882 I "settled down" among the Transvaal pioneers as a schoolmaster. The life there is very different from the sober routine of a New York grammar school pedagogue. The Transvaal Boers are a nomadic race, who travel in the winter toward the forests in the north in search of warmer pasture grounds for their herds. Instruction is only given when the caravan remains for some days at one spot; for the rest of the time the schoolmaster is like his employers, a cowboy and a hunter. The forests were at that time still full of antelopes of all kinds, and a journey of a few days would bring us within reach of large game, such as the wildebeests (gnu) kameels (giraffe), elephants, rhinoceroses and occasionally an ostrich.

We undertook these journeys not for pleasure, but business. Beside the skins the biltong (jerked meat) of all game finds a ready market in the Cape Colony, and we depended upon the sale of these commodities for our supply of powder and lead.

We never killed the lions and leopards unless they attacked our herds, and these animals seemed to understand the difference between the hunting methods of the whites and that of the barbarous natives. They generally retreated from the neighborhood as soon as our rifles were heard. The Boers argued that it was not worth the while hunting a dangerous animal whose skin was of no earthly use and could not even be sold unless a sporting Rooinek* was about. But it is impossible to live in the backwoods of the Transvaal without coming into contact with the king of beasts, the lion, and such of his court as the leopard, the baboon, the crocodile and divers rather unpleasant members of the boa constrictor family. Wolves are also plentiful, but not very dangerous, with the exception of the werewolf, a large gray species. An introduction to a member of this distinguished company is always interesting and sometimes more exciting than could be wished, especially where it is so sudden that no preparation for a worthy reception can be made. In such a case discretion is the better part of valor, and I cannot deny that I have sometimes trusted more to the fleetness of my horse than to my prowess. But if the horse fails?

On a hunting expedition in the Lebombo Mountains, which I made in company with a Boer named Van Aken, we obtained a number of chickens from the natives in exchange for such portions of game as we could not use ourselves. Our chickens roosted in a tree near the little brook from which we fetched the water for our camp. The tree, a large mimosa of the kameeldorn species, was peculiarly fitted for the purpose, giving excellent shelter to our feathered property, while its gnarled and thorny trunk prevented the snakes from reaching the sleeping fowls, which did not stray very far from it during day-time. We did not, therefore, wish to move the chickens nearer to our camp, which we had placed at the end of the cañon, about 1,200 yds. off, and in a spot comparatively free from mosquitoes. Our feathered colony was, however, threatened with destruction from an unexpected quarter. A spotted leopard had discovered them and fetched one regularly for supper. We objected to this. Chickens were at a premium in the Barberton gold fields, and we preferred to sell them to the diggers. Van Aken had an old muzzleloader which he occasionally lent to Platje, our Hottentot servant. We filled the old smooth-bore with slugs and pebbles and set it as a trap gun under the hen-roost in the hope that the leopard would receive enough of its contents to spoil his appetite for spring chicken. I baited* the trap with a lively young rooster and returned to camp, calmly awaiting developments.

The Amazwazi country is peculiarly unhealthy for horses. That kind of pneumonia, which the Boers call simply *Ahe*, horseness, is nowhere more dangerous to equine life than in the Lebombo Plains. It is therefore impossible to go a hunting in those parts unless you have a salted horse. Animals which have passed through the fell disease seldom catch it a second time. They are then called "salted" and rise considerably in value. South Africa is perhaps the only part of the world where a broken-winded, loose-skinned horse is 150 per cent. more valuable than a sound one. A written guarantee that the horse will not die of horseness within a year must nevertheless go with the just mentioned attributes to raise its price. My own steed, Black Maria, was not a handsome mare. Her shape was somewhat too angular from an artistic point of view, and her arched nose and drooping ears made it impossible to exhibit her among thoroughbreds. Her character was not much better than her shape. She had a decided will of her own, was a champion biter and kicker, and a decided glutton. Above all, she was terribly strong-minded. If a particular spot suited her, no amount of coaxing and flattery could induce her to leave it. Against whips and spur she remonstrated with tooth and heel, she took a mouthful out of Platje's leg once, and if you tired her out she simply laid herself down and rolled you off. But Black Maria was salted, and I was happy.

On the morning after the night on which we had set the trap I saddled the mare to look for some stray draught

oxen. The morning was cool and misty, the horse's hairs stood on end, and I saw that Black Maria had passed a decidedly bad night and was very cross in consequence.

She aimed a vicious kick at me, as was her wont on such occasions, but did not balk, starting off at a sulky jog trot and swishing her tail in an angry manner. As I passed the chicken roost I noticed that the bait was gone and on riding up discovered that the gun had gone off. A bloody trail proved that the animal had retreated toward a little thicket of Tambockie grass near by, and a sudden low growl admonished me to keep away. The mare cocked her ears, sniffed the air and backed directly towards the thicket. Evidently the smell of the blood confused her and she did not know. I labored the mare with my heels and shouted my most vigorous exhortation. But all in vain. The mare continued to go backward where I noticed the yellow spotted skin of the enemy among the tall grasses. Suddenly the leopard arose from his lair and leaped on the horse, landing on its haunches just behind the saddle. With a scream of terror the mare started off. I never knew that she could run until that day. Down the cañon we sped, over boulders and fissures, taking the brook at a flying leap—up to the little knoll on which our tent was situated. And all this time the leopard's nose was within a few inches of my back. I could feel his hot breath even through my hunting shirt. His wicked expression was not softened by the loss of one ear and a frightful wound in his shoulder, and his gleaming eyes and ominous fangs were not pleasant to behold. I was entirely unarmed since I had expected an altercation with Black Maria, in which case the gun would have been only a hindrance. Evidently, however, the big cat enjoyed his ride as little as I did. He announced his dissatisfaction by a series of growls, but the breakneck speed of the horse made it impossible for him to jump off.

I had a macintosh before me on the saddle. This I tore off and wrapped it around my arm, determined to stuff it into the brute's throat if he attacked me. Luckily there was no need for such extreme measures. As we neared the camp the mare stumbled over the tripod on which our breakfast was cooking, and fell. The dogs immediately attacked the leopard, and a bullet from Van Aken's rifle finished him before even I could get on my feet. The animal measured about 5 ft. 10 in. from the tip of the nose to the tip of the tail, and was remarkably fat. The charge from our trap gun had torn away an ear and injured its shoulder.

In a few weeks Black Maria had entirely recovered from wounds which the leopard had inflicted. The incident had nevertheless a lasting effect upon her; she never balked after that, and I was able to part with her at a considerably better price than I had paid for her. But I shall never forget that unearthly scream of the mare when the leopard jumped on her, were I to live as long—well, as long as Washington's coachman.

HANS HINTERWALDER.

A "NESSMUK" INCIDENT.

AUBURN, Cal., Feb. 15.—*Dear Forest and Stream:* Inclosed you will find my contribution to the "Nessmuk" memorial fund. I never had the pleasure of a personal acquaintance with the old woodsman, as many others of your readers have had, but his writings have given me many a pleasant hour.

One of the strongest reasons why I, a stranger, desire to help keep his memory green is the following: In "Woodcraft" he describes a visit he made to two of his old chums in Michigan. In the cabin of Pete Williams, near Saginaw Bay, were two little "kids," as he calls them. To these "kids" his tender old heart causes him to lie, as unblushingly as Uncle Toby swore, and like Toby's oath, I hope his lie was blotted out by the tear of the recording angel. Here is the episode as he himself relates it in "Woodcraft":

"About the only inducements I can think of for making a ten days' journey through a strange wilderness, solitary and alone, were a liking for adventure, intense love of nature in her wildest dress, and a strange fondness for being in deep forests by myself.

"The choice of route was determined by the fact that two old friends and schoolmates had chosen to cast their lots in Michigan, one near Saginaw Bay, the other among the pines of the Muskegon. And both were a little homesick, and both wrote frequent letters, in which, knowing my weak point, they exhausted their adjectives and adverbs in describing the abundance of game and the marvelous fishing. Now, the Muskegon friend, Davis, was pretty well out of reach. But Pete Williams, only a few miles out of Saginaw, was easily accessible. And so it happened, on a bright October morning, when there came a frost that cut from Maine to Missouri, that a sudden fancy took me to use my new Billingshurst on something larger than squirrels. It took about one minute to decide, and an hour to pack such duffle as I needed for a few weeks in the woods.

"Remembering Pete's two brown-eyed 'kids,' and knowing that they were ague-stricken and homesick, I made a place for a few apples and peaches, with a ripe melon. For Pete and I had been chums in Rochester, and I had bunked in his attic on Galusha street for two years. Also, his babies thought as much of me as of their father. The trip to Saginaw was easy and pleasant. A 'Redbird' packet to Buffalo, the old propeller Globe to Lower Saginaw, and a ride of half a day on a buckboard brought me to Pete Williams's clearing. Were they glad to see me? Well, I think so. Pete and his wife cried like children, while the two little homesick 'kids' laid their silken heads on my knees and sobbed for very joy. When I brought out the apples and peaches, assuring them that these came from the little garden of their old home—liar that I was—their delight was boundless. And the fact that their favorite tree was a 'sour bough,' while these were sweet, did not shake their faith in the least.

"I stayed ten days or more with the Williams family, and the fishing and hunting were all that he had said—all that could be asked. The woods swarmed with squirrels and pigeons; grouse, quail, ducks and wild turkeys were too plenty, while a good hunter could scarcely fail of getting a standing shot at a deer in a morning's hunt. But, *cui bono?* What use could be made of fish or game in such a place? They were all half sick, and had little appetite. Mrs. Williams could not endure the smell of fish; they had cloyed on small game, and surfeited on venison.

"My sporting ardor sank to zero. I had the decency not

to slaughter game for the love of killing and leave it to rot, or hook large fish that could not be used. I soon grew restless, and began to think often about the lumber camp in Muskegon. * * *

"Early on a crisp, bright October morning I kissed the little fellows good bye and started out with Hance, who was to put me on the trail. I left the children with sorrow and pity at heart. I am glad now that my visit was a golden hiatus in the sick monotony of their young lives, and that I was able to brighten a few days of their dreary existence. They had begged for the privilege of sleeping with me on a shake-down from the first; and when, as often happened, a pair of little feverish lips would murmur timidly and pleadingly, 'I'm so dry; can I have 'er drink?' I am thankful that I did not put the pleader off with a sip of tepid water, but always brought it from the spring, sparkling and cold. For, a twelvemonth later, there were two little graves in a corner of the stump-blacked garden, and two sore hearts in Pete Williams's cabin."

The man's nature must have been a tender one thus to have considered the feelings of two little homesick children; and his heart a true one, to lead him always to go to the "cold spring" in the middle of the night to procure a refreshing draught of water to cool their fever-parched tongues.

Show me the man who loves children, and who will undergo personal discomfort to show that he does, and I will show you a man whose memory is worthy of being cherished. I believe it was this trait that brought Mr. Sears so near to nature's heart. He loved all feeble and unprotected creatures, and never took life in a spirit of wantonness.

Let his memory be kept green!

AREFAR.

We had a pleasant personal acquaintance with Mr. Sears during the last five years of his life, and I called at his home the last time in September, 1888, and passed a few delightful hours in his company. If his grave is in the principal cemetery in Wellsboro, his resting place is not like the typical "village graveyard" we all know, but is in a park-like eminence, commanding a view of the town and of his beloved hills. The place is covered with noble trees, contains many fine tombstones and monuments, is well kept generally, and is a credit to the town.

A. AND E. G. K.

CENTRAL LAKE, Mich., Feb. 14.—Please correct the quotation from Whittier which appeared last week in my remarks concerning the Nessmuk memorial. It should have read:

—haply in some hull of life,
Some truce of God, which breaks its strife.

The printer made it "some trace of God," and it reminds me of the wail which "Kingfisher" sent up my way when this same printer transmogrified "sforzando" into "skillegalee," or something to that effect. KELPIE.

WINTER NOTES FROM FLORIDA.

The Lake Worth Country.

OAK LAWN, Dade County, Fla., Feb. 15.—The Lake Worth section appears to gain popularity, the tide of tourists and visitors overcrowding the boats on Indian River and the hotels here. The winter has been unusually cold previous to this month, there being frost at Jupiter, 12 miles north, during four days in January.

This month the weather has been most delightful, temperature ranging from 70 to 80°, with constant balmy breezes from the southeast and blue skies with small clouds floating by.

Tomatoes are being shipped North in abundance, and the strawberries are so delicious and the visitors so selfish that they are consumed as fast as they ripen, so that there is no possible chance of their getting North.

Many improvements have been made along the shores of the lake, and every place looks bright and prosperous. Many varieties of motor launches, catboats and schooners are constantly passing to and fro on the "summer sea." As we sit under the shade of the palms we can hardly realize that at our Northern homes blizzards, snow and frost still reign supreme.

To-day I caught with rod and line in two hours with cut fish bait 11 fish, mostly bluefish, three of them weighing 6 lbs. each, red snapper 6 lbs., and a cavale. Yesterday a 3 lb. pompano, which was immediately baked for dinner and pronounced most delicious. Some of the sailboats by trolling catch 50 bluefish in a day, the largest reported being 13 lbs. in weight.

The water from the ocean is remarkably warm, supposed to be caused by the prevailing winds forcing the Gulf Stream upon the coast. J. M. T.

The Halifax River.

NEW-SMYRNA-ON-THE-HALIFAX RIVER, Fla., Feb. 18.—I begin by telling a genuine dog story, which corresponds with some already known, showing to what a high degree that which is sometimes called the sixth sense is developed. A dog belonging to Mr. Avis, of Daytona, on the Halifax, was brought from Virginia, his old home. After remaining in his new home for nearly two weeks he suddenly disappeared and at the end of a month appeared again at his old Virginia home. He was returned to Florida by express and kept chained for several weeks. Immediately on his release he again disappeared and this time appeared at his old home within two weeks afterward, making better time perhaps from having better learned the way. This time he was permitted to remain at his old home and among his familiar haunts, having demonstrated his intelligence, his determination, his love of home and old associations. Those who deny intellect to animals would call this an exhibition of what they speak of as "animal intelligence," which is only a stupid way of saying: "We can't admit of anything that looks like human intelligence in a brute."

This part of the Halifax River is one of the most charming sections of Florida. The river is full of islands and abounds in fish, so that the sportsman never returns empty-handed, while the numberless channels running about among the islands afford ample opportunity for all forms of pleasure, sailing, rowing, etc.

These islands afford refuge and feeding ground for a great many heron, who may always be seen in their favorite attitude of apparent meditation, which is really one of wide-awake attention toward all his surroundings, to

* Slang term for Englishman, lit. redneck, a playful allusion to the fair complexion of the English.

yourself as well as to the little fish from which he expects to make his dinner. The grace of movement of these birds in flight is to be noted too, and each one is to be studied by itself.

There are very few ducks in this part of the river, and I saw but few in early winter on the Indian River.

The woods abound in game, but not every one can succeed in securing it, as every year finds it more wary. I saw a cabin yesterday adorned with the skin of a bear, while the other side was nearly covered with coon skins.

Those who come here year after year seem to grow more in love with the country each succeeding season, and return each year with added zest.

The hall of the hotel is well hung with implements of sport, and the porch and smoking-room in the evening witness the curling smoke of the pipe and the oft told yet ever new stories of bear, snake, fish and deer. Told on the porch and in the smoking-room, these tales go far toward making kinship and fellowship among men, for they are told with the same spirit and listened to with the same allowance the world around. W.

Pass a Grille.

DURING a residency of six years in Hillsboro county I have several times been through Pass a Grille, a narrow passage which leads into Boca Bay a few miles above the main entrance to Tampa Bay, and each time that I was through the Pass I found it alive with those fish which most delight the souls and stomachs of those brothers of the angling fraternity who ply the rod or cast the fly in the waters which border on the Gulf of Mexico, grouper, snapper, sea trout and bass, pompano, Spanish mackerel, kingfish and others, and on three or four of these visits I have found the surface of the water being ripped open in every direction by the long gafftops-shaped back fin of that king of all the Gulf fish, the great silvery tarpon. It was impossible to count them, but I think that I have during one trip through the Pass seen fully two dozen—perhaps more—of them. I am no sportsman and therefore did not make any attempt to land any of them, and they have never been fished for with the hook in the Pass, although from five to ten have been taken in a day by a single boat's crew with a harpoon. R. A. B.

The First Punta Rassa Tarpon.

PUNTA RASSA, Fla.—Mr. Hugh McNeill captured to-day the first tarpon of the season after a two hours' struggle. The fish was 6ft. 4½ in. in length, girthed 35 in. and weighed 114 lbs.

Natural History.

THE GRAY WOLF IN BRITISH COLUMBIA.

Editor Forest and Stream:

Mr. Thompson's admirable picture of the gray wolf, which appears in your issue of Jan. 5, has induced me to offer a few remarks respecting the distribution and habits of this animal in British Columbia, and although I have nothing of a very startling nature to chronicle, still I presume that one of the objects of FOREST AND STREAM'S animal portraits is to draw out information from all portions of the continent, and that no matter how meagre such information may be it cannot fail to be of interest to some one of its readers.

There are few places in this Province where the gray wolf is not to be found. I have met him down along our southern boundary on the head waters of the Thompson and Fraser rivers, and away up among the frozen hills of far away Cassia.

In the dry, open country, east of the Cascade Mountains, south of Fraser River, he is not often seen, his place being taken there by the coyote, or prairie wolf. His center of abundance seems to be along the coast and includes Vancouver Island. The proportion of gray to black wolves on Vancouver Island is about five to one, while along the coast of the mainland the black and gray are about equal. The dark colored ones vary from a dusky to a jet black, some of the latter having a very fine quality of fur.

There are portions of the Province where the wolf was once abundant and from which he has now disappeared, or rather receded before the advance of settlers. Fifteen years ago he was not uncommon at Burrard Inlet, and on the peninsula between Burrard Inlet and New Westminster. He is now rare in these localities.

The gray wolf of British Columbia does not appear to linger long in the neighborhood of settlements, and there are few instances on record where wolves have molested domestic animals. Indeed, the abundance of deer and other game makes it quite unnecessary for him to carry his depredations very far in that direction, and in the matter of attacking human beings he certainly does not possess those blood-thirsty propensities which are attributed to his kind in older countries. From my own experience I have found him to be a sneaking coward in the presence of man. I have had them follow my trail over the frozen surface of one of our northern rivers for days at a stretch for no other purpose, seemingly, than to steal into my abandoned camps in search of what odd scraps of food might be left, and their pickings on those occasions must have been very slim, as I was not in a position to afford any carelessness in what I threw away, for I had started out on short allowance and had been kept back by terrible weather from reaching a point at which my food was cached.

Once, while following the course of a mountain stream, a deer suddenly appeared around a bend some 200 yds. away bounding toward me, and, without even noticing me, swept past me with the speed of the wind. Feeling certain the deer was pursued by some animals my first thought was that they were Indian dogs and immediately a desire to murder took possession of me. Dropping down and resting my elbow on my knee I awaited developments, determined to dispute any further advance of the pursuers. Nor had I long to wait, for presently, from round the same bend, came the forms of ten wolves in hot pursuit. Covering the foremost one with my rifle I howled him over, when immediately the band stopped, threw up their heads, then turned and scampered back like a lot of frightened sheep, followed by a couple of parting shots as they disappeared.

Night after night I have had these animals howling round my camp, but aside from this annoyance and per-

haps the theft of provisions left too far from camp, I never had any trouble with them. The Indians will tell you that they are not afraid of wolves, that they will not attack human beings, but add, "All the time kill 'em Indian dog." This latter in the face of the fact that the two animals are known to interbreed.

I have, however, one circumstance to relate, which proves that at least on one occasion British Columbia wolves have attempted the life of a human being. The source from which this information comes is strictly reliable or it would not find a place in this paper. The story is told by Mr. M. King, lumber merchant of this city; a gentleman who has probably traveled over more of the coast of this Province than any other white man living, and with whom I have had the pleasure of spending many a night in the woods.

For years Mr. King has followed the occupation of "cruiser of timber," which occupation has often taken him single-handed and alone into the depths of the forest to be gone for months at a time; meeting with no one, camping where night overtook him, and finally, when his object was attained, his claim located, making his way to the coast, to be picked up by a chance steamer, or paddled to the nearest port by some dusky native.

During these trips Mr. King has had ample opportunities for testing the aggressive characters of wolves, yet this is the only instance where he has had any trouble with them, nor has he ever heard of any other case of the kind in the Province. The story in his own words is as follows:

"I had left my morning camp at the head of Salmon River about an hour when the howling of a pack of wolves behind me attracted my attention, and wondering whether they were on my trail or following the track of deer I stopped to listen. As the sounds appeared to be coming my way I thought it prudent to make myself ready for whatever might happen; so throwing down my pack and drawing therefrom a box of extra cartridges, having filled the magazine of my rifle before starting, I waited for developments. Soon the wolves came in sight and it was not long before I seemed to be surrounded by the hungry brutes; so far as I could calculate there were between forty and fifty of them. However, as long as they did not close in on me too fast I was pretty well satisfied I could stand them off. I was well supplied with cartridges and carried a .44cal. Winchester, one of the handiest little guns a woodsman ever packed and true as steel at short range. Well, the fight, if it could be called one, lasted about half an hour, when a few of them broke away into the timber and commenced howling, which had the effect of drawing the rest after them, when the whole band started away on the full jump, howling as they went. I listened till the sounds died away in the distance and felt satisfied that they had been following the trail of deer or elk when they crossed my track, and getting my mind followed it up with the result above stated. I found sixteen of their number dead and, probably, not a few were wounded."

I have inquired of the dealers here as to what portion of the Province furnishes the greatest number of wolf skins, and their answer is that the receipts are pretty equally divided and that the gray wolf is an animal of general distribution in British Columbia. JOHN FANNIN.

VICTORIA, British Columbia.

TIP AND ZIP.

Editor Forest and Stream:

Many years ago I lived for a year in Texas, a little settlement in the town of Somerset, Vt. The place was and is a noted resort for fishermen, the many mountain streams in its vicinity teeming with trout. But I remember it more particularly as the spot where I found Tip and Zip. One August day I was climbing the steep mountain which separates Texas from Dover, when in the road before me I saw two brown mites about as big as young kittens. They were coming toward me, but on discovering me they stopped and looked at each other in a perplexed way, evidently at a loss what to do. On my moving toward them they tried to scramble up a steep bank, but I caught them easily, and learned that though small they had very sharp teeth. I put them into a two-quart tin pail, where they had plenty of room, and then looked to see what I had captured. My first thought was that they might be woodchucks, but happening to notice their stumpy tails the secret was out. Faintly but unmistakably they were ringed. Tip and Zip were young coons.

Did you ever bring up a coon, or rather, two coons? If not you have lost no end of fun and saved yourself some trouble. Tip and Zip took kindly to civilization. Instead of sulking they greedily drank the first milk I gave them, and from that moment became my devoted friends. I never had a rival in their affections. Other members of the family who cared for them in my absence they treated in a friendly manner, but for me was reserved their warmest greetings. On the approach of strangers, they would scramble up my legs and body and perch one on each shoulder, chattering in my ears noisy protests at the intruders. Everywhere they followed me like dogs, not forgetting to scold if I walked too fast for them; and if the way was too long it generally ended in my having to carry them home.

They never from the first showed any desire to leave me. Within a few days after finding them I took them into the woods where I was cutting firewood. For hours they played like two kittens, chasing each other among the leaves, along logs, and climbing trees. I stole from them unobserved and waited in the road some distance away. First I heard a chattering, then a whimpering, which grew louder and louder, a floundering in the leaves, and Tip and Zip tumbled into the road sadly out of breath. After that they watched me closely.

It was the next day, I think, that they had their encounter with a drove of cattle. They were following me as usual when we met the cattle in a narrow roadway. I had passed by them a short distance, when I became aware there was trouble behind me. The right of way was in dispute. Most of the cattle (cows and young ones) had given way, but one or two big oxen, with lowered heads, were making a stand. I hurried back to save my little friends, but they did not need my aid. With bristling hair and growls that would have done credit to small bulldogs they started for the oxen. I saw the big fellows wavering for a moment, then they jumped to the side of the road, and my coons had won the battle. Indeed Tip was inclined to follow the retreating enemy, but I called him off, and put him in my pocket until he became quiet.

The great joy of my coons was to go fishing with me. They lacked the sportsman's delicate sense of honor, I suppose, for they would eat all the small trout I gave them and tease me for more. In fact, I was never able to satisfy them, although trout were plentiful then. I concluded their capacity for eating was inexhaustible and gave it up.

I have hinted that my pets were sometimes troublesome. Well, if you were to let loose a dozen or two children in your house with permission for an hour to overhaul, hide, carry off, and generally demoralize everything it contained, I think they might possibly accomplish as much as Tip and Zip would in half the time. I say possibly, for to me it will always remain an open question. If caught in mischief by any one else they would always come to me for protection, and while I was pacifying the enraged party, they would probably steal every tool or portable thing I had been using. By all means, if you want to enliven your household, get two young coons. You will never know another dull minute.

SPRINGFIELD, Mass., Feb. 21.

FRED L. BALLARD.

"Incidents of My Hunting Life."

A NOTE intended to have been appended to the article under the above title in last week's issue was inadvertently omitted and is now printed alone. Our correspondent has apparently confused European and American cuckoos. The latter usually build rudely constructed nests for themselves and hatch out their own young, although some cases have been recorded where their eggs have been found in the nests of other birds. An American species that has the parasitic habit of the European cuckoos, and never makes a nest of its own, but always depends on other birds to hatch and rear its young is the cowbird or cow bunting (*Molothrus ater*). The young cow bunting is said to throw out of the nest the eggs or young of its foster parent, all of whose attention is thus concentrated on the foundling.

Owls.

CINCINNATI, O., Feb. 13.—*Editor Forest and Stream:* A correspondent from Lockport, N. Y., writes that he shot a barred owl in that locality and wishes to know if it is rare. Seven years ago I procured two specimens in the same county (Niagara), and also shot several on the Canadian side of the Niagara River. This owl, with the exception of the great gray owl, is the only species that has brown or blue eyes. I have found the barred owl quite common in Ohio, also the short-eared owl, which, by the way, sees equally well by day. I have killed two sawhet owls in the last three years in Ohio, and I believe them to be rare, if not the rarest owl throughout the United States. F. B. MAGILL.

An Eagle in a Trap.

BARTLETT, N. H., Feb. 19.—The news reached me this morning that Mr. John O. Cobb had caught an eagle in one of his fox traps, so I tied on my snowshoes and went over to see him. He is a fine specimen of the golden eagle, weighs 12½ lbs. and measures about 7 ft. from tip to tip as near as I could estimate. Mr. C. says that the eagle had only the inner claw of the left foot in the trap, so he is not hurt except a slight swelling in the toe. Mr. C. intends to sell him. JAGARE.

A Snake on the Snow.

WEST CHELMSFORD, Mass., Feb. 20.—A few days ago a farmer living near here killed a blacksnake which measured about 5 ft. in length and was lying on about 6 in. of snow. F. A.

Game Bag and Gun.

NEW MEXICO GAME NOTES.

EDDY, New Mexico, Feb. 16.—*Editor Forest and Stream:* Replying to an inquiry published in your issue of Feb. 2, I am compelled to say that the story of the white bear of the Guadalupe Mountains is another fake, such as those of the cactus deer, the ibex of the Saw Tooth Mountains, the red goat of Mount Tacoma, the one-horned deer of the Big Hole, and numerous others that have been exploited in the press during the last two years. Your correspondent's friend, who told him the story of this white bear, was undoubtedly honest in believing that there was such an animal in the Guadalupe Mountains, but some one had been working him. The white skins he saw must have been those of Angora goats, or ordinary William goats. The only bears native in New Mexico are the black and grizzly, with colors running into brown and silver-tip.

John Dunaway killed a big panther in Dark Cañon, a few miles from Eddy, a short time ago. Thirteen of these varmints have been killed in the foothills west of here within the past two months.

Ed. Piontowsky, of the engineer corps, returned from the Sacramento Mountains lately, where he spent some ten days in hunting. He killed ten or twelve turkeys and a large number of ducks on the Penasco. There was too much snow in the mountains for comfort in deer hunting, which was fortunate for the game, as Ed. is a good shot, and would have brought in a number of head if he had found them.

John Buck and Mr. Welch, two homesteaders who live in the Sacramentos, were more fortunate, for they brought in seven deer lately, which they sold to a local meat market.

Hiram W. McKloskey, a cow man who lives on the Staked Plains, thirty miles east, brought in yesterday fifteen coyote hides and one gray wolf hide. He filed them with the County Clerk and obtained the bounty of fifty cents each on them, after which he sold them to a hide dealer.

Judge W. K. Stallcup, County Treasurer W. F. Cochran and City Clerk George Duncan drove up Rocky Arroya, twenty-five miles from Eddy. Hunted two days and brought in seven deer.

George Patton, of Chicago, who spent some three months here hunting jack rabbits last winter, came back a week ago to renew his acquaintance with them, but was surprised to find that the stock was somewhat diminished. He went out on three or four different days, but all he could find was about fifty to one hundred jacks each day, so he left the town in disgust. G. O. SHIELDS.

A ROCKY MOUNTAIN HUNT.

On the 16th of October, 1892, I bestrode Banjo. He is a horse with a history, only a little of which I know. He had been captured by the Crow Indians in one of their raids against the Blackfeet, and that afterward some men visited the land of the marauders to reclaim their property. Among other horses described for identification by a visitor was Banjo. He said, "You have a dark bay horse with a white nostril, and a black tuft of long hair about as large as a silver dollar just below the root of the right ear, a medium-sized animal, very kind and docile, an easy pacing gait, but when on the run none faster." The Crows grunted, smiled, and said, "Yes, the black spot at the root of the ear in enough to say; we have him." Such in brief is Banjo, now the property of a wealthy ranchman of Montana. Behind me trotted Queen, a mongrel setter dog, a present to me from Henry Norris, of St. Mary's Lakes, Montana.

When we arrived at Bird's ranch, on the south fork of Milk River, the hospitable Mexican, with his comely Indian wife, made us very comfortable for that night. The next morning I resumed the saddle, slung my gun on the horn and started for the mountain home of Mr. Henry R. Norris, situated between the upper and lower St. Mary's Lakes. I arrived there at 3 P. M. and was met at the door by that cunning hunter with a hearty welcome, and after picketing Banjo and disposing of a good dinner we resorted to pipes and began to talk hunting. Hank, as he is usually called, told me about the visit of the Helena outing party to his place some weeks before my advent. The party consisted of a score or more of gentlemen from the capital of Montana who had been hunting and fishing here. From all accounts they must have enjoyed themselves hugely judging from the heterogeneous display of camp debris about Hank's premises.

After a good sleep we took our rifles and covered two or three miles of country in search of black-tail, but we saw none and returned to the house; but even that jaunt has a recollection which I shall not soon forget. We stopped a moment in a pine thicket and within 5 ft. of us there sat on a limb a bird known as the "fool hen." Hank said to me, "Kill it with your pistol," which I wore in my belt to stand off bear at close quarters. At this suggestion I fired, once, twice, thrice, four times, five! only one more cartridge. Bang! the bird sat as motionless as a statue, unharmed. Getting out of patience with myself I leveled my Winchester at its eye, pulled trigger, off went its head and it fell a corpse at our feet. At the house we found Mr. Schultz, who had come up to borrow a few cartridges, and after dinner, which was quite late, we sought our pipes and rest.

I was up with the sun next morning; the air was sharp, crisp and dry. At breakfast Hank said: "What are you going to do to-day?" I replied I thought it would be a good idea to go up to and around Single Shot Mountain and try and get a sheep. So after tying up Queen, who begged piteously to go, I sauntered forth, armed with my pistol aforesaid, my hunting knife and my .45-70 Winchester. I trudged along up the mountainside until I had reached a point about a mile and a half from the house. I was alone, for Hank had remained to finish his new quarters for his family, which they were to occupy this winter. Occasionally while ascending I had seen old signs of bear, but now I discovered fresh ones. Here, too, was a thin layer of snow sprinkled in the long green grass common at high altitudes in the Rockies, and in this snow could be seen tracks of bruin, and big ones. The wind was blowing stiffly and cold from the west away toward the lower lake. An occasional flake of snow went sailing past me. I had stopped to look around and study the signs. I really hoped I would not meet a bear, for that was not what I was hunting; I wanted sheep.

Discovering no bear, I advanced slowly and cautiously. Suddenly I perceived a rank peculiar odor; it reminded me of that I encountered at the Zoo in Philadelphia, in 1884, while I stood contemplating some bears in the pen below. I now knew I was very close to a bear, and that from the location it must be a grizzly. Oh! how frightened I was. I had never met a grizzly; what I should do I hardly knew. The thought of being alone too, and out of sight and hearing of Hank, all made me quiver and shake like an aspen. While thus meditating, and looking in every direction, and trembling from head to feet, I soon saw the cause of the odor, standing on all fours with its tail toward me quietly digging in a hill side. My heart went like a trip hammer, I could hear the blood rushing up through my carotids, and feel its impact against the base of my brain; my throat was dry, and my hands trembled as I grasped my rifle.

I surveyed the huge brute a few seconds and saw that he was about 80 yds. away. I stood on a hog-back, or ridge, and between the bear and myself was a ravine 30 ft. deep and filled with a thicket of underbrush. The grizzly stood on clear ground. It did not take long to see that I had the advantage; this was the head of the cañon; to my right was a black thicket of pine, in front was the animal, to my left the cañon stretched away to the lake. A small sapling grew where I stood; I let myself down on my knees and toes, and projected my piece over a branch of the sapling. I was waiting for the bear to give me an exposure of its side. The wind blowing briskly from it to me gave it no opportunity to scent me. My sensations were those of resignation to my fate. I felt as I imagine a soldier feels on the eve of his first battle—only more so. I realized fully what a small thing I should be in a hand to hand conflict with that wounded and infuriated monster; but I was determined to fight if it cost me my life. I remembered my ten weeks of typhoid fever at Garfield Hospital in Washington, D. C., when I thought my time had come.

By this time I had become more composed; my nerves had resumed their usual tranquillity; I was thinking of what an everlasting shame it would be to my conscience to steal away and let that magnificent beast get off with its life; and while thus cogitating the bear slowly moved into the position I desired, and when there, with a steady nerve I glanced along the blue barrel of steel and fixed the sights on a line with a spot about where I thought its heart lay, held it there a second and pulled the trigger. Bang! went the magnificent arm, and simultaneously the grizzly leaped into the air, uttering a loud, prolonged cry of pain. Through the smoke I saw it fall on one side and quickly recover itself, its head was toward me; with mouth wide open and head erect it began the charge. I threw another cartridge into the barrel. I looked, and it had reached the bottom of the cañon and was making its way through the brush, blowing and snuffing. I coolly

awaited its emergence, but it never came out. Midway the thicket I could see some of its branches quivering, but could not see the bear.

At this juncture another grizzly, larger than the one shot, came out of the pine thicket to my right and bounded down to the spot of the quivering bushes in the bottom of the cañon, and was also lost to sight; I did not have time or opportunity to shoot it. Immediately behind me in the timber I heard the cry or wail of still another bear. This again terrified me beyond expression. I thought that the one in the rear would endeavor to form a junction with his fellows, and in doing so would necessarily have to run over or very near me. Now I was cool and ready for the fray. If I did miss my "fool hen" six times yesterday, I knew a bear was not to be missed with my revolver even once. But the bear in my rear put in no appearance; he evidently got wind of me and his cry became less and less distinct, but I knew the other two were within forty yards of me in that brush, and what to do I did not know. To charge them would be insane, so I concluded that I would stand my ground until they took the initiative. I sat there gazing at that thicket one hour by the watch, 12:30 to 1:30 P. M., Oct. 19, 1892, and no bear appeared. All was still as death, and from inaction I began to get chilly. No amount of money could have induced me to venture down to those two mammoth brutes in that cañon. I did not even know that one was dead, and was painfully aware that one at least was untouched. So believing that a skillful retreat is as good or better than a poor victory, I decided to return and get reinforcements in the shape of Hank.

I did so, and when we reached the spot we advanced abreast, Queen in terror at our heels, into the thicket. We found one bear stone dead, but the other had gone. Before we began to remove the pelt we estimated her weight to be 700 lbs. It proved to be a female. On our return Hank carried the skin and I the skull and guns. From the tip of one fore claw to the corresponding one behind measured 10 ft. 6 in. From the hindquarters, which Hank packed down on a horse the next day, he obtained six gallons of oil.

The next two or three days I was busy stretching and drying my skin. I was in absolute ignorance of the *modus operandi* of that process, but I learned from my companion all about it in a very little while. There is some little labor connected therewith too, and as Hank was busy finishing his house, I was fortunate enough to secure the entire job. I was glad of it too, for now I am independent of pelt stretchers.

After the excitement and flurry of killing a grizzly had subsided in my brain, I was athirst for more blood. It must be remembered that we had no fresh meat, and after the fat was removed from the hams which hung outside the house from the projecting ridge pole of the cabin, it needed no suggestion to Hank to immediately proceed to carve sundry steaks from the tempting bait. On this meat we feasted several days, and although we found it somewhat coarse and rank, still we managed to digest it without trouble. As we butchered the bear we tracked the course of the bullet through both lungs and through the center of the heart. I shot only once.

The next victim to my rifle was a black-tailed deer, which was found in the black timber opposite Hank's house and across St. Mary's River. She was shot three times while running. The first ball struck the foreleg just above the knee, inflicting a flesh wound; the second the opices of the scapulae, and the third passed through the lungs, which brought her down. We now discarded bear for the more palatable venison.

I now wanted a goat and Hank and I went eight miles to Goat Mountain. We discovered one about 700 or 800 yards away on the mountain side. I began firing and I shot sixteen times before I stopped her. She was running all the time. One shot took effect in the right flank and another broke her neck. The carcass we left on the mountain, the head and pelt we brought home. In going to Goat Mountain I was struck with the beauty of the scenery of the upper St. Mary's Lake. The deep blue of the water, in which was reflected the adjacent lofty peaks, and the far away glacier that forms the source of St. Mary's Lakes and river, presented a picture of beauty, grandeur and sublimity that I shall not soon forget.

This concluded my outing, and I felt well repaid for the hard work I had performed, and the trying ordeals through which I had passed. The lakes abound in mountain trout, and we could take a rod and catch all the large beautiful ones we wanted at any time. From 1 to 6 lbs. are the ordinary sizes caught. In returning to the Agency we were caught in a severe blizzard and lost the road on the prairies; I was on Banjo, followed by Queen and Hank in a wagon with his wife and little girl. We wandered until 10 o'clock at night, when, to our great delight, we accidentally ran into Bird's ranch. We were covered with ice and snow, and at one time I felt as though we would be lost. It was a dreadful sensation we experienced while groping about in the darkness trying to find the ranch; but Hank said all the time that we were all right. At one time I doubted him, and thought he said that to keep my spirits up. The next day was bright and fair and we returned to the Agency without further trouble.

Z. T. DANIEL.

A Wise Loon.

ONE calm day in the fall of 1890, my brother, while gunning off Cohasset, succeeded in severely wounding a young loon. After a sharp chase he penned the bird between his boat and the rocks, which were some hundred yards distant. As the loon dived, my brother rowed on for a dozen strokes, and then stood up, gun in hand, expecting to secure the loon when he rose by a quick shot. To his astonishment, however, no loon appeared, and, after waiting a few minutes, he was about to resume his oars and row back to his decoys, when he suddenly discovered a narrow cleft in the rock, and, more from curiosity than from any real belief that the loon was concealed there, he rowed toward it. As he approached he saw that the cleft extended in some six or eight feet, and was partially filled with water. Taking in his oars, he went forward, and, as his eyes grew accustomed to the darkness, he saw the loon at the extreme end of the cleft, stretched out at full length, with only his head and neck out of water. Backing water for a few strokes, my brother raised his gun and ended the loon's earthly career then and there. I think, however, that a bird who made such a plucky fight for his life and came so near escaping should have been left unmolested in the hiding place which his wonderful sagacity had gained for him.

E. H. C.

A SPORTSMAN'S INVITATION.

TACOMA, Wash., Feb. 14.—*Editor Forest and Stream:* We have read your valuable paper during the last six years and are deeply interested in your commendable efforts in every direction tending toward the preservation of game and the elevation of the morals of field sports.

We know many of your contributors and occasional correspondents personally, and feel that we belong by natural right to the "Rod and Gun" family. We read every story of hunting and fishing told by your brilliant staff of contributors, and with them live over again our own delightful experiences in the Maine woods, the Adirondacks, the lovely forests of northern Michigan, and among the cornshocks of the Old Dominion. To have thrashed brush with that big-hearted and powerful prince of sportsmen, Polk Miller, and to have ransacked the Roanoke bottoms with that inimitable story-teller Whitney are experiences worth remembering. And we do remember every little incident, every shaded nook where the speckled trout loved to hide, every little patch of blackberry bushes, where the pheasant loved to feed and flutter in the dust. As we read your stories we feel the breezes of the lakes and woods, and hear again the rustling of the leaves. And when you brag of your strings and bags we laugh, not incredulously, for we believe you; in fact we know it must be so, for it was that way with us once. We have tramped fifteen miles a day and fished assiduously at the rate of one 4 in. fish per mile, and all that ourselves, and can fully appreciate the pride and satisfaction such a catch will bring.

But now? Oh, that's different. Now as we read your inimitable stories and anon glance from the windows of our offices at the illimitable expanse of primeval forest, the snow-capped summits of the rugged mountains, and the wide stretch of placid waters spreading out in a glorious panorama for a distance of over a hundred miles in every direction and teeming with every form of bird, beast and fish that ever inspired or rewarded a sportsman, we laugh.

Our own experience then and now affords us a never-ending fund of amusement; and every time we hear you tell us of your toils and triumphs, we long to have you come out here and share with us the very richest of sport, where the breezes are the softest, the voices of the woods the most varied, the scenery the grandest, and the recompense for work the very highest.

In a city of 45,000 people, adorned by substantial buildings and beautiful parks, and provided with every modern device contributing to advanced and luxuriant living, we actually dwell in close proximity to the beasts of the field, and from our windows watch the flights of the fowls of the air and the gambols of the monsters of the deep. Bears, deer and cougars are killed within ten minutes ride of the court house; seals, whales, dolphins and inexhaustible hordes of food fishes crowd into our harbor and sport at our very doors.

Twenty minutes' ride in an electrical or steam car, an hour's walk or row, or half an hour upon a beautifully appointed steamer, will convey the ardent sportsman into better hunting or fishing ground than any or all the places enumerated in the beginning of this article.

I could particularize until I tired you, and as I write I can see a 300 lbs. black bear hanging in the market across the street which was shot one and a half miles from my office last week, and the legs of my chair rest upon the skin of a cougar shot ten miles from that city Jan. 23, '93. If Mr. Alex. Starbuck will stroll out here this fall he shall be entertained in a hotel better and bigger than the Burnett House, and I will put him into water that I will guarantee to yield average catches of 4½ lbs. rainbow trout, and all he can carry out at that, while salmon of 25 to 45 lbs. are quite the usual thing. Come out here some of you and touch this wonderland with the magic of your pens, and provide yourselves with a fund of story and adventure that you will never forget nor regret.

J. A. BEEBE, M. D.

THAT GUN TAX SUGGESTION.

MEDINA, Tenn., Feb. 11.—*Editor Forest and Stream:* In your issue of Dec. 29, 1892, you have an article, "The Gun Tax Again," signed by "Stanstead."

The people of Tennessee, almost to a man, hunt more or less, and have one or more guns. They at this season of the year, in fact from November till February, have at their command a great deal of time. A great portion of it is spent afield, and they make the most of it, and a good many of them are expert in the use of the shotgun. Their surplus game is sold to those willing to buy, and I venture to say that when the balance is struck they do not come out even on the amount expended for shells, ammunition, etc., outside of the pleasure they have had. I am speaking now of those who sell their surplus game, and not one of them I have met but has invited myself and friends to hunt with them. No one can therefore call them selfish in their ideas of sportsmanship. Yet here is a man who comes among them a stranger, and wishes at once to have a law enacted and rigidly enforced to tax every gun in the State of Tennessee, and let non-residents hunt and shoot at their own sweet will. This may do in Vermont where "Stanstead" claims to own and have exclusive control of extensive shootings of woodcock, ruffed grouse and other game. But not in Tennessee. Oh, no! It won't do here. He also says we are here for sport and divide our game with the farmers. I wish to say that when that article was written, to my certain knowledge he had never given a bird to any man, and I know of but two birds that he killed that have been passed around to the farmers. No, sir! The birds that were passed around were shot over my dogs, and by me and assistant.

He also mentions one nuisance, as he terms it. That is the negro. He must have met with a change of heart, as he has now one negro whom he has armed with a repeating shotgun, and he now stalks about the country displaying his marksmanship.

To give the people of the vicinity where he is located, and to the many readers of the FOREST AND STREAM, an idea of what some people call sportsmanship and shooting for pleasure, I would say that there was billed to Humboldt, Tenn., for him, a box of ammunition of which the shells were not all loaded with shot (the shot was bought here) that weighed 228 lbs., which he intended to use "for sport" only over the grounds of people that he would have taxed for the guns they own to shoot over their own property, while he, a stranger, could roam at will.

R. B. MORGAN.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

Feb. 25.—On last Thursday President Organ, of the State Sportsmen's Association, State Warden Bortree and the writer went to Springfield in response to a kind invitation to appear before the House Committee on Fish and Game. Arriving at the halls of the Capitol, we found matters not in all best possible shape, no bill at all having yet been introduced. Some technical defect in the framing of the sportsmen's bill had prevented its earlier introduction, and thus valuable time was lost. A friendly member took our corrected bill and sent it down to the desk that morning, but of course this was too late for it to gain reference and a hearing before the committee that afternoon, as the session had been called for 2 o'clock. Therefore we went before the committee without any bill to advance. This, however, made little difference, for we had no special plea to offer or nothing to ask for sportsmen as a class. All we did was to say that our bill would be in print and before the committee at their meeting of next Tuesday; that we did not claim that it was the best bill in the world, and did claim that it was an unselfish one; that while it might seem strict, there might be other bills still stricter, and more highly advantageous to the game; if so, we wanted the committee to recommend that other bill and not ours. All we asked for was that the law might make it as difficult as possible to kill a bird or a fish. The sportsmen wanted no increased privileges for themselves, but only increased privilege for the game, and they deplored the old and erroneous class distinction of city sportsmen and country sportsmen. All sportsmen were alike. Moreover, it was not a question of sport but of right. The game and fish, commercially speaking also should be protected, for they belonged to the people. Some of the people would not think. We asked this committee to do a little thinking for them, and not allow them to waste their patrimony. That they were wasting it, the testimony of market-hunters and market-fishers was introduced to show.

What seemed to me a valuable portion of our little testimony before the committee was the figures offered by Warden Bortree as to the amount of game received in Chicago. One firm had in one day received 1,000 dozen quail. Another firm had in one day received 500 dozen. These were their own figures. The total of quail received in this one city of Chicago alone must, during this one winter, have been in the millions. Did the gentlemen realize the magnitude of this traffic, or did they realize what awful drains it meant on the game supply of the country? That game was disappearing rapidly the gentlemen had had the best of evidence to show. Would it not be wise for the committee to take such action as would put the State of Illinois in the lead in a measure really beneficent?

Simple as is this argument I can not for the life of me see how it can fail to convince any man who can think. I cannot see how this old cry can be urged against the "city sportsmen." I cannot understand how any man's political friendship and selfish political interests can blind his eyes or dull his ears to the strength of this simple argument: I can see absolutely but one line of duty in this matter for any member of the Legislature. This is a question which rises above politics and above selfishness.

The House Committee on Fish and Game consists of twenty-one members, the majority of whom are farmers, but all of whom I take to be men of intelligence and fairness. Their names are as follows: W. S. Smith, Chairman; E. Meyer, L. Rohrer, J. E. Miller, M. J. Gill, J. W. Drury, Peter Cahill, L. St. A. Whitley, J. W. Bonney, S. E. Carlin, R. S. Carter, E. J. Hayes, D. A. Campbell, R. J. Beck, J. S. Martin, N. A. Guthrie, C. C. Ramsey, B. A. Gower, E. H. Griggs, W. A. King, J. C. McKenzie, B. McPherson, Clerk.

These gentlemen had already recommended for passage a bill changing the prairie chicken date back to Sept. 1. We did our best against this, but will probably lose this point. From all we could guess the sportsmen will lose the chicken date in the game law and will probably lose so much of the old fish law that spearing will be allowed and perhaps seining privileges extended. During our presence the committee passed the spearing clause by a vote of 7 to 6. This seems to us to be a most unwise proceeding, and we can only hope that the measure will not pass the House. Even should it do so it is doubtful if it gets through the Senate.

As to the question of the abolishment of the State Fish Commission, I am now satisfied that there is nothing in the alarm about that. Gov. Altgeld cannot abolish the Commission. All he can do is to approve a bill proposing that. No such bill has been introduced except that by the freak, Mr. Barnes, of Lacon. This bill we did not meet in the committee room, and from the earnestness and intelligence of the men of the committee, we feel it perfectly safe to infer that if it ever does get into the committee room it will never leave it alive.

Inebriated Corbies.

Mr. Bortree told me a singular thing. Down in McHenry county they are having a pest of crows, these birds covering the country in thousands. Will Glass of Hebron, put out half a bushel of corn soaked in whisky and picked up that afternoon 105 drunken crows. It seemed the general belief among the captives that they had had a — of a time. Mr. Glass thinks he has a great trap-shooting scheme in this. Crows are not swift enough to make much of a test of skill at the trap, and their toughness makes it only the more cruel to shoot them.

Calumet Heights.

Calumet Heights Club holds its annual meeting at the Grand Pacific next Wednesday evening, March 1. The officers request a general attendance.

Not Sanitary.

I grow in the belief that "Chicago and the West" is a good advertising medium, though it is such against my will. A while ago I mentioned a pack bag, and since then I have had several inquiries for the name of the maker of it. Two of these inquiries came from Providence, R. I., one from Charleston, N. C., and to-day I have one from Holt, Missoula county, Mont. I have written to the maker of the pack bag and told him that he will either have to give me a half interest in his business or else put an advertisement in FOREST AND STREAM, whichever he may prefer. If any man has as good

sporting article, there is one very direct and easy way to sell it, but patrons like to see their own patrons patronized. This is why I feel like saying here, without instigation, that Mr. A. S. Comstock, who does advertise in FOREST AND STREAM, also has patented a very simple and easily adjusted bag. Newspapers are the kindest-hearted concerns in the world, and newspaper men are the best people what there are, but neither advertisers nor newspapers are in business for purely sanitary motives. This is not a hint to inquirers like those above mentioned, for the more letters of that kind I get the better I like it, and I answer them all gladly. They constitute a valuable sandbag, and with such weapons the amiable newspaper man can go out on the warpath and either get hair or get plenty good reasons.

Away Down South in Dixie.

Messrs. C. W. Lee and J. Herbert Ware have returned from their pleasant trip to Lake Worth, Florida, both well tanned and ten years younger. "Feather" Ware insists that he can now cast a shadow by himself, and states that he gained 4½ lbs. on the trip—at least, he is sure about the ½ lb. Mr. Lee says Lake Worth is the only place in the world, and has given a solemn promise to write about it.

Mr. Calvin S. Smith, of this city, starts this week for a trip which will extend as far as San Diego, Cal. He will spend some time shooting in Louisiana and Texas.

E. HOUGH.

175 MONROE STREET, Chicago.

THE SWAMP HOLE BUCK.

WHEN the accommodation train stopped at the lonely little station known as Slocum one evening in the winter of 1872, it landed two individuals of contrasting appearance, for one was an old timer of something like 50 years, the other about 25, and the manner in which they were greeted by another individual of lank proportions and slouch hat, who stood at the head of a team of frightened colts hitched to a large lumber box sled filled with buffalo robes, horse blankets and straw, made known to the curious passengers who peered out of the windows, that they were not strangers, and as the train laboriously moved away the hearty voice of Si Slocum, who, until now, was kept busy holding his uneasy horses, welcomed them with an honest and vigorous hand-shake as he said, "I been a waitin' on ye nigh on to an hour 'n' I'm glad ye got here at last."

It was a quiet winter evening, a foot of newly-fallen packing snow lay upon the ground and the branches of the trees and undergrowth of bushes were heavily laden with a beautiful covering of its whiteness, for no disturbing wind had yet come to drift it away. The tracks of Si's sled runners and horses' hoofs were seen blending away in a turn of the road, which gently declined through a dense woods of deciduous trees and evergreens, reminding Bo and his friend Coulton of the hospitable home of their host at the other end and a good supper to be provided by his better half when they arrived. But Si permitted no time for further observation, and when he made an opening in the labyrinth of robes and blankets on the back seat his order to "jump in 'n' we'll be gittin' on Sade'll have supper ready before we git there" was quickly obeyed; and taking the front seat himself he chirped to his horses, and amid the jingling of old fashion sleigh bells the station platform was soon left far out of sight. A half hour's drive through the beautiful wintry landscape brought the trio in view of a large barn at the foot of the hill they were now descending, and a moment later the low-roofed and comfortable house where they were to stop. The deep voice of the watch dog heralded the approach of the sled, and as it drew up into the well-filled wood yard before the gate the door was opened by a curly-headed little girl who saw them, while she questioned, "Did they come, papa?" modestly shrinking back as Bo jumped out and caught her to claim the kiss she had promised him when he came. Coulton, whose "taste for such foolin'" had, according to his tell, long since departed, threatened to tell Bo's wife, but the threat was only ignored by another smack as the little one broke away and ran into the house.

Without any fear that the performance would be repeated, although there was temptation enough, the good-looking wife of Si had soon shaken hands with the visitors and bade them a pleasant welcome, while Si turned the horses over to the big boy who stood ready to take them to the barn.

Mrs. Slocum's invitation to "Come right in and make yourselves to home and I'll have supper ready in a few minutes," was gracefully accepted, and before long overcoats were off, the hunting paraphernalia snugly stowed away in one corner and the trio comfortably settled before the big fireplace and a pair of massive "andirons" which held a pile of blazing logs that gave light and cheer to the sitting room, and while Coulton and Si talked over past and future events, Bo and his curly-headed little friend strove to outdo each other in asking questions, until Mrs. Slocum called them to the lamp-lighted kitchen and a supper of hot buckwheat cakes, home-made sausage and other good things which only thrifty farmers can provide.

Supper over, the circle was again completed before the sitting-room fire, pipes lit and the plans for the morrow talked over, Coulton and Si having all to say, for Bo was a novice in this kind of sport and wisely preferred to listen rather than take any part in the arrangement of the programme.

Introducing the subject the usual queries about guns, etc., brought out the information that Coulton's weapon was his favorite 40 to the pound muzzleloading rifle, a beautifully finished piece with barrels side by side, made to his order and without which he never made longer excursions than he was accustomed to make with Bo within a day's tramp of home. With it he had once killed a buck and a doe at a double shot, and without regard to his own most excellent skill he gave all the credit to his gun. The old man's weapon was highly commended by Si, who looked with something of disdain upon Bo's double breechloading shotgun with which he had brought a supply of cartridges loaded with various charges from buckshot down to No. 8. However, his only comment was that he "didn't like scatter guns. They was good enough for pa'tridges, 'n' when a man couldn't shoot nothin' else, but a deer was too big a mark for anything but a rifle."

"I d'no whether we'll git 'em to-morrow or next day,"

he said, confidentially, "but down in the swamp 'hole there's been three deer hangin' round all winter, 'n' one on 'em 's an all-fired big buck. Jake Hersel, the blacksmith down 't the forks, got a shot at him 'tother day, but Jake never could shoot worth a darn 'n' he got away, but if he's there yet we'll git him sure."

So it was decided that the three hunters would go down to the blacksmith's in the morning, get Jake and spend the day in that section. If the deer were not found they would go across the ridge the next day and try the laurel swamp, but it was "mor'n likely" that they would be found in the "swamp hole." With this plan settled upon, after another pipe the visitors were conducted to an early bed of fat feather ticks and warm comforts, to be roused long before daylight and before Bo had thought himself fairly asleep.

Breakfast of more deliciously crusted buckwheat cakes and country smoked ham was soon dispatched by lamp-light, and Si taking down his well-kept rifle, powder horn and bullet pouch from the pair of antlers over the mantle, while Coulton and Bo uncased their own guns, they were ready as soon as they were handed the lunch which Mrs. Slocum prepared, Si turning to say as he opened the door, "Ye might have some supper ready 'bout dark, for I guess we'll want some 'bout that time."

It was a well-measured mile of weary trudging through the foot of snow that covered the road before the hunters reached the little shop and cosy habitation of the blacksmith, but the reflection of a full moon and the breaking of day gave them plenty of light and the distance was soon covered.

A muffled thump on the floor answered Si's pounding on the door, and in a moment more the bushy head and red-shirted shoulders of the blacksmith were thrust out of an upper window inquiring the cause of his disturbance, and when he learned who his visitors were and the reason for such untimely calling, he quickly came down to admit them. While Si raked out the still glowing embers from under the backlog and threw on some pitchy knots which gave light and warmth to the room, Jake finished dressing and prepared himself some breakfast, during which time Si made him acquainted with the programme.

"I reckon they're over in the swamp hole," he agreed, "leastwise they was before the snow come, 'n' I hain't heard of anybody huntin' 'round there sence." Then it was arranged that they would go up the old log road until they reached a clearing where Coulton, who was familiar with the ground, and Bo would cross the upper end of the swamp, and go down on the other side and station themselves on runways, Si and Jake going down on the opposite side to do the driving.

By this time Jake had finished his breakfast and it was daylight. He took his gun from a corner behind the cupboard, and, taking the log road they were soon at the clearing, where Coulton and Bo left to cross over to the other side of the swamp.

Coulton led by the most direct route until he came to a small creek emptying into the swamp, which he said was the place where he killed a doe the year before, and after placing Bo at a stand on a rise of ground under a small oak tree, beside which lay a convenient log to sit upon with a fairly open view in front, he assured him that he knew of no better place, and with instructions to remain quiet and be ready to shoot at all times, he went to take his own stand further down in the woods.

Left alone, Bo experienced sensations peculiar to no other sport he had ever indulged in. Once only before had he been placed in a similar situation, and then after two whole days of waiting he had not even occasion to raise his gun to his shoulder, and the monotony of remaining in solitude with nothing to do nearly disgusted him with deer hunting. With Coulton at home he found satisfaction in tramping o'er field or fen, for Coulton was always with him for company, and there was some shooting about that, but so much had been said about this annual trip of Coulton's that he was prevailed upon to try his luck again, in the hope of better results. His acquaintance with Si had been made the year previous when on a short visit for grouse shooting, and the hospitality with which he was entertained was also an inducement to repeat it, and these thoughts, coupled with a thousand others, revolved through his mind while he waited as patiently as possible and smoked his pipe for want of better company. The time passed tediously away and yet no sound or sign gave indication that there was any living thing within a thousand miles of the spot, and the quietude became almost unbearable. If even a hare or grouse would come his way, anything to break the monotonous stillness, he thought it would be a relief, but not even a twittering snowbird was seen or heard. He found by his watch that it was nearly noon; he thought it should be nearer night. He felt like shouting for Coulton or going to him, but remembered the injunction to remain quiet and filled his pipe again for consolation. The striking of the match on the gun hammer was almost startling, so sudden and loud it seemed; then he seated himself on the log, desperately resolved to be as patient as possible until night, if necessary, knowing that his companions would come then if not before, but if he was ever caught deer hunting (?) again it would be a long, long time in the future. Thus the moments sped for perhaps another hour, when, sudden and startling, two reports from Coulton's rifle rang out not 300 yds. away. What a revulsion of feeling then took place! With a thrill of expectancy he arose to his feet, his heart throbbing against his side as though it would burst from its confinement. No shout of victory followed the shots, and with a malignant hope that the old man's opportunity had been lost he stood with gun almost to his shoulder, praying that fortune would favor him this one time if never again. He thought he would give a month of his life to "wipe the old man's eye," and when, a moment later, he heard the muffled pounding of hoofs coming nearer and nearer, he determined that this should be the one grand, glorious triumph of his life. Oh, what a tannut of excitement was raging in his breast in that one brief moment. What a throb of joyous fear almost unnerved him, joy that the opportunity had come and fear that it would be lost. Then as the beautiful antlered buck broke through the thicket of bushes into view and staggered to one knee, then to both, arose again, and fell heavily on its side, striking the air with its dainty feet and threshing the ground with its antlers, a cry of disappointment came with the revelation that the old man's opportunity was not lost but well taken care of. For a moment he stood undecided, then ran to the dying monarch and stood pityingly viewing its last mighty struggle to regain its feet,

and final quivering throes of death, and he was almost glad that his was not the hand that caused it. Collecting himself he shouted and was soon joined by Coulton and Si, who mercifully drew his knife across the poor beast's throat; the crimson blood bursting out upon the snow while an exultant gleam of satisfaction overspread the old man's countenance as, without a word, he deliberately filled and lit his pipe.

When the train stopped at the little station to pick up Coulton and Bo two days later, a doe was loaded with the buck in the baggage car, but no one of the admiring passengers were told that it did not fall to Bo's gun, and when he sent a portion of the meat to each of his neighbors, he cunningly permitted their return compliments on his skill as a mighty hunter to go by without contradiction.

J. H. B.

JACK RABBITS BY MOONLIGHT.

CANDO, North Dakota, Feb. 20.—Seeing several articles in late numbers of the *FOREST AND STREAM* relating to the jack rabbit, has led me to think that a few notes from here would not come amiss. The jack rabbit is the only animal that we have here in any numbers that is considered game. They are quite common and on the increase. The principal reason for this is, I think, that their natural enemies have been reduced both by killing and by being run out by the increase of settlers. Another reason would be the increased supply of the best of food and hiding places furnished by the grain fields.

Considered in a sportsman's way, they are of but little interest until all other game has sought a warmer clime. In the late fall and early winter they are in the finest condition for eating, and great numbers are disposed of in that way. When they can get it, they feed almost exclusively on grain, and consequently their meat is sweet and free from all strong flavors, usually said to be a characteristic of this rabbit.

In the winter, after the first heavy snows, they come in in the night to feed around the elevators and side tracks of the railroad, where farmers have been loading grain. I followed beaten paths like sheep paths for several miles out on to the prairies, where they have made their daily nest, to lie quiet and rest after their nightly frolics, for no one can call it anything else than a frolic after watching them for a time on a moonlight night.

During the period of the bright nights there is a constant fusilade going on all evening, as from one to a dozen men and boys will be out in the vicinity of the elevators waiting for the rabbits. Many of the creatures are killed and many more are missed, as distances are very deceiving, and it is not always easy to see a white animal on the snow. In either case there is excitement enough to keep the blood circulating, if the thermometer does range down in the 20s and 30s below zero, which it usually does here.

E. T. J.

PENNSYLVANIA LAWS.

Editor Forest and Stream:

All sportsmen and many farmers of Pennsylvania see and feel the great need of a change in the game laws. In making this change, do so with the point in view of permanency, not a law to be altered at the next session of the Legislature; and have in addition to the close season clause, one that will carry enforcement—by game wardens—with it. To-day this is the great weak point; no one acts. Grouse are able to take care of themselves; make the open season Oct. 1 to Jan. 1. Woodcock should not be protected after Oct. 1. The fall flight arrive about Oct. 10-15; and protection, as proposed—until Nov. 1—would not be only unreasonable, but would tend to lead to much opposition in any change in present code. Y.

WILKES-BARRE.—I hope the lawmakers of our State will enact some law that will be more protective to our game and fish, and especially our beautiful trout. I know of parties who claim to be sportsmen, right here in my town, who caught trout last year that I had put in the tributaries of the Wapwallopen in April, 1891. They caught them in May and June, 1891. If we had game and fish wardens in counties where trout are being put in streams every spring, and they should do their duties, these sportsmen would be taught a lesson, and true sportsmen might have some pleasure when they go out and catch two or three year olds.

H. L. M.

Nova Scotia Moose.

WINCHESTER, Mass.—I am told by a resident of Shelburne, N. S., that at the close of the open season, Feb. 1, 42 moose and 5 caribou were known to have been killed in that part of the Province during the past season. Most of the moose were young bulls and cows, in fact, there was but one large bull in the lot. This moose was mentioned in *FOREST AND STREAM* of Jan. 26 under the heading of "An Ear-Marked Moose." I saw the head a few days since and it is an unusually large one, the horns spreading a little over 50in. The latter, however, show signs of age, and would have been better had the moose been killed two or three years earlier.

There are quite a number of wildcats to be found in Shelburne county. Jesse Bowen of that town hunts them with a couple of hounds and claims to get about every cat he starts. In the fall and winter of '92 he killed between 70 and 80, and has killed about as many this season.

C. M. STARK.

A "Webfoot" Duck Story.

PORTLAND, Oregon.—A good duck story comes from Astoria, down at the mouth of the Columbia. Recently a barge with several thousand bushels of wheat went to the bottom alongside one of the docks and myriads of canvasbacks flocked there to feed. The security afforded them by the ordinance, forbidding the discharge of firearms within the city limits, encouraged the ducks to such a degree of boldness that their aggravating audacity became absolutely unbearable to the urchins that "go a angling" for tomcod and smelt along the wharves. Equal to the occasion, as are most "webfoot boys, one of the "kids" procured a sturgeon line, attached a lot of baited hooks, made a cast and was rewarded with 16 fine fat ducks the first haul. This story sounds just a little bit fishy, but as its truthfulness is vouched for by one of our most reliable sportsmen I give it for what it is worth.

S. H. GREENE.

New Brunswick Bear Traps.

BOSTON, Feb. 20.—I have read with great pleasure in the *FOREST AND STREAM* a description of the traps used at the headwaters of the Tobique, but I find one discrepancy in the bear traps.

The ones that I have seen have at the entrance to the trap sharpened stakes which protrude above the lower log at the mouth of the dead fall some 5in. These are driven into the ground inside the trap, and I was informed by an old bear hunter that their use is to bleed the bear and also to hold him more securely when the dead fall strikes him. This, you will notice, is quite an important item. I have seen all of these traps that have been illustrated in some of my numerous trips to the Tobique, where I this fall killed a moose with a pair of horns that measured 4ft. 9in. across.

FRANK DEWING.

Denver Notes.

DENVER, Col., Feb. 25.—E. A. Callicotte, the new game warden, says that if the Legislature will pass one of the bills in regard to fish and game which are now before it he will make it his business to personally investigate all charges of game violation that are reported to him. He intends to make a collection of native trout and exhibit them alive at the World's Fair.

The citizens of Los Animas celebrated Washington's birthday with a jack rabbit hunt and scored 2,190.

The Boulder hunters are arranging for a wolf chase on the 26th inst. It is proposed to circle thirty miles of country in Boulder county with men and horses and materially diminish the number of coyotes and gray wolves.

TESEEBY.

Quail in the South.

BIRMINGHAM, Ala., Feb. 20.—The Southern quail are having a hard time of it in the winter of 1897-3. I was told of 600 being sold at Durham, N. C., for \$6. Supposed to be trapped by the negroes while snow was on. I was told by a gentleman on a train on the Georgia Central R. R. one night last week who owns a plantation of 5,000 acres in Alabama that he and five others in a week's shoot on his place killed 1,100 quail. What would some of our Northern shooters, who are happy to get a dozen or two birds after the hardest kind of a day's tramp, think if they could run into such shooting?

K.

Johnny Get Your Gun.

WHAT earthly analogy is there between shooting a brace of woodcock on the wing at one shot and a brace of partridges? Partridges associate in coveys; woodcock never do. Time and time again have I shot the former in doubles and several times in triplets; but in all the long years of my hunting never have I seen two woodcock fly in range of the same load of shot, and if any man or cowboy in North America has ever killed two on the wing at a single discharge of his gun I should like to hear from him; he is certainly entitled to a chromo. Of course, in what I have said, I refer to the Virginia partridge and not to the ruffed grouse.

J. I. C.

Virginia's Cold Winter.

LYNCHBURG, Va., Feb. 15.—From all reports that I can get the snow and cold have been hard on the quail in this State. When the snow is on then is the time for the colored man with his musket to scoop a bevy of birds at one shot in a bunch. And many have been found frozen. However, a fair head of game is still left in this State, and with no more snow good shooting can be had next season.

E. H. K.

Game and Fish Laws at Albany.

ALBANY, Feb. 22.—On Tuesday afternoon the Assembly Committee on Fish and Game gave a hearing in the presence of the Fish Commissioners. Assemblyman Thornton wanted a number of amendments made so that the people of Orange county could fish through the ice everywhere in that county. The Commissioners said that they would approve of Mr. Thornton's amendments if he would name the lakes in his county and guarantee that there were no trout in them. Mr. Thornton became very much excited and made some personal remarks about the Commissioners, who took them in very good nature. Assemblyman Rice, from Ulster county, made a plea for the catching of sturgeon, which fish was the food of a great many people, and the catching of it should not be restricted. The Commissioners were inclined to grant his request.

Senator Parsons appeared for his bill paying special protectors \$100 a year.

Assemblyman Parkhurst wanted fishing through the ice in Stouven county.

Mr. Yetman, of Richmond county, opposed the use of nets for menhaden in Raritan Bay.

The committee had been furnished with a memorandum from the Fish Commission in regard to the principal bills before them. The memorandum is as follows:

To the Committee on Game Laws of the Assembly of the State of New York.

GENTLEMEN.—The Commissioners of Fisheries at a meeting held Feb. 13, 1898, decided to memorialize your honorable body upon the subject of pending fish and game legislation.

While they have no desire to influence your committee in any manner, still they feel that it is their duty to take some action in the premises. At the beginning they wish to recite the circumstances under which the present code of the game and fish laws were enacted. Upon the recommendation of Governor Hill in several annual messages the Legislature of 1890 made provision for the appointment of a commission of three to codify the game laws of the State. Robert B. Roosevelt, president of the New York State Association for the Protection of Fish and Game, Richard U. Sherman, at that time a Commissioner of Fisheries, and Edward G. Whitaker, then Deputy Attorney-General of the State, were appointed as Commissioners.

The Commissioners held a large number of meetings in various parts of the State, and devoted a great deal of time and attention to the subject, and made their report to the Legislature at its session of 1891 in the form of a bill known as the "Fish and Game Law Codification Bill."

This bill was passed by the Assembly of 1891, but failed in the Senate, owing to the deadlock of that year. It was again introduced in the Legislature of 1892 and finally passed, was signed by the Governor and became a law. It has been in operation less than one year and the Commissioners feel that it may contain many imperfections, still it has had so short a trial and the work of game and fish protection has progressed so favorably under its provisions that it would not be advisable to make any radical changes in it at present.

Ignorance of the law, of course, cannot legally be urged as an excuse for its violation, but at the same time it seems to the Commissioners that fish and game laws are of such a character that ignorance of their provisions, while not a legal excuse, may be considered a moral excuse and, therefore, that all fish and game laws should be widely advertised and the people should be kept as familiar with their provisions as possible. They believe, therefore, that when once established such laws should be changed as little as possible, and then only upon certain well-known lines and in the interest of further protection. They believe that they differ from statutes passed against crimes that are in themselves immoral, and that this fact should be taken into consideration by the Legislature before passing hastily upon amendments submitted for their approval.

Of course there are some amendments that are absolutely necessary, arising from acknowledged defects in the existing law, errors in printing the bill as it passed last year, and some few slight amendments that the chief game and fish protector and his force during the past year have considered absolutely necessary.

In order that these amendments might be properly considered, the Commissioners have called to their aid Mr. Whitaker, who was the legal member of the Codification Commission, and the Chief Game and Fish Protector, and as a result of their work have caused to be introduced nineteen bills.

In regard to the remaining legislation now before your committee, the Commissioners, with the aid of the two gentlemen just mentioned, have given them careful examination, and desire to present herewith a statement, giving the number of the bill and its title, and an expression of their opinion. They trust that this action on their part will not be presumptuous, and that the committee will receive it in the spirit it was intended.

Assembly bill No. 104, by Mr. Thornton, adding in Section 141 Orange and Sullivan counties in which fishing for bullheads, etc., is allowed, is disapproved.

Assembly bill No. 147, by Mr. Parkhurst, allowing the same privilege to Honossee Lake, is also disapproved. The Commissioners disapprove all bills for fishing through the ice unless the lakes desired to be exempted are named in the bill.

The four following Assembly bills, also amending Section 141, are disapproved for the same reason: No. 191, Mr. Roberts, amending Section 141 so as to include Hemlock and Conesus lakes; No. 336, Mr. Lounsbury, including Ulster county; No. 514, Mr. Kinsla, allowing the use of "tip-ups" in Orange and Sullivan counties; No. 617, Mr. Rice, allowing the use of "tip-ups" for pickerel and rake-hooks for suckers in any of the waters of the State not inhabited by trout.

Assembly bill No. 382, Mr. Townsend, allowing angling in Jamaica Bay every day in the year, is approved; as is also No. 566, Mr. Foster, amending Section 136 so as to forbid at any time purse-nets, scup-nets, fyke-nets and hoop-nets in the Hudson River above Poughkeepsie.

Assembly bill No. 616, by Mr. Thornton, is necessary. It amends subdivision 5 of Section 271 so as to define angling as "taking fish with hook and line held in hand."

The Commissioners approve of Assembly bill No. 624, Mr. Higbie, amending Section 164 so as to make the close season for woodcock from Jan. 1 to Oct. 1, the close season for possession or sale commencing Feb. 1.

Assembly bill No. 632, Mr. Avery, is also approved. Assembly bill No. 616, by Mr. Thornton, is necessary. It amends subdivision 5 of Section 271 so as to define angling as "taking fish with hook and line held in hand."

The committee has reported Mr. Townsend's bill, No. 382; Mr. Thornton's bill, No. 612; Mr. Guenther's bill, No. 38; Mr. Higbie's bill, No. 127; Senator Parson's bill, No. 188, chartering the Genesee Valley Fish Breeders' Association; Assemblyman O'Sullivan's bill, not printed, to legalize the acts of the forest commission; also Assemblyman Avery's bill, Nos. 600, 605, 607, 615, 602, 593, 591, 598, 594, 596, 592 and 578, nearly all of which are from the forest commission and described, by numbers, in the *FOREST AND STREAM* of last week.

Sea and River Fishing.

The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.

RANGE AND SIZE OF TROUT.

ALLART, Tenn.—*Editor Forest and Stream:* I cut the inclosed from a local paper in this State, whose editor for some time published a paper in Maine and should know something of what he writes:

"A 10-pounder is no uncommon thing to land at the Rangeley Lakes, in northwest Maine, while occasionally one of 12 and 15lbs. is heard from. But then the Rangeleys are the only waters not overfished in New England. The fish called trout in Tennessee waters are not the true speckled trout so highly prized by epicures."

I have occasionally fished for trout in the Rangeley lakes during the last forty-two years and never saw nor before heard of a 10, 12 and 15lb. trout of the mountain or speckled species. Will you kindly let me know what your information is on the subject? I wrote the article in the *Gazette* and the supposed facts were given from personal observation.

Will you kindly favor me with a specimen copy of the *FOREST AND STREAM*?

J. W. BLANCHARD.

[To the trout fisherman there is probably nothing more interesting at this time of the year than a discussion of the limit of size of his favorite fish. The correspondent named below will find further west several kinds of trout that reach a very large size. We have weighed a Gairdner's trout, for example, of 29lbs., and Clark's trout runs up to 20lbs. The lake trout, which is a near relative of the common brook trout, reaches 50lbs. and upward.]

FOREST AND STREAM has frequently published notices of large brook trout. The largest well authenticated specimen known to us was caught by Seth Green in the "Soo" and weighed 12lbs., according to the personal testimony of the late Dr. P. R. Hoy. The National Museum exhibited at the Centennial Exposition a 10lbs. brook trout belonging to Geo. Shepard Page, Esq., which was caught in 1867 at Rangeley Lake, Maine. This fish was carried alive in a box of water which also contained a female trout weighing 8lbs. to Stanley, New Jersey. Visitors to the U. S. Fish Commission Exhibit at the World's Fair will see a cast of a 9lbs. brook trout taken at the Rangeleys last year.

"Speckled" trout are found in streams flowing over limestone rock, but they do not appear to thrive as well as in waters of free stone and granite regions. They occur in the headwaters of the Chattahoochee, Savannah, Catawba and French Broad, and northward through the Alleghany Region and the Great Lakes, at least, to Labrador.

The scales of the brook trout are so small that the fish is often erroneously considered scaleless. The native trout of Idaho and Colorado, however, are mainly black-spotted forms, with larger scales. The Salmon and Trout Supplement of *FOREST AND STREAM* contains illustrations of all the important species.]

The Tourilli Fish and Game Club.

QUEBEC, Feb. 18.—I have just returned from our club limits where it was my duty to inspect the work of building an upper club house, thirty-five miles from the main club house. You can get an idea of the extent of our limits when I tell you this is the center of our grounds. We shall also build the camps and a third house at the entrance of the Little Saguenay or Northeast Branch St. Anne River.

The trip to the upper club house was rather a hard one owing to several snowstorms in succession, which made snowshoeing very heavy. All the work of construction is done on the spot as there are no roads to this place and we are fifty miles from a roadway. Boards, shingles, square and round timber are made on the spot. The cost of the building will be about \$1,600. We had but little time to follow up any game which from the numerous tracks seemed to be plentiful.

Local clubs and sportsmen from all parts are actually agitating the enforcing of the game laws, which are totally ignored by pot-hunters and farmers around here. A few changes are also to be made, and I shall try and find the time to let you know more on this subject later on.

G. VAN F.

ANGLING NOTES.

The Yellow Perch.

As the salmon fisherman turns up his nose at the so-called sea trout of Canada, and calls them vermin when he seeks the nobler fish; and as the brook trout angler mildly curses the fall-fish or chub, or "cousin trout," that takes his fly when he casts for the beauty of the fountains; so the bass fisher, as a rule, damns with faint praise, or plainly without praise, as his bringing up may have been, the yellow perch that takes his cricket, grasshopper or minnow when he is fishing for plain bass. But really the yellow perch is entitled to greater consideration than it receives from those who seek the so-called game fishes only. In fact, two eminent doctors have given the perch a character which entitles it to stand with the very elect of fishes. Dr. G. Brown Goode reproduced the late S. A. Kilbourne's painting of the yellow perch, and included it in his "Game Fishes of the United States," and Dr. David S. Jordan in his report upon the fishes of Ohio, says that the yellow perch "is voracious and gamy, readily taking the hook, and being a handsome fish it finds a ready sale for food." I suppose the truth to be that we have so many larger or more dainty fishes, in some instances in abundance, that we do not properly appreciate some of the lesser fishes, like the perch, which in another land would be highly esteemed on the hook and on the table. Starting with the certificates of good character which I have quoted for the perch, let us become more familiar with it.

Its Habits.

The yellow perch is a gregarious, spring-spawning fish, inhabiting ponds and streams, and like most spring-spawning fishes, its eggs are of the adhesive class. In northern New York it spawns in May, and to the early lake trout troller the perch are a familiar sight on their spawning beds around the shores where they are sometimes sought for bait and used on a gang of hooks after taking the skin from one side. It is a prolific fish, spawning from 10,000 to 100,000 eggs. Buckland counted 127,240 eggs in a yellow perch of 2lbs. 11oz. in weight, and 155,620 in one of 3lbs. 2oz. These were the European perch, *Perca fluviatilis*, which is very like our perch, *Perca americana*. The spawn is laid in glutinous bands adhering to everything they touch, and the eggs hatch in from six to twelve days, depending upon the temperature of the water. They inhabit the waters of the Great Lake region, the upper part of the Mississippi Valley, and most of the waters east of the Alleghany Mountains, south nearly to Florida. They are also called barred perch, and winged perch, because of the vertical dark colored bars on their yellow sides.

Its Size.

One of the chief things urged against the yellow perch is its insignificant size, and too often this is a true count; but it is claimed, and I believe with truth, that yellow perch of 5lbs. in weight have been caught in Schroon and Paradox lakes on the borders of the Adirondacks, and Benjamin Hayes, of Brant Lake, not far from Schroon Lake, has told me that perch of 3 and 4lbs. each were once not uncommon in Brant Lake; and a year ago last summer I saw one caught from this lake that weighed almost 2lbs. In Schroon Lake, fishing one evening and one morning, with a friend, we caught 127 perch that weighed 57lbs. One perch of this lot weighed 1lb. 9½oz., and it was not considered remarkable and would not have been weighed except a gentleman had a \$5 opinion that a perch which he had was heavier, and it did prove to be almost as heavy. A few days ago twenty-eight perch were caught through the ice in Glen Lake, Warren county, N. Y., that weighed 14lbs. This is larger than the average in most waters, but ½ and ¾ lbs. perch are not unusual in waters where they have an abundance of food. Like other species of fish the large perch are more wary than the smaller ones, and it is not positive evidence that there are large perch in a pond or stream because small ones do most abound. In England yellow perch of 6, 7 and even 8lbs. are recorded, but of course such fish are exceedingly rare, although Pennell says that perch of 2 and 3lbs. are by no means uncommon, and specimens of even 4lbs. are probably less rare than may be supposed.

Edible Qualities.

There is a difference of opinion regarding the perch as a food fish, and that is very natural, for they inhabit warm water with mud and water weeds, and they also inhabit clear, cold water with rock and sand bottom, and the difference in environment makes the difference in the quality of the flesh of the fish. Dr. Jordan declared that the flesh of the yellow perch was much inferior to that of the bass and pike-perches, "being soft, coarse and insipid." I questioned this opinion and he wrote me that he would retract the "soft" but must adhere to the "coarse and insipid." At the same time he said the perch he tried at my suggestion "were market fish crushed beneath a mass of ice." Later he wrote: "Taken at its best, the perch is a good pan-fish, and every fish has the right to be taken at its best." The fish that Dr. Jordan tried were Western perch, and may have come from warm or muddy water and from being on ice were probably "tourists" or traveled fish, in which case they were not in condition to compete regarding a question of flavor. It may be heresy for me to say so, but I firmly believe that a yellow perch

from a clean mountain lake in February or March, is a sweeter-fleshed fish than any bass or pike-perch that ever wiggled its tail. It is a mistake to skin a perch, and it is in this way that market perch are treated, as a rule. A perch should be scalded, its head cut off, if you please, and the back fin taken out, and it comes out easily, when you have left a delicious, sweet, firm-fleshed fish. In summer perch from warm muddy water may be insipid, and they may also be coarse, but they are not so from a clear, cold lake, and any one who despises a yellow perch for the table has not seen it at its best.

As an Angle Fish.

If all fish that take a fly are to be considered game fish, then the yellow perch is to be included in this class of fishes, for it will take a fly, but there is no certainty that it will do so, and the regular bait in summer is the angle or earth worm for those of small size, with small minnows for the big ones. Of artificial lures its preference is for those which are striking, and it will take a gaudy scarlet-ibis fly rather than a modest brown-hackle, and it will impale itself on a silver trolling spoon with a regularity that is vexing when one is trolling for black bass and offers the choice between a spoon and a minnow gang. Like other fishes, they are peculiar in their moods. At times a large school of perch will swim past a variety of baited hooks, taking no notice of them whatever, and

perch is caught it furnishes the bait for its brethren, as a perch eye is the best bait for perch fishing through the ice. Kill a perch, remove its eye on the point of the hook and that is all there is to baiting the hook, and two or three perch will be caught at a time from early morn to frosty eve, and they are at this time in the best possible condition. A. N. CHENEY.

THE NEW JERSEY COAST POUNDS.

Editor Forest and Stream:

Appropos of the fishing season I wish to protest against the merciless slaughter of our food fishes on the New Jersey coast by the pound fishermen. I know there are thousands of people who will echo the sentiments I express. That every variety of fish is being rapidly decimated there can be no question, and unless a halt is called in the near future the livelihood of thousands of honest toilers and the delightful pastime of the salt water angler will be a remembrance only. It is a matter of public surprise that our commissioners of fisheries do not acquaint themselves with the senseless havoc wrought.

Within the past five years the number of pounds have increased from 19 to 128. What the exact number of pounds which were put down last year aggregate I have been unable to learn, but it is safe to say 12, which makes the entire number, to be entirely conservative, 140 of these monster death traps guarding every inlet and tideway of our coast, scooping in without reserve all that comes within reach. Beginning with the early runs of the shad this pernicious system is continued day and night, week day and Sunday alike, during the entire season, until the last fish has left our waters.

As the fish approach the shore to spawn, their natural runway is at low water back of the outer bar, at high water inside the bar and near the shore. The great net known as the fence is stretched from the bar shoreward and the pocket just back; so no matter what stage of tide the fish move there is no escape, small and large alike are held. Were these nets arranged as gill nets or so that marketable size fish only could be taken, the aspect of the case would be materially different; but the aforementioned pocket being made with small meshes, no matter how small the fish may be, he is kept captive. And right here comes the most damnable part of the whole affair. As is natural with animated creation everywhere, the weak must succumb to the strong, and when great masses of fish are packed in the pocket the small and consequently weak ones are literally smothered to death, so that at every lift of the net tons of dead fish are unceremoniously dumped into the sea. A little figuring will soon prove to those who have not considered the subject a slight idea of the tremendous waste carried on. Say of the one hundred and forty pounds, each makes one lift per day during the fishing season and casts over only 1,000lbs. we have as a result 12,600,000lbs. of the young of our finest food fishes criminally destroyed. That the above figures are entirely conservative and away within bounds, can be easily verified by any one who will take the trouble to investigate a little; and that these figures would approximate nearly three times the above I am confident could the exact truth be learned. I have seen as high as 90,000lbs. of weakfish massed in one net at a single lift.

This enormous mass of fish is worse than wasted; it destroys their productiveness in addition, for nearly all kinds of fish, as is well known to every student of the finny tribe, spawn at an early age. And were they even sold as fertilizer some consideration might be granted, but such a course would tend to open the eyes of the public, a circumstance which it is desirable should not occur. Again, at the season of the year when drum do not sell well, those scaly beauties, instead of being humanely liberated, are mercilessly stabbed to death in the net and allowed to drift with the tide until they are finally beached, when they become a public nuisance. One morning last August I counted no fewer than sixteen drum, ranging in weight from 15 to 40lbs. each, floating in Shark River Inlet at one tide, each one bearing the same fatal stab, and each one representing just so much waste in point of depopulation and valuable food.

Again, the thousands of boat fishermen who have heretofore made good incomes and provided well and plentifully for their families, find their vocation gone; attest the hundreds of boats lying idle upon our beach, the men either seeking new employment or sitting despondent in enforced idleness and a mortgage growing upon each heretofore happy home. That the present system of pound-fishing is detrimental to our best interests cannot be successfully contradicted; viewed in any light it is pernicious, and works financial good to the few against misfortune to the masses. The argument that the inhabitants of the great deep are so numerous that depletion is impossible, will not stand trial.

That our sea bass are growing scarcer each year is a matter of common comment. The bass begin moving shoreward about May 10 for the purpose of spawning, naturally seeking the channels of the rivers and bays as feeding grounds during the period, and as all streams are now guarded by pounds their chances of success are small indeed. Examination of all early caught bass will show them to be full of ripe spawn. Consequently, nature's great object of reproduction is thwarted.

Abundance of fish should mean cheap fish for the peo-

OUT FOR SPORT.

what one does all will do. At another time one cannot bait hooks fast enough to satisfy their voracious appetite. I have fished from one end of a boat, and fished for perch, too, without a bite for hours, during which time my companion in the opposite end of the boat has taken perch as rapidly as a hook could be baited and thrown into the water. Then the school would move to my end of the boat, and while I caught them rapidly my companion would be idle. At times a school of perch will be seen at the surface of a lake when it is still, apparently in play, for they refuse all baits offered, although one might suppose from their actions that they were feeding. It is just at dusk when they are at the surface breaking the water in all directions that they take a fly the best, but even then they are not to be depended upon, for one evening they will take a fly, and another evening—when all the conditions seem to be the same—they will refuse it utterly, but if you catch one you are sure of more. In the early summer the perch are on the shoals, but as the weather grows warmer they retire to deeper water where there is a bottom of grass or weeds, and here they may be caught until cold weather comes. From November to January in northern latitudes perch are not biting as a rule, but when February, March and April comes then is the perch fisherman's harvest. He cuts holes through the ice and catches perch until he reckons his score by the "dozens," as the Ettrick Shepherd reckoned his trout. At the end of his line the fisherman has a wire "spreader," from which depend two or three snelled hooks, as the case may be. For a first baiting the white grubs found in dead second-growth pines are used, but as soon as a

ple, but this is not the case. The carters get as good or better prices than they did when they depended on the boat fishermen for their supply. What cannot be sold at established prices are thrown away rather than to have the prices lowered, and so again the people suffer an imposition. Barnegat Bay has suffered, perhaps, more keenly than any other point. That lovely body of water has been the delight of thousands of anglers and the support of hundreds of families; but each year it has grown less productive, until last year it ceased to exist so far as fish and fishing were concerned, and all this was due to the existence of pounds and other illicit nets that guard its every approach from the sea. The great body of men who have hitherto earned a comfortable competence with their boats have grown disheartened at thoughts of the future.

So much from an economic view; and now from the angler's standpoint. There is not a hotel on the whole stretch of our coast but has during the season some disciples of Walton with their families as guests. They have come here for years, spent their money freely and enjoyed themselves at their favorite pastime. Mr. John Coffin, ex-editor of the *Asbury Park Journal*, lately interviewed the proprietors of our leading hotels on this subject, and procured the names of and the amount of money left with them annually by the anglers; and was surprised to find that each season would average \$80,000. This does not include the great majority who stop at boarding houses and cottages; these would easily figure as much more. We also have the important item of bait, boats, tackle, etc., which would swell the figures to the enormous sum of at least \$75,000; and this is only our own town. The past two years have been, however, seasons of discouragement, and many an old face will be missed the coming season, owing to the circumstances that they are called upon to face, and will seek other waters where pounds are unknown. This unless some change is made at once.

Ten years ago the entire coast from Seabright to Barnegat Inlet was a veritable paradise for the salt-water angler. No better stretch of beach existed. From June till November the waters swarmed with scaly prizes. Bluefish could be taken from the beach any day in profusion. Now the capture of one is regarded as a rare stroke of good luck. Kingfish, weakfish and other valuable varieties of game fishes crowded in every stream and were ready for the hook on presentation; but these days of pleasure are now known to memory only.

The pound men argue that the existence of their nets can have nothing to do with the present scarcity of striped bass, as they are never caught. Their argument is as misleading on this as on all other questions, and the absence of the striped bass from the nets is easily understood. The bass is endowed with more cunning than any of his fellows and is too wily to be taken in any such manner. He is at all times an inshore feeder, and what angler has not seen the silvery gleam of his side as he darts through the very undertow in pursuit of his prey? Meeting as he does the great succession of nets stretched along the beach, it is small wonder that he takes himself to waters and feeding grounds where he will not encounter what undoubtedly seems to him a snare and an intrusion.

In view of all these facts, is it either right or consistent that the public sit idly by and allow this wanton destruction to continue? Is it right that the masses shall be deprived in the future of such excellent food so bountifully supplied by our creator? Is it right that our thousands of fishermen shall be driven from their homes, and from the possibilities of earning an honest living? Is it right that our hotel keepers shall be deprived of their legitimate revenue? Is it right that the angler (to whom the hum of the reel and the swirl of the rod are indescribable music) shall be deprived of his innocent and glorious pastime? and all that the plethora pursues of a few men shall be swelled to enormous proportion. For mark you, the poor man cannot enter into this business, as each pound represents many thousands of dollars in value.

I know of no subject where economic importance is so disregarded by our authorities. It is only to be explained by ignorance of actual facts. Could our lawmakers but witness for one week the enormous waste persisted in, the pound would be abolished. LEONARD HULIT.

MORE ABOUT LEWISTON RESERVOIR.

PITTSBURG, Pa., Feb. 21.—The weather here is cold and cutting, and as I want to go fishing, but cannot on account of it being against the law and the rivers full of ice, I ask permission to take an old one of last year and invite your readers to go along. From my home I have two ways to go and those living along these lines can join me at the different points. By taking the "Flyer" on the Pittsburgh & Lake Erie R. R. at 8 o'clock A. M. and going to Cleveland, O., and taking the Big Four R. R. to Bellefontaine, and then to Huntsville, or by taking the Baltimore & Ohio R. R. to Columbus and then the Big Four to Springfield and to Huntsville, we can soon get to our grounds.

The place I propose to take you is the Lewiston Reservoir, situated four miles northwest of Huntsville, in Logan county, O. Huntsville is the station, on the Big Four R. R., and is the only railroad that reaches that place and of necessity you must take it. But I must say, for their credit, that they are reasonable in their charges, courteous and attentive to all their passengers, and especially to fishing parties. When we land at this village we shall find Dick Floyd and Jesse Short, two livery keepers, ready to haul us to the lake. The regular charge is 50 cents each way for passengers, but these two gentlemen always haul your camp equipage out and back free of charge; so if you bring tents, etc., they will be taken along. Before we go, however, let us stop at the Judge's, who keeps the hotel, and get our dinner. In we go and down the stairs we follow one another, until some one cries out, "Oh, look at the fish!" and sure enough, there, in the floor, the Judge has a hole some 6ft. long by 4ft. wide and 16in. deep, with fine large 6lb. black bass and one large 10lb. carp, besides smaller bass and minnows.

The judge is introduced all round and he shows us his living wild geese decoys, trained to bring down all the V shaped flock going either north or south, and says now, boys, when you want them send me word and I will take them out; but come, have a good warm dinner before you go, and we sit down to the Judge's best and we soon satisfy our hunger with good victuals from the Judge's own table. There is nothing too good, he thinks, for the

hunter and fisherman. But the sight of those bass gives us the fever, so out we go to find Floyd and Shorts ready with our conveyances. In we go and away we go over dry, hard, level, smooth roads, bound for Lake Ridge.

This place is on the eastern side of the water and is an island containing 100 acres, and is owned by a Mr. Spencer, but is in charge of his son-in-law, Mr. W. E. Clarke, who is one of the most pleasant and courteous gentlemen you would wish to meet. The hotel is run this year by Messrs. Becht & Heinmann, formerly of Columbus. In front is a lawn some 200ft. wide, and then, on the edge of the bank is the boat house, containing over 100 flat-bottomed dry and light running boats, which hold two or more persons. In front of this lies Indian Lake, one mile wide, and I am credibly informed, 80ft. deep. I do know that in this lake the largest black bass have been caught. Beyond this lies a number of islands, whose shores are covered with stumps, logs, brush, grass and debris of all kinds, and beyond the eye beholds the stumpy field where once wild forest held sway, but which fell under the pioneers' axes. Then comes the open water at the bulkhead, in which the outline and netting fiends deplete these waters unmolested and upon whose banks they find protection. In 1892 these two classes of people have settled down upon these waters to destroy, before the law prevents them, the finest black bass fishing in this country, and it seems no one can or will stop them. I was at this place in April, May, November and December, and during each visit I saw these violations going on. I was told the warden lived on the other side of the lake, but I never saw his face, nor did I see any evidence of his attention to destroying these appliances, although dozens of them were lying high and dry in sight.

It is no uncommon thing to get a boat at 25 cents per day, minnows 25 cents per dozen, and to get your partner in and spend the entire day in front of the hotel, and at no time out of sight nor beyond one-quarter of a mile away, and catch from 25 to 50 black bass and to eat your meals when the bell rings in the hotel. Mr. Clarke has live boxes for the use of the fishermen, with proper fastenings to keep it safe.

A great feature of this place among the farmers is to call themselves "guides," when you could not get lost or get out of sight to save your soul, and you could not stray away from the fishing grounds if you tried. They are more properly oarsmen, to row your boat if you wish to fish, and they come in handy for that purpose.

The hotel is fitted with good clean beds and has plenty of good, rich and well-cooked food, and the charges are only \$1 per day.

There will be this year some twenty cottages for those who desire their own home comforts by themselves at a mere nominal cost. My partner on one trip was Mr. O. M. Bingham, a manager of one of our local business houses, and he has the fever bad. We got over 100 bass and brought home 75, which we displayed to our friends and then distributed them.

We have arranged to go again, in larger numbers, and all who wish to join us can do so, and be assured of a good time. Besides the bass are the yellow perch, sunfish, calico bass (called by them the Lake Erie) and mud catfish. Turtles are abundant and so are frogs, and in season ducks cover the lakes. Adjoining Mr. Clarke's house is the park, with deer, hare, squirrels, raccoons, monkeys guinea pigs, white rats and white mice, etc.

J. W. HAGUE, Fish Warden.

A SOCKDOLAGER.

A DECIDEDLY cosmopolitan crowd we were. There was Ryan from Virginia, Whitsett from the Panhandle country, and Cutcheon and myself from a lake port of northern Michigan. Then there was Harvey and his chum Inverarity, Inv'y we called him for short. Once he was introduced to a fellow in his full imposing title of Duncan G. Inverarity, and the fellow just snorted and said, "Oh, come off now; tell me the fellow's real name." Didn't make Inv'y hot though! Well, he and Harvey were from Seattle or Tacoma or some such place in the furthest corner of the realm. There was only one sentiment in which we all agreed and that it was which had drawn us from the remotest parts of our land to the common Mecca and bound us with tenderest ties to our *Alma Mater*.

Nothing could be named which was not excelled or at least equalled in Washington, according to Inv'y and Harvey. So when the talk turned to fish and fishing we were at once assailed by the champions of the Occident. But Cut and I thought that we had seen some big fish ourselves, and on fresh water too. For a time we succeeded in holding up our end, but finally Harvey sprung a bender that would have daunted any one less courageous or more voracious than us.

"Well, when the diver went down to look at the wreck for the underwriter he found that shark in the hold of the schooner, swimming round as nice as anything. You see the planks had sprung inwards when he collided and jammed through, and the hole wasn't big enough to let him out. They had to blow him up with dynamite."

"Yes, some of those sharks certainly do come monstrous big," said Cut, "But now you ought to come up our way some vacation and let me show you what the lake sturgeons are like. Dynamite wouldn't touch them. Now there's that one that used to come into Manistee at times and had to go into the upper harbor to turn around; and he wasn't extraordinary at all," and Cut puffed out a couple of "rings" from his corn-cob and appeared to be calling up old memories. "I remember well the first time he came in. There's a wing bridge over the channel and they didn't see him in time, and—well, you may seem surprised, but it wouldn't seem strange to one familiar with Lake Michigan fish—but that sturgeon just lifted the bridge off on his back. After that they kept a watch at the Life Saving Station and used to telephone up to open the bridge when the old snoozer crossed the bar. Every one up there will tell you the same thing. But then that is not very strange."

"Oh yes, I've no doubt that's true," said Inv'y with an air of languor. "But then mere size is nothing. It's surprising to me how intelligent some fish are. Now there used to be a medium-sized whale around the part of Puget Sound where I lived—don't know but what it's there yet—might have been about a 150ft. long, more or less, and it got so used to the steamers that passed through the channel there that it learned the rules of the road and used to squirt water for signals in place of blowing a

whistle. One blast for port, two for starboard, and three when it came to the bridge in the narrows."

Our stock had declined ninety per cent. in a breath. Whitsett thought that might be "a right smart fish," and Ryan said it was time for a flag of truce. But not so. Cut's fertile imagination was only receiving stimulus by the yarns that smote me so heavily, and he would essay once more to uphold the piscatorial honor of his native State.

"That's nothing—positively nothing at all," he drawled. "Why up in our town there is a museum of natural wonders that can discount that whale. You see they've got an aquarium with a sword-fish in it. Well, twice every hour during the matinee a trainer comes out dressed in a uniform and at his command that sword-fish goes through the entire manual of arms."

The champions of the land of the setting sun pulled their hats down over their eyes and went out to get an invigorator.

HERBERT L. HARLEY.

MANISTEE, Michigan.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

Beaver Dam Bullheads.

CHICAGO, Feb. 18.—The last issue of *FOREST AND STREAM* contained mention of the bullhead flood now in progress up in Wisconsin, not far from the scene of the great Kekoskee bullhead upheaval years ago. The conditions are much the same as those of the *affaire* Kekoskee, a shallow mill pond full of fish, some open spring holes and a hard winter. My only satisfaction is in seeing the Kekoskee fish story perfectly confirmed, and my own reputation as a strictly truthful man fully sustained.

In this connection there arises an incident which carries a curious query in one's mind. It is, Can animals understand human speech, or is there any method by which they can gain a knowledge of what is going on in human affairs? This question is the more natural at this point because Santa Ana, the old Mayville horse which lived on bullheads in the hard Kekoskee winter, has, without any agency of human sort, and apparently of his own free will, deserted the town of Mayville and gone over to Beaver Dam, where he has resumed the diet of bullheads of which he earlier became so fond. Now, it seems absurd to suppose that a horse can read a newspaper, or if this source of information be set aside, the question remains whether or not Santa Ana heard or understood the talk about the Beaver Dam output, and so made up his own mind to move and go over to the land of plenty. Certainly the distance to Beaver Dam is too great for Santa Ana to smell, and no Beaver Dam horse has had any communication with Santa Ana. As the old inn-keeper at Mayville remarks, "Ach, dot Santy Anny, he vos doch ein crade horse alretty!"

It so happens that Mr. Percy Stone was up at Fond du Lac last Friday attending a meeting of the stockholders of the Horicon Club. While there he saw two sled-loads of bullheads; with side boards on the boxes and heaped full, which had come up from Beaver Dam, 60 miles away. The bullheads were offered at 60 cents a bushel. The Fond du Lac men, and indeed all of those present, for they all live around Horicon and Beaver Dam way expressed regret to Mr. Stone that he did not bring with him the representative of *FOREST AND STREAM*. This is a regular bullhead revival, and every genuine Wisconsin man is feeling good over the return of the good old days. They all assured Mr. Stone that so many bullheads had been taken out of Beaver Dam Lake in the past few months that the water of the entire lake had fallen over a foot. The Beaver Dam geysers have now been in action for over six weeks. I trust that after this no discredit may be cast upon any fish story I may see fit to tell. Any one must admit that a man is very strong medicine who can produce an irruption of bullheads, if necessary, to prove the truth of his assertions.

Horicon Club.

It is cause for congratulation all around to state that at the Fond du Lac meeting of last Friday the stockholders of Horicon Shooting Club, of Wisconsin, transferred the entire management of the club and the handling of the reserved shares over to Mr. Percy Stone. Mr. Stone will next summer put up a club house exactly like that of the Diana Club, at the opposite end of the great marsh, and will also make arrangements for a good steward, etc., etc. Mr. Stone, it will be borne in mind, was the man who made the Diana Club what it is to-day. The most sufficient comment on this is, that, as soon as the meeting was over, the club shares stiffened up at once, and are now held at a great advance over the market value of last year. Matters on the vast and valuable Horicon Marsh are now in admirable shape.

Trout Have No Wings.

If Mr. Fernandez, State fish warden of Wisconsin, will go to the Pine River, one of the best streams of the State for trout, and will ascend it to a point about three miles below the mouth of the Poplar River, he will find a big logging dam, over which no trout can go. This dam has no fishway, as the laws of the State demand. There are no trout in the Pine above this dam, so the logging men say. Certainly there ought to be, yet trout have no wings. These facts are brought me by Mr. C. F. Norris, who has been up looking for some good trout country for us next spring.

Mr. Norris tells me that the snow in the Wisconsin woods is 5ft. deep on the level, and so soft and fluffy that snowshoes can not be used. It is truly an awful winter through the West, and the game can not fail to suffer sadly.

E. HUGH.

175 MONROE STREET, Chicago.

Mussels Caught on a Hook.

CHATTANOOGA, Tenn., Feb. 15.—Concerning the "Curious Capture of Mussels" in your edition of Feb. 9. While trolling in Canadian lakes, notably in Cook's Bay, Lake Simcoe and Lakes Rosseau and Nipissing, it was an everyday occurrence to catch mussels on the line. I never caught one on any bait.

D. G. CHARLES.

Sunapee Saibling.

At the meeting of the Biological Section of the New York Academy of Sciences, to be held March 13, Dr. J. D. Quackenbos will read a paper "On the Sunapee Saibling," a fourth New England variety of *Salvelinus*.

CONNECTICUT RIVER PIKE-PERCH.

CHARLESTON, N. H., Feb. 20.—I inclose a cutting from the Bellows Falls paper, which shows that the pike-perch placed in the upper Connecticut about twenty years ago by my old friend, the late A. H. Powers, are gradually working down the river:

"A gentleman from Saxton's River came down here one day last week on a fishing excursion and captured, in the river below the mills, 17lbs. of wall-eyed pike, one alone weighing 7½lbs."

We noticed the capture of one at Mills River, sixty miles above here, last year, and I heard of one or two small ones as having been caught opposite this village, but have not heard of any so large as this. We ought to have good fishing in the Connecticut here. Livingston Stone put in black bass about 1870, and the Lake Champlain pike, which were washed down when Gov. Paine's dam at Bethel gave way in 1840, are pretty plenty.

I hear of a few, 12 or 15lbs., every summer, but mostly taken on night lines, and also of a few bass, mostly taken in the eddies below the piers of Cheshire Bridge, a mile and a half above here, and the only bridge over the river in eighteen miles. It is ten years since I wet a line in the river, for such time as I get for fishing I prefer to devote to the "crimson-starred beauties" of whom Mr. Starbuck writes with such gusto, and I had rather tire my long legs with a four-mile tramp along a trout brook than cramp them by curling them up in a boat in the sun.

However, certain unerring and unwelcome symptoms warn me that I shall not stretch my legs over the hills many seasons more, and I think it very possible that next summer may see me dropping a line again in the old river as I used to sixty years since, before I learned how to catch trout. It will be for different game though, for in those days we had only yellow perch, dace and "redfins," with now and then a stray pickerel who got himself into trouble by a rush among the smaller fry who were gathered around our hook. I am glad to see the portraits of Mr. Starbuck and "Ned" in a late number of FOREST AND STREAM, and wish I could be young enough again to join them in a trip along the "North Shore." VON W.

An Adirondack Programme.

JUDGE GEORGE W. SMITH, of Herkimer, one of the clearest thinkers and most effective writers in this region, has prepared a memorial to the Legislature in relation to the preservation of the Adirondack region. Judge Smith urges "a simple, safe, effective and inexpensive policy," based on the following ideas:

1. Let the State take by right of eminent domain land within the limits of the preserve, adjacent to State lands, as fast as funds can be provided, and as may be expedient. A reasonable price can thus be fixed.
2. Collect the full amount of taxes from the owners and associations within and about the preserve, and devote the entire amount to enlarging the holding of the State within the preserve. The process of taxation may be made to ascertain the value of the land required for the preserve.
3. Forbid any expectation that the State will, at its expense, maintain or watch against fires, or give the service of fish and game protectors for the benefit of private owners.
4. Keep off lumber thieves by the combined action of the fire wardens, fish and game protectors.
5. Let there be no co-partnership between the State and private owners in lumbering or any other business.
6. Sell no timber; it performs its best office where it is, the profits of sales would be trivial, probably nothing, while the removal of the timber would seriously and at length fatally impair the principal design. Besides, the whole business would be fruitful of corruption and abuses.
7. Only small lots should be leased and those under restrictions that would prevent any trenching upon the public right of free resort.
8. Make the whole preserve a Free Commons for a whole people—an object lesson set against land monopoly and the English game preserve system—make this, as easily it may be made, the Excelsior Park of the State and of the World.
9. Having secured the required land, maintain it in a state of nature, and nature will continue to do all that is necessary to be done, without other expense than the required police. By keeping in view these principles a great and beneficent design can be accomplished and a legacy of incalculable value transmitted to posterity.

Another Bullhead Upheaval.

CAPAC, Mich., Feb. 13.—Among the many attractions of this village is a "fish mine." Mud Lake is completely frozen over; there are no air-holes. Fish who desire to continue breathing are compelled to swim about four miles to the outlet of the lake, whither there are but a few square rods of open water. Naturally, this point has become a favorite rendezvous for the finny tribe, who literally fall over each other in their anxiety to get near the air. Around this open space sportsmen from far and near have gathered, with spear, pitchforks, shovels and other instruments of war. It is impossible to estimate the amount of the catch since the sport began a week ago. Fish have been taken away by the string, in bags and even in barrels. Many of them weigh from 8 to 12lbs. There are "bullheads," pickerel and pike. Every one goes fishing regardless of the weather, and there is no occasion for lying. "Truth is stranger than fiction."—*Detroit Evening News*.

River Cruises for C. J. L.

STAUNTON, Va., Feb. 18.—In my short communication in FOREST AND STREAM of Feb. 16, entitled "River Cruises for C. J. L.," the compositor, by misplacing capitals and punctuation marks, made a mess of that part of the article relating to the Miami. What I intended to convey is as follows:

"The Great Miami River in Ohio will furnish him a delightful two weeks' cruise from Sidney to Hamilton, or Lawrenceburg, Ind., on the Ohio just below the mouth of the Miami. The river (Miami, not the Ohio) is swift and full of little rifts, and the Miami Valley is beautiful."

By giving space to the above correction you will greatly oblige

COMMODORE

PEORIA, Ill., Feb. 28.—In the issue of Feb. 16 "Commodore" mentions several fine cruises in response to an inquiry from "C. J. L.," of Detroit, all of which are good

particularly the Wabash, St. Joseph and Susquehanna rivers.

The Kankakee River, in Illinois, is another good cruising stream, and as for bass fishing cannot be beat. From Mokena down to Morris on the Illinois River, just below the mouth of the Kankakee; would make a two or three weeks' delightful cruise just after the "June rise."

HE-CHI-MO.

Jocko River Trout.

In the fall of 1892 Major Peter Ronan, Agent of the Flathead Indians in Montana, advised the Commissioner of Fisheries that he had preserved a pair of large trout of Jocko River and would forward them to Washington if desired. He wished to know the name of the species.

The fish arrived last week and proves to be a Dolly Varden, also known as salmon trout and bull trout. The specimen weighs 6lbs. and measures 25in. in length. These trout are abundant and form a very important source of supply for food and sport. The fish sent is a male with the lower jaw hooked upward at a right angle and the outer edge of the ventral and anal fins milky white as in the Eastern brook trout in the breeding season. The red spots of the sides are large, but much faded by the preserving fluid.

Massachusetts Black Bass Season.

HOUSE BILL No. 352, introduced by Mr. Blodgett, of Leominster, amends the present statute so as to open the bass season June 15 instead of July 1. The measure has the support of Mr. Henry J. Thayer, of Boston, and other bass fishermen, and Mr. Thayer invites the co-operation of the anglers of the State in urging upon the Legislature the change of date.

"Forest and Stream."

COPIES of Sept. 25, 1890, are wanted at this office and will be paid for.

The Automatic Reel

is an invention which when first put upon the market met with much adverse criticism. To-day its manufacturers, Messrs. Yawman & Erbe, of Rochester, N. Y., can scarcely supply the demand. The intrinsic merit of this reel has carried it to the front, despite all obstacles, and at present some of the anglers formerly most hostile to the "little finger" wonder are most enthusiastic in its praise. Write the manufacturers for catalogue describing recent improvements.—*Adv.*

Camp-Fire Flickerings.

"That Reminds Me."

FOUR MILE RUN, Va.—The publication in the FOREST AND STREAM of Jan. 19, of the "Ode to Pup," by the late John E. Kenna recalls an incident during his life. There are two club houses here occupied by the members of each, or occasionally when accompanied by a member, a visitor is admitted. The late Senator Kenna had a friend staying with him from West Virginia, and as the ducks were flying on the Potomac, the Senator proposed to give his friend and brother sportsman a little duck shooting. To avoid a long and cold pull in the boat in the early morning they were invited by one of the members of the club to pass the night comfortably in the club houses and start from there in the morning for their sport. The friend related his exploits with a torch after ducks at night, and nothing would do but to make a torch and try it in this new field. The tide that night was very late, and at midnight I retired, but I had hardly fallen asleep when a terrible fusillade commenced, and from the continued firing I supposed that they were literally "slaughtering" the mallards. In the morning I asked mine host Taylor how many ducks they had killed. "Every blessed one I had," he replied. It appears that his own tame ducks were in the habit of feeding at night on the marsh, and these had fallen victims. But they were well paid for and secrecy was ordered, and this is the reason it has not before appeared. I will not give the friend's name, but I suppose he will recognize the incident. SPOTTY.

Eighteen years ago, said a Maine woodsman, I was camping on Pitlock Stream and one night I went out doors. It was about half past eight and pitch dark. I heard somebody a hollerin' way off in the woods and I thought may be somebody was lost, so I answered. Well, it kept coming nearer and nearer, and hollerin' onct, till all at onct it stopped of a sudden. I listened for it quite a while, then I thought I had better sing out onct more. I did, but that was the last time, for right above me in a big pine something gave the most un'arthly yell, or scream, that I ever heard. I tell you, it just lifted the cap off my head. Well, the way I rushed into the camp was a caution. I didn't stop to see who the stranger was, I tell you. I couldn't sleep that night, I was too frightened. Afterward, when I told the boys they laughed and said, "Well, somebody was lost, maybe, but we guess you heard an Injun devil." JAGARE.

A New-Subscriber Offer.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

Monday Morning at the Parsonage.

REV. MORGAN COOLEY, who has contributed many readable sketches to our columns, writes:

"There is no paper I enjoy more than FOREST AND STREAM. It reaches me every Monday morning and it is the first paper I open, sure that on its clear, fresh pages I'll find something which will be a pleasure for all the week."

We Deny the Age but Admit the Quality.

FOREST AND STREAM is forty years old and is the best paper in the world in its particular field. It has put on a new head and is otherwise improved.—*New Albany (Ind.) Leader*.

Fishculture.

Pennsylvania Fishculture.

THE report of the Pennsylvania Fish Commissioners for 1888 to 1892 shows a highly gratifying state of advancement in fishculture in the Keystone State. The number of fish distributed during the period covered by the report exceeds one hundred and fifty-two millions, including brook trout, rainbow trout, whitefish, shad, pike-perch, and a dozen other food and game species. The bulk of the work was devoted to brook trout, whitefish, pike-perch and shad.

The Delaware has been cleared of pound-nets, fish weirs, fish baskets and unseasonable seines. The dam at Lacka-waxen has been overcome by means of fishways, with the result of extending the fishing grounds and spawning area more than one hundred miles.

The Susquehanna, owing to its obstruction by fish baskets in Maryland territory and the imperfect working of fishways in the dam at Columbia, Pa., continues to be an indifferent shad river.

The State now owns a well-equipped car, which will be used in hatching and transporting shad and in carrying fish throughout the commonwealth. Many of the fine fishes of Lake Erie, such as the pike-perch, white bass, yellow bass, black bass, calico bass and rock bass can now be quickly and safely carried to suitable streams and lakes in all parts of the State. In accomplishing this work the Commission will have the usual liberal aid of the railroads.

The U. S. Fish Commission has continued to co-operate with the Pennsylvania Commission in stocking the waters with shad, pike-perch, and other valuable fishes. The fish-protective associations have also been of the greatest service by creating a healthy public sentiment in favor of fishculture and fish protection. In this effort they have received the hearty and powerful aid of the press.

The appendix to this report contains a detailed account of the fishes of Pennsylvania, by Dr. T. H. Bean, of the U. S. Fish Commission and National Museum, angling editor of FOREST AND STREAM. We have previously outlined the character of this paper, which has been justly pronounced one of the most valuable issued by a State Commission. The report contains full descriptions of all the fishes known to occur, 157 in number, followed by popular notes on the common names, distribution, habits, reproduction, growth and mode of capture. Nearly one-half of the species are illustrated, fifteen of them by colored plates, which were reduced from original drawings by Mr. S. F. Denton.

Owing to this reduction, there was some loss of faithfulness in following the colors in a few instances, but the work as a whole is up to the best standard. Had the reproduction been of the size of the original, we are satisfied that they would have left nothing to be desired in the way of accuracy and artistic beauty. The white perch was first copied full size and the work was exquisitely done.

We understand that the demand for copies of this report of the Commission cannot be supplied, and it is even now difficult to secure them, although the work has been off the press scarcely more than a month.

Fishway Construction.

Editor Forest and Stream:

Some time ago you published an illustrated article in regard to "fishways" or "chutes" over dams. By a recent act of our Legislature it is made obligatory on the part of county commissioners to construct such fishways when a certain number of freeholders request it. We have a very good field to work in here and want to find the best thing in the way of a "chute." Can you refer me to the number containing the information, or if you can give us any information in regard to it in your next number you will confer a great favor. SUBSCRIBER.

[Articles on fishways were published Dec. 31, 1891, Jan. 28, Feb. 4 and April 14, 1892, but these papers were not illustrated. No recent account of fishways in general has been issued, as far as we know, by the national or State Government. One of the best short articles upon the subject was prepared by Mr. Charles G. Atkins, now living at East Orland, Me. This was printed in Part II. of the Report of U. S. Fish Commission, and issued in 1874. It contains fifteen plates.

In Part X. of the same report the present Commissioner of Fisheries published a paper on "A New System of Fishway Building." This was sent out in 1884 with seven plates. It relates to the McDonald fishway, which has been greatly modified since that date.

If you can find these reports in a library accessible to you, they will prove valuable on account of the many suggestions contained in the articles mentioned. The numbers of FOREST AND STREAM above referred to contain more recent discussions of fishway construction. There is urgent need of a full report, bringing the subject up to date. The necessity of fishways is becoming more and more evident every year.]

Trout Culture.

Editor Forest and Stream:

I notice in your last issue the inquiry of "Owahgena" regarding an inclosure for brook trout, and your reply thereto. I agree with you upon most points in your reply, but, in the light of several years' more experience upon the subject than any other American, I cannot recommend a pond for a trout preserve. Your correspondent does not furnish sufficient data for an intelligent reply. It is somewhat essential to know the region of country, the surroundings, whether cultivated or wild, the fall of the stream in the distance named, and the character of the bed, whether rock, loose stone, gravel or otherwise. There is not one chance in twenty-five of any success whatever in the natural stream, unless the main flow can be deflected. Success would be far more probable in artificial channels, led from the head and under entire control, but considerable fall would be required with stone or gravel for bed. With these factors and those named in your reply, success might be attained, and without artificial propagation. MILTON P. PEIRCE.

After Eighteen Years.

A WILLIAMSPORT, Pa., reader says: "We have been subscribers to your paper since 1875, we think, at least since its consolidation with *Rod and Gun*, but must say it is still improving. Your last few numbers are 'great.'"

Business.

MR. G. C. WALTON, Augusta, Ga., writes Feb. 5: "Let me compliment you on your valuable paper; like wine, it improves with age."

It Has None.

Haverhill, Mass.—I have taken your paper for twelve years and I don't know its equal. J. P. U. G.

MESSRS. W. W. HART & Co., the taxidermists, have removed their establishment from 11 and 13 Jacob street to 5 West Third street, near Broadway. This firm recently received the heads and antlers ready for mounting of twenty-six caribou, besides four complete specimens. There are some very fine heads in the lot.—*Adv.*

"FOREST AND STREAM" PHOTOGRAPHS.

Amateur Competition of 1892.

THE AWARDS.

THE first annual FOREST AND STREAM Amateur Photography Competition has been a brilliant success, far exceeding the most sanguine anticipations of its promoters, both as to number of pictures entered for competition and in the very high character of the work submitted. As a whole the collection constitutes a remarkable series of pictures of outdoor, forest and stream life, representing many phases of sport with rod and gun.

Because of the number of specimens of work of high grade and possessing decided merit the committee on awards were confronted by a task of no slight magnitude and attended with no little delicacy. They have given most careful consideration to the selection and we improve this opportunity to acknowledge their conscientiously rendered services. We renew as well our expression of appreciation of the interest shown in the competition by our friends and of the co-operation of all who have contributed to the successful issue.

There were so many photographs worthy of prizes—had the prize list been larger—that the final awards have been made only after the passing by of numerous works which the committee deemed hardly less meritorious than those finally selected. Some of these we shall reproduce, following the publication of the prize pictures. The first prize subject is reprinted to-day from a previous issue. The second prize work will be given next week, and the others will follow in succession. There are ten prizes: First \$25, second \$20, third \$15, fourth \$10, and six of \$5 each for fifth. The committee's report follows:

Editor Forest and Stream:

Your Committee on Amateur Photographs beg to submit herewith their decisions in the matter of prize awards.

After an examination of the large number of photos, very many of which were of a high order of excellence, the committee has selected the prize winners as by the accompanying list:

FIRST PRIZE.

Out for Sport.

Mr. A. G. McFarland, San Francisco, Cal.

SECOND PRIZE.

Group of Deer.

Mr. A. S. Bennett, Axial, Cal.

THIRD PRIZE.

"Dar's He"

Mr. Clarence B. Moore, Philadelphia, Pa.

FOURTH PRIZE.

After the Speckled Beauties.

Dr. J. Max Mueller, West Chester, Pa.

FIFTH PRIZES—SIX OF EQUAL MERIT.

Nesting Woodcock.

Mr. G. E. Jaquins, Hudson, N. Y.

Grouse Shooting in Michigan.

Mr. J. C. Thompson, Bay City, Mich.

A Parry Sound Moose.

"Huck Lake."

Now for Trout.

Dr. J. J. Mills, Poughkeepsie, N. Y.

Listen!

Col. Cecil Clay, Washington, D. C.

June in the Adirondacks.

Mr. John E. Ottaway, Charlotte, N. Y.

Your committee found so much to commend and so little to condemn, that it was only after the most careful weighing of individual points of merit, that it was enabled to reach a final determination.

In making the awards the committee has endeavored to confine itself closely to the limits of the competition, as regards the selection of the subject, the difficulties to be overcome by the photographer in securing the picture, the general excellency of his work, and its artistic merit. Among the leading competitors each excelled in some special feature or features, while in others he fell behind his foremost rivals. The task of the committee was therefore one of great difficulty; and each one of the members was obliged to yield his judgment on certain points; but the committee can confidently assert that on the whole substantial justice has been done.

THE FOREST AND STREAM is to be congratulated upon the interest felt by amateurs in this competition, as shown by the unusually fine collection of photographs submitted, both by Americans and by foreigners.

E. BIERSTADT,
THEODORE ROOSEVELT,
WILMOT TOWNSEND.

The Kennel.

FIXTURES.

DOG SHOWS.

March 7 to 10.—Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderfer, Sec'y. Entries close Feb. 25.
March 14 to 17.—Washington, D. C. F. S. Webster, Sec'y.
March 21 to 24.—City of the Straits Kennel Club, at Detroit, Mich. Guy D. Welton, Sec'y.
March 22 to 25.—Elmira, N. Y. C. A. Bowman, Sec'y.
March 28 to 31.—Illinois Kennel Club, first show, at Indianapolis, Ind. Chas. K. Farmer, Sec'y.
April 4 to 7.—New England Kennel Club, at Boston, Mass. J. W. Newman, Sec'y.
April 11 to 14.—Continental Kennel Club, at Denver, Col.
April 19 to 22.—Fifth Annual Dog Show, at Los Angeles, Cal. C. A. Sumner, Sec'y.
May 5 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.
June 13 to 17.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.
Sept. 7 to 10.—Hamilton, Ont. A. D. Stewart, Sec'y.
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y.

FIELD TRIALS.

Nov. 20.—Eastern Field Trial Club's Trials, at High Point, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

Don't forget that Washington entries close March 6, with F. S. Webster, 1237 Pennsylvania avenue, Washington, D. C.

CLUB MEETINGS.

American Spaniel Club.

The annual meeting of the American Spaniel Club was held at the Madison Square Garden, 5 P. M. Feb. 23. There were present Messrs. A. C. Wilmerding, James Watson, E. M. Oldham, William Payne, Dr. Kitchel, George Bell, C. M. Nelles, E. H. Morris, W. S. Brooks, J. Otis Fellows and Rowland P. Keasbey. The president, Mr. A. C. Wilmerding, presided.

The minutes of the last meeting having been read and approved, the president made a report of the work done by the executive committee during the past year. The treasurer also presented a report showing a balance in the treasury of \$114. It was resolved to instruct the executive committee to investigate the subject of club medals. It was further resolved that the letter of P. J. Keyes, of Ottawa, Canada, in which he makes the statement that certain dogs would win at New York if owned by Mr. George Bell, thereby applying dishonest collusion between that gentleman and Mr. Oldham, the judge of spaniels, be referred to the American Kennel Club with the request that that club impose such punishment as it may deem fit on the same P. J. Keyes, he not being a member of the Spaniel Club, and therefore not subject to their jurisdiction. The club also took a vote of confidence in Mr. E. M. Oldham.

Nominations were then received for members of the executive committee. A vote being taken, the following gentlemen were duly elected: Messrs. A. C. Wilmerding, E. M. Oldham, A. E. Foster, F. W. Kitchel and Rowland P. Keasbey. The following gentlemen were elected vice-presidents of the club for the ensuing year: Messrs. James Watson, J. P. Willey and J. F. Kirk.

At the meeting of the executive committee the following officers were elected for the ensuing year: President, Mr. A. C. Wilmerding; treasurer Mr. E. M. Oldham; secretary, Mr. Rowland P. Keasbey.

St. Bernard Club Meeting.

The St. Bernard Club of America held its annual meeting at Madison Square Garden, N. Y. City, Tuesday, Feb. 21st, at 9 P. M. There were present: W. H. Joeckel, Jr., President; E. B. Sears, Treasurer; Mrs. Smyth, Mrs. Nicholson, O. W. Volger, Daniel Mann, G. E. Wigan, R. M. Cushman, B. F. Johnson, Edward Booth and H. S. Chambers. Mr. Volger was requested to act as Secretary pro tem. Reading of minutes of previous meeting were on motion, dispensed with. Treasurer Sears read his report and showed a balance of \$340 in the bank and about \$200 owing the club. Mr. Cushman moved that a vote of thanks be tendered Mr. Sears for his indefatigable efforts in furthering the interest of the club, and more particularly in so ably filling the position of treasurer. Same was seconded and carried. The resignations of J. R. Teague, J. J. Key and A. Stucky were tendered and accepted. The names of five applicants for membership were read and referred to the Board of Governors to be acted upon at their first meeting. The following officers were elected for the coming year: President, W. H. Joeckel, Jr.; Vice-Presidents, Miss Whitney, R. J. Sawyer and Jacob Ruppert, Jr.; Treasurer, W. A. Wells. Governors, W. C. Reick, E. B. Sears, B. P. Johnson, K. E. Hopf, W. H. Walbridge, E. H. Moore, O. W. Volger, Edward Booth, R. M. Cushman. Meeting adjourned.

National Greyhound Club.

The National Greyhound meeting was held Feb. 23. There were present, Messrs. Whiton, Rowe, Wade, Drake, Nelson, Watson, Schumacker, Usher, Stewart, Lewis, Huntington. Treasurer's report accepted as read and ordered placed on file. Regarding suspension of D. C. Luce, for alleged wrong entry, at the American Coursing Club meeting, 1892, it was referred with full power to Messrs. Bartels, McDougal and Williams to take evidence and report to the club at large. The election resulted: Directors, Williams, Wade and Belmont. Second, Third, Fourth and Fifth Vice-Presidents, Page, Whiton, Watson and Rowe.

It was moved that the fall meeting of the club be held at the place where and time of the American Coursing Club's running meeting, the secretary to give ten days' notice of such meeting. Members of the N. G. C. who may be at the Washington show were requested to see the Government officials and secure, if possible, recognition of the National Greyhound Stud Book of England as the recognized authority of pedigrees of greyhounds.

Medals were donated as follows: Boston, Baltimore, Detroit, Washington, Toronto. Three medals for each show, that is, one for the best American bred greyhound, one for best deerhound and one for best wolfhound; Elmira, three medals, one for the best of each breed without regard to place of birth; twelve medals to the World's Fair, six for any breed and six for American bred. One medal for each sex of greyhound, deerhound and wolfhound. Decision of the A. C. C. in the matter of the Pearl of Pekin-Chicopee Lass was reversed and the award given to Pearl of Pekin.

National Beagle Club.

TARRYTOWN, N. Y., Feb. 25.—A special meeting of the National Beagle Club of America was held in Madison Square Garden, Feb. 22. Present: President, H. L. Kreuder; First Vice-President, H. F. Schellhals; Second Vice-President, J. W. Appleton; Third Vice-President, John Bateman; Secretary and Treasurer, George Laick; Executive Committee, George W. Rogers, F. C. Phoebe, F. W. Chapman, H. V. Jamieson, Dr. Edwin Field, Bradford S. Turpin, Aug. A. Knoblauch and E. Gerry Roberts. Voted that the N. B. C. decline giving a special prize to the City of the Straits K. C. show, inasmuch as they are not members of the A. K. C. The delegate to the A. K. C. was instructed to see that the

winnings at the first bench show held by the N. B. C. be recognized by the A. K. C. Voted that the secretary circulate a subscription list among the members of the club, the money to be used for the purchase of bench show and field trial prizes for 1893. Voted that a special prize of silver plate be given to the Maryland K. C. show for the best beagle in the show, owned by a member of the N. B. C.; that a special prize of silver plate be given to the Washington show for the best beagle in the show, exclusive of the first prize winners in the challenge classes, open to members of the N. B. C. only. Voted that a special prize of silver plate be given to the Elmira show, to the best beagle having won a second prize at the Elmira show in the regular classes, open to members of the N. B. C. A communication was received from the Toronto Industrial Exhibition Association asking a special prize to this show to be held in September next. On motion, laid on the table until some future time. Voted that the official classification of the club be printed and sent to the different bench show committees with the request that such classification be made. A communication was received from Mr. O. W. Brooking. Moved by Mr. Brooking and seconded by Mr. Chapman that a new committee be appointed to have the N. B. C. of America incorporated. Motion lost. Messrs. E. Gerry Roberts of Red Bank, and J. B. Lozier of Oradell, N. J., were admitted to membership. The Committee on Resolutions made their report, which was received, and the secretary was instructed to forward a copy thereof to the officers of the N. B. C. of Am. of 1892. Moved by Mr. Laick, and seconded by Mr. Bateman, that Mr. Kreuder be appointed a committee to use his best efforts to have the game laws of the State of New York revised so as to have rabbits protected at certain seasons of the year the same as other game. Motion carried. The Auditing Committee was requested to make their report to the club. Messrs. W. A. Power and W. F. Rutter, Jr., were reinstated to membership. The secretary was instructed to forward a card in the press asking beagle breeders and the public in general for suggestions of suitable places to hold the N. B. C. field trials in 1893. GEORGE LAICK, Sec'y-Treas. N. B. C. of Am.

Irish Setter Club.

The executive committee of the Irish Setter Club met at the Westminster Kennel Club's show, on Feb. 22, and elected Mr. George Langran, of Yonkers, N. Y., a member. It then adjourned and the annual meeting of the club was held. The Vice-President, Dr. Rowe, occupied the chair. The following members were present or represented by proxies: C. T. Thompson, W. L. Washington, B. L. Clements, J. B. Blossom, E. C. Fowler, E. B. Bishop, W. H. Child, H. B. Anderson, L. C. Sauveur, Geo. Langran, Dr. Rowe and G. G. Davis. The secretary read a communication from Mr. Stone, secretary of the show of the Industrial Exhibition of Toronto, Can., requesting a donation of special prizes for Irish setters. On motion, it was decided that the Irish Setter Club, not having decided to give any special prizes for bench shows, regrets that it cannot comply with their request at present. The treasurer then submitted his report for the past year and his accounts were approved and the report accepted. The club owes nothing. The annual election for officers then took place and resulted as follows: President, W. L. Washington; Vice President, Dr. N. Rowe; Secretary and Treasurer, G. G. Davis. Executive Committee, C. T. Thompson, F. H. Perry, E. B. Bishop, L. C. Sauveur and F. L. Cheney. The question of field trials was referred to the field trial committee and a committee authorized to be appointed by the president to revise the constitution. After a vote of thanks to the secretary for his services, the club adjourned.

Pointer Club.

The Pointer Club of America, met on Thursday afternoon and elected the following list of officers: President, Jas. L. Anthony; Vice-President, John S. Wise; Secretary and Treasurer, B. E. Edwards; Board of Governors, George Jarvis, T. G. Davey. Special prizes to the amount of \$40 were donated to the Toronto show, \$20 of which is to be divided between the best dog and bitch respectively owned by member in open classes, and \$20 more to best dog and bitch in open classes. Mr. Calvin S. McChesney, Troy, N. Y., was elected a member.

English Setter Club.

The English Setter Club held no meeting. There were but 37 members present on Thursday and 47 were necessary to make a quorum. The executive committee attended to some business of a routine character. There was no election of officers, therefore the present incumbents hold over till next year. There is a movement to call a special meeting to amend the by-laws in respect to a smaller number constituting a quorum.

Eastern Field Trial Club.

The Eastern Field Trial Club met on Thursday, and transacted business of a private character.

Indianapolis Dog Show.

Editor Forest and Stream:

After making application for membership in A. K. C. we were informed that the Columbus Fanciers' Club had claimed dates we wanted for our show, which were the only available ones to be had, but as we had heard nothing of their proposed show it occurred to us that if we presented the matter to them, showing how far we had gone and what a disappointment it would be to us to be left out this year, they might waive dates in our favor, and on receipt of our letter they most courteously called a special meeting and decided agreeably to our request and immediately wired us their decision, stating they would also advise A. K. C. I take this opportunity of expressing the appreciation of our club to the Columbus gentlemen, for I do not believe there is another place or club in the United States that would go to all the trouble they did to defeat their own purpose to allow us to execute ours, and I can further say that beyond what apparent appreciation we can show them in this way, we trust they will all come over to our show and allow us an opportunity to practically demonstrate it. We have called a meeting for Feb. 22, when suitable vote of thanks will be properly transmitted to them, and we will at the same time appoint our various committees to prepare for the coming show. I have also to state the express company will run a special car for dogs from Elmira, N. Y., and from Detroit, Mich., immediately after those shows, without change through to Indianapolis, full particulars of which I will report later, so that parties desiring to attend either of above shows and our show also will experience no trouble or fear of delay or exposure caused by transfer of dogs.

Arrangements will be made to return all dogs free that have paid full rate one way, and it is expected that the railroad companies will make reduced rates for fare during our show.

The Board of Trade kindly donate to us the use of their rooms for our meeting and we feel that the Commercial Club is at our back. A postal card will insure a premium list, and we hope to show our friends who may visit the Hoosier capital that we can have as fine a show as any other city, and we also feel that our show should help the entries for Detroit and Elmira shows, for we hope to hear from them.

CHAS. K. FARMER, Sec'y.

INDIANAPOLIS, Ind., Feb.

NEW YORK DOG SHOW.

BEYOND what we said last week about the opening of the show, there is little more to be written. Everything progressed in good order, as well it might under Mr. Mortimer's able generalship, aided as he was by the watchful eye of Mr. Tom Terry, who while strolling around with a good word for every one, never failed to note a "jar" in the proceedings. Mr. Cromwell was also a busy man, and through the little window in the front office had to answer many questions, and on the last day we saw him paying the prizes, no mean undertaking in a show like this. All were paid off on Friday excepting a few exhibitors not present. It is a pity the rings could not have been larger, as many of the classes were crowded. The rings were kept clean and tidy as usual and with Mr. John Read on the lookout from the assistant superintendent's box there was no loose straw in the aisles, and everything smelled sweet. The dogs on the whole were well shown, though some of the pointers would have been better at home, as the dirty brown patches on several dogs are eyesore. We would not think of showing a horse before a judge unless his coat had the gleam of health and good grooming, then why put a dog down before a judge unless he is properly fit, at least as far as coat is concerned. Some of the judging was very difficult and required a careful eye. In St. Bernards Miss Whitney had a huge task, but acquitted herself with satisfaction to herself and most of the exhibitors, though her work would be easier were she to be a little less generous with the cards and clear her rings a little sooner of those dogs that cannot possibly come within a dozen of the winners. Her most difficult undertaking was to decide which should be considered the best St. Bernard, and the decision that gave the ribbon to Princess Florence met with indorsement from many present, as we said once before, condition will turn the scale one way or the other.

Mr. Muss-Arnolt acquitted himself well, and so pleased were the gentlemen who own the Hepburn Kennels in being beaten in dogs, that they presented the judge with a handsome cigar holder. This is a tip for other disappointed exhibitors. Mr. Mayhew had double mother assigned to him, for on account of Mr. Dorsey's wife's mother dying the latter could not fulfill his engagement, and so the classes were turned over to Mr. Mayhew. There was some little dissatisfaction expressed in this, as many of the dogs entered would not suit Mr. Mayhew's idea and were entered for Mr. Dorsey, who favors the larger type. We fail to see how the club could have done better. Mr. Tallman looked worried, and probably when he finished his large contract there was no happier man in the building, until the fellows got at him and worried him so for his reasons, that he failed to take notes of the classes even for his own paper, and so we had to give up every idea of having a report of his breeds, which would have made our judges' reports complete.

Mr. George Raper had a busy two days indeed, for his dogs were made up of "a miks," and it is barely human not to have made a mistake or two, and in the hurry of finishing up on Wednesday night, to have placed dogs a little differently when the specials were awarded. In one instance this rejudging worked injustice to Mr. Rathbone over the Thayer special for best dog by Starden's King, Hempstead Farm Kennels' Suffolk Regent taking vhc. in puppy dogs and Beverwyck Boy reserve; in the throw-off afterward Regent took the dollars. Mr. Rathbone just missed this special last year, but thought he had it this time. Major Taylor was called in to judge the half-dozen Chesapeakes present. During one afternoon there was some little excitement when a lighted cigarette had fallen on a mat upstairs in the gallery.

MR. G. MUSS-ARNOLT.
Judge of Great Danes, etc., New York Show, 1893.

Mr. Mortimer saw a curl of smoke arising, and quietly summoning a deputy instructed him to go quietly up and get help with a bucket or two and put it out. Mr. Mortimer says he knows what his heart tastes like now. There was a good deal of smoke and a big smell, and lots of people wondered where it all came from afterward. It is dreadful to contemplate what a scene would ensue if fire did really break out in such a place at such a time.

Among those whose names we failed to remember last week as being at the show were Messrs. Herbert Meeres, John Bateman, C. A. Shinn, Dr. C. A. Louget, Geo. W. Glazier, Washington Coster, R. R. Moore, J. F. Stewart, Bradford S. Turpin, F. J. Farley, Noyes Billings, F. W. Whitlock, J. H. Winslow, S. S. Banks, Lloyd K. Banks, James B. Blossom, etc. Below will be found the reports by the judges, which cannot fail to be of great interest to the exhibitors, both as a novelty, because they, the judges, have made a point of giving reasons for their awards, and another, that we think judges should occasionally be allowed an opportunity to give their side of the case.

The attendance was good throughout, though the dreadful weather precluded all idea of the crowds that came in last year. That the club will be on the right side there is little doubt. The quality of people present was hardly up to that which we have seen, the weather, as stated, probably accounting for this. Still, in the afternoon "dog alley" formed a convenient meeting place for many society dames and their good men, and some of the toilets were strikingly handsome. Many ladies took great interest in the judging, such society people as Mrs. August Belmont, Mrs. Ladenburg, Mrs. Albert Stevens, Mrs. Terry, Miss Maud Lorillard, Mrs. Duncan Elliott, etc.

St. Bernards.

(Special Report by the Judge.)

Rough-coats, challenge class, dogs.—The competitors, Sir Bedivere and Kingston Regent, placed as named, need no introduction. The former, now entering the second half of his sixth year, has not "gone off," spite of would-be detractors. He is all here, firm and strong in back, loin, limb; more genial in expression, perhaps, not in fullest coat, but still

carrying enough for beauty. Not since he came to America has his coat been more brilliant. Kingston Regent, sterling good dog as he is, should be well contented with second prize. Yet he loses little in size, nothing in body color to his kennel mate, and in feet excels him. He is a trifle low in flesh and off in coat, good in head as always. Were he graced with such markings as many poorer in quality, his merit would be more readily acknowledged.

Owing to the absence of Lady Livingston in the corresponding class for bitches, the grand Lady Gladwyn had nothing but her own high record to beat, and though quite out of coat, fairly won her blue ribbon. A full sister to Kingston Regent, a half-sister to the matchless Princess Florence, her rare beauty, noble expression, high type, are no matters of chance. Now at a state in which most rough St. Bernards should be kept at home, she bears criticism bravely. For the first time her ears seemed a bit large, but careful measurement proved my error due to the lack of coat on

MR. E. M. OLDHAM.
Judge of Spaniels at New York Show, 1893.

throat. In skull, stop, depth of muzzle, symmetry, it would be hard to improve her head, unless the aquiline line could be reduced to something nearer the Greek in her profile. Generous in proportions back of the ears, firm and strong in limb, and apparently sweet in temper from the beginning to the very end of the show, she is one of the choicest of her race and sex. In color she might be a richer orange, but her heavy black shadings relieve it admirably.

Open class, rough-coated dogs.—Of the thirty-one entries. Otos, Eboracum and Harold Saxton were absent, and Ben Hur and Sir Plinlimmon were not for competition. Even without them there was a ring full of all sizes and grades, small weeds, tall weeds, self-colored outsiders stamped with a "blot on the scutcheon," and exquisitely marked, grandly-framed giants, with disgracefully weak heads. Cheating nature is not the easiest feat.

The recent importation, Marvel, first, is in many ways a surprise. In color and markings, rich deep orange, with snowy ruff, even blaze, strong black shadings and flecks on muzzle adding greatly, white forelegs, hindfeet, tip of tail, etc., he is strikingly handsome. In massiveness of frame he is astonishing; looks like Alton, a smaller dog than he is, because of his proportions. Careful measurements alone tell the story. Were he shown as heavy in flesh as many it would be no advantage. His head, huge as it is, is not too large for such shoulders, chest and limbs. A little greater width between the ears, and a little taken from length of forehead and flew would improve it without marring the sweet expression. Like Princess Florence and Lady Gladwyn, his nose is a bit Roman in outline. A fortunate fellow he is to have only one pastern that at times suggests dancing lessons. Roland, Jr., second, a fine specimen of American breeding, may well be proud of standing next the wonderful Marvel. Of good size and proportions, with strong, straight limbs, shapely head, pleasing, gentle expression, bright orange and white in color, with even face markings and black shadings, he is very taking. His coat, flat and excellent in texture, is not at its best, and he lacks flesh and condition. Kamehameha I.—St. Bernard, forgive the name—third, a well-grown, handsome son of champion Hesper, is hardly out of puppyhood, or would push the second prize winner even more closely. In size, symmetry, massiveness, he challenges comparison; his expression is winning, his head of good type, but lacking maturity; his color, rich orange tawny, with the proper markings and black facings. He should improve for two years to come. Altoner, fourth, is another good American-bred young one, in his second year; spall in size among so many giants, and shown quite too thin, with the additional disadvantage of not wearing a fresh coat. Withal, he inherits exquisite quality from his sire and will rarely be outclassed anywhere. Kingstonian Count, vhc. reserve, a very large, heavily framed young dog, not yet two years old, contrasts strikingly with those immediately above him. Great in size of head, it lacks breadth, depth of stop and fine modeling, is too long in forehead as yet; time may develop it. His color is the richest dark orange, with blaze and all white markings save collar. Dense black shadings add to his beauty. In loin and quarters he shows sad lack of growth and strength.

Roland, vhc., an importation from Switzerland some years ago, has dropped from the second prize place won here in 1889 through no fault of his own, for he never looked better than to-day. Successful later importations and the results of careful selection and breeding have relegated him and many another good dog to the rear. He is of grand proportions, splendid in coat, sound and strong on his feet as need be, rich dark brindle and white in color, short and square in head. In expression he might be less keen and more genial, and his coat should be flatter. His son, Roland, Jr., shows his value. Refuge II., vhc., one of the few sons of champion Plinlimmon now alive in this country, and no longer a young dog, still carries himself fairly, but short of coat and flesh. Handsomely marked, like most of his family, bright orange, with white blaze, collar, etc., relieved by dark facings, and standing on strong if not straight limbs, he merits notice for his frame, good proportions and head. Had it not been for his unfortunate eyelids, now all right, thanks to New York skill, I think his expression would be less sad. Bevis, vhc., a tall, grandly-built, powerful young son of Alton, orange, with the desired markings, needs smoothing in coat and calming in expression, as well as some improvement in fore face, to carry him to the front in such company. Claudius II., vhc., a son of Ben Lomond, imported last year, made his bow to the American world and may have been disappointed not to add to his long list of winnings in England. In height, length, straightness of limb he is hardly equalled by any other in the class. His bright orange coat and even markings suggest his sire, and, like him, Claudius lacks black facings. A splendid, great fellow he is back of his ears, but his head is weak and lack-

ing in character. Mauprat, he., is another handsome specimen, almost exactly like Claudius in markings, below him in stature, good in skull, but wanting in depth of muzzle. George T., c., a 13mos. old pup of enormous size and good proportions, should have been content with a place in the novice class, being quite too young and unfurnished for his older competitors in this. His head needs growth in all dimensions save length, and his pale color is not pleasing. Barney D. is another whose size and symmetry cannot blind us to the woeful lack of strength and expression in head. His brindle coloring and that of Donnar, c., and Percival, c., show a reversion toward the Swiss markings. These last two, grandsons of old Otho, strong, stocky, well set up, but small, are almost very good. They are too square in head, lacking in finish and commonplace in expression. Brooklyn Prince, c., won his letter for symmetry, beauty and quality of body and limb.

Open class, rough-coated bitches. Of the twenty entries Lady Sneerwell, Kingstonian Beauty and Princess Anne were absent, and four others competed for specials only. Over many good ones, and some of great excellence, Princess Florence queened it easily. Wonderful as her size is for one of her sex, that is not the secret of her supremacy. She is magnificent in quality from tip to tip, grand in proportions, massive and strong in frame and limb, shoulder and loin, chest and back, rich red orange in color, with proper markings and shadings. Crowning all, her exquisite head compels the admiration of even the most captious. In beauty of contour, exquisite modeling, dignity and sweetness of expression, it is nearly flawless. Hespsey, second, another grand one from England, is one of the most massive for her inches. In color of coat she has improved amazingly during the year, and now it is pleasing and rich, an orange tawny with the snowy markings, jet black facings and flecks. She shows beautiful quality, admirable symmetry and strength in body and limb, and carries herself splendidly. For her build her unusually large head is not over size, now that she is fully grown throughout. It is fine in shape, skull, forehead, muzzle, flew, and improves upon examination and measurements, the severest tests. The sight of both eyes is perfectly good. Just below them less breadth of muzzle would be a gain in delicacy and expression. Miss Anna, third, a more recent importation and a rare good one, as a daughter of Watch should be, loses but little to her kennel mate in quality, is smaller, though not small, has an exquisite head, more feminine than Hespsey's perhaps, with charming expression; as shown, looked a trifle heavy in ear and thick in neck. When full in coat matters will be different. In color she is white and orange with beautiful head markings and black shadings. In symmetry of body, strength and straightness of limb, etc., there is nothing to improve. Sunray, fourth, a handsome, great animal, shown in exquisite condition, brilliant red orange with white markings and black shadings; in coloring leaves nothing to be desired, and in movement is as active as the proverbial "terrier." It was no mean honor to stand fourth to the noble trio above her. In head properties she loses, though far from poor. Judy, vhc. res., like Sunray, a daughter of Alton, lacks black facings only to rival her in color, and in size, texture of coat, frame and limb scores high. In head she falls below the rank of the others, but is pleasing in expression. Uarda, vhc., shown dead lame, and evidently suffering intensely from an accident to one pastern, could hardly show herself at all. Of medium height, long, deep head and massive in body and limb, as a bitch should be, her good head and general quality were hardly able to carry her nearer the front in such a high class. More polish on her orange and white coat would improve her appearance. Kingstonian

MR. POTTINGER DORSEY, NEWMARKET, MD.
Who was to have judged Beagles and Chesapeake Bay Dogs.

Countess, vhc., lately brought over, a daughter of Scottish Prince in her second year, is hardly developed enough for full criticism. Like most of her sex she has strong limbs, size enough and fair proportions, shines in brilliant deep orange, with proper white and black trimmings, but her skull is not broad enough to match depth of muzzle and forehead, and her ears are hardly small enough. Lady Taylor, hc., very like her, loses in size, texture of coat and stop. Lady Nicotine, hc., far excels her in head and massiveness throughout, but has now a very pale yet smartly colored coat, crooked foreleg and extreme youth against her. Nell Gwynne IV., c., an imported beauty of deep coloring, perfect where most bitches are, and bright in expression, lacks quality in head. Jungfrau, c., and Streatham Belle, c., won their mention for general quality back of muzzle and forehead.

Rough-coated dog pups.—In this lot of twenty-two there were as many sorts as in the open class. A vast difference lies between six months and eleven in growth and development, and comparison was difficult. After dismissing twelve aspirants, first prize went to Lord Walbeck, a son of Miss Anna, eleven months old, a huge fellow in frame, not yet straight of limb, very good in skull, face, muzzle; heavy in ear now and most peculiar in color, a sort of pink fawn with proper white markings and shadings of black. The texture of his coat is that of a three months youngster still wearing his puppy down. Gen. Phil Sheridan, second, a noble-headed son of Sir Bedivere, most promising in every respect, pushed the first prize winner hard, far excelling him in expression, coloring and development, but showed so badly in the ring that he missed victory. Duke of Alton, third, a great sized handsome son of King Regent, well deserved his rank, and if he goes on right will give others work to beat him. Gen. Victor Joseph, vhc., litter brother of the second prize winner, and very like him, showed his misfortune in being too shy to show himself to advantage. Lord Essex, vhc., another well grown one, good in skull and symmetrical in body, needs richer color to make him pleasing. Sir Eldred Bedivere and Clairvaux, hc., two more good ones, the former of the litter of Generals, are not yet up to the others though quite above mediocrity in promise and size. Benny, hc., shows something of his sire Otos, but has much more to

do in growth and development. Gen. Joe Hooker, c., a big fellow, lacks stop and has a very pale eye in a very dark face, giving him an unpleasant expression. Lord Leander, c., a good tawny brindle well marked, strong and well framed, is almost too finished for a pup. Here let me apologize to Bayonne Hector, who was quite dwarfed in the ring among the older ones. Looking him over later in his stall alone, he proved a very good pup, excellent in promise, bone, build and last and most important, head. He should fare better another time. The majority of the letterless contingent were very poor in head. Brutus S., hc., is of better quality than he shows at first. In head and muzzle he scores more than in size; his dull brindle body color is hardly relieved by his good white markings and black facings.

Of the nine entries in the corresponding class for bitches one was dismissed and one, Jess Bedivere, was snowed up and arrived too late for judging, and the others were a very pretty lot. Lady Bess II., first, a daughter of Sir Bedivere and litter sister of the handsome Generals, is what might be expected from her breeding in bone, frame and quality too, happily. Lady Charlton, second, a promising pup all through, still wears her first coat and needs growing. Hero, third, loses in head promise and is quite too fat; her coat is like Lady Charlton's. Adina, hc., is much younger and consequently hard to criticize—handsome and promising for her months. Felicita, Duchess of Montreal, Daffodil and

ARTHUR TRICKETT WINS WITH MR. MOORE'S ALTON, JR.
New York Show, 1893.

Lady Cora, c., all took their letter for general promise and growth.

Challenge Class, Smooth-coated Dogs.—Nevis and Scottish Leader, well known and good in quality, met for the first time. The latter won, excelling in all points, a wonderfully improved dog in condition, coat, muscle and expression. Nevis, now nearly six years old, is in better coat than heretofore, and in exquisite form, gentle and winning in expression as always.

In the bitch class the sweet Empress of Contocook, not in best show form, won first, followed by handsome Miss Alton, second, richer in color, a good orange, with orthodox markings and shadings, full of quality, taller, on the best of legs and feet, but very low in flesh. Cleopatra, reserve, also rich in color, shown rather heavy in flesh, must yield to the others in quality.

Open Class, Dogs.—All the 14 entries were present and made a grand display in quality, size and beauty of markings. Melrose, first, fine as he was last year, has improved greatly, and though still lacking in depth of chest and loin, is so great in frame and limb, so grand in head and beautiful in expression that he easily won over his litter brother, Melrose King, second, another good one of the same rare family. The second prize winner, as perfect in markings as Melrose, richer orange in color and very nearly his equal in size, loses to him in head and expression, is almost abnormally heavy in brow and rather full in eye. He was hard pressed by the beautiful, massive Patrol, third, in brilliant condition, a superb dog, showing the quality of sire and grandsire. In condition he beats those above him, and in girth. In head proportions, shadings and frame the advantage is with them. A royal trio they are. Hercules, fourth, a newcomer, a little lower in size, well built and firm on his limbs, equal to the best in coloring, needs a little more depth of flew to match his skull, and his eyes would be kinder if darker. Leicester, Jr., vhc. reserve, strongly suggests his sire, but lacks his grandeur of head, and is as yet too heavy in coat. Sir Richard, vhc., a tall, lithe, free moving young dog, orange and white, heavily flecked, lacks massiveness throughout, is sweet in expression and symmetrical, but a little too much on racing lines for the rest of the company. Two years hence he may be much better. Solace, vhc., another good one, of Swiss blood, is of fair size, strongly built and finely proportioned, rather fine below the eyes and inclined to fullness of cheek muscles. Caesar, hc., like Sir Richard in build, is a peg lower in head quality and rather straight in hocks. Carlo A., hc., beats him in size and symmetry, but has too thick a coat, is weak in muzzle and carries his ears doubtfully. Kingston Bosco, c., a son of Scottish Guide, without glaring faults, scarcely rises above mediocrity, and Apsley, Leon and Benoni, all of the same value from the bench show point of view, are individually good enough to command attention. This class was much more even in quality than the open class of rough-coated dogs.

Open class smooth coated bitches. A small and select lot of the cream of the breed were there. Lady Alton, first, as marvelous a surprise as Empress of Contocook when she made her debut, won her place readily. A wonderful young creature, great in size, beautiful in color and marking, powerful in frame, true and strong in limb, and most typical in head, benign and gentle in expression; she needs more flesh. Charmion, second, daughter of champion Hesper and Cleopatra, rich in color as the first prize winner and suggesting both her parents in quality and beauty, owes her place in no small measure to her exquisite condition, in which she far excels her charming half sister Bellegarde, third. The latter a smaller edition of Empress of Contocook, is far too low in flesh to do herself justice. When in show form she must be a different creature. Judith, fourth, the most wonderful matron of her race now in this country, sweet faced and gentle, of medium size, rather slight in frame and over plump in body, white and orange with well marked head, accepted her position with pride, as the parent of the first prize winner. Lady Gwendolin, vhc. reserve, her half-sister, is better in body and limb but loses to her in head.

The puppy classes were almost blanks, only one dog, Boston Boy, a son of Belisarius, a handsome fair specimen, appearing, and his sister Miss Nellie, similar in quality, alone in her glory also. Elma, a fair rough-coat, wrongly entered in this class was transferred and awarded hc.

The novice class, dogs, rough and smooth-coated, brought out sixteen, a motley collection, nine of whom were unnoticed. As usual, quality lay among the smooths, and Alton, Jr., first, easily led them all. A king among giants in frame, height, length, with perfect limbs and feet, beautiful in markings as the best, noble in head, with the true, typical expression combining gentleness, intelligence and dignity, he is a glorious specimen. Fuerst Bismark, second, a son of Charmion, is a medium-sized dog of good quality, excellent in head, smutty in color, and lacking in collar; far above the average in most respects. Plinlimmon V., third, a son of Refuge II. and Cleopatra, a very promising pup, already a large dog though less than eight months old, was far above all the rest of the class in quality and equal to the most mature in size. Wieland, vhc. reserve, was the first rough-coat to win notice. A heavily built one he is, deep brindle and white, with excellent limbs, good stamp of head but too broad below the eyes and rather short and square; stern in expression, due to lack of face markings. In better condition she would show to more advantage. Mauprat and Geo. T., hc., have already been criticised. Free Trade Tom and Rolfe, hc., both sons of Vindex, are handsome, heavily coated fellows of medium size and some quality, a little inclined to curliness of jacket. Big White Friar, hc., with only slight head markings enough to relieve him from the odium of being self-colored, well deserved his letters, for general proportions, quality, texture of coat, etc. Meldo and Defender, c., two nice dogs of small size, fair symmetry, flat coat, good limbs and pleasant expression, were decidedly better than those mentioned.

The novice class of bitches brought out thirteen, four of whom were quite outclassed. Lady Alton, first prize winner in the open class, took the highest honors here, followed by the rough-coated Uarda, already better of her lameness. Alberta, third, another rough, tall, but thin in flesh, showed herself handsomely, and barring lack of massiveness throughout and a little weakness in forehead and muzzle is a good sort. Fenton Peggy, vhc. reserve, won her place through her good quality, and in spite of her lack of size and poor coat. In markings she is handsome, like most of them. Nell Gwynn IV., vhc., has been criticised, and Lady Sif, vhc., is very similar in beauty, size and symmetry, with the same faulty muzzle. Princess Isabella, hc., a daughter of Vindex, is a big one, rich in color, with too little white, too much curl in coat and somewhat coarse in head. Mistress Lomond, c., is hardly more than a promising pup.

The New York Kennels won the special for rough-coats with the peerless Princess Florence, Sir Bedivere, Marvel and Kingston Regent, and as easily the Melrose Kennels claimed that for smooths, also the club medals and those offered by the Herald, Altoner, a rough from the same kennels, taking the club medal for roughs. Uarda won the special for the American-bred rough-coated bitch, and the \$500 challenge cup went to the wonderful Alton, Jr. The Duchess Kennels' grand collection of bitches easily distanced all competitors for Mr. Reick's piece of plate, and his incomparable pair, Sir Bedivere and Princess Florence, won Col. Ruppert's with equal ease.

The club medal for the best in the show was awarded to Princess Florence after a close examination of her and Sir Bedivere. She comes nearer perfection than he in all points, save in texture of coat and carriage of tail. In expression there is little choice.

Newfoundlands.

(Special Report by the Judge.)

Open class, dogs, nine entries, that really looked as though they belonged to the breed, made a rare sight. Roscoe, first, a son of the well-known Prince George and New York Lass, shows his good breeding in every line. Taller than his sire and not yet equal to his brother, Prince Hal, in depth of body, he surpasses both in head, sweetness of expression, massiveness of frame and brilliancy of coat, spite of evident lack of grooming. A powerful young dog of excellent type is the second prize winner, Prince Hal, only a step below Roscoe, flatter in coat and lower on the leg. Prince George, third, the sire, shows age, is growing gray in muzzle, lacks coat

ST. BERNARD LOLA IV.
Bred by Horace T. Leopold, Spalding, England.

and shows a little too much height of skull, but keeps enough quality to stamp him of the best still. Mt. Vernon Bull, vhc. reserve, of good size, is of another family, in head lacking breadth of forehead and depth of muzzle. His good, flat coat is a little rusty. Sailor Lad, vhc., is not so good in muzzle, a trifle curly in coat and shows grayness. Satan, vhc., is of good size for his age, less than one year, and promises well, is somewhat undeveloped in skull and his muzzle can improve. He needs grooming, as is the case with Nero, hc., who is behind him in shape of head and muzzle, good in size and fair in proportions. Frank, c., is too narrow in skull and weak in muzzle.

Bitches.—Troy Lass II., half-sister of the first and second prize winners among the dogs, had no trouble in securing highest honor. Not the largest, her proportions are admirable, her head broad and shapely, expression kind and gentle, coat good and color bright. Lady Patch, second, cannot equal her in any point save size, though a good one; is narrower above the eyes and loses a bit in muzzle as well. New York Lass, third, taller than those above her, carries her years lightly, is in fine coat, strong and firm on her feet, most pleasing in expression and presses the younger ones closely. Brunette, vhc. reserve, a first-prize winner elsewhere, is not equal to the best here, lacking quality in head by comparison. Jezebel, vhc., a handsome Prince George bitch, is still only a pup, and like her brother, Satan, promises to improve with time.

Every Newfoundland shown was well built, sound and strong in limb and free in movement. Only a few showed any white, and that, a slight patch on chest, was not noticeable. In coat there was a decided improvement, and also there was a sad lack of grooming evident. Six of the fourteen were of the Prince George family, the best strain we have, far beyond all others in beauty, character and type. All lovers of this valuable old breed owe thanks to Mr. Marshall. He won the special for the best brace with Prince Hal and Troy Lass II.

Pugs.

(Special Report by the Judge.)

Challenge class, dogs. For the first time the well known Bob Ivy, first, and Cashier, second, met in competition in this class. The former scores in size, eye, shortness and squareness of muzzle and coat. The latter takes defeat with the same equanimity as victory, always jaunty and stylish, with his inimitable tail in its perpetual exquisite twist. In carriage of ears he leads the victor. In color and markings there is little to choose. The corresponding bitch class was a *pas seul* for lucky Nellie Bly. In color (clear apricot fawn), beauty of coat and markings she well deserved her ribbon.

With two exceptions the open dog class was the prettiest, most even lot I have ever seen here. The winners of first, second and third were no further apart than the fingers on one hand, in size, show form, beauty and texture of coat. Under the trying conditions Dixie, first, carried himself and his good little ears most nearly right, and showed more wrinkle. He would be improved by more sharply defined trace and black nails. Waddles II., second, is a trifle heavy in flesh, not quite true in one foreleg, could not be prevailed on to carry his ears right. In markings the contrast was a trifle brighter than Dixie; like him he lacks black nails. Little Fritz, third, elbows the others, but seems not quite their equal in wrinkle and general style. Ivy Boy, vhc. reserve, loses to his kennel mate, the third prize winner, a little, in carriage, ears and muzzle. Patsy Bolivar, vhc., has some-

ST. BERNARD JUDITH.
Owned by G. P. Wiggin, Lawrence, Mass.

thing the style of his father, Cashier, and is shorter in muzzle. In wrinkle he is excellent, as in head markings, but loses to those above him in coat, show form and eyes. Tip Top, hc., was badly handicapped by his own lack of confidence in the ring. Seen the day after, out of his cage and at ease, he carried himself beautifully from ears to tip of tail. Like Patsy Bolivar his coat is too heavy; and he is behind the others in quality of head. Griff W., hc., litter brother of Patsy Bolivar, is not quite his equal in any respect. Beauty, c., is a beauty in coat, markings, wrinkle and eyes; quite outclassed in all else.

In open class bitches Sara Bernhardt, first, a tiny creature, with all the style and airs of the great Sara, and like her, not overburdened with avoirdupois, led her class in head, wrinkle, ears, muzzle and carriage. In coloring the contrasts should be clearer and she is, as usual, too low in flesh, but better in coat than we have seen her before. Midget, second, beautiful in color, is as much too fat as the first prize winner is too thin; she scores handsomely in size and general effect, but show herself she would not for me. Eastlake Sister, third, a very pretty little bitch and, like all exhibits from this kennel, in exquisite coat, shows her relationship to Lord Clover in wrinkle and good head, but is quite too much undershot. Mabel E., vhc. reserve, shown rather heavy in flesh, hardly did herself justice and was sadly out of coat; she should look better later in the year.

Puppies, dogs and bitches. Midget Harry, first, is almost too small, though his self-possession and strength suggest a watch spring; in color a pretty golden fawn, his tiny body is well-fronted, with a head quite large enough, ears well carried, muzzle very short and as much wrinkle as there is room for; quite a charming little fellow, too nearly a toy, however. Cashier's Daughter, second, a well-grown, promising pup, looks like making a good one later, when her color clears and family pride gives her the family style. Jane, vhc. reserve, a very pretty daughter of Bob Ivy, was far too shy to display herself; when more furnished and she acquires her sire's *aplomb* she should go higher. Toto, vhc., Tony II., hc., and Punch, c., all of the same litter, are at the awkward age; all silvery fawns, heavily marked, Toto showing the most quality and heaviest wrinkle.

All the pugs were sadly at a disadvantage in having to move on so slippery a surface and in many cases their anxiety to keep their footing rendered them oblivious of all else. Bob Ivy won special for the best in the show, after a critical examination of Seminole Dixie. The kennel prize was won by Little Fritz, Ivy Boy, Midget Harry and Eastlake Sister.

ANNA H. WHITNEY.

Mastiffs.

(Special Report by the Judge.)

The challenge class for mastiff dogs only tempted Beaufort's Black Prince, who gained a bloodless victory, and later on beat every individual competitor in this group, carrying off no less than five specials, and with the assistance of his three kennel companions, Beaufort's Colonel, Beaufort's Big Bess and Bess, Mr. Winchell secured the Westminster Kennel Club's special offer for the best four exhibits. If my memory serves me right, Black Prince was equally successful last year, since which time he certainly has made no perceptible improvement, in fact he gives me the impression of having to some extent deteriorated. In hindquarters and movement he has not in the slightest degree improved, and although his head is generally very massive yet it somewhat lacks high-class type and character in these essentials. I preferred Mr. Wade's Lady Coleus, whose formation of head and general contour—notwithstanding to a slight degree it lacks size and substance—is grand in character, and in addition she is very level and symmetrical in build, and although beaten by Mr. Winchell's larger and more massive representative she was in no way disgraced, in fact, taking all in all, was very little his inferior. Of course she beat the Lady Dorothy decisively, especially in size and substance, and grandeur of head, and a couple of specials were placed to her credit, one for the best mastiff bitch in the show and the challenge cup for the second best mastiff in all classes.

Coming to open dogs I considered Mr. Charles Wallack's

Merlin well ahead of his fifteen opponents; he scored almost in every particular, his head, in formation, wrinkle and quality, was far the best, and in bone, body, action and condition he again had a pull, therefore deservedly taking the coveted ribbon. Next to him in order was Mr. J. Lynn's Cardinal Beaufort, a big-headed fellow, though a trifle too short in muzzle, has plenty of bone, a deep, massive body, but he stands too near the ground and did not move particularly well. For third it was a very near thing between Mr. G. W. Glazier's Ingleside Minting and Mr. Beier's Beaufort's Beau; the former, a promising son of Ch. Beaufort and Bess, and now just a year old, should yet improve considerably; in formation of skull, depth and squareness of muzzle he had the advantage of Mr. Beier's dog, who gained a point or two in size and also in hindquarters, where Beau falls off especially from the loin to set on of stern; in other essential properties I liked Beau better and therefore placed him third and Beaufort's Beau fourth, with Mr. Winter's Duke IV. reserve, the latter a fair-sized dog, better in body than head, which lacks character, wanting in depth and squareness of muzzle, and size of skull and wrinkle, and his forelegs are neither straight nor well-formed. Beaufort's Colonel might, with advantage, be a size larger, he exhibits fair type, though his light-colored eyes and color somewhat detract from his character and expression, he falls off behind the shoulders, faults that prevented him gaining higher distinction than vhc. Beaufort Prince, he., has a fair head, he is too hollow in back and moves badly. Better in this respect was Czar, whose good condition was also in his favor; however, his forelegs are defective in formation and his muzzle far too weak.

Thirteen bitches were paraded, the best among them being Mr. Chas. Bunn's Miss Caution, a capital type, still she would be better if larger, and her condition was not the best, the reverse with Mr. McGuinness's Jessica, who immediately succeeded her, for she was exhibited in rather an obese condition. However, she has size and substance to recommend her, and her head is also presentable. She experienced little difficulty in defeating Mr. Randall's Fron for second honors. The latter's head is very fair in formation and shape, but her pale markings somewhat penalize an otherwise fair stamp of bitch. After her I preferred Beaufort's Big Bess, who is plain before the eyes, lacking squareness and depth. The reserve bitch, Ethel, fails in the same particular, and in addition is very tight in skin. Her good bone, lengthy and deep body and sound action warranted the complimentary card awarded her. Gerda II., vhc., possesses a very fair head. In formation, size, expression and type it is commendable, but she is almost a cripple. Her badly formed forelegs and feet should always prevent her scoring in fair company. Lady Temple, hc., falls away too much below the eyes; she is a trifle hollow below the

big, handsome bitch—we refer to the Hempstead Farms' Zmeika—was severely handicapped by being entirely out of coat, and she was shown in too obese condition, otherwise she would have made a much bolder bid for victory. Of the rest, Flodeyka was the best. Among the half dozen puppies there was nothing remarkably striking. The best was Mr. Huntington's Krimena, whose muzzle is too weak and snipy, and at present he is too long and slack in loin. The only other worthy of notice was Mr. Tefft's Bendigo, whose moderate legs and feet must always penalize him severely.

The kennel prize was carried off by Mr. Huntington's quartette. Argos secured the National Greyhound Club's special in addition to the Westminster challenge cup, offered for the best Borzoi in the show. The special for the best bitch was taken by Jerry.

Deerhounds.

(Special Report by the Judge.)

But for the support accorded them by Mr. John E. Thayer would have been both an inferior and small collection; from this noted kennel no less than ten out of a total entry of sixteen—extending over four classes—were sent for competition, and, needless to say, took by far the largest share of honors. In the challenge class Hillside Warrior beat his kennel companion, Robber Chieftain, whose shoulders are somewhat loaded and his head is coarse and plainer generally than his more fortunate companion, who afterward was awarded the special prize for the best dog, but was afterward beaten by the well know Hillside Romola, who won comfortably in challenge bitches and also secured three specials. With the exception of having large ears she is almost perfect, possessing as she does immense size and substance in combination with quality. Olga, who beat Hillside Theodora, had a decided pull in length and formation of head, in addition to size and texture of coat, but she did not move very true behind. In open dogs Argyle was the most representative, although his muzzle is somewhat weak and altogether he moved in a sluggish fashion, still Hillside Raven is much too coarse in skull and general build and more nearly approaches the wolfhound type on the other. Hillside Lancelot is too weak in head, and his forelegs are not well formed. The winning bitch, Hillside Ruth, a big, upstanding wheaten colored bitch, possesses a rather strong skull, but immense bone, grand loin and thighs, with excellent texture of coat. Hillside Sylvia is too straight in stifles, which impairs her hind action, and her shoulders are too loaded; a nice stamp otherwise; so is the smaller Hillside Fedora, who won third money.

Greyhounds.

(Special Report by the Judge.)

The challenge class scored three entries, the best being

Retrievers.

(Special Report by the Judge.)

Only two retrievers were entered, both curly-coated specimens. Physician, who won premiership honors, has a capital shaped head, good eye and ears, and is a well made dog generally. He is a size small and at present a little open in

MASTIFF BEAUFORT'S BLACK PRINCE.
Owned by J. L. Winchell, Fair Haven, Vt.

coat, in which essential property Hempstead Jet was not seen to the best advantage.

Collies.

(Special Report by the Judge.)

Collies were one of the largest collections in the show. In addition to the two challenge classes, other six competitions were provided and averaged fourteen per class. In challenge dogs Roslyn Wilkes easily beat Ormskirck Shep, who has greatly deteriorated, he lacks size and raciness in build and the carriage of his brush is anything but orthodox. The winner at present is in excellent condition and coat, the latter is very dense and weather-resisting, and unlike many other competitors he can boast of an excellent undercoat, his fore legs are well formed but his head is a trifle short, and for its length somewhat coarse. Metchley Surprise was alone in the bitch challenge class, is too low on the leg and generally too cloddy in build. In the open dog class there were just twenty-four entries, among which Argyle Sandy, the winning puppy at Nashville, was absent, as also was the Lothian Kennels' Dandy King.

The winner turned up in the Hempstead Farm's Woodmansterne Trefoil, a good-coated, nice-sized black, tan and white dog, possessing a fairly long and well shaped head, with neat ears and good texture of coat; his kennel companion, Conrad II., succeeded in getting third, a position he might have improved upon, had he not been so listless and shown to better advantage, but nothing could induce him to carry his ears in the orthodox manner; his shoulders are somewhat heavy, but he is a rare coated fellow, has capital bone, well-formed legs and is shapely in build. He was beaten by the puppy Roderick Dhont, who is exceedingly well grown and excellently shown. This dog has a capital body, most excellent legs and feet, plenty of frill and top coat, though his under jacket is not very conspicuous, and his head, while lengthy, lacks quality. His brother, Cragston Rhoderick Dhu, was given reserve; he carries plenty of coat, but is too thick and cloddy in build, and not a very good mover behind, besides, his skull at present is too round and prominent above the temples. Curzon, from the Seminole Kennel, succeeded in capturing the fourth ticket, a position his dense coat and general collie properties warranted. Chrysolite, vhc., a very neat sable and white, went lame. Auburn, hc., is undersized, but has a good coat to recommend him to notice. Sir Walter's expression is no

COCKER SPANIELS SNOWBALL, BEAUTY, JACK OF CLUBS, MIDDY, MISS WAGGLES, MISS CHIP, LADY GAY
Owned by Swiss Mountain Kennels, Germantown, Pa.

shoulders, too straight in stifles and is fully a size too small. In puppies and also in the novice competition Ingleside Minting scored decisively. Second honors in the first named competition went to Dr. Lougest's Emperor William, an exceedingly well reared son of Ingleside Maximilian and Gerda II. Although only seven months old he is a good size, straight all round, with plenty of bone and substance generally, and his head is fairly massive and squared. Should he escape the ills of puppyhood I expect him developing into a very creditable representative. His kennel companion, Emperor Maximilian I did not care for, his head is altogether too short and bulldog-like; besides, he falls far too suddenly away from the loin and moves badly. Lady Portia, from the same kennel, is very symmetrical in shape and make, and her action all round is faultless. She also scored over Lady Diana in squareness of muzzle, and her pale marking did not add to her attractiveness. The second prize in the novice competition was awarded to Mr. Julius Grau's Rover, a big, good-bodied dog with only a plain head—not that it errs so much in size, as in true formation and character.

Bloodhounds.

(Special Report by the Judge.)

Were numerically a small group. By far the best were Mr. Winchell's Victor and Judith, both of them were indulged with a walkover in their respective classes, and too well known to need a detailed description. In open dogs Belhus, Jr., failed to fulfil his engagement, hence Bono II. had no opposition. He is only a fair specimen; neither did Jess impress me very favorably, although she was well ahead of her three opponents. She lacks size and showed indifferently. Nellie Bly, who took second, is too short and coarse in head, lacking wrinkle and length and quality of leather. Third prize was withheld for want of merit.

Barzois.

(Special Report by the Judge.)

Barzois, or Russian wolfhounds, although not very numerous, contained some good representatives, the majority well known. For instance, Argos, Princess Irma and Svodka have all made their mark on this side, and they are placed in the challenge class in the order as written. Argos has in some respects improved since last year, notably in coat. With the exception of his color, to which some connoisseurs take exception, he is, taken all around, a very good specimen. In open dogs, both Peter the Great and Muscovite were absent, so the light for premiership honors rested with Groubian and Osslad; the former, better in head and equally good in every other essential, secured the blue ribbon. In bitches, Mr. Huntington's Jerry and his Modjeska won first and third respectively, being divided by Mr. C. S. Hanks's Vinga, a nice-sized, well-made bitch, not just now in full coat. The winner is a large, upstanding bitch, possessing a well-formed, intelligent head, excellent neck and shoulders, fair depth of ribs and good quarters; her coat might with advantage be more profuse and straighter. Modjeska, although a couple of sizes small, shows remarkable quality and type, and she was shown in grand coat and condition; her worst faults were found in her hindquarters, which are somewhat plain. A

Gem of the Season, who looked remarkably well, although had he been shown two or three pounds lighter he would have looked none the worse; his kennel companion, Ornatus, on account of his inferior hindquarters and action, was well beaten for second prize by the brindled Lord Neverstill, whose neck might, with advantage, be a trifle longer, and he is also too upright in shoulders and hardly covers enough ground. In bitches Bestwood Daisy is a size too small, but her quality and all round style and symmetry told in her favor. In some respects we prefer Lilly of Gainsboro, whose moderate feet, drooping hindquarters and straggling gait handicapped her too severely. Maud Torrington's hind action is also open to criticism, and her wide chest and loaded shoulders, notwithstanding her deep and capacious chest, firm loin and well developed thighs prevented her gaining higher distinction than reserve. Open dogs brought out a new face in Honor Bright, a racing-like black, and while built essentially on racing lines he has a capital outlook, lengthy, well-placed neck, excellent shoulders, very fair depth of chest and both muscular and well-developed hindquarters; he was shown too light in flesh; however, he won comparatively easy in his class, and afterward beat Gem of the Season and all others for the best greyhound in the show. The recipient of the second money was Randy, a stylish brindled who, like the winner, was not seen to the best advantage; he shows quality and style, covers plenty of ground and looks like racing; he would be better with a little more bone, and his loin in his present condition appeared a little slack. Henmore King, never a special favorite of mine, could not be denied third in this company; lacks substance and muscular development, especially in second thighs, and, moreover, moved indifferently. Prince Bismark, placed next in order, is too upright in front and long in loin; his chest is deep and he stands true and covers plenty of ground.

Southern Beauty, who took the coveted ribbon in bitches, is an excellent example, her neck and placement of shoulders are almost faultless, she is a grand topped one, deep in chest and well finished behind, but shown in anything but creditable condition, and had there been anything approaching her in quality and style she must have been beaten. "Chips," placed second, has poor feet—thin and open—her chest is wide and shoulders rather heavy, but beyond the saddle she scores heavily. Wild Rose is smart and taking, but too light generally, and would have looked better if seen four pounds heavier in flesh, whereas Dolly Dollar was exhibited too heavy in condition, which made her chest and shoulders look all the worse. If shown judiciously she might do better, but these faults and "lameness" in one of her hindlegs prevented her gaining higher distinction than fourth place. The white and fawn Spider is also wide in chest and heavy in shoulders, and her feet are thin and open. Puppies were a poor lot, the best being the brindled Norway Star, whose shoulders are already a trifle loaded, but behind them he exhibits fair substance and has well formed hindquarters. Fashion Queen, a nice quality black and white, is very proportionate and symmetrical in build, but she is decidedly small, while Snowball, who is the next best, is never likely to make a great prize winner, for his neck is too short and his stifles too upright and straight. The kennel prize was easily captured by Mr. Arthur W. Furbeck's representatives,

"DO YOU THINK I'LL GET IT."
Chas. Heath and Arthur E. R. Bellman consults the catalogue.
New York Show, 1893.

pleasing, and he is raw and unmatured, neither Finsbury Duke nor Fordhook Eclipse will ever gain high distinction on the bench.

Taken as a group, bitches were better than the dogs. The winner, Nancy Lee, who made a very successful debut, is only 9mos. old, for her age a capital size, and she was just in her best coat, while many of her opponents suffered in this

respect. Her head at present, while fairly good in shape and character, is not really high class, but in bone, shape and make of body and general style and contour she had the advantage of Highland Floss, who was also in tiptop condition and not one in the class moved with greater freedom. Her head is not quite correct in chiseling. We should prefer her muzzle if it were a trifle longer and not quite so angular in formation, and her skull might with advantage be a little flatter. In form the Hempstead Farms' Ormskirk Susie would certainly have held her own, but she was sadly handicapped by being ragged and deficient in coat. She has an excellent body and shows plenty of quality. From the same kennel was Minnie Sefton, a very pretty sable and white, but certainly undersized. One of the most shapely and characteristic bitches in the class was Lady Fidget, whose excellency, notwithstanding her very scanty coat, enabled her to win fourth money. The reserve ticket was handed to Highland Mary. She is by no means a bad-bodied bitch and her legs and feet are quite presentable, while her coat is fairly abundant and dense. Her skull is too domed and her expression not sharp enough. The once notorious Ormskirk Dolly was about the best in the vhc. division. She was altogether out of show condition and at the present time attending to maternal duties, hence very short and open in coat, and her proportions were entirely hidden and spoiled by her very obese condition; therefore, under these circumstances, it would have been an injustice to her other opponents to have placed her any higher. Mary of Argyle, vhc., stands too near the ground and is somewhat wide in chest. Her skull is inclined to be coarse, behind the shoulders she is well built and her good bone and dense coat also weighed in her favor. Cragston Belle, hc., has a nasty, twisted tail, and although fairly lengthy in top coat her under coat is conspicuous by its absence.

Gold Dust, recently purchased from Mr. Thomas E. Stretch, of the celebrated Ormskirk Kennels, for a very high figure, did not arrive from England in time to compete. I may say he is undersized, but one of the most typical and highest quality dogs at present before the public and likely to have a highly successful career.

Nothing new appeared in puppies excepting Blizzard, who showed more quality and style than his more matured kennel mates, Rhoderick Dhu and Cragston's Rhoderick Dhu, placed second and third in the order as written. Among the rest there was nothing better than Mavor, who is rather small in size, weak in face and his skull at present is too domed. The winner requires further time, which will no doubt benefit him. Nancy Lee again scored in puppies and also in the novice class competition. Second to her came Highland Mary, to whom reference has already been made. Mary of Argyle, from the same kennel, took third. In novice dogs the order was exactly a repetition of the puppy awards, and the same remark is equally applicable to novice bitches, with the exception that third honors went to Mr. Bowne's Deepdale Madge. Nancy Lee secured the head prize in the grand annual Collie Sweepstakes for collies born in the United States or Canada after July 1, 1891. Roderick Dhont came next, with Roderick Dhu third and Lady Fidget fourth. The special for the best team was won by Mr. J. Pierpont Morgan's representatives. Roslyn Wilkes took the special for the best collie in the show, in addition to that offered for the best American bred dog. Woodmansterne Trefoil secured the medal for the best dog in the open class, and that offered for the best in the corresponding bitch class was awarded Nancy Lee.

Smooth sheepdogs were a small group, only three putting in an appearance. Hempstead Farm Kennels were represented by Hempstead Maid and Blue Light, who were placed first and second. The winner is rather small and light in bone, but shows good quality and type. Blue Light also lacks size, and Farina, who got third, carries too much coat by far. Hempstead Bob, the only old English bobtail,

IRISH SETTER CHAMPION TIM.
Owned by Seminole Kennels, Chestnut Hill, Pa.

is an exceedingly well grown puppy, possessing a typical head and excellent body and hindquarters.

Bulldogs.

(Special Report by the Judge.)

Bulldogs were exceptionally meritorious and representative. In the challenge class the well-known Harper and Pathfinder were quite ahead of Bo'swain and Carisbrooke. In the corresponding class for bitches, Saleni beat The Graven Image. Both bitches were looking well; the former has slightly the deeper and broader muzzle, is longer from eye to ears, and better in spring of ribs and formation of shoulders.

Open dogs, over 45lbs., brought out Leonidas, whose massive head, great bone, excellent shoulders and grand body properties carried him well to the front. Stanley, who immediately succeeded him, has a well-finished muzzle, good stop and temples, and well-formed skull; in comparison he is leggier and lighter in middle piece. Rustic Sovereign might with advantage also be lower on the leg and his shoulders require developing; with these exceptions he is a most excellent specimen, having a very large and massive skull, big nose, and broad and well finished underjaw. Handsome Dan, reserve, is a very taking fellow; is short in face, but lacking breadth in foreface, and his eyes are not placed wide enough apart; he is fairly short in back and stands moderately wide in front, but his stern is too high set on and carried gayly. Cardinal Wolsey is almost froggy, a fault that is fatal to success. Bombardos is plain in head, his skin being very tight, and he would be all the better if shorter in back.

In bitches the brindle Rosie could not be denied; she scores in size and finish of head, in looseness of skin, in bone and massiveness of shoulders, her hindquarters and stern are plain, a fault, but to a less degree also inherited by the well-known Maggie, who was her immediate attendant.

Next to her in order was Miss Venn, pinched in under jaw, but commendable in stop, skull, wrinkle and body, her stern is badly carried and she exhibits a little too much daylight. Dolly Tester, reserve, is fairly good in body and bone; her chief faults are her narrow under jaw and pinched muzzle. Derby May, vhc., was shown as fat as a Christmas prize ox, which entirely spoiled her appearance. Lena Langtry has capital bone and very typical body, but her plain skull and badly-carried ears tell terribly against her.

Dogs under 45lbs. Here King Lud had an easy capture, for with the exception of placement and carriage of stern he beat Wal Hampton with something to spare; the latter, a fair-headed brindle, shows style and quality. Heather, placed third, is a bad color and his short under jaw gives him a down-faced appearance, his skull is large and he is a well-built dog, with capital formation of bone.

Bitches under 40lbs.—In this competition the struggle for supremacy in reality rested with Luna and Adiscombe Gipsy, the former had a slight pull on muzzle and is decidedly lengthier in skull and equally well made in body; behind these there was nothing better than Derby Hebe, who was well beaten allround; her face is pinched and mean and she is too long in back. The puppy and novice classes were divided into sexes. In dogs there was nothing of great promise, by far the best were Argonaut and Slim Jim; the first named had the advantage in muzzle and skull and was also slightly wider in chest. In bitches Papa's Pet could not be denied, she just won from her kennel companion Empress of Orienta, who is a shade longer in back and not quite so

ENGLISH SETTER COUNTESS ZOE.
First, open bitches, N. Y. Show, 1893. Owned by Rockingham Kennels, N. Y.

well finished in fore-face. The awards in the novice class were almost a repetition.

No less than twenty-five specials were offered, but by far the most interesting competition was that for the grand trophy, value \$250, for the best bulldog or bitch in the show. The three favorites were undoubtedly Saleni, King Lud and Leonidas, and eventually the issue lay between the trio. Leonidas and King Lud were first placed together, and after a minute and critical examination the latter had to give way; although Leonidas's jaw is slightly twisted it is quite as broad, deep and *retroussé* as King Lud's; in size, shape and development of skull and looseness of skin he gains a few points, which are further increased in formation of bone, great depth of brisket, and in rotundity of ribs; neither dogs have good sterns, but Leonidas's is not only better placed, but better carried. Saleni scores over both in this one particular, but she loses in forelegs, both in substance and muscular development, also in skull, which wants more development in cheeks to make it perfect. The dog is deeper in stop, higher in temples, and possesses more loose skin; he won several more valuable specials, so did Saleni, including that for the best bull bitch in the show. The special for the best pair went to Saleni and Pathfinder, that for the best teams was awarded the Illwis Kennels, who were represented by Harper, Bo'swain, the Graven Image and King Lud.

Poodles.

(Special Report by the Judge.)

In the challenge class Dexter unsuccessfully opposed Berri, who won most easily. At the present he is in excellent coat, which Dexter is not. In open dogs (black) Mr. Hitchcock's Lion stood out conspicuously; his head is a trifle coarse, but his lengthy and fine coat and good body properties easily secured him the blue ribbon. Tell, the property of Mr. Priem, was given second. His coat is fairly abundant, although coarse; his head is nicely chiseled, and he stands well and is very good in outline and general symmetry. Milo, the recipient of third, is also commendable for his body properties; his expression and formation of head is typical, but his coat is too open. Of the rest Duke was the best; his head is too coarse, and coat a little bronzy. Black Jet is also plain in head, has capital legs and body, his coat is too mixed. In bitches the typical Chloe could not be denied; she had a slight advantage in head and coat over Lady Marquise, who is capital in neck, body and hindquarters. Frou Frou has a fair head, nice legs, feet, neck and shoulders, but she moves badly behind. Flora, reserve, has not a first-rate head and is too long in loin. In any other color Pierrot won from Leo W. Both are typical whites; the former had a slight advantage in head and is firmer in loin and a trifle thicker and denser in coat. Pooh-Bah, a well made brown, is very coarse in skull and dished in face; so is Bellone, from the same kennel. The team prize was won by Mr. Trevor's quartette, and the special for the best poodle in the show was placed to the credit of Berri.

Bull-Terriers.

(Special Report by the Judge.)

Bull-terriers have made rapid improvement of late and are deservedly popular. In the challenge dog class Streatham Monarch, Carney, Prince Bendigo and Dusty Miller met; the two former were eventually selected for the money prizes. Mr. Moorhead's handsome dog was shown in remarkably good condition and beat Carney handsomely, and later on all the other competitors. There were half a dozen entries in challenge bitches, among them Edgewood Fancy, who was shown in beautiful form and shape; she won, but not easily, from the well known Attraction, whose eyes are a trifle bold and her skull is not quite so correct in formation as the winner's, but in body, bone and stern she compares very favorably. Starlight, reserve, is a little dished in face and falls away a little behind the shoulders; otherwise she is a smart and characteristic specimen. Enterprise was shown in a too obese condition and Winning Wagtail has deteriorated since I saw her last.

Open dogs over 30lbs. weight brought out seven competitors. Crisp, who won premier honors last year at Omaha, was absent. Young Marquis, a typical son of Bendigo and Enterprise could not be denied the coveted card; he is a very promising young dog possessing the right type of head, excellent bone and fair body. Gully the Great, the noted sire, has much to recommend him, his marked skull scores against him and his muzzle is a little coarse at the finish,

with these exceptions he is a very sound dog. Diamond King, placed third, possesses a fairly good head, although his light colored eyes tell against his appearance and his stern is awfully long. Aristocrat, vhc., is better in body than head, he falls away too much under the eyes which are too full and bold. Prince Gully is only young, requires further time to fully develop, he was placed reserve, while hc. was given Cornet II., whose tail is too gay in carriage, and his face is not sufficiently filled up, neither are his eyes dark enough in color.

In bitches over 30lbs. Vesper Bell just won from Fidget. The former showed the most quality and had a slight advantage in head properties, granted her eyes are a bit too wide apart, but Fidget's are too light in color. Third honors went to Maggie Cline, a neat bodied bitch with fair skull, but rather weak jaw and moderate bone and feet. Dogs under 30lbs. proved an easy victory for Sir Rudolph, who was well shown and better in eye and head properties than the shapely Surefoot, who in turn beat Griffio, who is none too good in head and longer in body than necessary. Mermaid, the winning small sized bitch, is a clinker, one of the best youngsters seen out lately. Her head is wonderfully well balanced, eyes dark in color and exceedingly well placed. She possesses plenty of bone, beautiful neck, and is well made up in body, in addition to owning a good stern. Taking size into consideration, she was one of the best terriers in the show, and easily secured the premier prize both in the novice and puppy competitions. Edgewood Wonder, who succeeded her, has a rare body and stern, but she fails before the eyes, which are a little too bold. Early Rose, who came next, carries her stern too gaily and her jaw is a little weak; besides, she was shown far too big in condition. Woodcote Lilly, hc., has a rare body but rather plain head.

In puppies Mermaid and Prince Gully were placed as written. The former again won in novices, where she beat Sweet Marjoram, who later on will want reckoning with. At present she is altogether out of form.

Fox-Terriers.

(Special Report by the Judge.)

Fox-terriers (smooth) were both a large and creditable collection, and certainly an improvement all round on any previous show. In the challenge class for dogs Starden's Jack, Raffle and Blemton Victor II. were entered, but the first named failed to meet his engagement, so the issue lay between Raffle and the Blemton Kennels' representative, who eventually was declared the winner. He scores in size, in head and coat. In bitches New Forest Echel was absent, thus allowing Dona, who was looking fit and well, to score a bloodless victory.

Among the twenty-one competitors in the open dog class there were at least seven unworthy of notice, and Valens, who cost a large figure and came with a big reputation some three years ago, only got a plain commendation, which certainly represented his full value. The winner turned up in Starden's King, who certainly has improved since last year. He was shown lighter in condition, and his head has, to a slight degree, fined; taken all round he is an excellent sample of substance and quality. Ripon Stormer, who succeeded him, was shown light in condition; he exhibits plenty of dash and character, stands true in front and has an excellent jacket. For third there was nothing so good as Warren Tip Top, who if shown a little lighter in flesh, would have appeared to better advantage; this is a very useful puppy; he possesses plenty of bone, grand front and nice body; his muzzle is a trifle short and so is his neck; should he fine down he will hold his own in the best company. Blemton Rasper has not made any marked improvement since last year; his eyes are a trifle full and his body is almost as deep and round at the loin as chest; he stands as true as a gun barrel in front, but for all that he would be improved with more bone. Bever-

IRISH SETTER CHAMPION LUCIA B.
Owned by Seminole Kennels, Chestnut Hill, Pa.

wyck Punster, vhc., although a size too big, is a taking terrier; his head, expression and coat are all commendable, his thighs lack substance and he does not move very well behind. Raby Pallisy, with the exception of his over-sized ears, is a useful, game-looking dog, so is Vandal, although a bit long in back. My Fellow, hc., has excellent bone, but big feet; his face is weak, ears large and coat soft; his body is excellent and his stern well placed.

Among the nineteen bitches that paraded, Miss Dollar, who appeared in excellent fettle, showed the most quality and style. Like all the rest she has a few faults. Her muzzle is somewhat weak; so are her bone and feet, and she falls off a bit in back ribs. Dominica, from the same kennel, was placed second in order. She is heavily marked, but is a rare, sturdy stamp, with fairly good head, excellent legs and feet. Her shoulders are a bit upright, but we think she has improved in back ribs. Warren Dorothy, the third selection, may be a size small, and her head, although a shade short, is terrier like. She is very symmetrical in body and stands true in front. Blemton Splinter, fourth on the list, is exceedingly well made behind the saddle. Her shoulders are a trifle bossy and her eyes somewhat bold. The formation of her bone is excellent, and no serious objection can be taken to her coat. An extra fourth went to Lady Roseberry, who shows remarkable quality, although if she had a bit more substance generally she would be all the better. Dusky II. is another more than useful bitch. She has deteriorated somewhat in front and shoulders since last year. Ripon Regina, vhc., exhibits quality, but her pasterns are not very firm and her hindquarters lack substance. Maystorm, from the same kennel, is too weak in jaw and her feet are thin and open. Blemton Vindex, vhc., is a goodish stamp and should she not grow too big will prove a very useful bitch. Her head and expression are commendable, but her ears are thin, large and rather lifeless. In carriage she is a bit long cast and was shown too fat,

In dog puppies, Blemton Stickler succeeded in making a successful debut. This youngster with luck should make up into a good terrier, his head is lengthy and well balanced, his expression certainly might be keener, in neck, shoulders, outline and finish he is taking, though at present he looks a shade long in the back; but this apparent fault should be obliterated when he is fully matured. Warren Layman is built on heavier lines; his skull is somewhat coarse, so are his shoulders; therefore, with age he is not likely to make much improvement; but here, with the exception of being a trifle fat, he looked well and showed for all he was worth, which Beverwyck Rex did not. The latter is a very shy dog in the ring, and on the second day, when competing for a special, he persistently refused to make an effort, and no inducements on the part of his owner could tempt him to show, hence he was beaten by the sturdy Suffolk Regent, whose bone is immense, his skull is a trifle coarse, and he was shown in rather obese condition. Arrandale Mixture, vhc., who is too young to successfully compete, is likely to develop into a shapely terrier.

Bitch puppies found Warren Regina and Blemton Vindex ahead. Third ticket went to Hillside Serena, who was rather shy, hence did not show to great advantage. She is very typical in make and shape, shows considerable quality, but is not particularly pleasing in head. For reserve there was nothing better forward than Hillside Pepper, whose jaw is a bit weak and her coat is not very hard in texture; still quite a useful youngster, and if her shoulders don't get loaded she will prove a useful representative. Arrandale Sybil, vhc., has a few good properties, though she appeared very green and made little of the opportunity afforded her. In both the novice classes the awards were almost a repetition, many of the same dogs competing, hence it would be superfluous to again go into details, as the prize list will supply all that is requisite. The special for the best dog or bitch in the show was carried off by Blemton Victor II. That for the best in the open classes went to Miss Dollar. Blemton Stickler was considered the best puppy, while Hillside Kennels exhibited the best team.

Black and Tan Terriers.
(Special Report by the Judge.)

In the challenge class Broomfield Sultan, who has made considerable improvement, won hands down from Prince Regent and Salisbury; the former was shown rather thin, while Mr. Doie's dog carried a little too much flesh; between this pair, in their present condition, there is mighty little difference, the latter being paler in color and not quite so true in markings, but slightly better in body and develop-

BULLDOG BO'SWAIN.
Owned by Illwis Kennels, Chicago.

ment behind. Queen III., in much best shape, won first in challenge bitches over Meersbrook Maiden, whose show days are fast passing away; she was exhibited awfully fat and moved badly behind, while Matchless at present, is thin and out of form. Monarch, a nice-headed terrier, with fair color and markings, might be truer in front, was the only competitor in open dogs. In bitches four paraded, the head prize falling to the share of Gipsy Girl, very neat in style, but a little mixed in markings, a remark equally applicable to Louie, who is rather coarse in head and badly breeched. Rochelle Majestic wants more bone and a stronger jaw, her color is very fair; she easily disposed of her kennel companion Carmencita for third place.

Toys.
(Special Report by the Judge.)

Smooth toy terriers secured an entry of nine, but with the exception of Lady Clyde, who is a good specimen, all the rest were much too short in face, full in eye and too round in skull.

King Charles and other toy spaniels were not conspicuous for their numbers, though the majority of the competitors exhibited merit. In King Charles (challenge class), the good headed Romeo was alone, he is rather dark in color and a bad mover, hence was beaten for the special by his kennel companion King of the Charleys, who is much better in tan and eyes and also in action. Yankee Boy, although not quite so square in muzzle or so pronounced in stop is a very pretty little dog, he beat Duke of Wellington easily for second money, the latter's eyes are too small and his ears are very short and devoid of feathering. In bitches Minerva had a slight advantage in head properties and was equally good otherwise, therefore rightly placed before Mrs. Sinn's Lady de Lena, who in turn beat Mr. Davis's Rose whose face is too long and skull not massive enough.

In Blenheims, Exeter Earl, a well known winner, had much the largest skull and best foreface, but his coat was not so profuse as that of Young Duke, who succeeded him. Como, placed third, is plain in head and a shade long in body. In bitches last year's winner, Murilla, again scored, having a superior head, not only larger, but shorter in face, deeper in stop and better in formation of skull, than Tiny, who had to rest content with second position.

There was nothing striking in Prince Charles or Rubies; the winning dog, Pippo, however, is quite fair, but King of

the Faucy suffered from a damaged eye. Ruby Prince is too straight and long in face, and not quite right in body. In bitches Marguerite, last year's winner, was absent, hence the fight for premiership rested with Bell and Jenny Lind, the latter winning somewhat easily in general quality and type.

The Japanese pugs or spaniels were not nearly so numer-

BULLDOG KING LUD.

ous as last year. In the challenge class Nanki Poo, who was shown in capital order, walked over for the prize, then in open dogs a very smart and typical specimen, the property of Mrs. Senn, was selected for the blue ribbon; he is very shapely and has an exceedingly well feathered and well carried tail, and his head, taking size into consideration, is most commendable. Prince Yodo, who came next, is thinner in coat and slightly longer in back, but quite as good in head properties. Tootsie, the winning bitch, showed most quality and style, besides she was in better coat and condition, and won well from Ki-Ku and Sotah, both of which will appear to more advantage later on, as at present their coat is scanty and short.

Only three Schipperkes were on view, much the best being Cople Sophia, who in make and shape ails little, and her head is characteristic. Nuit is a trifle plainer and not so well knit in body, while Sophia Dreiske has light eyes and is very small in bone and weak in head.

Miscellaneous.
(Special Report by the Judge.)

In the miscellaneous class Boston Model, a very fair whippet, was placed in the ascendancy, followed by Mr. Joyce's Mexican hairless bitch Jewell. Third honors were given to Doe, a fairly good Maltese terrier, but rather over-sized. Among the remaining competitors there was nothing that called for special remarks or attention. GEORGE RAPER.

Great Danes.
(Special Report by the Judge.)

In the challenge dog class Melac of course had to beat Pedro, the latter having in fact nothing in common with Melac; what the winner is faulty in is head and neck, which are too mastiff-like. Pedro is rather weak, thin, and beside this, only a perfectly proportioned dog is able to beat the excellent body and limbs of Melac, and especially so in limbs. Pedro has nothing to stand on, and the horrid condition of his tail should almost have debarred him, it being an eyesore to everybody.

The open class winner, Wenzel, is a great Dane in the full meaning of the word and should beat a dog like Melac, as he did, under any judge, who is not judging big dogs only, and has the type of great Danes in his mind: a strong, yet elegantly built animal. Wenzel has grand outlines all through, especially so in the beautiful lines of neck and profile. He is not perfect by any means, but is as yet the most typical great Dane we have here. He could be dryer in cheek and is wrong on top of skull; his eyes are very bad in color, but these are almost trifling defects, if one takes the whole into consideration, which a judge has to, if he is not one-sided. He beats the second, Hero, who is in many respects more a dog of my liking, but his present gross condition makes his shoulders somewhat thick and lumpy, as well as shortens his neck to such a degree that in this alone he is beaten by the winner; he is also somewhat wide in front, and loses to the winner in trueness of front legs; has grand body and is better in hindquarters than the winner, who is some-

BULLDOGS STANLEY, LEONIDAS AND LUCY GLITTERS.
Owned by Mr. Dudley Winthrop, Westbury, L.

what soft, having, I am told, only landed a couple of weeks since. Hero ought to, in correct condition, beat Wenzel.

The third prize, Apollo, is a nice dog all over, but on the small side, but at any time I prefer a small dog of correct shape and perfect limbs to a big dog whose principal recommendation is size only, which has been too much catered to, and if not stopped will make great Danes just as useless, practically, as English mastiffs and St. Bernards, dragging, nine out of ten times, their hind limbs along instead of using them. Apollo could have better muzzle and is somewhat thick in cheeks, could be deeper in chest, but has enough for his size, he carries tail high. The illustration of this theory is best given in the fourth prize winner, Hanley, a very big dog, very faulty in forepart of head, as he is very wooden and badly modeled in front of eyes; throaty and absolutely condemnable in his hindleg action, being cow-hooked and weak, and stern is coarse also. Master, vhc., is in no way

extra, but would in former years have been up in the money; so would Earl of Wurtemberg, vhc., and his kennel mate Alexander II., hc.; good typical dogs in many respects, but bad movers. Tyras is not worth the consideration he did get, as his head is absolutely wrong, but he has a good sound body and therefore ought to have had a consideration, as also Duke, a nice typical blue, with correct type, but short neck, clumsy, tight shoulders, and not straight in front and a stilty mover. Harras, also vhc., barely deserves his letters; he is just a fair dog, who is no credit to his good sire Helios; has too much coat.

The bitch class was all round a fair class, very even as a whole, and like all of the great Danes, an immense improvement since last year, and the correct estimation in this regard was expressed by my esteemed predecessor of last year, Mr. Raper, when he said there had in fact only two great Danes been shown last year, whereas this year thirty was his estimation, and this is the best illustration of the progress great Danes are making. The winner, Portia Melac, will be the dissenting point, strongly used in any disagreeing argument; but if one leaves out size as first consideration, where will one find a more typical specimen all the way through? My old favorite, Neverzell, would be the only one at present I know, that can run her close. She is beautifully chiseled in head and all over; one ear is dropping, but as this is not a structural fault it would and should only count in other-wise equal competition. She is a beautiful, rich brindle, in poor coat, a real credit to Melac as a sire, but he must have found just a right mate in Madge, and the purchase of her by Mr. Goodman shows him to be a man who is well up in breeding. Second went to Juno, who is on the same style as the third prize dog; too small to be a first class one, but good in general, and outside of her snipy muzzle and full cheeks is a good, fair specimen, but will not hold her place if the fourth prize, Hepburn Vera, will build up behind; she had, I understand, left the steamer only three days before the show and was very weak behind, and although by all means the best in the class I cannot tolerate faulty movement, and especially behind. Outside of this she is a grand specimen, of rich brindle color, very good in head; a bit doggy; her immensely square muzzle cannot be improved, good, well-arched, clean neck and good body and front. She would have been an easy winner had she been better behind; she is of immense size. Minerva, fourth, is a dark brindle, almost black in stripes; is a good all round bitch, not thoroughly sound in knees; too blocky as a whole and very medium in size; she is a half sister to the first prize winner, but cannot touch her superb elegance and quality. Charmion, vhc., her litter sister, is very much on the same shape, only coarser. Nora, reserve, is a good specimen, too short in head and shown like a prize pig

THE GRAVEN IMAGE.
Owned by Illwis Kennels, Chicago.

more than a great Dane. Phoebe, hc., got all she deserved. Lufrä is of the regular butcher type. The puppies were nothing extra in any respect, fair specimens, with not much to recommend nor to condemn. Pasha, first, could be improved in character of head and will never make a good specimen, and the same may be said of the second bitch, same litter. Third, very bad tail curve, got almost too much, and his coat and general appearance has not much of great Dane character, even if his owner thinks, as he says, he and Stella were the only great Danes in the show. I agree with him if he says great mongrels.

Dachshunds.
(Special Report by the Judge.)

As a class, rather poor, except the winners, and outside of those I have hardly seen a more common lot. The winner in challenge class, dogs, Windrush Rioter, is a better dog than Zulu II. in head, general type; is longer in neck and better in body. Second to Zulu, who is somewhat plain in head. Janet had a walkover in her class and keeps her own well, and could not be improved very much. In open class, dogs, Jay, a capital specimen, liver colored, in wretched condition and was very nearly getting beaten through it, but his cleaner cut skull, ears, and especially his superiority in back, secured him the ribbon over Tack, second, which is a very nice black and tan, and to the winner only inferior to any extent in back, which is too straight for my taste. Third, Don Quixote, is a very nice little hound, not as clean cut as those in front of him, specially so in leather and neck, head is somewhat short and wide in skull. The vhc. and hc., are a common lot, so much inferior to the winners that they can hardly be mentioned beside them.

The open bitch class brought out Jargonelle, who is far ahead of the others; good in coat and beats Jane Shore in head, back, length and stern, in fact, everywhere. She is nowhere in it with Jargonelle, and would have been beaten by Pollywog, third, a much cleaner cut animal all the way through, but for the latter's abominable front fish-legs, otherwise she beats Jane almost all round, and especially so in condition. Mr. Manice had only enough superiority in quality in his dogs to outweigh the wretched condition he had them in, and I was tempted to deny him the wins more than once on this point, but could not help acknowledging their quality. The rest were nowhere, except a nice little dark red bitch that I must have overlooked, she deserving a

vhc. card, but I did not give it at all, evidently meaning to do so, but overlooked it. Mr. Manice won the challenge cup with Jay, as also the kennel prize for best four.

Basset Hounds.

(Special Report by the Judge.)

This breed had one, only a fair specimen, and it is unfair to the breed to withhold every prize and so I gave her second, which I think is more than she is worth, only to encourage the breed. She is a black, tan and white, too small, barring color, not more than an enlarged edition of a dachshund, and although closely related there is quite a difference between the two.

American Foxhounds.

(Special Report by the Judge.)

This was a small but select class; only one doubtful specimen in it, a white hound with little head marking, Picket, and good as he is, there is evidently some other blood than foxhound in him, probably greyhound, as his square-cut, prominent development of muscles below the hip indicate; otherwise a very nice hound, but is beaten by the third winner, Deacon, in hound character, who again cannot compete against the high quality of the second winner, Parson, a beautiful specimen all the way through, and runs the winner of first, Elite, very close; should be larger, otherwise there is little to choose between them, for I do not fancy the stary eye of the winner nor his flat skull over much.

The bitch class had as first the best hound of the whole lot in Femur, a truly lovely bitch, best in type and coat. There is hardly anything that could be said to improve her; she showed to be in whelp, too, but helped to make Dr. Thurber's exhibit a really grand lot. The second winner in this class, Modest Girl, is a very nice bitch, too, but shows a little in her head that she is very near English blood, otherwise very good; not so good in coat as winner. Third, Diana of Briarcliff, is almost solid black, with little tan about her, and I fancy that some outside blood is in her, too, though she is a racy enough looking animal, but I do not like her color.

English Foxhounds.

(Special Report by the Judge.)

Here I had a beautiful lot of dogs and the three winners run each other very close. Somebody at the show asked me the favor to let him see my catalogue and without noticing it kindly lost the notes about this class, so I have to go over them by memory only. First, Radnor Hunt's Specimen, is a truly made hound all over, excellent in head proportions, just what I fancy a hound ought to be. He has capital limbs and I wish for only a bit more brush. Rather peculiarly none of the other winners, and, in fact, hardly one in the class had much. The winner beats second, Mr. Harrison's Denmark, only in head, otherwise they are a grand couple. Third, Rockaway Hunt's Warrior, is a somewhat coarse animal, not so good in head as his follower, Radnor Hunt's Pensioner, but he beats him decidedly in body, where Pensioner appears stunted and needs decidedly more of it. Barister, vhc., is on the coarse side, as were all the rest of those in the class.

In the bitches there was such an even trio that there is very little choice between them and my decisions may be at any moment reversed without the slightest wrong, as it then will rest entirely on condition and fancy. First to Radnor Hunt's Daffodill, second to Radnor Hunt's Poetess and third to Mitchell Harrison's Rosemary.

Harriers.

(Special Report by the Judge.)

I had only one entry in each class and Mr. Harrison's dogs got first in each, although I prefer the dog in head.

G. MUSS-ARNOLT.

Pointers.

(W. Tallman, Judge.)

Probably never in the long list of shows held by the W. K. C., always in itself closely affiliated with this breed, has there been such a collection of these dogs as met Mr. Tallman. There has been such diversity of opinion heretofore, and some of the sporting judges have not altogether fulfilled their mission with that acumen which all exhibitors seem to expect from a judge, that the comparatively new judge was given a bumper entry to try his hand on. A sort of "let's see what he'll do" feeling pervaded, and that feeling did not diminish when it was seen that the ring was small, and consequently the dogs crowded each other too much for easy judging. The classes were "hot," and especially the lightweight class, and though the decisions were well made in some instances, certain it is, or must be, that the judge overlooked animals that he had awarded prizes to at Brooklyn, and other good ones were not noticed. As we predicted, the task of judging pointers and setters is too much for one man at such a show as this. For instance, it required one whole day to get through the pointers alone.

In challenge heavy-weight dogs, with Lad of Kent, Pontiac and Tempest in the ring, any one with half an eye could see that George Jarvis had an air-tight grasp on first money, Lad's better shoulders, body and action laying well over Pontiac, who came next. Two well-known dames then trotted out, Woolton Game and Revel III., when the latter's age told on her, good and sprightly bitch that she is, with all her years, losing to the other in ribs and neck, though I like her forelegs and front better than W. Game's; Revelation's plain head was against her in this company, but she has better legs and front than either. In open dogs (17), after much sorting, Ridgeview Panic was the lucky one; a son of Tribulation, without many faults, there is nothing really striking about him, he is fairly well made all round; Duke of Kent II. has been a frequent winner lately and he comes very near the winner, and in body I like him; Westminster Drake, third, and well-known, is not good in expression and was far from being in that elegant coat and condition we expect to see the Brighton Kennel dogs shown, and I don't think he was in his proper place on this account; Hylas of Naso, fourth, is thick and short in neck, rather heavy, coarse head, and ears don't set well, otherwise fairly good; Bar Harbor Sam, reserve, is not just straight enough in front, weak in pasterns and not deep enough nor furnished sufficiently in body, also his quarters lack that striking and well-muscled appearance a pointer should have; Sanford Druid, vhc., was probably set back on condition, for he was not at all in good shape, he is not as he should be before the eye, he is good in front but a bit plain in loin, a good mover, and when well shown will get much higher; Wantagh Chief is plain and disfigured; Devon Banger is stilty, pinched in muzzle, stern set on too low, otherwise well formed; Brooklyn Shot, c., is faulty in front, plain in muzzle and not enough bend in stifle. A dog that should have been noticed and placed about third was Bracket's Lad, who shows lots of quality, is a little heavy in shoulders but his well-formed head, ribs, bone and quarters certainly deserved letters, and he is a better dog than either fourth or third in his present condition. Duke's Lad also deserved something, for though a trifle coarse he is well formed, and has less faults than some put over him. In bitches (16) the winner proved to be Josie Bracket, who fulfilled my prediction made in the Chicago report, she was looking well, too. Lady Tammany, second, loses in head to the other, and also in ribs. Lass of Kippen, third, won at Pawtucket, while Ighfield Midge, fourth, has also been frequently commented on. She was in good shape. Snowflake, reserve, should be closer in toes, her muzzle longer, fair body. Duchess of

Naso, I thought, might have changed places with either Midge or Snowflake as she is a better all-round made bitch, and was a winner at Brooklyn. Westminster Gladys, hc., is showing gray a bit, but can give points to a good many in shape of head, legs and feet. Sister Rap, hc., has not enough stop, stands back on pasterns, but legs are straight, body and quarters were good. Molton Bee, c., is wide in front, a rather plain sort, too high in brow. In light weight challenge dogs Duke of Hessen was well put down; in fact so well that he won the special for best in show. Inspiration was absent. Two good bitches were entirely left over in this class. Westminster Ina, second at Brooklyn, who, though not in good shape, deserved recognition, while Westminster Nan's rather plain head is counterbalanced by her good points in body and legs. In bitches that smartly made and sprightly winner Lady Gay Spanker, very well shown, was rightly placed over Queen Fan, who is ageing a bit. Then in open dogs (17) came a number of well known faces, and the ring was full of them. First went to Arthur, the smart little dog that won at Boston last year. He shows much quality; might be better in forelegs, but otherwise it would be caviling to find much wrong with him. Second to Ridgeview Donald, who loses to a good one before the eye; his pasterns are not strong, but his other good points give him the place, despite size. Ridgeview Faust, third, is too coarse in shoulders, and pasterns are not above suspicion; muzzle not square enough, but beyond this he is well made. Rock II., fourth, has become a household word, but still keeps his form. Glamorgan, reserve, was about rightly placed. Grouse-dale, hc., brow too prominent, needs more rib development, stands hardly true in elbow and his feet turn out a bit as well; nice strong loin. Touchstone, hc., was at Gloversville, and Dash A. was commented on at Pawtucket. Ben C. is only moderate in head and light in body. The bitch class contained some pointers—23 in number—and many of them would be more than well thought of if the others were away. After much marching and counter-marching the pride of place went to Patti, whose chief fault is in skull, though very little, while her front is excellent and her well-shaped body is carried with nerve and snap. Graceful II., second, was locked in her stall, and I could not get a good look at her,

SCHIPPERKE COPLÉ SOPHIA.

Owned by F. W. Connolly, Boston, Mass.

but she struck me as if her muzzle should be squarer, and her pasterns stiffer, and is large in body without being well ribbed. I thought that Lass of Kent should have the place, beating in head and body. Dame Bang, fourth, who made a reputation in the field in Canada, is not very good in front. Jingle Bells, reserve, is not deep enough in chest, nor as well ribbed as the other; head too blunt and square looking. I liked Bloom for that position, for while she is rather weak in head, still her other good points of body and leg cannot be passed over. Ridgeview Venus has an excellent front and expression, though a bit off in muzzle and ear. Betsy Bracket, vhc., should be stronger before the eye; could do with more bend of stifle; one ear is not well carried, good otherwise. Bloom of Kent is another good one, a little off in muzzle and shown too light altogether. Miss Rumor was rather out of place with three letters, though muzzle is faulty and is throaty, her nice outline, neck, shoulders and quarters especially, make her more than fit to associate with the winners. Wild Lily is a sprightly little bitch, trifle light and feet turn out, too. She deserved her letters; she was first at Pawtucket. Flora R., c., could be stronger in feet and pasterns and has not enough stop. Most of the puppies had gone home when I took notes, but in dogs the winner, Odd Fellow, is narrow fronted, and legs not just right, well formed head, and nicely turned quarters. Ossining's Boy, second, might well have changed places with Top Gallant; is a well furnished youngster with a good head, neck hardly clean enough. In bitches Lady Grace, also belonging to Luke W. White, won first; she has a nicely shaped head, but needs more bend of stifle; the others had been sent home. In novices, many of the awards followed the open class, Ridgeview Panic winning in dogs over Hylas of Naso and Graceful II. in bitches over Dame Bang as before. Duke of Hessen's good condition and front sufficed to beat Woolton Game in the field trial class.

H. W. LACY.

English Setters.

(William Tallman, Judge.)

English setters were remarkably strong, both in numbers and quality. Mr. Tallman had a most difficult task, in the open classes, to judge them accurately, owing to the smallness of the ring and the excellence of the competitors. He, however, acquitted himself well, making but few mistakes. Four dogs were entered in the challenge class. Paul Gladstone was for exhibition only and Toledo Blade was absent. Breeze Gladstone won first place over Count Howard, the latter a dog of merit, but losing quality with age, and gaining in sourness of expression. Princess Beatrice was a good first in the corresponding class for bitches. Cambridge was second. She was out at elbows, and not in good condition. She had canker in ears, which she carries indifferently well. The third entry, Donna Juanita, was very close to second place, if not quite. Thirty dogs in the open class appeared before the judge. The remaining two entries, Paul Bo and Ezra Noble, were absent. First prize was won by Real English, a remarkably handsome dog. He has a graceful carriage and a pleasant disposition. Feet and legs good and shapely, and he stands squarely on them. Good, clean cut head, ears nicely carried, body well ribbed, good back and loin, well developed quarters, neck lean and of good length, but slightly throaty, stern a proper length, well carried. He has excellent symmetry. Sheldon, second, is somewhat too short in neck. His feet and legs are good, ears set low; strong back; muscular quarters; good stern; head fairly good. He is a symmetrical, tidily built dog. Glendon, winner of third, shows throatiness, and his forefeet are too long. He has muscular development of a superior order; head fairly good; ears well set on; good stern and loin, and he is sym-

metrically built. Fourth went to Antonio, a strongly built dog, but coarse and inferior to Ben Hur of Riverview, which was unnoticed. The latter was superior to several which received vhc. Ben was a trifle heavy in the shoulders, but he stands squarely on excellent legs and feet; has a good, well ribbed body; head nicely shaped, and general symmetry better than the average good dog. The reserve went to Matane. His feet are a trifle large, but they are well shaped and strong. He has a good head, but is too flat in stop; ears well carried; a lean neck of proper length; quarters muscular, and general symmetry superior. He was shown too thin in flesh. Sam C., vhc., is about an average specimen. The Corsair and Reverdy, both vhc., are coarse dogs. The Sultan, vhc., is coarse in head, leggy and straight in shoulders. His symmetry is fairly good. Of the three remaining which received vhc., The Earl has good muscular development, a well turned body, nicely ribbed; a strong back, and ears well hung. He has some throatiness; skull too round, and muzzle too short. Prince Ben Ali has a light muzzle, a plain head, good back, body, bone, legs and feet, and fair symmetry. Rockingham, Jr., stands badly behind, is too light in eye, and his head is too narrow. He has a good body, forelegs and shoulders. Joker, hc., is an ordinary specimen, and Pride, of Bronx, also hc., was not in his stall when I called to look him over. There were twenty-five competitors in the open bitch class, of which Lady Dudley was absent. First was won by Countess Zoe, a bitch of superior qualities. Her head would be better if there was more stop; ears well set on; she stands squarely on sound legs; has muscular hindquarters; good neck, back and stern, and she moves freely and gracefully. She is well built and symmetrical. Prima Donna, second, is fairly good in quality. She has a well-ribbed body, good legs and strong loins. Her muzzle is too short, as is also her neck; stern too long, and she was deficient in feather. Gossip, third, is somewhat too heavy in shoulder; is a bit narrow in muzzle; she has a lean neck; good feet, back, loin and quarters. Countess Rush, fourth, was shown too fat, which marred her proportions. She stands squarely on good legs and feet; neck well set on shoulders which are too heavy; head plain. She is a good bitch. Laundress got vhc. reserve. She is a bitch of many good points, but shows coarseness. She is too heavy in the shoulders and narrow in muzzle. She has good body, loin and quarters. Her kennel companion, Belle of Blue Ridge, a large upstanding bitch of a great deal of quality, I fancied much better. She has a well-shaped and well-ribbed body; good head, legs and feet. She was shown in too high flesh, and was not free from throatiness. Spectre, Myrrha II. and Katie Noble II., also received vhc. Spectre has a badly cut foot, which may have given her the peculiar awkward motion of the shoulders which she has when in motion. She is quite a handsome bitch; is straight in stop; is a trifle throaty, and just a perceptible bit cow-hocked. Katie Noble II. is a bit straight in stifle, and was shown in poor condition. Her muscular development is excellent. She was short of feather. Myrrha II. is heavy in shoulders, plain in head and straight in stifle. There were four—Doretta, Eastern Queen, Virginia Rockingham and Daphne—which got vhc. The first-mentioned is light in bone, and does not stand well in front. She has a good body and loin. Eastern Queen was not on her bench when I looked for her. Virginia Rockingham is symmetrical. She has a light muzzle; shoulders well shaped; strong back; well ribbed body. Daphne is a strong bitch, of average symmetry. Her ears are thick and not well carried. Cleopatra, unnoticed, is a trimly-made, small bitch. She has well made legs and feet, and was better than some of the bitches which received vhc. The winners in the puppy classes had been removed from the show, after they were judged. Therefore, there was no chance to examine them afterward. Albert's Druid, vhc., was out of condition, but showed a great deal of quality. Druid's Dick, the reserve, is coarse and long eared. In bitches, Fanchon, third, was thin in flesh; has a plain head; good legs and feet. May Win, vhc., would undoubtedly have been higher if in better condition. She is bright, upstanding, and well made. Nell of Lenox, hc., was out of condition. She is trimly built. Her muzzle is light. Downings, first in novice class for dogs, is coarse. Sam C., third, is a coarse dog. Novice bitches were but an average lot. There were eleven entries in the class for dogs and bitches placed at any public field trial in the United States or Canada. Paul Bo, Toledo Blade and Cincinnati were absent. From a bench show standpoint, they had not much claim to excellence. Antonio won first, The Corsair second and Cambriana third. They were shown in other classes, and have been already mentioned. Rockingham Kennels took the prize for best kennel, and the Blue Ridge Kennels won the special prize for the best four which have run in any public field trial in the United States or Canada. Countess Zoe won the special for the best English setter, and was very closely pressed by Real English. Rosecroft Kennels won the silver medal as breeder of the best brace shown.

Irish Setters.

(W. Tallman, Judge.)

Irish setters were strong in numbers and quality. There were seven competitors in the challenge class, all well-known winners. Dick Swiveller was not for competition. Tim and Kildare were first and second respectively, and Duke Elcho was reserve. Pride of Patsy, Kildare Glenmore and Seminole were the other competitors. There were three challenge bitches, Norna, Rose Sarsfield and Laura B., first, second and reserve, in the order mentioned. Sixteen dogs competed in the open class, there being no absentees. The class was a good one. Nearly all the dogs were in good condition, the Oak Grove Kennels being particularly noticeable for good conditioning and grooming. First went to Duke of Kildare, quite a good all-round dog, though a bit round in shoulders. One foot turns in. His head is fairly good; he has a well-shaped body; strong, muscular back and quarters; good legs and stern. Blarney, Jr., second, is inferior to Duke in muscular development; his fore feet turn out, and fore legs lack the symmetrical roundness and finish so necessary to a good form. Though a good dog, he is lacking in general symmetry. Montauk, Jr., third, was better in some respects than either first or second winner. He beats Duke in color; stands better in front than either first or second winner. He has a good head, body, back, legs and feet. He is a trifle straight in stifle. I thought him better than the second prize winner. Fourth was won by Kildare Duquesne; plain in head; neck a bit throaty. Body, legs and feet good. The reserve went to Tim's Dandy, quite a good dog. Young Tim and Nieho were vhc. The former has a long head, and is coarse. The latter is somewhat coarse. The open bitch class had thirteen entries. The winner was Queen Vic, an excellent bitch. Head clean cut; nicely carried ears; lean neck; strong back and excellent legs and feet. Second went to Fly, winner of first at Brooklyn. Belle of Kildare was not in her stall when I looked for her. Fourth went to the Marchioness, fairly well made bitch; good in color; legs, feet, neck and fairly good head. Delphine, vhc. reserve, is light in muzzle; a good bitch. Of the vhc.s, Claremont Heather was too fat; she stands over somewhat on ankles, and is light in bone. Nellie Husted is short in neck. Kathleen is a good vhc. bitch. Lady Noreen, hc., has a coarse head; is about ordinary in quality. There were eight entries in the dog puppy class; three were absent. Clonmel, first, has a coarse head, and was shown too fat, thereby aggravating a tendency to coarseness. Second went to a very ordinary puppy, Bantry, and third to Ostler Joe; flat in ribs; head coarse, and quality inferior. There were but two bitch puppies, Alannah and Daisy Redstone, respectively first and second. Daisy is light in bone, color and muzzle. Novice dogs were nine in number. First, second

and third were won by Duke of Kildare, Blarney and Kildare Duquesne, which had also competed in the open classes. Tippecanoe, the reserve, is large in ankles and plain in head; back, body and quarters good. There were five novice bitches. Queen Vic and Belle of Kildare, competitors in the open class, were first and second. Third went to Lady Elcho; light in color. Young Juno, reserve, is flat in body and plain in head. There was but one entry, Rockwood Dandy, in the field trial class. The Oak Grove Kennels took the prize for best kennel. Seminole Kennels' Tim took the special prize for best setter.

Gordon Setters.
(W. Tallman, Judge.)

Gordon setters were a superior lot. Five were entered in the challenge class for dogs. Beaumont being sick, was withdrawn. Ivanhoe was first, Leo B. second, and Rexmont reserve. There were five bitches in the corresponding class. Duchess of Waverly, first, Heather Bee, second, and Bailmont, third. All are well known winners. Thirteen dogs competed in the open class. First went to Ranger B. He was shown in excellent condition—muscles hard and well developed, and coat bright and healthy, and indications of regular exercise and good food. He has muscular quarters; a strong back; body well shaped; good neck and head. He has a sour expression of face; stands over perceptibly on knees; fore feet turn in, and his feet are thin and weak. He is deficient in feather, and has a twisty stern. Still he is a symmetrical dog, and has great muscular development. Archibald, second, was not in good condition. His coat was rough. Legs and feet good; head well shaped; shows some throatiness. Doc, third, is flat in ribs and throaty. Head fairly well shaped. Count Noble, fourth, is good in head, feet, loin, body, stern and quarters, and has fairly good legs. The reserve, Robert Burns, has flat ribs, and a leggy appearance, which is intensified by his thinness of flesh. Comus, vhc., has a coarse head and smudgy tan. He is ordinary. Duke of Wellington, vhc., has a coarse head, long ankles, smudgy tan, and is somewhat cobby in build. There were ten entries in the open class. First went to a remarkably symmetrical, muscular bitch, Lady Gordon. She stands on excellent legs and feet; has a good body, quarters, stern, neck, body and head. The tan is clear and distinct from the black in her color. Princess Louise, second, is plain in head, but otherwise is fairly good. She was shown and won first in the late Nashville show. Third went to Venus; out a bit at elbows; light muzzle, and ears not too high. Sally Beaumont won fourth. She is deficient in feather; light in muzzle; straight stop, and she had but little feather. Katherine has a smudgy tan, is throaty, and ordinary in quality. The remainder of the class was ordinary. There were three puppies, Robert Burns, Fremont and Roscoe, winning in the order named. They were ordinary. Four bitch puppies competed, of which Fairmont, Dundee and Fenmont were the winners. Novice dogs had four, and novice bitches five entries, nearly all of which competed in the open classes. In the field trial class Ranger B. won first, Count Noble, second, Flomont, third. Dr. S. G. Dixon's kennel took the kennel special prize. Mr. Noyes Billing's Ranger B. took the specials for the best Gordon setter. Mr. Tallman managed his classes very well. He took plenty of time; so much so sometimes that it seemed unnecessarily long; but he was handicapped by a ring which was too small for the large classes which he had to judge. The setters of each breed showed improvement, particularly English and Gordon setters. B. WATERS.

Spaniels.

(Special Report by the Judge.)

In challenge field spaniels, dogs, Beverly Negus, looking fairly well, won with lots to spare from Beau, second; the winner much improved since Brooklyn, but should be shown with a little more flesh on him. Beau is well known. In corresponding bitch class Briford Ruby, in better condition than I have before seen her, was alone. She is undoubtedly the best of her breed in America. In open dogs there was a good class, all in splendid condition. Judex won with some to spare from Warwick, scoring in head, muzzle and set-on of ear; Warwick, in different shape to his wretched Brooklyn form, scores a little in coat, is too high in leg, has a good body and moves well; Elcho, third, coarse in head and not right in front; good body, feet and coat; Compton Brigand, reserve, looking well, has filled out nicely, but loses to the winner in head, body and field spaniel character. Beau Baron, fourth, beating him in head, has a fair body, rather short in couplings, shows a little of the cocker type. Bolus, vhc., is very bad in head and front, but good body and coat. Sorry Jake, vhc., loses to him behind the head; the latter will improve. In open black bitch class Ace of Spades, in good condition, though heavy in whelp, won over Dame Trot, beating her in head. Both are good in body and coat, but Ace gains in front and behind. Rosedale Bess, third, loses to the winners in coat, and is too high on leg; she has a fair head, but does not move with so much spaniel character.

In open liver class Queen won with very little to spare from The Shrew, gaining in skull, set on of ear, is better in front, but losing in coat and body. Both are good in bone and substance. Diana, third, loses to the others in little except head. In other color dogs Newton Abbot Farmer was alone. He is well known, coarse in head and not right in front, has lots of bone, good coat and moves well. In field spaniel puppies Fashion won, he will improve. Sorry Jake, second, losing to the winner in head and field spaniel type. Kelpie, third, loses to the winners in legs and feet, body and head. The others in this class were overgrown cockers.

In challenge cocker dogs Fascination, in good condition, won over Red Jacket, second. The winner scoring in head and set on of ear; both are not right in muzzle. Brant is too well known to need describing; he carries his age well and looked in better condition than I had ever seen him before. In challenge bitches Troublesome won. This was not an easy class to judge, the type was so different. The winner shows marked improvement, has filled out nicely; she is defective in muzzle, but won well in hand. I know my decision in the second award will be questioned, but to take the Troublesome type and then jump from that to the I Say type, would, I think, be inconsistent. The latter gains in head, but is too long in body, whereas Novel shows much cocker type behind the head. Novel showed well in the ring, whereas I Say did not show her usual form, she gained in condition, but was tucked up and stood higher behind than in front. It was a close thing, and had they been alone I would have been tempted to place I Say first.

In open black cocker dogs my Brooklyn favorite won. He shows much improvement, and if he keeps on gaining will run the best of them closely. A cocker, not quite right in muzzle, he has a fair length of skull, fair eye, nicely set on ears, good compact body, about right behind and the same in front, good in coat and length of leg. He won over Black Prince, second, in head, and only lost to him a little in coat. Brantford Jet, third, loses to the winner in general cocker formation and is a little inclined to the field spaniel type. King Raven, fourth, look well. I liked him better than Donovan, reserve, who is coarse. Jay Kay, hc., had been in better condition would have stood much higher in the class. He was much too light in flesh, and did not move as freely as Pickgrania, vhc.

In open black bitches Realization won well in hand from Tess, second. The winner is a new one, and shows much quality and type, being a truly typical cocker in many points. She is a well bodied, cobby little dog, with good formation of skull, perhaps a little strong for a bitch, with

ears nicely set on. There might be a trifle more length of skull; eyes are good, coat excellent, body well ribbed, good bone and substance. Just coming off ship she seemed a trifle weak in pasterns. Her front legs might be a little truer. She is a good one, but may grow coarse, especially in head. Tess, second, is a nice pup, showing much quality, nice head, coat, body, legs and feet. Miss Wagglies, third, loses to the winner in type, behind the head, but is a good headed bitch, with nice muzzle. She showed much improvement on her Brooklyn form. Miss Chips, fourth, loses to her kennel companion in head; she will improve as she matures. Woodstock Dora I mentioned in my Brooklyn report; her condition was not so good here. The c. dogs were all very fair, but some were shown too light in flesh to do themselves justice. Raven Belle loses to the winner in head and general formation. This was a very strong class; with one or two exceptions every dog could win in good company. Let us make up our minds to work for the Mason type of head, a Miss Oho II., a nice, cobby, well ribbed body, good legs and feet, not too low on the leg, plenty of bone and substance,

COLLIE THE SQUIRE.

Owned by Seminole Kennels, Chestnut Hill, Pa.

and we will have what the American Spaniel Club have been looking for for a long time and are now on the homestretch to get.

In other color cockers, open dogs, Rollo won with little to spare from Redfellow, second, who gained in head but has the long body we do not want in the cocker. Great Scot, third, is much the same type as the second prize winner, but not quite so good in head. In other color cockers, open bitches, first went to Cherry Blossom, who beat Brantford Red Riding Hood in body; barring her head she is a typical little cocker; moves well. The second and third prize winners show too much field spaniel behind the head. Ditton Brevity, vhc., is not the right thing in head and bad in front.

In cocker puppies the winners are entered and described in the open classes, and in novice classes the same.

Irish Water Spaniels.

(Special Report by the Judge.)

Two entries, both good ones, especially the winning bitch Marguerite. Shown in good condition she would be a hard nut to crack in any company; at present her coat is somewhat loose; she is light in flesh, but in skull, body, legs and feet and topknot she is the best specimen we have had here for

BEAGLE CHAMPION FRANK FOREST.

Owned by Rockland Beagle Kennels, Nanuet, N. Y.

some time. She won over Dennis with plenty to spare, but he will improve.

In specials there was quite some competition for best sporting spaniel. I finally gave it to Judex who I thought showed more quality. Mr. George Bell's handsome team had no difficulty in capturing the special for best kennel of cockers and the same prize in field spaniels went to Mr. Egglestone, who showed an even team of blacks. The \$100 cocker cup went to Fascination, he did not win easily as his two kennel companions and Swiss Mountain Kennels' Middy were all close up.

In concluding my report I would say that at no other show have I seen the spaniels shown in such excellent condition, for with the exception of a few shown too light in flesh, all looked well. Much credit is due to Mr. Joseph Spracklin for the manner in which he handled his dogs in the ring, and if exhibitors would only encourage the dogs to show themselves, as he did, the judge would have an easier task to make his decision. It does not help the dog any, if he has a bad muzzle, for the handler to keep pulling on it to try and get the lips into shape. It has always been my opinion that handling of this kind calls the judge's attention more to the defect.

E. M. OLDHAM.

Beagles.

(Special Report by the Judge.)

Owing to the compulsory absence of Mr. Pottinger Dorsey, for whose sad bereavement every one expressed regret and

deep sympathy, the honor of judging beagles devolved upon me. The collection, which had been attracted solely on account of Mr. Dorsey's long connection with the breed, was a good one, and with the exception of the absence of one or two smaller specimens, it was thoroughly representative.

The challenge class for dogs brought out Roy K., last year's winner, and Storm. The latter scores considerably in muzzle, skull, type and expression, as well as in front and carriage of stern. His defects are length of body and lightness of ribs, points where Roy K. takes a lot of beating. The Rockland representative, however, showed himself badly, which gave a somewhat easy victory for Storm.

Five put in an appearance for the corresponding class for bitches. After sorting them out, the blue ribbon rested between Belle of Woodbrooke and Lou, and finally fell to the first named. The winner has the advantage in neck, shoulders and shortness of back, taking into consideration her height from the ground. She also showed herself to perfection. She is, however, a bit too strong in skull, although possessing nice type and expression, and is badly out at elbows. Lou was the superior in head and skull formation, as well as in front, but she is far too heavy and loaded in shoulders, and too close to the ground for the length of her body. Twintwo has plenty of bone and substance and nicely carried stern, but she is common in head and expression, as well as being long in the body and close to the ground. Both June M. and Betty R., the two other competitors, were outclassed.

Whalebone, the recipient of premier honors in the big open dog class, had a somewhat handy win; he has toned down since his successful debut last year and is a well-built hound, with a fairly taking outline and good carriage of stern, as well as being well off for bone and substance; he could be improved in formation of head and muzzle, but his nicely set ears and good eye both help to improve his type and expression. Doctor, second, might be better in spring of rib and not show so much daylight; he could also have more power in muzzle, but he has plenty of bone of nice formation, a good top and carriage of stern, with nicely set, quality ears; he showed himself for all he was worth. Millard, third, loses to his two more successful opponents in substance and general character, but he has a nice outline and top, and is the best of movers. Jupiter, reserve, is long-cast and favors the coarse side; but for these defects he has plenty of good about him, such as a nice top and carriage of stern, well-set ears, and good bone and substance. Pulboro Crafty, vhc., is plainish in head and expression, and shows far too much daylight under him, otherwise he is a nice-topped hound, with the best of legs and feet. Trifle II., the other vhc. dog, is nearly all white, which, perhaps, places him at a disadvantage with his more gayly-marked competitors; he is of the correct type, with a good expression, nice short back and good carriage of stern, but he could be improved in front and formation of bone, added to which he is loaded in shoulders, and a bit light in loin and hindquarters. Halcyon, hc., could be better in head and expression, while Joe showed too much daylight under him, and neither Prince nor Chanter took my fancy in type of head or expression.

Turning to the class for big bitches, Emeline, last year's winner, had a very handy victory, possessing, as she does, a beautiful head, with an intense type and character, a grand neck, clean, well-placed shoulders and grand symmetry and outline. She is certainly one of the best hounds in the country. She might be stronger in bone, nor does she show herself to advantage. Charm, second, is a neat, nicely made bitch, who loses to Emeline in high-class type and character. Prudence, third, possesses the beautiful head and expression of her dam, Sally Lee, but she is unfortunately too long and slack in body. Vick R., reserve, is a nicely-proportioned and symmetrical hound, but her weak muzzle and general type and expression prevented her being higher. Lufra, hc., is short and "chumpy" in head, while Fanny Racer, c., is but a fair specimen.

Forest Hunter, the winner in the class for dogs 13in. and under, is a well-proportioned, symmetrical hound, with a good carriage of stern, fairly good legs and feet, and much better in type and character than Paderewski, who came second. The latter is short and "chumpy" in head and lacking in expression, but he is a good-bodied one, with a nice top and outline. Young Royal, third, is a toy, somewhat too short in body and decidedly dull in eye, while he gets his stern too much over his back. Apart from these defects he is a good-boned and fronted little dog, with nicely set ears and fair type and character. Cry Baby, reserve, is too square and short in face and long in body, while Hawk Eye is but moderate.

Heir, the winner in the small class provided for the opposite sex, is a symmetrical, well-made little hound with nice head and expression and good legs and feet. She was shown too high in flesh, which made her shoulders appear heavy and loaded. Fanny Reed, second, ran the winner close, as she scores a bit in head and expression and is equally as good in front, but she lost decisively in loin and hindquarters. Zillah, third, was handsly beaten by her two more successful opponents in general symmetry and outline.

The puppies were not a flattering lot. Cry Baby, the winner, being fortunate to beat Nora K., who refused to show herself at all. The latter has a sweet head and expression and set of ear, and when she gains sufficient confidence to put her tail up will "smother" the winner. Naomi, reserve, also refused to show herself, or she, too, might have been placed over Cry Baby.

Unquestionably the best class was that for hounds that had been placed in field trials. This brought out Frank Forest, who never looked better in his life. His beautiful shape and make, grand symmetry and outline and carriage of stern, to say nothing of the substance and formation of bone, made him an easy winner. His faults, which have been discussed time and time again, are a slight cheekiness and rather prominent eye, which mar what is otherwise a good hound; his ears, too, are lacking in quality, and his elbows are what, in fox-terrier parlance, would be termed "Clarkey." In spite of these defects his wonderful body and grand proportions make him about the best hound in the country, and when it came to the decisions for the specials for the best, the only contestant to approach him was Emeline, who was a worthy second to him. Her listless, apathetic air will, however, always be a big handicap when meeting her stylish kennel companion.

Wire-Haired Fox-Terriers.

(Special Report by the Judge.)

Suffolk Toby, in old dead coat, but looking well otherwise, was alone in the challenge class.

In open dogs Saint Broom, the winner, was handicapped by an old ragged coat, which, however, was of the correct texture. He is a grand-bodied one, with a nice top and good bone and front. He could be improved in expression, which is somewhat marred by a light eye. Oakleigh Horner, second, who had the advantage over the winner by being in good new coat, is almost as good in this property as could be. It is of a hard dense nature, in addition to which he has a lean nicely chiseled head of good expression and character, with plenty of bone and substance and a nice top. He is inclined to stand with his elbows "in," and might with advantage be longer in loin. Suffolk Billy, third, is soft in coat, and on the big side, but otherwise he is a terrier all through. Jack Trick, reserve, is very plain and common in head and expression, he also lacks coat along his sides and on his hindquarters, which are too bossy and bull-terrierlike. Dandy Jack, vhc., is not only well-eyed, but he is a moderate one all through. Saint Brittle, hc., was dead out of coat, besides which he was shown too "flabby" and fat for a dog of his stamp.

Sister Pattern had a very easy win in the open bitch class. Her nice head, type and expression, neatly placed ears, good bone, excellent outline and requisite texture of coat, stamping her as one of the best that has yet been in the country. Were she a better shower, she would run the best of the smooths very close indeed. Jess Frost, second, is a nicely built good topped bitch, a bit off in head and expression. Suffolk Tassel, third, shows quality and character, while Sister Mop, reserve, is severely handicapped by a soft coat. In head and expression she is a small edition of Mr. Carrick's old champion Vora, in fact, with the exception of size she resembles the latter very much. Cairnsmuir Belle, vhc., is a decidedly good stamp, possessing as she does a good hard dense coat, nice bone and front, and a capital top and outline. She, however, refused to carry her ears at all decently, and showed herself to great disadvantage. Sister Nettle, in spite of her refusing to put her ears right, her old dead coat should have received a vhc., as she has a regular "Tack" outlook, and is a nice topped and bodied bitch. With the exception of Saint Brittle, the representatives in the puppy class were but a moderate lot.

Irish Terriers.

(Special Report by the Judge.)

Jack Briggs and Boxer IV. opposed one another in the challenge class for dogs. Boxer IV., who secured the award, loses to his rival in bone, substance, set on of stern, and slightly in character, but Jack Briggs had been stripped of all vestige of top coat, which lost him the coveted ribbon, as his opponent's old dead coat had been allowed to remain on him. In the corresponding bitch class Dunmurry, looking far different to what she did at Brooklyn, was alone.

The open dog class was responsible for four fairly good specimens among the thirteen exhibits. Jackanapes, first, possesses a grand head and expression, exceedingly neat, well carried ears; he is well off for bone, has a grand front, and a coat that handles well. He is lacking in back ribs, is pinched and tucked up in loin, and has a bad set on of stern. Merle Grady, who came second, had been shown in better form would probably have turned the tables. As it was he was shown with a far too profuse coat; his head for a dog could be harder and more varmint in expression, and the winner scores decisively over him in information of bone. Back of the shoulders, however, the Providence dog loses to his more successful opponent, his set on of stern, general outline and movement being vastly superior. Valley Boxer, third, is a racy stamp, with a fair outline, head and expression, and beat Hanover Boy, owing to the latter showing himself badly. The Providence second string is a grandly made one, with the best of coat, but he is sour and commonish in head and expression, and he is very loose in elbows. The others were outclassed.

The open bitch class, with the exception of the winner, Candour, was a poor one. The recipient of first has a bad, soft coat, in addition to which she was shown too fat. She has a good, strong, punishing head, with fair expression, plenty of bone and substance and is an exceptionally well-made one, with a capital top and set on of stern. Chancery Lass, second, is all curves and angles in outline, while Dunmurry II. must thank the lack of quality of her other opponents for her position of third. Red Rag, unnoticed, would have been in the money but for the fact that she is badly undershot.

The class for puppies contained only one that is likely to be heard of again. This was His Honor, a youngster by Hanover Boy—Crate. He is a good-headed and expressed pup, with any amount of bone and a good top. The only fear is that he may grow too big.

White English Terriers.

(Special Report by the Judge.)

It was refreshing to see two fairly typical specimens of this breed after the bad small bull-terriers that have been posing as representatives of the breed. Spring is a nice-headed little dog, with good expression and fair outline, while Nellie, second, but for being a bit full in eye and too close to the ground, is nothing to be ashamed of. Blinkbonny, reserve, favors the bull-terrier too much, while White Chief is naught but a small specimen of the latter breed.

Dandie Dinmonts.

(Special Report by the Judge.)

King of the Heather, in spite of his washy color, beat Amphion, who came second in eye, body and Dandie character generally. Laddie, third, was outclassed by his two kennel companions, while Ainstey Daisy had an easy victory over Heather Peggy II. in the class for the tenderer sex, as she smothered the last named in head, character and general style.

Bedlingtons.

(Special Report by the Judge.)

Christmas Carol, a well-known face, scored very handsily over Qui Vive in the challenge class in head, type, outline, topknot and ear tipplings. Professor, who was alone in the open dog class, is a square-headed liver, lacking type and character. Parilla, the winning bitch, had an easy task over her two opponents.

Scottish Terriers.

(Special Report by the Judge.)

The premier award in the challenge class was fought out between Kilroy and Kilstor, and was in favor of the first named, who scored over his opponent considerably in bone, front, outline, and shape and make. In the class for open dogs, the decision which placed Kilreer over Tired should have been reversed, as the latter's grand bone and substance and better knit back more than counterbalanced Kilreer's advantage in coat, eye and expression. Rhudunan, third, who was in bad coat, possesses a good head and expression, and small, nicely shaped ear, but he could be stronger and better in formation of bone. Ashley Plug, reserve, shows more daylight under him than the winner, in addition to which he is light and narrow behind. The remainder was outclassed.

Culbena, the winning bitch, scored easily over her rivals in head and expression and general outline, both Wankie Diana and Wankie Daisy, second and third respectively, being too long in back.

Welsh Terriers.

(Special Report by the Judge.)

Dewr and Jack Frost were the only two decent ones of the four shown. Dewr, the winner, has a short, plain, bad head, but he scored so much in bone, front, shape, make and coat over Jack Frost, who came second, that he eventually won handsily.

Skye Terriers.

(Special Report by the Judge.)

Sir Stafford's good head and expression and style generally proved too much for his old rival, Loyet, in the challenge class for dogs. The winner's companion, Bessie, was equal to the occasion in the corresponding class for the opposite sex, over Effie Deane, who loses in length of body, coat and head.

Barnaby Rudge, the winner in open dogs, wants time to develop in ribs, loin and hindquarters. He has, however, a good, strong, punishing face, and plenty of length of body. Sir Roger, second, loses in length and expression of head, as well as in length of body, while Sir Thomas, third, is shorter

in body than his two more successful rivals, and Sir Robert the Bruce, falls in head and expression and front.

Wheel of Fortune, in spite of the rough state she was shown in, had a decisive victory in the open bitch class. She possesses a grand head, eye and expression, plenty of bone and substance, and is a good-ribbed and quartered one. Islay, second, has an excellent texture of coat, with a good length of body.

Yorkshire Terriers.

(Special Report by the Judge.)

With the exception of the first and second, in both the dog and bitch classes, the contestants were but very moderate. Young Ted, the winner, scores over Prince, who came second, in head and character, body color and texture of coat, while the same remark applies to Judy's win over Queenie in the bitch class.

Italian Greyhounds.

(Special Report by the Judge.)

Sprite and Spring made a nice brace in the challenge class and gave little opportunity to their two opponents to get in the money. The first named won from her companion in grace of outline and movement. Lewis, the winner in the open dog class is much better than his opponent, Byron, in ribs, loins, hindquarters and outline, Byron being tied at his elbows and dropping too much behind the shoulders. Two good small ones in Folly and Trixie put in an appearance in the open bitch class, the blue ribbon being captured by Folly for the reason that Trixie, who is decidedly better in symmetry and outline, has a badly broken foreleg.

R. F. MAYHEW.

These are the awards not made in time for last issue:

ENGLISH SETTERS—*Open*—*Bitches*: 1st, Rockingham Kennels' Countess Zoe; 2d, E. J. Myers's Prima Donna; 3d, 4th, very high com. reserve and very high com. Blue Ridge Kennels' Gossip, Countess Rush, Laundress and Belle of Blue Ridge. Very high com., William Bryce, Jr.'s Spectre, John Brett's Myrrha II. and Francis G. Taylor's Katie Noble II. High com., Roscroft Kennels' Doretta, W. H. Brush's Eastern Queen, Philip Daly, Jr.'s Virginia Rockingham and W. Wells' Queen of the Purple. *Novice*—*Dogs*: 1st, Bronx Valley Kennels' Deceive; 2d and 3d, Henry Pape's Critic and Cactus. Very high com. reserve, W. S. Bood's Druid's Dick. Very high com., R. H. Alberts, Jr. & C. T. Alberts' Albert's Druid and John Brett's Robin Goch. *Bitches*: 1st, John Brett's Maid Marion; 2d, W. H. Brush's Eastern Queen; 3d, Philip Daly, Jr.'s Fanchon. Very high com. reserve, Sunset Kennels' May Win. High com., R. R. Moore's Nell of Lenox. Com., E. J. Myers's Toubette. *Novice*—*Dogs*: 1st, Roscroft Kennels' Domingo; 2d, Chas. Stuetzel's Bob Gladstone; 3d, F. E. Lewis's Sam C. Very high com. reserve, W. B. Wells's Luke. Very high com., Bronx Valley Kennels' Bronx Valley Dick and Victoria Kennels' Prince Ben Ali. High com., John Brett's Robin Goch. Com., Mrs. G. W. Neal's Robert Kent. *Bitches*: 1st, C. L. Wright's Domination, 2d, John Brett's Maid Marion; 3d, W. B. Wells's Cleopatra. Very high com. reserve and high com. Victoria Kennels' Queen Gail and Donna Carlotta. Com., Bronx Valley Kennels' Jennie V.—**FIELD TRIAL CLASS** (Dogs and Bitches that have been placed at any Public Field Trial in the United States or Canada).—1st and very high com., Blue Ridge Kennels' Antonio and Fanny Murrain; 2d, E. O. Damon's The Corsair; 3d, W. B. Wells's Cambriana. Very high com. reserve, J. W. Wells's Reverdy. Very high com., F. E. Lewis's Sam C.

IRISH SETTERS—*Challenge*—*Dogs*: 1st, Seminole Kennels' Tim; 2d and very high com. reserve, Oak Grove Kennels' Rose Sarstedt. Very high com. reserve, Seminole Kennels' Laura B.—*Open*—*Dogs*: 1st, W. L. Washington's Duke of Kildare; 2d, Sharpless's Blarney, Jr.; 3d, very high com. reserve, very high com. and com., Seminole Kennels' Montauk, Jr., Tim's Dandy, Young Tim and Seminole, Jr. Very high com., John Mack's Niche. High com., C. T. Thompson's Rockwood. *Bitches*: 1st, W. H. Beazell's Queen Vic; 2d, C. T. Thompson's Fly; 3d, W. H. Beazell's Belle of Kildare; 4th, Oak Grove Kennels' The Marchioness. Very high com. reserve and very high com., Seminole Kennels' Delphine and Claremont Heather. Very high com., Orienta Kennels' Nellie Husted. High com., Redstone Kennels' Lady Noreen and W. H. Beazell's Kildare Winnie. *Puppies*—*Dogs*: 1st and 2d, L. W. Barnes's Clonmel and Bantley; 3d, Sunset Kennels' Oatfield. *Bitches*: 1st, L. A. Van Zandt's Alannah; 2d, Redstone Kennels' Daisy Redstone. *Novice*—*Dogs*: 1st, W. L. Washington's Duke of Kildare; 2d, T. Sharpless's Blarney, Jr.; 3d, E. W. Walker's Kildare Duquesne. Very high com. reserve, D. F. Keller's Tippecanoe. High com., Woodbury Kennels' Mille. *Bitches*: 1st, W. H. Beazell's Queen Vic; 2d, W. L. Washington's Belle of Kildare; 3d, J. P. Dixon's Lady Elcho. Very high com. reserve, G. Langran's Young Duke. *Novice*—*Dogs*: 1st, W. L. Washington's Duke of Kildare; 2d, C. T. Thompson's Rockwood. *Bitches*: 1st, W. L. Washington's Duke of Kildare; 2d, C. T. Thompson's Rockwood. *Dogs*: 1st and 2d, Dr. S. G. Dixon's Ivanhoe and Leo B. Very high com. reserve, Smith Bros.' Remont. *Bitches*: 1st, Dr. S. G. Dixon's Duchess of Waverly; 2d and very high com. reserve, J. B. Blossom's Heather Bee and Bellmont.—*Open*—*Dogs*: 1st, N. Billings's Ranger B.; 2d, Iolanthe Kennels' Archibald; 3d, Rosemont Kennels' Doc; 4th and com., Inwood Kennels' Count Noble and King Noble. Very high com. reserve, J. W. Graham's Robert Burns. Very high com., Dr. S. G. Dixon's Duke of Wellington, J. B. Blossom's Comus. High com., E. H. Seehusen's Richmond Prince, T. Darling's Woodmill Shot. *Bitches*: 1st, 2d and very high com. reserve, Dr. S. G. Dixon's Lady Gordon, Princess Louise and Katharine; 3d and 4th, J. B. Blossom's Venns and Sally Beaumont. Very high com., J. B. Blossom's Psyche, H. O'Reilly's Dan. High com., C. F. Sykes's Mabel. Com., J. B. Blossom's Elsie. J. L. Wells's Gazette. *Puppies*—*Dogs*: 1st, J. W. Graham's Robert Burns; 2d, E. H. Morris's Freemont; 3d, C. E. Mather's Roscoe. *Bitches*: 1st, E. H. Morris's Fairmont; 2d, H. F. Ludlow's Dundee; 3d, Smith Bros.' Fenmont.—*Novice*—*Dogs*: 1st, Iolanthe Kennels' Archibald; 2d, J. W. Graham's Robert Burns. Very high com. reserve, Rosemont Kennels' Doc; 3d, H. Morris's Fairmont. *Bitches*: 1st, Dr. S. G. Dixon's Katharine; 2d, E. H. Morris's Mabel; 3d, J. B. Blossom's Psyche. Very high com. reserve, J. L. Wells's Gazette. Very high com., Prof. L. P. Braive's Lady Beaumont II.—**FIELD TRIAL CLASS** (Dogs and bitches that have been placed at any public field trial in the United States or Canada).—1st, N. Billings's Ranger B.; 2d, Inwood Kennels' Count Noble. Very high com. reserve, J. B. Blossom's Sally Beaumont.

GORDON SETTERS—*Challenge*—*Dogs*: 1st and 2d, Dr. S. G. Dixon's Ivanhoe and Leo B. Very high com. reserve, Smith Bros.' Remont. *Bitches*: 1st, Dr. S. G. Dixon's Duchess of Waverly; 2d and very high com. reserve, J. B. Blossom's Heather Bee and Bellmont.—*Open*—*Dogs*: 1st, N. Billings's Ranger B.; 2d, Iolanthe Kennels' Archibald; 3d, Rosemont Kennels' Doc; 4th and com., Inwood Kennels' Count Noble and King Noble. Very high com. reserve, J. W. Graham's Robert Burns. Very high com., Dr. S. G. Dixon's Duke of Wellington, J. B. Blossom's Comus. High com., E. H. Seehusen's Richmond Prince, T. Darling's Woodmill Shot. *Bitches*: 1st, 2d and very high com. reserve, Dr. S. G. Dixon's Lady Gordon, Princess Louise and Katharine; 3d and 4th, J. B. Blossom's Venns and Sally Beaumont. Very high com., J. B. Blossom's Psyche, H. O'Reilly's Dan. High com., C. F. Sykes's Mabel. Com., J. B. Blossom's Elsie. J. L. Wells's Gazette. *Puppies*—*Dogs*: 1st, J. W. Graham's Robert Burns; 2d, E. H. Morris's Freemont; 3d, C. E. Mather's Roscoe. *Bitches*: 1st, E. H. Morris's Fairmont; 2d, H. F. Ludlow's Dundee; 3d, Smith Bros.' Fenmont.—*Novice*—*Dogs*: 1st, Iolanthe Kennels' Archibald; 2d, J. W. Graham's Robert Burns. Very high com. reserve, Rosemont Kennels' Doc; 3d, H. Morris's Fairmont. *Bitches*: 1st, Dr. S. G. Dixon's Katharine; 2d, E. H. Morris's Mabel; 3d, J. B. Blossom's Psyche. Very high com. reserve, J. L. Wells's Gazette. Very high com., Prof. L. P. Braive's Lady Beaumont II.—**FIELD TRIAL CLASS** (Dogs and bitches that have been placed at any public field trial in the United States or Canada).—1st, N. Billings's Ranger B.; 2d, Inwood Kennels' Count Noble. Very high com. reserve, J. B. Blossom's Sally Beaumont.

COCKER SPANIELS—*Novice*—(Any variety, except toy spaniels).—1st, Ancient and Modern Spaniel Kennels' Realization; 2d, Brooks & Green's Tess; 3d, Palmer & Kennedy's Ida. Very high com. and com., Jersey Cocker Kennels' Pickpatria and Lady Dufferin.

COLLIES—(Grand Annual Collie Sweepstakes, for collies born in the United States or Canada after July 1, 1897).—1st and 4th, F. R. Carswell's Nancy Lee and Lady Fidget; 2d and 3d, J. P. Morgan's Roderick Dhoat and Cragston Roderick Dhu.

BULLDOGS—*Challenge*—*Dogs*: 1st and very high com. reserve, Ilwis Kennels' Harper and Bo'swain; 2d, Wheatly Kennels' Pathfinder. Very high com., C. A. J. Smith's Carybrook. *Bitches*: 1st, Wheatly Kennels' Salenti; 2d, Ilwis Kennels' Graven Image.—*Open*—*Dogs* (45lbs. and over): 1st and 2d, Ranch Kennels' Leonidas and Stanley; 3d, Iolanthe Kennels' Rustic Sovereign. Very high com. reserve, A. B. Graves' Handsome Dan. High com., Wheatly Kennels' Cardinal Wolsey, R. M. Jones's Bombardier. *Bitches* (40lbs. and over): 1st, E. K. Austin's Rosie; 2d, C. E. Cox's Magpie; 3d, Dr. D. L. Light's Miss Venn. Very high com. reserve, H. H. Matthews's Dolly Tester. Very high com., R. M. Jones's Derby. High com., J. Whelan's Retnor Kennels' Lena Langtry, Wheatly Kennels' Lady Regent, Ilwis Kennels' Lady Nan.—*Open*—*Dogs* (under 45lbs.): 1st, Ilwis Kennels' King Lud; 2d, Hempstead Farm's Wal Hampton; 3d, C. A. J. Smith's Heathen. *Bitches* (under 40lbs.): 1st, C. French's Luna; 2d, A. B. Graves' Adiscombe Gipsy; 3d, J. H. Matthews's Derby Hebe.—*Puppies*—*Dogs*: 1st, Ilwis Kennels' Argonaut; 2d and com., Ranch Kennels' Slim Jim and Handsome Hank. Very high com., J. Whelan's British Lion. High com., R. L. Crawford, Jr.'s Mars. *Bitches*: 1st and 2d, Orienta Kennels' Papa's Pet and Empress of Orienta. Very high com. and high com., R. M. Jones's Lady Grace and Miss True.—*Novice*—*Dogs*: 1st, Ilwis Kennels' Argonaut; 2d, A. J. Hatch's Ritchie Swell. Very high com. reserve, Capt. J. J. Phelps's Lord Sheffield. Very high com., J. Whelan's British Lion. Com., Ranch Kennels' Handsome Hank. *Bitches*: 1st, Orienta Kennels' Empress of Orienta; 2d, Ranch Kennels' Hop Tod. Very high com. and high com., R. M. Jones's Lady Grace and Miss True.

BULL TERRIERS—*Challenge*—*Dogs*: 1st, J. Moorehead, Jr.'s Streamtham Monarch; 2d, Tubby Hook Kennels' Carney. Very high com. reserve, H. F. Church's Prince Bendigo. *Bitches*: 1st, Tubby Hook Kennels' Edgewood Fancy; 2d and very high com. reserve, F. F. Dole's Starlight and Attraction.—*Open*—*Dogs* (30lbs. and over): 1st, Mrs. J. N. Henry's Young Marquis; 2d, P. F. Dole's Gully the Great; 3d, Retnor Kennels' Diamond King. Very high com. reserve, Poon & Symonds's Prince Gully. Very high com., P. C. Petit's Aristocrat. High com., H. M. Howes's Comet II. *Bitches*: 1st, Wm. Hanmull's Vesper Bell; equal 3d, Castle Point Kennels' Fidget and Dr. F. Mitchell's Maggie Cline. High com., Castle Point Kennels' Castle's Pride.

—*Open*—*Dogs* (under 30lbs.): 1st, D. T. Mitchell's Sir Rudolph; 2d, T. S. Bellin's Surefoot; 3d, H. F. Church's Griffo. Very high com., A. Stillman's Autocrat Victor and F. F. Dole's Woodcote Scamp. High com., Woodbury Kennels' Blucher. *Bitches*: 1st, Toon & Symonds's Mermaid; 2d, F. F. Dole's Edgewood Wonder; 3d, Castle Point Kennels' Early Rose. Very high com. reserve, W. J. Higginson's Lady Dinah. High com., Retnor Kennels' Nettle and H. F. Church's Woodcote Lily. *Puppies*: 1st and 2d, Toon & Symonds's Prince Gully and Mermaid. Very high com. reserve, Castle Point Kennels' Blanche. Very high com., Retnor Kennels' Retnor King.—*Novice*—1st, Toon & Symonds's Mermaid; 2d, F. F. Dole's Sweet Marjoram. Very high com. reserve, A. Thompson's Viscount.

FOX TERRIERS (American Fox-Terrier Club Stud Dog Stakes).—Equal 1st, L. & W. Rutherford's Warren Layman and Warren Risky; equal 2d, J. E. Thayer's Hillside Pepper and Hillside Serena.

IRISH TERRIERS—*Challenge*—*Dogs*: 1st, W. J. Comstock's Boxer IV.; 2d, Toon & Symonds's Jack Briggs. *Bitches*: 1st, W. J. Comstock's Dunmurry.—*Open*—*Dogs*: 1st, Iolanthe Kennels' Jackanapes; 2d, W. J. Comstock's Marie Grady; 3d, Toon & Symonds's Valley Boxer. Very high com. reserve, W. J. Comstock's Hanover Boy. Very high com., Toon & Symonds's Paddy Dorian. High com., J. Patterson's Paddy P. and Hempstead Farm's Fenian Boy. *Bitches*: 1st, M. Harrison's Candour; 2d, Iolanthe Kennels' Chancery Lass; 3d, W. L. Morgan's Dunmurry II. Very high com. reserve and high com., J. Welsh's Nora II. and Erin. *Puppies*: 1st and 3d, W. J. Comstock's His Honor and Maggie Cline; 2d, Iolanthe Kennels' Red Ribbon. Very high com. reserve, W. J. Comstock's Hanover Boy.

BLACK AND TAN TERRIERS—*Challenge*—*Dogs*: 1st, Rochelle Kennels' Broomfield Sultan; 2d, Toon & Symonds's Prince Regent. Very high com., Frank F. Dole's Salisbury. *Bitches*: 1st, Frank F. Dole's Queen III.; 2d, Rochelle Kennels' Meersbrook Maiden. Very high com., Toon & Symonds's Matchless.—*Open*—*Dogs*: 1st, Rochelle Kennels' Monarch. *Bitches*: 1st, Toon & Symonds's Gipsy Girl; 2d, A. W. Smith's Louie; 3d and very high com., Rochelle Kennels' Rochelle Majestic and Rochelle Armenianca.

WHITE ENGLISH TERRIERS.—1st and 2d, James L. Kernochan's Spring and No. 3d, John M. Harris's Turk. Very high com., L. A. Van Zandt's Blinkbonny.

DANDIE DINMONT TERRIERS.—*Dogs*: 1st, 2d, 3d and very high com., Heather Kennels' King o' the Heather, Amphion, Laddie and Sir Robert. *Bitches*: 1st and 2d, Heather Kennels' Ainstey Daisy and Heather Peggy II.

BEDDLINGTON TERRIERS—*Challenge*—1st, Wm. H. Russell's Christmas Carol; 2d, Martin A. H. Thielberg's Qui Vive.—*Open*—*Dogs*: 1st, Thos. Pearsall's Professor. *Bitches*: 1st, Harris R. Childs's Parilla; 2d, Martin A. H. Thielberg's Mignonette; 3d, Wm. H. Russell's Sweet Orchid.

SCOTTISH TERRIERS—*Challenge*—1st, Wankie Kennels' Kilroy; 2d, Toon & Symond's Kilstor.—*Open*—*Dogs*: 1st, Wankie Kennels' Kilreer; 2d and 3d, Toon & Symonds's Three and Rhudunan. Very high com. reserve, E. Elliott's Ashley Plug. Very high com., F. F. Kilt and Toon & Symonds's Scotch Hot. *Bitches*: 1st, 2d, 3d and very high com. reserve, Wankie Kennels' Gubieu, Wankie Diana Wankie Leslie and Wankie Daisy.

SKYE TERRIERS.—*Challenge*—*Dogs*: 1st, C. A. Shinn's Sir Stafford; 2d, Woodbury Kennels' Lovet. Very high com. reserve, Mrs. A. P. Smith's Bruce. *Bitches*: 1st, C. A. Shinn's Bessie; 2d, G. S. Duryee's Effie Deans.—*Open*—*Dogs*: 1st, C. H. Smith's Barnaby Rudge; 2d and very high com. reserve, W. S. Lieber's Sir Roger and Sir Robert the Bruce; 3d, S. Barr's Sir Thomas. *Bitches*: 1st, Hempstead Farm's Wheel of Fortune; 2d, C. H. Smith's Islay; 3d, R. K. Camer's Endcliffe Maggie. Very high com. reserve, A. I. & H. L. Jeffrey's Gamp II.

WELSH TERRIERS.—1st, Iolanthe Kennels' Dewr; 2d, Mrs. E. C. LaMontagne's Jack Frost; 3d, Hornell-Harmony Kennels' Mephisto Dick.

YORKSHIRE TERRIERS.—*Challenge*—No entries.—*Open*—*Dogs*: 1st, 2d and very high com. reserve, F. Senn's Young Ted, Brandy and Ted; 2d, J. Bell's Prince. High com., P. Cassidy's Black Burns and B. Cummings's Ben. Com., P. Cassidy's Young Spark. *Bitches*: 1st and 2d, J. Bell's Judy and Queenie; 3d, E. W. Barnes's Mischief. Very high com. reserve, E. A. Lynde's Woodhouse Silk.

TOY TERRIERS (other than Yorkshire, under 7lbs.).—1st, Pittsburg Black and Tan Terrier Kennels' Lady Clyde; 2d, 3d and very high com., M. Rothschild's Noble, Jerry and Jennie. High com., Mrs. W. Harrison's Gypsy.

KING CHARLES SPANIELS.—*Challenge*—1st, Mrs. F. Senn's Romeo.—*Open*—*Dogs*: 1st, 2d and very high com., King of the Charles, Yankee Boy and Charlie; 3d, Mrs. J. Brombach's Duke of Wellington. *Bitches*: 1st and high com., Mrs. A. W. Lucy's Minerva and Flora Viola; 2d, Mrs. F. Senn's Lady de Lena; 3d, Ben Davis's Rose.

BLENHEIM SPANIELS.—*Dogs*: 1st, Mrs. A. Lucy's Exeter Earl; 2d, Mrs. T. E. Shreve's Young Duke; 3d, Col. M. Davies's Coma. *Bitches*: 1st, Mrs. A. Bernstein's Muriel; 2d, G. W. Wambach's Tiny.

PRINCE CHARLES AND RUBY SPANIELS.—*Dogs*: 1st, Miss S. D. Wynn's Pippo; 2d, W. Phillips's King of the Fancey; 3d, A. Bernstein's Ruby Prince. *Bitches*: 1st, W. Phillips's Jenny Lind; 2d, Mrs. F. Senn's Bell.

JAPANESE SPANIELS.—*Challenge*—1st, F. P. Comstock's Nanki-Poo.—*Open*—*Dogs*: 1st, 2d and 3d, Mrs. F. Senn's Chie, Prince Yodo and Tokio. Very high com., Mrs. E. Clarke's Shugio and Mito. *Bitches*: 1st, Mrs. R. L. Crawford Jr.'s Tootsie; 2d, Mrs. F. Senn's Ki-Ku; 3d, Mrs. E. Clarke's Ootah. Very high com., Miss T. Schmidt's Tinsin. High com., Mrs. E. Clarke's Klyo.

TOY SPANIELS.—*Puppies*: 1st and 2d, Mrs. F. Senn's Princess and Topaz.

ITALIAN GREYHOUNDS.—*Challenge*—1st and 2d, J. Lewis's Spritle and Spring. Very high com., J. Brombach's Golden Rod.—*Open*—*Dogs*: 1st, C. Lohmann's Spauris; 2d, F. H. Hoyt's Byron. *Bitches*: 1st, C. Lohmann's Folly; 2d, H. H. Thielberg's Trize; 3d, J. Lewis's Alice. Very high com., J. Brombach's Fanny.

SCHIPPERKES.—1st, 2d and 3d, F. W. Connelly's Cople Sophia, Nuit and Sophia Dreiske.

MISCELLANEOUS.—1st, G. S. Thomas's Boston Model; 2d, T. A. Joyce's Jewel; 3d, Lloyd's Doe. Very high com., Toon & Symonds's Sheffield Lad. Very high com., J. C. Dillon's Jack o' Tramp and Mrs. J. C. Danun's Nellie. High com., W. G. Adderton's Rex.

SPECIAL PRIZES.

MASTIFFS.—Best exhibit of four, J. L. Winchell. The Westminster challenge cup, value \$300, Beaufort's Black Prince. The club's silver challenge cup, value \$150, and the club's diploma, for the best American-bred dog or bitch, Beaufort's Black Prince. The Taunton gold medal, value \$50 (breeder's prize), for best American-bred mastiff under 2yrs. of age, Miss Derby's Hans Sachs. The club's silver challenge cup, value \$100, for the best mastiff dog the property of a member of the Westminster Mastiff Club, Beaufort's Black Prince. The club's silver challenge cup, value \$100, and the club's diploma, for the best mastiff bitch the property of a member of the American Mastiff Club, L. Winchell's Beaufort's Big Bess. Best mastiff bitch with two of her produce, Beaufort's Beau and Merlin. The Old English Mastiff Club challenge cup, value \$42, for the best mastiff dog or bitch, the property of a member of the Old English Mastiff Club, J. L. Winchell's Beaufort's Big Bess. Best mastiff dog, value \$231, for the best mastiff of the opposite sex to the one winning the above, W. Wade's Lady Coleus. The New York Herald medal for the best mastiff dog, L. Winchell's Beaufort's Black Prince. Ditto, for bitch, W. Wade's Lady Coleus.

ST. BERNARDS.—Best kennel of four rough St. Bernards, New York St. Bernard Kennels. Best kennel of four smooth St. Bernards, Melrose Kennels. The St. Bernard Club specials: Club medal for the best American-bred smooth-coated dog over 12mos., E. H. Moore's Alton, Jr. Best American-bred smooth-coated bitch over 12mos., E. H. Moore's Lady Alton. The Westminster challenge cup, value \$100, for the best American-bred rough-coated dog over 12mos., E. H. Moore's Altoner. Best American-bred rough-coated bitch over 12mos., Gramercy Kennels' Uarda. Club medal for the best St. Bernard in the show, W. C. Reick's Princess Florence. The New York Herald bronze medal for best rough-coated St. Bernard dog, W. C. Reick's Sir Bedivere. Ditto bitch, W. C. Reick's Princess Florence. Best smooth-coated bitch over 12mos., E. H. Moore's Alton, Jr. Best smooth-coated dog over 12mos., E. H. Moore's Altoner. The Westminster challenge cup, value \$100, for the best American-bred smooth-coated dog over 12mos., E. H. Moore's Alton, Jr. Best smooth-coated bitch over 12mos., E. H. Moore's Lady Alton. The Westminster challenge cup, value \$100, for the best American-bred smooth-coated bitch over 12mos., E. H. Moore's Altoner. Best smooth-coated dog over 12mos., E. H. Moore's Altoner. Best smooth-coated bitch over 12mos., E. H. Moore's Lady Alton. The Westminster challenge cup, value \$100, for the best American-bred smooth-coated dog over 12mos., E. H. Moore's Alton, Jr. Best smooth-coated bitch over 12mos., E. H. Moore's Lady Alton. The Westminster challenge cup, value \$100, for the best American-bred smooth-coated bitch over 12mos., E. H. Moore's Altoner. Best smooth-coated dog over 12mos., E. H. Moore's Altoner. Best smooth-coated bitch over 12mos., E. H. Moore's Lady Alton. The Westminster challenge cup, value \$100, for the best American-bred smooth-coated dog over 12mos., E. H. Moore's Alton, Jr. Best smooth-coated bitch over 12mos., E. H. Moore's Lady Alton. The Westminster challenge cup, value \$100, for the best American-bred smooth-coated bitch over 12mos., E. H. Moore's Altoner. Best smooth-coated dog over 12mos., E. H. Moore's Altoner. Best smooth-coated bitch over 12mos., E. H. Moore's Lady Alton. The Westminster challenge cup, value \$100, for the best American-bred smooth-coated dog over 12mos., E. H. Moore's Alton, Jr. Best smooth-coated bitch over 12mos., E. H. Moore's Lady Alton. The Westminster challenge cup, value \$100, for the best American-bred smooth-coated bitch over 12mos., E. H. Moore's Altoner. Best smooth-coated dog over 12mos., E. H. Moore's Altoner. Best smooth-coated bitch over 12mos., E. H. Moore's Lady Alton. The Westminster challenge cup, value \$100, for the best American-bred smooth-coated dog over 12mos., E. H. Moore's Alton, Jr. Best smooth-coated bitch over 12mos., E. H. Moore's Lady Alton. The Westminster challenge cup, value \$100, for the best American-bred smooth-coated bitch over 12mos., E. H. Moore's Altoner. Best smooth-coated dog over 12mos., E. H. Moore's Altoner. Best smooth-coated bitch over 12mos., E. H. Moore's Lady Alton. The Westminster challenge cup, value \$100, for the best American-bred smooth-coated dog over 12mos., E. H. Moore's Alton, Jr. Best smooth-coated bitch over 12mos., E. H. Moore's Lady Alton. The Westminster challenge cup, value \$100, for the best American-bred smooth-coated bitch over 12mos., E. H. Moore's Altoner. Best smooth-coated dog over 12mos., E. H. Moore's Altoner. Best smooth-coated bitch over 12mos., E. H. Moore's Lady Alton. The Westminster challenge cup, value \$100, for the best American-bred smooth-coated dog over 1

282, Northern Ohio Poultry, Pet Stock and Kennel Association, 91 Akron, O.; Jan. 16, '93, Chicago Kennel Club, of Chicago, Ill., Jan. 30, '93, Ohio Field Trial Club, of Canton, O.; Feb. 7, '93, Great Dane Club of America, of Brooklyn, N. Y.; Feb. 13, '93, Illinois Kennel Club, of Indianapolis, Ind.

These applications were all received in regular form, and, according to the several constitutions, are eligible for admission as provided for in our constitution. I would, however, direct your attention in particular to the applications from the City of the Straits Kennel Club, the Chicago Kennel Club and the Great Dane Club of America. The first two hail from cities already occupied by clubs that are members of the A. K. C. and in good standing. The latter is organized for the protection of a breed of dogs, for which a similar club is now a member of this organization. In Detroit we have an old member in the Michigan Kennel Club, a club that has always been loyal, but it is stated that this club has been gradually wasting away until its membership only consists of some half dozen, while the new applicant from this city has a membership of seventy-five.

Mascoutah Kennel Club still exists and has given large and important shows each year, and since its organization until this spring, which has been entered on account of the forthcoming World's Fair show. The new applicant has just given its initial show.

The German Mastiff or Great Dane Club in Chicago has been a member since its organization, but it is claimed that it is purely a local club, and has no national character about it, while the new club claims to be entirely national. Under these circumstances it behooves you to carefully consider the claims the older clubs have upon your protection. Whether new and stronger organizations should supplant the older ones, or admission refused them for the benefit of clubs already members.

The application of the Boston Terrier Club has been in abeyance since May 4, 1891. At our last meeting it was directed that this matter be for me definitely settled at this meeting, and it is therefore before you for final action.

The following credentials have been filed with me since our last meeting:

1. The New Jersey Kennel League, appointing as its delegate Mr. Edwin H. Morris. Jan. 17, National Beagle Club of America, appointing as its delegate Mr. Herman F. Schellhass. Jan. 30, the Duguesne Kennel Club, appointing as its delegate Mr. Wm. E. Littell. Feb. 11, Massachusetts Kennel Club, Lynn, Mass., appointing as its delegate Mr. Robert Leslie.

An appeal by Dr. Wm. Kenney against the decision of the executive committee of the Rhode Island Poultry Association has been filed. The case briefly is as follows: Dr. Kenney states that he was informed that certain Irish terriers, the property of Walter J. Comstock, were not entered at said show at the time the entries closed, and said dogs were allowed to compete; that he made a formal protest according to A. K. C. rules, said protest being disallowed. The secretary certifies that the protest was received, placed before the executive committee, and as no evidence was submitted showing that the rule of the A. K. C. relating to entries had been violated that it was voted "that the protest be not sustained, and the awards made by the judge in Irish terrier classes be confirmed." Dr. Kenney appeals from this decision.

Mr. Charles Stedman Hanks petitions to have the awards made to a Russian wolfhound which he has repeatedly exhibited under a wrong name through ignorance rectified, he having but lately discovered the facts are: He imported several of these dogs which duly arrived at his kennels; later the pedigrees arrived at one time, and he misnamed two of the dogs, showing one a number of times and winning with it. He has lately learned that the winning dog has been shown under the name of the dog that has never been exhibited. He now asks that this club will officially afford him relief in the matter.

The National Greyhound Club duly suspended an exhibitor named P. Heckleman for removing his dog from its late show without permission, by forcing his way through the gate against the protest of the gatekeeper. The action of the club was duly reported in accordance with Rule XXV., and Vice-President Thos. H. Terry, in the absence of the president, confirmed said suspension pending your further pleasure in the matter. By the rules this suspension must either be removed at this meeting or the penalty of disqualification be imposed in its stead.

The Mascoutah Kennel Club has forwarded a number of amendments to the proposed new bench show rules, and requests that the rules, when adopted, be copyrighted to prevent parties from using them without legal right to them.

I hereby report that in compliance with your instructions I returned the money held by me in trust to the several parties from whom I had received subscription money for the new social department of this club. I herewith report I beg to submit for your consideration the following recommendations:

First, that the secretary be directed to refuse the privileges of the stud book to all persons under the penalties of suspension or disqualification.

Second, that after the charges pending before this club have been disposed of the A. K. C. will refuse to arbitrate in any personal or financial dispute, and will only discipline persons guilty of an infringement of the rules in connection with bench shows or field trials held by active members in good standing.

Since closing my report I have received amendments to the rules from the Continental Kennel Club and the Elmira Kennel Club. I have also received the resignation of the Wilmington Agricultural and Industrial Association. Respectfully submitted,

A. P. VREDENBURGH, Sec'y.

The report of the secretary was received and placed on file. The treasurer's report is as follows:

NEW YORK, Feb. 18.—To the Executive Committee of the A. K. C.: Gentlemen—I herewith beg to submit my quarterly report of all moneys received and disbursed by me during the year 1892:

Balance on hand Jan. 1, 1892.....	\$5,004.20
Receipts from all sources to date.....	1,833.25
	\$6,837.45
Disbursements for same period.....	636.79
Balance on hand.....	\$6,200.66

I also beg to report the following clubs in arrears for annual dues for 1893, bills for same having been mailed to them Dec. 1, 1892. South Carolina Poultry and Pet Stock Association, Montana Kennel Club, Continental Kennel Club, California Kennel Club, National Greyhound Club, English Setter Club, American Fox-Terrier Club, American Mastiff Club, Delaware and Susquehanna Association, New York and New England Poultry and Kennel Club, Bexar Field Trial Club, Western Michigan Kennel Club, and the Georgia Kennel and Farm and Kennel Club, Tri-City Kennel Club, Wisconsin Kennel Club, Freeport Poultry and Pet Stock Association, Western Michigan Agricultural and Industrial Association, Georgia Poultry and Pet Stock Association, Cincinnati Sportsmen's Club. Respectfully submitted,

A. P. VREDENBURGH, Treas.

MR. ANTHONY—I move that the report be accepted as read, and the secretary instructed to notify the various clubs that are in arrears that at the next meeting if their dues are not paid they will be dropped from the roll. Seconded and carried.

Subsequently the treasurer reported that he had received the annual dues from the Westminster, Keystone and Mascoutah Kennel Clubs.

The report of the Advisory Committee was read and accepted, as follows:

Minutes of advisory committee meeting, held Feb. 7, 1893. Present Thos. H. Terry, William C. Reick, James L. Anthony.

J. Frank Perry vs. A. G. Eberhart, *re* misconduct in connection with dogs. The committee received the charges brought against the accused Eberhart, and they are substantiated. Ordered, that A. G. Eberhart and the Eberhart-Pug Kennels be disqualified for the period of six months from this date.

T. A. Howard vs. A. G. Eberhart, *re* misconduct in connection with dogs. Charge I. Resolved, that the committee cannot too strongly condemn the practice of using out of one dog to represent another, whether in a circular or other publication, and that the committee is hereby instructed to give points to the picture of another dog and said picture not being one of the dog so criticised. Eberhart is guilty of said charge, but in consideration of the penalty imposed in the Perry case, the committee will not impose an additional penalty in this case.

Charge II. The committee finds it not proved, and is therefore dismissed. The committee is of the opinion that in a similar case to avoid the same kind of a mistake, the pictures should have been registered as by Bradford Ruby II. of Boyetts.

A. G. Eberhart vs. A. E. Pitts, *re* misconduct in connection with dogs. The committee finds Pitts guilty as charged, but in view of the fact that he acknowledged the charge, and as he owed both dogs and could derive no advantage from the transposition of cut, said Pitts is hereby censured for his conduct.

Lowery, Stone & Auerbach, *re* bill rendered for legal expenses. Resolved, that the respondent on the bill for \$3,862.53 as submitted by the secretary be approved by the committee, who recommend that the bill be settled by paying \$1,862.53 now, and \$1,000 be paid from the receipts of 1893, and \$1,000 be paid from the receipts of 1894, which amounts include all claims for legal expenses in connection with suits in the hands of Messrs. Lowery, Stone & Auerbach. The committee

desire to express appreciation of the reduction voluntarily made by said firm in their bill.

The prefix, Elkwood, was claimed by Phil. Daly, Jr., and allowed. The prefix, Chatham, claimed by H. M. Howes, was allowed. E. B. Elliott vs. H. E. Twyford. Resolved, that the case be reopened and the secretary be instructed to notify the parties in interest.

(Signed) A. P. VREDENBURGH, Sec'y.

MR. WATSON, of the stud book committee, reported: This committee has two cases referred to it, the Boston terrier case and the collie Toronto. In regard to the latter the committee asks for information. The collie was entered at two shows this year and last year. Then it was entered at Brooklyn. There seems to have been negligence somewhere. The point is this: Is Canadian registration good on this side? Do we honor Canadian registration or do we not?

MR. VREDENBURGH—Yes. At the annual meeting of the American Kennel Club in 1889 the Canadian Kennel Club sent a delegation of three members of their club to us and made us a proposition, which we finally accepted by resolution to the effect that we would acknowledge registrations of the Canadian Kennel Club without further registration with us, they doing likewise, acknowledging our registrations without further registration with themselves. This is by resolution, and we have adhered to it for four years. You will recall that a year ago I suggested and recommended in my report that that contract with the Canadian Kennel Club had better cease, but no action was taken concerning it.

MR. WATSON—It becomes, then, a question of carelessness on the part of Mr. Jarrett. In regard to the Boston Terrier Club we are very much at sea. Dr. Cryer, I believe, is in favor of it. Mr. Fiske says that it appears to him that the Boston Terrier Club has made out a *prima-facie* case, and he does not see why they should not be admitted. He is rather on the fence you might say. I have just been handed his opinion, which I will read: "You are quite at liberty to report on my position on the question of the Boston terrier. That I find no evidence before the committee in contravention of what seems to me to be the *prima-facie* evidence presented by the Boston Terrier Club that the Boston terrier is a breed of itself and entitled to admission to the stud book. I do not, therefore, find any objection to its admission. Signed, Wilson Fiske." For my own part I cannot bring myself in favor of admitting the dog. I would like to admit the club, but it appears that we have to take the dog too. The question for the club is, is it a proper breed to add to the stud book, and I cannot say that I am in favor of admitting it, and there is your committee hung with three minority reports.

On motion the report of the Stud Book Committee was accepted and placed on file.

Nominations for secretary and treasurer being next in order, Mr. Vredenburg was re-elected Secretary-Treasurer.

Under the head of new business the matter of the application of the Boston Terrier Club and the Boston terrier to the stud book came up, and Mr. Richards spoke to a motion to admit the breed.

MR. RICHARDS—This being made in the form of a motion, I suppose remarks are in order. This matter has been referred to the club several times, and I have asked the privilege to be heard once or twice, and would not ask it again if it were not for the fact that there are many members present to-day who, I am quite sure, have never considered the merits of the case, and who are familiar with the question. I think that in passing upon this question, inasmuch as it involves something of a precedent, it ought not to be determined upon vague considerations, but we should have some precise reason or theory for future cases by which we shall determine when a breed of dogs has become so established that it has an identity in natural history, not sentiment; as to whether we like the dog or not, but has it an identity, just as you can say, "There is a fox, or a deer, or a greyhound?" When we come to determine that question we come to the matter of evidence; and what is the evidence? In the first place, there may be a dog which has obtained a likeness, but yet so much unlikeness, with such a want of refinement—a want of exact similarity. (I use the word "exact" not in an absolute sense, but in that relevant sense which all dog men understand.) I say there might be such a want of that resemblance that we would make no note of the breed, while recognizing in a general way that they become so uniform that it is likely to perpetuate its own in kind. We know that in the matter of the French coach horse—we have a good deal in the stud book about coach horses, but practical horse-breeders know that the French coach horse has not produced satisfactory results in breeding in this country, because it has not been able to reproduce itself in a uniform type here. We would not like to make that mistake with this breed of dogs, or any breed of dogs, and I therefore think that the evidence on which we should act is the evidence of a power to reproduce. Mr. Power, who is here as the agent of the club, has shown to me the pictures of different generations of the dog and pictures of different dogs of the same generation, which indicate a reproductive uniformity to my mind. While there can be no doubt that those pictures are photographs they are fair representations of the dog. If I am right about that, if my ideas are not too vague of what uniformity is, it seems to me that the Boston Terrier Club has established *prima-facie* that power to reproduce the type among these dogs. There is one other condition, and that is some recognized authority which shall see to it that the type is maintained in future breeding, so that they shall not fall away and pass into heterogeneous types. It seems to me that guaranty is afforded by the very organization of this club, by the establishment of a club stud book, by the requirement that the pedigrees to be registered shall all be referred back, as in the case of backneys. Now, I say when that has been done the American Kennel Club has a guaranty upon which it is safe to rely, and I think it would be unreasonable not to rely upon it. At former meetings there was on the part of two or three members, I thought, a tendency to reject the breed, because they did not like the dog, because they thought it was inferior to the English bull-terrier, on the general proposition that they did not like the breed and that they were not a gamy-looking dog. That is aside from the case. The question is not whether we like the dog, but whether the dog has an established breed in which a number of reputable fanciers are interested, and which is going on to reproduce itself in types with certainty. I think if we are satisfied of that evidence, as presented, it is a matter of simple justice to admit them.

A call for the ayes and nays resulted in the following vote: Ayes—Anthony, Wilmerding, Munhall, Shotwell, Heppner, Cryer, Van Schaick, Diffenderfer, Bryson, Schellhass, Power, Morris, Reick, Oldham. Nays—Arnold and Webster. Messrs. Foote and Watson declined to vote. The chair declared the motion carried.

MR. POWER—I must take this occasion to thank you for your kind and serious attention of this matter and for your vote in favor of our club. I have to say that the stud book committee will take every precaution to have every dog kept out that is not strictly eligible. We have required an affidavit of the breeder of the sire and of the breeder of the dam, certifying to the pedigree in each case before the puppy can be registered. After it is reported favorably upon it comes before the club and a vote is taken by the club whether it shall be admitted, and every member has a chance to say whether the dog is straight.

The application of the following clubs were accepted, and the clubs admitted to membership in the A. K. C.: Des Moines Poultry and Pet Stock Association, The Northern Ohio Pet Stock and Poultry Association, The Illinois Kennel Club, St. Louis Kennel Club, The Great Dane of America, The Ohio Field Trial Club. The application of the Chicago Kennel Club is rejected.

It was carried, that the application of the City of the Straits

Kennel Club of Detroit, Michigan, be referred to a committee, which committee shall ascertain whether the Michigan Kennel Club is dead or alive.

MR. VREDENBURGH—I read the following recommendation of the Auditing Committee:

NEW YORK, Jan. 14, 1892.—Your Auditing Committee recommends that a resolution be adopted by the A. K. C., that the secretary-treasurer shall pay all bills only when marked approved by at least two members of the Advisory Committee. This recommendation receives the endorsement of the present secretary-treasurer. J. D. SHOTWELL, A. C. WILMERDING, J. B. BLOSSOM.

Resolution made and carried.

Mr. Munhall presented a communication concerning silver prizes offered by the Cleveland bench show held in April, 1891, which prizes had not yet been delivered. On motion the same was referred to the Advisory Committee.

The Wilmington Agricultural and Industrial Association was accepted.

The appeal of Dr. Kenney against the decision of the Executive Committee of the Rhode Island Poultry Association was, on motion, referred to the Advisory Committee with power.

Concerning the request of Charles Stedman Hanks, Mr. Anthony moved that similar action be taken as in the Meersbrook Maiden case.

Regarding the suspension of Mr. Heckleman by the National Greyhound Club for removing his dog from a show without permission, Mr. Richards moved that he be disqualified for one year. Seconded and carried.

The recommendation of the secretary, "That the secretary be directed to refuse the privileges of the stud book to all persons under the penalties of suspension or disqualification," was on motion adopted.

As to the second, as follows: That after the charges now pending before this club have been disposed of, the A. K. C. will refuse to arbitrate in any personal or monetary dispute, and will only discipline persons guilty of an infringement of the rules in connection with bench shows or field trials held by active members in good standing. Mr. Webster moved that the matter be referred to the committee on constitution and by-laws, to be considered at the next May meeting.

MR. POWER—I move that the wins of the first field trials of the New England Field Trial Club, held in 1891, be recognized by this club. Seconded and carried.

Mr. Schellhass asked the recognition of the wins at the National Beagle Club bench show at Nanuet, N. Y., in 1891. He was directed to present the case in detail at next meeting. Adjourned.

"Forest and Stream" to-day presents a full report of the New York show by the judges. In thoroughness, intelligent treatment and value, this report may be ranked as one of the achievements for which "Forest and Stream" has won fame. Such a report is without parallel in the annals of kennel journalism in America.

DOG CHAT.

A New Beagle Kennel.

MR. E. GERRY ROBERTS gives us the list of the dogs he bought at New York. He writes: "I feel it a great pleasure to say that I have gone into beagles and have made the following purchases, some at pretty low prices: Champion Racer, Jr., from Mr. H. L. Kreuder, winner of over twenty-five prizes, as my stud. Fanny Reed, winner of third at Nanuet, '92, and second at New York, '93, from Glenrose Beagle Kennels. Hope, winner of first and special in puppy and first and special in open, New York, only times shown, from Mr. Phoebeus. Miss Rogers, by Royal Krueger ex Mira, from Mr. Kreuder. Luna, from Mr. Geo. Laick. All of these, with the exception of Racer, Jr., were purchased at the New York show. I am going to Red Bank, N. J., to-day, to arrange for building a kennel, such as will make my beagle friends envious. It will be only large enough for twenty dogs but will be arranged in the best possible manner. I have engaged an architect to draft plans who thoroughly understands the needs of dogs. I have named my kennels the Shrewsbury Beagle Kennels. I also purchased last year and still have in my kennel, Romp C., winner first Derby and third 13in. bitch class N. B. C. field trials, 1891."

A Correction.

Please correct a mistake made in the premium of the Elmira Kennel Club. Under the head of Boston Terriers, class 86 and 87 should come under the head of Basset Hounds, and class 88 should come under the head of Dachshunds. See printed slip inclosed in premium list.

C. A. BOWMAN, Sec'y.

Sale of Nancy Lee.

There was no prouder man than Mr. Frank Carswell in the show building last week. His winning bitch, Nancy Lee, is a credit to any kennel. While others have bought dogs, Mr. Carswell has had to breed for them, and in the case of Nancy Lee he owns the dam, grand dam, great grand dam and great-great grand dam, Maid, which was the first he owned. Mr. Carswell on Friday sold Nancy Lee at catalogue price to Mr. Pierpont Morgan, whose kennel will be materially strengthened thereby.

Sale of Carisbrooke.

Charles A. Smith sold his bulldog Carisbrooke to Mr. Wyman Porter, of Montclair, N. J., as a companion; so, probably, we have seen the last of this rather plain-faced, but well-made, dog.

Bulldog Dockleaf.

We have received from the publishers, Messrs. Frederick Mansell & Co., 7 St. Clements street, Barnstable, London, one of the finest etchings of a dog we ever remember seeing. This is the celebrated bulldog Dockleaf. Though we have never had the good fortune to see this dog and cannot personally judge of its true likeness, still we understand that on Jan. 27, the day after it was published, it was taken by the Bulldog Club judges, such as Messrs. Peybus Sellen, J. W. Berrie, A. M. Hodges, Frank Crowther and many others, and is admitted by them to be a fine and correct likeness and a standard to breed up to. Such reliable pictures do more to educate the budding fanciers than any amount of tinkering with mediocre specimens in their own kennels. The etching is by Richard Josey. Size 15x11, and lettered India proofs are \$5.50 each.

Dr. Glover performed his duties conscientiously, and had an almost herculean task to examine the large entry which passed through the small gate. A new feature he introduced was his daily report on the health of the dogs, which was posted on the press bulletin board. Only one dog, a deerhound, was seriously sick, and that had a touch of pneumonia.

During the New York show the Hempstead Farms Kennels sold the bulldog Wal Hampton and collie Ormskirck Susie to Col. A. B. Hilton, of Woodlawn Stock Farm, for \$600; also the wire-haired fox-terrier bitch Suffolk Tassel to G. N. Carnochan.

The Iolanthe Kennels made an important purchase from the Wheatly Kennels in the bull bitch Salemi. Mr. Hobbie told us without a smile that he got \$14,000. The Wheatly Kennels are dispersing the good team they got together. Pathfinder and Lady Regent were bought by Mr. C. K. Austin. Mr. Renshaw Mason Jones purchased their good dog Cardinal Wolsey. These will be shown again.

Mr. Mortimer did a little speculate in wolfhounds, buying a rather handsome-looking ten-months' pup, Czar, Jr., from Miss Steiner.

Hillside Kennels sold their deerhound Alpine to Fred Kirby.

Mr. John Marshall, of Troy, made a good sale of his Newfoundland Prince Hal and New York Lass II, both good winners, to Mr. Clarence R. Conger, a lawyer of New York city.

Mr. Ed Brooks thinks he will have a try at the dare devils and intends getting a couple of brood bitches from the other side. At the show he purchased Valley Boxer from the Anglo-American Kennels and Nora II. from Mr. John Welch.

A Mr. Grey, of Baltimore, bought the bulldogs Derby Hebe from Mr. Matthews and Miss Nancy from Mr. R. M. Jones.

Mr. Adrian C. Pickhardt, whose dogs won two firsts at the W. K. C. show, sold his two good pointers, Ridgeview Donald and Ridgeview Panic to Mr. Perry Lewis, of New York. Mr. Pickhardt, who owns the Rinada Kennels, showed us the plans of some extensive kennels that he intends building as soon as the ground is suitable, at Massapequa, L. I.

Mr. Julian E. Smith sold the handsome, though peculiarly marked St. Bernard White Friar to Mr. Ion Witzleben, of Mount Vernon, N. Y., for \$300, so Staten Island knows this dog no more. Brooklyn Prince, an hc. dog, was sold.

The Maybrook Kennels, of which Mr. Bradbury is manager, purchased from Mr. A. W. Purbeck the newly imported greyhound Honor Bright, that won over everything at New York.

Mr. Ed. Manice just had his hands full with his dachshunds. Though he has had eczema in the kennels the dogs were fairly shown. He made a number of sales. The bitch Jane Shore, a good one, too, goes to Mrs. John E. Thayer's boudoir. This is about the third best bitch in America and of happy disposition. Then Mr. Matthews, the bulldog man, to get a little more chest and elbow, invested in a Pterodactyl—Jargonelle pup in whelp to Superbus II. Every pup he has is engaged and he took orders for twenty stud visits. Dachshunds are evidently booming seriously, for Mr. Manice has commissions to start three parties with dachshunds for a kennel. Babbette, the Basset, was sold to Mrs. Cass Canfield, of New York.

During the show we met Mr. German Hopkins. When asked how things were going, he remarked that he couldn't sell a dog, and so sold a dominick game hen for \$10. That was pretty good, but he finished a little stronger than this by selling Warren Tripper, the fox-terrier, 2d, Brooklyn; 1st, Pawtucket, to Mr. Dupee, of Chicago. Their Grove Tripper goes to Macon, Ga. The Grove Kennels also bought the bitch Baby Nell from C. A. Bowman. This bitch is by Dominic out of Blackrock Belle.

There was another collie man busy at New York, and though he did not show much, he managed to get rid of the collie Toronto Wonder, who is by Metchley Wonder, at a good and remunerative figure, to Iolanthe Kennels, and further, to same kennels Duchess of Fife, in whelp to Christopher.

We regret to hear that old champion Bounce, the noted beagle of a few years back, was killed about ten days ago by a kick from a hunter at the Somerset Kennels.

During the New York show the Heppner Kennels, of which Messrs. C. D. Bernheimer and A. H. Heppner are the owners, sold their blue dog Apollo, winner of third prize, to Mr. Calvin S. McChesney. The kennels retain the stud services of the dog, which is quite typical.

Mr. Elliott purchased, while in England, five good collies for the Chesterford Park Kennels of Chicago. One was a third-prize winning bitch at Birmingham last year, in whelp to Rufford Ormrod, another in whelp to Sefton Hero and another in whelp to a good dog whose name we forget. Two good pups by Sefton Hero complete the list. They will arrive on the Italy and come in charge of Spratts.

We received the Boston premium list as we went to press, and a glance shows it to be well arranged. Four prizes are given in principal breeds and in value from \$15, \$10 and \$5 to \$10, \$5 and \$3.

Mr. Dole sold the following dogs at New York show: Bull-terrier Prince Bendigo to R. S. Palmer, New York; Woodstock Scamp to Mr. Graves, of Orange, N. J.

As several of the judges who officiated at the New York show this year were also judges at last year's show, and as their portraits were published in our EXTRA at the time, we thought it superfluous to publish them again. They are Miss Whitney, Messrs. Geo. Raper, W. Tallman and R. F. Maybew.

Mr. Otto Volger, a member of the St. Bernard Club, has purchased from Mr. Foster, of England, the Yorkshire terrier Nelson, by champion Kit out of Lady. It came over about two weeks ago and weighs but 4½ lbs.

Mr. A. S. Bradbury, of the Maybrook Kennels, has purchased the Dandie Dinmont Rugely Sandy.

Elmira Dog Show.

Editor Forest and Stream:

The following specials have been received up to date: The Collie Club offer the club medal, value \$20, for the best collie dog or bitch exhibited by a member of the Collie Club. The American Spaniel Club offer the following prizes, open to members only: \$5 for the best field spaniel, \$5 for the best cocker spaniel, \$5 for the best Irish water spaniel and \$5 for best Clumber spaniel. The American Mastiff Club offer a challenge cup, value \$150, for the best American-bred mastiff, entries to be made with the secretary of the American Mastiff Club before March 10; entry fee \$5; one-half goes to the winner of the cup and the other half to the Mastiff Club. The National Beagle Club are going to give a plate valued at \$15, and a number of other clubs to hear from.

C. A. BOWMAN, Sec'y.

Dog Laws in Indiana.

Editor Forest and Stream:

The House of Representatives in session here passed a bill on the 10th inst. regulating the tax on dogs as follows: One

dollar on first male dog and \$3 on each additional male dog owned by one party; \$3 on first female dog and \$10 on each additional female dog owned by one party. Is it not time that some of the owners of dogs in this State take action and see that they are represented in their views in our Legislature and not be imposed upon by this unjust, partial and cruel legislation. If we are to be taxed more for dogs we may happen to have for our amusement, sport or use, than these legislators (?) are taxed for their horses, cattle or hogs, why not afford us the same legal protection for our dogs. As it is we are to be taxed more for one dog than these legislators would be for any horse they ordinarily drive. Still the owners of fine dogs are left at the mercy of the dog thieves, with the law protecting the thieves and proclaiming that dogs are not property.

Some of these very men who make these so-called laws will use every effort to avoid paying this tax which they voted for, if it becomes a law. However, we must appreciate the position of some of these dog law makers as they cannot find anything else to do, and in order to show their constituents that they did something they have to pass a dog law or goose ordinance. Gentlemen of Indiana, what do you propose to do?

CHAS. K. FARMER.

INDIANAPOLIS, Ind., Feb. 13.

A World's Fair Fox Hunt.

Editor Forest and Stream:
I have corresponded with the World's Fair officials in regard to holding a national fox hunt. They say there will be a bench show, but cannot give a field trial on account of grounds. As for myself, I would not care to see five hundred or a thousand beautiful hounds chained up, but it would be the joy of my life to see that number in the field. Now, the Western Massachusetts Fox Club have the ground and the foxes, a broad, level, open country for our Western brothers and hills and mountains for the Eastern boys to exhibit their hounds. While we cannot have a World's Fair in the East, I do think we could have a fox hunt that would lay over the world. Brother fox hunters, sound the horn and we will loose the chains and show our Western brethren that we are "in it" when it comes to a fox hunt.

GEO. W. RORABACK, Pres. Western Mass. Fox Club.

So FAR as the various principals, both owners and builders, are concerned not an authoritative statement has yet been made concerning the new Cup defenders. What little is known has partly leaked out and has partly been discovered by means more or less honorable or justifiable. What is now needed in the supposed interests of owners and designers is some invention which will provide an opaque but elastic envelope for the entire yacht and her rig, which will not interfere with the free action of the wind on the sails or of the water on the hull, but which will at all times conceal the deep mysteries of modern designing not only from prying newspaper men but from the ordinary *hoi polloi* of common every day yachtsmen.

WHAT shape this much-needed invention will take is yet a question, but just as nature is commonly believed to have furnished the model for the America and various other speedy yachts, down to the Volunteer, in the humble barnyard duck, so we may look to her for another example in the cuttlefish, with its obscuring flood of ink. It might be possible to provide a system of piping throughout the keel, frame and spars by which a dense vapor, such as that which vexes the souls of the unfortunate residents on the North Shore of Staten Island, should at all times be released to enshroud the entire yacht. It is true that certain difficulties such as that of discovering one's opponent or making out marks might attend this plan, but they are mere trivial details that might be formidable so long as the necessity for secrecy was confined to the slow-going Scotchman, but which will be quickly brushed aside now that the great Yankee intellect is grappling with the problem.

FAILING such an invention, the time must come, and in a few months, when the proudest product of the locked and guarded workshop must be revealed, as Thistle was, in the dry dock; while her sail plan will come under the relentless fire of the camera. In the meanwhile, however, it is possible to obtain information only through the medium of detective work or through unfaithful workmen, and yachtsmen must believe what they please of the many rumors of finkeels, Tobin bronze bottoms, wonderful appliances and novel composite construction. The same rigid secrecy is observed at the Herreshoff shops which evoked so much comment from Americans in the case of Thistle, but it is said that the two Boston yachts will be built in plain view; let us hope from some better motive than the difficulty of applying the Clyde-Bristol plan to local conditions.

THE Stewart & Binney boat is all but an accomplished fact and a final decision will probably be reached this week, as the building cannot be delayed much longer. Nearly all of the money has been subscribed, the delay being over the last few thousands, and as the construction of a fourth defender is in no way local, but a matter of national pride, it will be strange if it is allowed to lapse for the want of a little money. The yachtsmen of the Lakes and the West, many of whom spend part of each summer on the Eastern coast, are not yet represented, though as deeply concerned as any in the adequate defense of the Cup.

So FAR as mere rumors are worth anything, they run to the effect that both the Eastern parties, the Paines and the other syndicate, are prepared to force the question of the fin-keel at once, while the Herreshoffs, not unnaturally, are desirous of keeping this latest development in reserve for another season; in other words, following the Wasp type with some essential alterations rather than the more extreme fin-keel type of Dilemma and Drusilla. The Carroll boat may be classed as similar to Wasp, with the addition of a centerboard, and

report has it that the Morgan-Iselin boat would be similar to her, but of lighter construction, while the Rogers boat has been set down as a keel, still nearer to Wasp in model as well as general type. A still later story goes that in view of the possible developments in Boston the Herreshoffs will make a fin-keel of the Morgan-Iselin boat. For the present "anum's the wort" everywhere, but unless the above indicated invention comes along very quickly, we shall soon see what we shall. The work at Bristol is going on rapidly, but there is a delay at Lawley's, the steel for the Paine boat not having been received.

THERE is a promise of a revival of the measurement discussion about Boston through a very intelligent letter to the Boston *Globe* from an advocate of the old mean length measurement. While the writer takes a very fair and liberal view of the whole question, he is unfortunate in the selection of his text, a quotation from one of the old builders, who cannot understand why, if he avails himself more fully than others of the crude elements of power, he should be taxed for each of these elements, and who demands the right to unlimited beam, depth and sail area without paying for them, so long as he abides by the one limit of waterline length. Discussions of the measurement question are always in order, and if carried out on logical lines they cannot fail to be instructive. Unfortunately, however, these discussions are generally monopolized by the advocates of the idea that one element alone can gauge the power of a boat, or by others who have nothing tangible to offer, but content themselves by decrying existing rules and proclaiming for a measurement of "size," as has been the case of some of our correspondents in the past.

A PRACTICAL test of the disputed question of the value of aluminum for yacht construction is about to be made in France in the construction of a racing 10-tonner under the new French rule, the yacht being designed by Mr. Godinet for the Count de Cabannes La Palice. The yacht will be 37ft. l.w.l., with a displacement of 12 to 16 tons; and it is estimated that while the weight of good composite construction would be 4,500 kilogrammes, the weight in aluminum will be but 2,500 kilos.

The Cruise of the Cy-pres.

TWO WEEKS IN A 22-FOOT BOAT.
[Continued from Page 150.]

ABOUT 5 o'clock the pilot came alongside, and as soon as he was on board and had made his boat fast we got up our mainsail and ran the jib out on the bowsprit, having put it up in stops during the afternoon so we could break it out quickly. The pilot took the tiller while I manned the windlass; I walked the chain right in as rapidly as possible, but just as I got it straight up and down a sea struck us, and we were lifted to it we parted the chain like pack thread. I pulled the slack in on deck, broke out the jib and we were off; as her head fell away rapidly, I looked aft to see what was going on there and saw that the pilot had let the main sheet slip through his hands till the knot had run out check to the block on the boom. As he lifted up to bring the boom inboard where he could reach it the loops of the sheet got foul of both rowboats and for a few minutes we were in a awful mess.

As soon as we had cleared the sheet we were round and headed for the entrance of the river before a nice brisk breeze. I first took in the jib and stowed it below, then got out our keedge and road line to use in place of the lost anchor. The tide ran in like a mill-race, and the stiff breeze helping it along carried us up past the docks and club house at railroad speed. We dropped our keedge in a deep pool just in front of a little fish house, and the boat left the bank of the stream and went for a few spots that we had selected as being a good anchorage ground when we rowed up at low tide.

As soon as our mainsail was furled I rowed ashore to telegraph to Boston for a new anchor, but learned at the hotel that George H. Jeck, the keeper of the club house, was accustomed to dragging for lost anchors, and could in all probability get ours for us next morning. I found Jeck and told him the story of our predicament, and he said he would go to the eastward and abreast of the big spar buoy that lies about 200 yds. out from the entrance to the river. He said he could locate it near enough by that description and would go out after it next morning, and would charge me \$2 for the job. I thought this cheap enough and returned to the yacht for F., who got into a dingy and we rowed up the river to Kennebunk Port village. As at York, the river was crowded with skiffs and canoes, and the advantage of the flood tide was being lost, and we were in a very bad way. The boats and the people that at York; in fact, they were the finest lot we had ever seen, their glossy sides showing that they were well cared for. Rowing is about the only amusement they have here, and nearly every one owns a skiff or canoe. It is about a mile up to the old village of Kennebunk Port, and the river is not very pretty up to that point, but we were told that it was beautiful beyond the bridge, which crosses it just in the village. go into Kennebunk Port again, but come in here in preference every time. We were surprised to see so many small fishing schooners moored up the middle of the channel; there were ten of them, all 35 or 40 ft. long, and moored so close together that there was just room for them to swing by each other at the turn of the tide. We learned from an old fisherman who came alongside in his dory in the evening that this was only on Saturday night, that all of these boats would go out on Monday morning and stay away almost all the week, so that a yacht coming in here on any other day would have no trouble in picking up one of several good moorings.

We sat on deck till 10 o'clock enjoying the cool evening air and watching an illuminated water procession which formed in line in front of a hotel to the west of us; the boats were covered with brilliant Chinese lanterns and they moved slowly off round a point of land, firing rockets, burning red and green lights, their crews singing and shouting at the tops of their voices.

We were up at 5 o'clock, and at 5:45 and under way at 5 o'clock, but early as we thought this to be the Lydie Adams was ahead of us and sailed out of the harbor close to us, turning westward, bound for Boston. The wind was very light from the south by west and we went along very slowly, although we had the ebb tide with us. We stood well off from the land, hoping to get more breeze and to avoid going on to the rocks should the wind fall at us at the turn of the tide. As we ran out of the harbor we heard distinctly the whistling buoy off Cape Elizabeth, which is eight miles away and dead to leeward.

The breeze continued very light till about 7 o'clock, when it freshened a little, and as the water was as smooth as glass we made good time, picking up the black buoy off Fletcher's Neck about 9 and soon after the red buoy off Dansbury Reef. When we left Cape Porpoise we intended to go no further than Wood Island, but when we reached there the breeze was so light and the day so beautiful and clear, we could not resist the temptation to go on to the narrow channel between Portland Head and Bangs or Cushing Island, and we went both, leaving Stage Island with its lonely-looking monument on our port hand, going out between Ram Island Ledge and Negro Island Ledge, and stood over toward Old Orchard Beach. When abreast of the hotel we turned northeast and just cleared the point at Prout's Neck, running into the cove to westward of Richmond Island, passing near the old Proprietor and Chateau de la Roche, leaving them to port.

We went well up into the cove and found a good landing near the breakwater, but did not stop to go ashore. A fishing schooner, the Yankee Maid, was lying at anchor near the landing, and her boats seemed to be busy taking on stores. We sailed around her and came sharp up on the wind, skirting along the shore till well clear of West Ledge, when we bore away with lifted sheets for Cape Elizabeth, picking up the Black Buoy at 11 A. M. and 30:15 at 1 P. M., and for the last hour or two had been increasing rapidly. We paid out about ten fathoms of chain and went below to get dinner, congratulating ourselves on having reached this port on schedule time, in spite of our unexpected delays at York and Kennebunk Port.

The wind had been freshening gradually for the last two or three hours, and as we passed around Cape Elizabeth it increased quite rapidly, so that about the time we were abreast of Portland Light we took in our foresail. The tide was rushing through the narrow channel between Portland Head and Bangs or Cushing Island, and we went both, leaving Stage Island with its lonely-looking monument on our port hand, going out between Ram Island Ledge and Negro Island Ledge, and stood over toward Old Orchard Beach. When abreast of the hotel we turned northeast and just cleared the point at Prout's Neck, running into the cove to westward of Richmond Island, passing near the old Proprietor and Chateau de la Roche, leaving them to port.

We were fearful at times that the boom would jibe over in spite of us, but fortunately it did not, and at just 1:15 we rounded up and dropped our anchor in front of the ice houses on Peak's Island in three fathoms of water at half tide, making a run of thirty-four miles in eight hours, including the detour through Winter Harbor or Wood Island and round Old Orchard Beach. As we were almost becalmed for three hours of this time, we thought we had made a quick run. The barometer dropped steadily all the morning; it stood at 30:15 at 5 A. M., 30:12 at 11 A. M., and 30:09 at 1 P. M., and for the last hour or two had been increasing rapidly. We paid out about ten fathoms of chain and went below to get dinner, congratulating ourselves on having reached this port on schedule time, in spite of our unexpected delays at York and Kennebunk Port.

After dinner we lounged around on deck for a while, watching the yachts at anchor and under sail. The wind was blowing a gale, and sailing was anything but fun, as we were crowded and the water got wet to the skin coming over to the island from Portland. Lying right ahead of us were several yachts, among them the 40 ft. sloop Georgia, with a jolly party of five on board who were excellent singers. Near us lay a fine little sloop called the Cruiser, with a party of ladies on board. They were sitting around in the cockpit and on the trunk, laughing and talking, when they discovered they were dragging their anchor. It amused us to see how noisy they were when they were so quiet and how they hustled the ladies ashore while they got out second anchor. They did not care to trust their anchors entirely after this, so picked up a mooring that was near them and held on to it as a last resort in case their anchor should again fail to hold them.

Three or four boats of the Savin Hill Y. C. lay near us, and in the afternoon two more came in; one of them had a rollicking crowd on board, and they kept us to see how noisy they were when they were so quiet and how they hustled the ladies ashore while they got out second anchor. They did not care to trust their anchors entirely after this, so picked up a mooring that was near them and held on to it as a last resort in case their anchor should again fail to hold them.

They did not care to trust their anchors entirely after this, so picked up a mooring that was near them and held on to it as a last resort in case their anchor should again fail to hold them.

[TO BE CONCLUDED NEXT WEEK.]

A New Watson Steam Yacht.

The fleet of the Royal Canadian Y. C. of Toronto, which was strengthened last year by the two new racing yachts Zelma and Vedette, will this season boast of a new addition, one of the finest steam yachts on fresh water. The new yacht, which is now partly completed at the works of the Hamilton Bridge Co., Hamilton, Ont., was designed by Watson, for Albert E. Gooderham, Esq., owner of the steam yacht Abeona, and a well-known lake yachtsman. She will be entirely of steel, and her dimensions are:

Length over all.....118 ft.
Length L.W.L.....101 ft. 10 in.
Beam extreme.....17 ft. 5 in.
Beam L.W.L.....16 ft. 10 in.
Least freeboard.....3 ft. 6 in.
Draft.....5 ft. 6 in.

The deck below the main deck is joined by a low level of deck, is 17 ft. long, containing a smoking room forward with a galley abaft it, just over the fore end of the boiler and ventilating into the stack. The fore-cabin, with hammock berths for six men, is forward, finished in clear white pine varnish.

The dining saloon is 12 ft. 6 in. long and of the full width of the vessel, finished in quartered oak; the wainscoting being about 4 ft. high with tapestry hangings above. The saloon is fitted with a fine piano and machinery, 10 ft. 3 in., is given to the owner's room on the port side, the stairway and the pantry to starboard.

The owner's room occupies rather more than half the vessel, and will be finished in bird's-eye maple with tapestry hangings, fitted with wardrobe, dressing case, folding bed berth, etc., and communicating with a small toilet room taken out of the boiler space. The pantry will be finished in oak and is located just below the galley and opens directly on the dining saloon.

The engine and boiler space is 28 ft. long, abaft which is the ladies' cabin, 30 ft. 15 in., finished like the owner's room, with a divan around three sides. Under the floor is a bath tub. To starboard of after companion is a stateroom, and to port are two toilet rooms, the after one for the officers, who occupy two after staterooms, these three being finished in quartered oak.

The engine is a triple compound, designed by Mr. Redfield H. Allen, of Detroit, Mich., and building by the Kerr Engine Co., of Walkerville, Ontario, Canada. The cylinders are 10, 15 and 25 x 12 in. to make 330 turns per minute with a working pressure of 200 lbs. The engines are of handsome design and the builders are doing excellent work on them. The boiler will be a Thornycroft, imported from England. A Stourtevant blower will be used for the forced draft, and the condenser will be independent. The wheel, a three-bladed Thornycroft, of manganese bronze, will be imported from England, and the steam steering gear and windlass are made by Reid & Co., of Paisley, Scotland. The rig will be a two-masted schooner, with pole masts.

The lines were sent out full size on a scribe board, and one of Mr. Watson's surveyors, Mr. Jos. Ewing, has had the work in charge, having come out for the purpose. The design is rather fine, with considerable deadrise, the ends being well balanced. The yacht has the Watson sheer and overhang and will make a very shapely craft when at her designed trim. She is to be launched and ready for her trial trip by the end of this month.

American Model Yacht Club Trophy.

Will you kindly correct a mistake made in your last issue in regard to the American Model Yacht Club Trophy in the sailing regulations as to length? It should read: Yachts shall not be less than 35 in. or exceed 45 in. on L.W.L. As you have it you give the excess as 45 in., which is not correct, and as this may be misleading to those interested you will do the club a great favor by correcting same in your next.

F. NICHOLES.

The yachtsmen of Lake Minnetonka are discussing the practicability of an open regatta for prizes sufficiently large to tempt boats from the coast or even from England. The races would be limited to open boats of 21 ft. or so, of which the Minnetonka fleet includes some fast boats, among them the Herreshoff Alpha, lately purchased in Boston.

The Lateen Rig on Ice Boats.

Editor Forest and Stream:

In your issue of Feb. 16, I notice a discussion under the above heading by "G. P." and "C. L. N." as to the claim of priority in the use of the lateen sail for ice boats, in the course of which it is stated that it has been used for at least twenty years. I can say that at Toronto, which has always been a leading center for winter as well as summer yachting, they have been using the lateen sail almost exclusively for ice boats for more than forty years. I attended school there in the winters of '30, '31 and '32, and ice boating was almost as much indulged in there then as now, the lateen being the only rig used. How long it had been in use before that I do not know.

I visited Toronto this year for the first time in winter since then, and almost the first objects that caught my eye as I got off the train were six ice boats close by, and with their lateen sails set, evidently waiting for a breeze, as it was quite calm. I could not resist the temptation of having a closer view of the locality and some reminded me forcibly of boyhood days. I noticed that their sails were flat and rigid as boards, a condition easily attained by this rig. Asking a man in charge if any other kind was used in Toronto, he answered that the "club" had imported a crack "sloop-rigged" boat (as an experiment, I inferred), but that she took so much more wind to drive her, although as well built and not any heavier, that she was not a match for the regular Toronto boats.

There is no doubt that the lateen sail is the best for ice boats, as their tremendous speed on the wind requires the flattest sail that can be had. The peak should also remain in the same plane as the boom to keep it drawing equally with the foot of the sail. The lateen has notably this property, as the yard, or what is the gaff in the ordinary fore and aft sail, is confined forward past the mast, as well as the boom to the lower forward end of the sail where they meet and are fastened together, so that the peak cannot fall away from the line of the boom to the extent that a gaff does, thus when well hoisted the sail is one large plane and every part draws alike.

J. C. M.

MIRAMICHI, N. B., Feb. 21.

Editor Forest and Stream:

I am pleased to see in your issue of Feb. 16 that "C. L. N." disclaims any intention in his *Outing* article on "Ice Yachts" to credit the Hudson or Shrewsbury clubs with inventing the novel idea of stepping an inboard inclining mast near the gunwale, instead of amidships, which, with drawings and explanations were first published on Aug. 7, 1884, in the *Forerunner*, a paper called the "Prince rig." The drawings were again, in 1886, produced by the Forest and Stream, and strongly recommended for ice yachts, and were immediately after adopted by the above named clubs. The statement by "C. L. N." that said clubs "each suspected the other of having stolen its plans," would seem to infer that each one was claiming this novel idea as its own invention.

No suggestion has been made by the Forest and Stream or the present writer that the lateen sail was a recent invention. We all know it to be as old as the Egyptian Pyramids. The "Prince rig" is the first and only successful plan ever adopted to make the lateen-shaped sail effectual in every way—on or off the wind. All previous attempts signally failed; not one succeeded.

The Vixen and other yachts which have experimented with the "Prince rig" have proved all that was claimed for it by its inventor in 1884, in the *Forerunner*, and given it to the public, thus, as "C. L. N." truly says, becoming "public property."

I would add here that a single mast is preferable to the double mast unless the sail and spars are heavy. The sail should be strongly reinforced in the vertical section, where it is bent to the center of the yard and boom, to prevent its bellying too much. Other arrangements will suggest themselves as required. If guys or stays are used they should be so arranged as not to impede the free swing of the boom. G. P.

Boston, Feb. 20.

Beverly Y. C.

A SPECIAL meeting of the Beverly Y. C. was held in Boston Feb. 17, at which the following changes of rules were adopted, to apply only to the Buzzard's Bay division of the club fleet south of Cape Cod, except where otherwise specified:

To alter the racing line south of Cape Cod, the following classes on the Buzzard's Bay division of the club fleet south of Cape Cod, except where otherwise specified:

To make the racing length south of Cape Cod the length on waterline.

That no prize be given for a walk over either north or south of Cape Cod.

That no second prizes be given in championship races south of Cape Cod, when less than four boats start in a given class.

That if there be but one entry in any class, either north or south of Cape Cod, the yacht entered may sail in the next class above of the same rig in which there may be any entry without assuming the minimum length on waterline in that class. In case there may be one entry in all sloop classes, the yacht entered may sail with catboats in her class.

To amend Rule 20, sailing regulations ("amendments") so as to read: "These sailing regulations may be amended at any special meeting, provided notice of the proposed amendment has been given in the call for the meeting, or at annual meeting, whether with or without such notice."

To amend Rule 5, sailing regulations, Clause 3, by striking out "with two men from the bow" and substituting therefor "the crew need not be aboard; but if aboard, must be stationed amidships."

YACHT NEWS NOTES.

A visit to the office of Manning's yacht and vessel agency, No. 45 Beaver street, New York, is quick proof of the extent to which Mr. Manning's business has developed since it was established twenty years ago, and also of the value of such an agency to the shipping business. The amount of information that can be obtained from this agency by any one looking for information in regard to any sort of vessels for sale or to charter is probably beyond comparison with any other bureau. Mr. Manning has built up a business upon its merits and numbers among his customers not only leading yachtsmen but very many commercial houses.—*Marine Journal*.

The Cleveland Y. C. has decided not to build on city property at the foot of Erie street, as when the Council, after long deliberation, granted them the lease, they stipulated that the city could at any time, upon six months' notice, reclaim the site, and also that the club should in no way interfere with the freedom of the people in Lake View Park. The club has decided to accept the fifteen-year lease from the United States of the entire lake front along the hospital grounds. This lease has fourteen years to run and can undoubtedly be renewed at the end of that time.

The officers of the Rhode Island Y. C. elected on Feb. 20, are: Com., Warren B. Fales; Vice-Com., Fred P. Sands; Sec., F. P. Eddy; Treas., E. T. Herriek; Meas., A. M. Black; Directors, R. H. Carver and A. E. Austin; Race Committee, Charles E. Smith, E. E. Hubbard, E. C. Reynolds, Samuel Whitely and Harry H. Low; Committee on Admissions, C. G. Bloomer, Jr., R. H. Carver, R. Greene, A. M. Black, C. A. Eddy, T. Herriek, A. D. Lette, Leroy Fales and A. E. Austin. House Committee, C. G. Bloomer, A. S. Ross and R. L. Greene; Potter's Cove Committee, W. B. Fales, A. D. Ross and F. P. Eddy.

A new company, the Universal Electric Launch Co., of Nyack, N.Y., has been formed, to manufacture, lease and sell boats propelled by electricity and batteries, machinery and other supplies for the use of sailboats. The capital is \$25,000, and the directors are: S. R. Bradley, S. R. Bradley, Jr. and C. L. Seabury, of New York city, and A. L. Riker and T. L. Proctor, of Brooklyn.

A bill is now before Congress providing that after the close of the World's Fair the model battleship Illinois shall be transferred to the State of Illinois for the use of the State Naval Reserve. Another bill which has been passed by the Senate, is for the recompense of the owners and crew of the schooner H. R. Tilton, sunk off Sandy Hook last summer by a shot from the proving grounds there.

The St. Lawrence S. C. & S. L. Co. is building for Mr. E. E. Sargent, of Newark, N. J., an 18 ft. sailing length fin-keel for use at Lake Hopatcong. She will be rigged with jib and mainsail and will have several new features in her rigging. The firm will exhibit at Chicago and are building a "scarecrow" to send there.

At Van Deusen's new boat shop, Camden, N. J., there is building a keel yacht designed by H. C. McCormick for George J. Gibson, of Philadelphia. She is 31 ft. over all, 21 ft. L.W.L., beam 4 ft. 4 in. draft, with iron keel. She will have a cabin house and will be used for cruising and sailing on the Delaware.

The Schoodic Y. C., of Calais, Me., has reorganized with the following officers: Pres., M. H. Pike; Vice-Pres., Lewis Todd; Sec., W. E. Davidson; Treas., G. W. Hines. The first of a series of races will take place on June 22.

Ituna, steam yacht, lately sold by Com. Morgan, has been taken over by her new owner, Mr. Belmont, and is now fitting out at Newport for a Southern cruise.

O. B. Jennings, owner of the steam yacht Unquowa, died suddenly on Feb. 12 at the age of 67, leaving an estate estimated at \$10,000,000.

Read Bros., at Fall River, have the Eaton yawl partly planked, and are preparing to build a 35 ft. L.W.L. cutter for Mr. Geo. Turner.

The Brooklyn Y. C. has announced the following fixtures: May 3, opening day; June 12, annual invitation regatta.

New Jersey, steam launch, has been sold by Leon Abbett to H. M. Farr, of Holyoke, Mass.

Sagamore, steam yacht, sailed for Norfolk on Feb. 23 for Old Point Comfort, where her new owner, Mr. Edgar S. Scott, and a party of friends boarded her for a cruise to the West Indies.

Mr. V. D. Bacon, several of whose designs have appeared in the FOREST AND STREAM, is prepared to furnish full designs for building Cape catboats at a low figure. His advertisement appears on another page.

A large steam yacht is building at Ithaca, N. Y., for Charles Kellogg of Erie, Pa.

Clytie, schr., has been sold by G. M. Preston to H. C. Ward, N. Y. Y. C., former owner of Sagitta and Triton.

A report from Florida mentions the burning of the Lorillard steam launch used as a tender to the houseboat Caiman. No details are given.

Comanche, steam yacht, H. M. Hanna, was at Jacksonville, on Feb. 21.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

JUNE.

10. Brooklyn Annual, Bay Ridge. 24. Marine and Field Club, Bath Atlantic, Ann., New York Bay. Beach.

17. New York Ann., Bensonhurst.

JULY.

1-15. At. Div. Meet, Captain's Island. 15-30. W. C. A. Meet, Ballast Island.

AUGUST.

11-25. A. C. A. Meet, St. Lawrence River.

The letter of Com. Cotton emphasizes the difficulties which we pointed out in the way of the postponement of the annual A. C. A. meet. Such a proceeding would be entirely unprecedented; and, so far as we can judge from the opinions of A. C. A. members, is entirely unnecessary. A good attendance and a very pleasant and successful meet are promised, in spite of the attractions of Chicago and the Fair.

The meet of the Atlantic Division in July promises to be a notable one; it is under specially able management, in a very desirable location, and there is good reason to hope that those sports and diversions which, however agreeable to a certain number, have seriously lessened the attendance at previous meets of the Atlantic Division, will be conspicuous by their absence.

Atlantic Division Meet.

To the Members of the Atlantic Division of the A. C. A.

GENTLEMEN.—The next annual camp of the Atlantic Division will be held on Great Captain's Island, Long Island Sound, July 1-15. Great Captain's Island is situated twenty-five miles from New York City and is two and one-half miles from Port Chester, Conn., and about the same distance from Greenwich, Conn. Port Chester, forty minutes from Grand Central Depot by N. Y. N. H. & H. R. R. is the nearest station to the camp. Your Committee intends to make arrangements to reach the island from Port Chester by steam launch, making frequent trips each way.

Great Captain's Island is about 15 acres in extent. The soil is sandy and a fine beach extends along the northerly shore terminating in a horse shoe, which will afford ample protection from the winds. The beach slopes back to a bluff some ten feet high in parts. Altogether the island offers an ideal spot for the meet. Fresh water is obtainable on the island, and your committee will make all arrangements necessary for the comfort and convenience of those who attend.

An excellent sailing course will be laid out on the shore side, and the attractive programme prepared by the regatta committee will be productive of very many fine races. It is the wish of the officers to make this meet of 1893 not only the largest and most successful, but one of the most memorable in the history of the Atlantic Division, and every member is requested to do his utmost toward the accomplishment of that end.

Your presence at the meet and your hearty co-operation in making it a success is therefore earnestly desired. Arrangements will be made for a ladies' camp. The transportation committee will arrange for the satisfactory transportation of canoes and camping outfits from the several club houses to the camp and return at a nominal charge.

Further information will follow on completion of work by the different committees, which are composed of the following gentlemen: Regatta Committee: W. P. Dodge, chairman; Jantlie C. C., W. S. Elliott, Marine and Field; D. P. Goodsell, Youkers C. C.; R. B. Burchard, New York Y. C.; T. Torst, Hoboken C. C. Transportation Committee: H. L. Quick, chairman, Youkers C. C.; J. F. Hogan, Brooklyn C. C.; Barron Fredricks, Jantlie C. C.; E. D. Newman, Crescent A. C.; Geo. V. Strahan, Hoboken C. C. Camp Site Committee: W. C. Lawrence, chairman, Park I. C. A. C.; V. Schuyler, Brooklyn C. C.; J. F. O'Shea, Knickerbocker C. C.; R. H. Peebles, Bayonne C. C.; H. C. Ward, New York Y. C. Respectfully yours,

JAMES R. LAKE, Vice-Commodore.

By F. L. DUNNELL, Purser.]

The A. C. A. Meet of 1893.

Editor Forest and Stream:

Referring to Canoe Notes in your issue of Feb. 16, and the letter of Mr. Henry L. Smythe, with your editorial remarks thereon, may I ask space for a few lines to say how impossible it now is to postpone the yearly meet. As you remark, the work is too far advanced, and besides, it would require the sanction of a general meeting to do so. As it is only right that all members should understand the position of affairs, I desire to say that the year book is just about to be published, and contracts have been entered into with advertisers which must be fulfilled. A contract for the lease of the ground has been signed and arrangements completed for meeting. An ice-house has been filled for the use and comfort of the members in camp. The regatta committee are under way with their programme and transport facilities definitely fixed. While it is unfortunate that the wishes of many in this respect cannot be met; still, it must be apparent to all, when they know the advanced state of the arrangements, that a postponement is now out of the question. Under the circumstances may I earnestly request members and the interests of the Association, not to press the matter further, as any doubt thrown on the success of the meet will be sure to injure it.

On the other hand, taking advantage of the great attraction of the World's Fair, it is my intention to invite members of all foreign clubs to be present.

W. H. CORROX, Commodore A. C. A.

KINGSTON, Feb. 20.

CANOE NEWS NOTES.

The Canoeists' Club, of New York, will hold a dinner at the Arena, 41 West Thirtieth street, on March 11, the tickets being \$1.50 per plate.

The Wish-Ton-Wish C. C. of Northampton, Mass., has elected the following officers: Captain, C. B. Swift; mate, J. R. Gilliland; purser, H. C. French; member of executive committee, C. B. Edwards.

Captain Ruggles, the well known canoe builder, has turned his genius for invention to good use in an entirely new field. The distance between Rochester and Charlotte, the latter on Lake Ontario at the mouth of the Genesee River, is nine miles; the two being joined by an electric railway. In winter the snow on the tracks causes great delay and annoyance, the snow plows in use last season proving entirely inadequate. During the past summer Capt. Ruggles has been struggling with the problem, and late last fall he patented a new snow plow, a wheel similar to a propeller, driven by an independent motor, which cuts the snow away and then blows it to a distance, at right angles to the track. The present winter has provided ample opportunities for a severe test, the machine working admirably.

DORION'S ADJUSTABLE RUDDER HEAD.

Dorion's Adjustable Rudder Gear.

No PART part of the gear of a boat is the object of more admiration than a handsomely-shaped tiller, which for several reasons besides that of beauty should extend into the cockpit. This often proves inconvenient in small boats where the crew is likely to sit on the floor boards and the space is necessarily limited.

It would also be found a restless and agreeable change aboard such a craft in some winds could the helmsman face the bow, but this cannot well be done, as the tiller comes in contact with his side. If it is made short to better enable him to take this position his arm must pass behind his back, and this soon causes fatigue. Another objection is, that the short tiller prevents the skipper from well hiking to windward when occasion requires.

The rudder gear herewith illustrated is the invention of Mr. Severe Dorion, of 110 Burnet avenue, Syracuse, N. Y. After a thorough trial it has been pronounced a perfect success, entirely obviating the difficulty mentioned. The tiller can be placed at any angle, entirely out of the cockpit and out of the way of the helmsman, when the boat is in stays or under way, by merely lifting the tiller a few inches, placing it in the position required and allowing it to drop to place. The gear is fastened to the rudder head and is all in one piece, with nothing to drop off or get out of place. The tiller slips into the fitting and can be easily removed, a slight taper holding it in place, but when in position it is securely fastened to the rudder with no lost motion.

When sitting to windward the tiller can be held so close that in luffing one does not have to reach inboard and lose the benefit of a portion of the weight that should be to windward. If on short tacks the tiller can be changed without giving it a thought. Carry it over with you and it will drop into place before the boat gets under way. If you prefer it amidship place it there.

Three parts constitute the gear (see cuts). No. 1 consists of two pieces of metal (AA), with oval holes on each side to lighten. On the top edges is a plate (B) fan-shaped, with seven holes on the circular edge and a $\frac{3}{4}$ rod (C) brazed upright on the small end. The upright rod has a hole at the top (D) with a pin in it. No. 1 is fastened to the rudder head with the small end of plate (B) placed aft or toward the rudder blade.

No. 2 is a square ferrule made to fit the tiller, with a slight taper at the top, which is cut away to lighten. The lower side of No. 2 outside of No. 3 and fasten with screw hole at H. This allows No. 2 (containing the tiller) to move up and down as it passes over plate B and enables pin F to enter the different holes in the plate to give the angles required. The metal is sheet brass, polished and nickelled.

To assemble the gear, place No. 3 over pin C in No. 1 and fasten with small pin at the top; this gives side motion. Place the G end of No. 2 outside of No. 3 and fasten with screw hole at H. This allows No. 2 (containing the tiller) to move up and down as it passes over plate B and enables pin F to enter the different holes in the plate to give the angles required. The metal is sheet brass, polished and nickelled.

Rifle Range and Gallery.

The Zettler Rifle Team Tournament.

THE third annual Washington's Birthday team tournament, inaugurated in 1891 by that famous group of expert riflemen known as the Zettler Rifle Club, was brought to a successful close at the club's headquarters, 219 Bowery, on Wednesday night of last week.

Of the many associations of riflemen located in the cities of the United States the Zettler Rifle Club has for years taken first rank as experts in off-hand shooting with the sporting rifle.

The club was organized some twenty years ago in the shooting gallery of the Zettler Bros., located at that time in the Bowery, near Grand street, and from its inception has been known as the Zettler Rifle Club. For years there has not been a shooting festival of prominence in any part of the country east of the Mississippi River that has not had representatives from this club as competitors for prize honors, and at the present time the club is the Alma Mater of quite an Alumni located in various parts of the country.

With the small .22cal. gallery rifle as the "primer" in the education of the novice in the art of rifle shooting the Zettlers have brought out some of the most expert marksmen known in the history of rifle shooting, and to-day the headquarters of the Zettler Club is the objective point for all lovers of the sport in and about New York city. When the club, in the early part of the month, sent out its notice of another tournament on Feb. 22, with the information that it would donate four trophies for winning teams and an extra prize for the best individual score, there was a hearty response returned from the many shooting societies in and about New York in favor of taking part in the contest.

When the day for the tournament arrived the entry list was found to contain entries from ten clubs and societies. Prominent among the entries were one team from the Independent New York Schutz Corps, B. Walthers, captain. One team from the Williamsburg Shooting Society, F. C. Ross, captain. The Harlem Rifle Club was represented by two teams; Team No. 1, J. A. Boyken, captain; Team No. 2, W. Heaney, captain. The Central Turn Verein one team; C. Gilman, captain. The Empire Club one team, Wm. Rosenbaum, captain. The

Albig Club one team, Geo. Albig, captain. New Jersey was represented by the Greenville Club's team, Wm. Robeson, captain; the Excelsior Club's team, L. P. Hanson, captain; the Hudson Club's team, J. Rehhan, captain; the Our Own Club's team, J. Bauder, captain.

The terms of the match called for teams of 5 men each, 10 shots per man, 2 re-entries allowed, distance 75ft., 25-ring target, possible 250 points.

The trophies were the work of Rogers Bros., and were made to order for this occasion. They were emblematic of shooting and beautiful to the eye (of the shooting rank, especially so).

The Empire team was the first to put in an appearance in the morning, and with their first entry they rolled up a score of 1,198 points, that stood high until 11 o'clock P. M., when the Farmers from New Jersey, on their second entry, made a tie score of 1,198 points; but by counting the best center shots the Greenville team, by the rules governing the contest, took first place in the race for honors. In the meantime the Independent team, under the leadership of Barney Walther, had made a leap for the honors, but by some unfortunate shots they fell back behind the Empires in the race with a total of 1,178. In the meantime Harlem team No. 1 were pegging away in their first entry and got together a total of 1,187 points.

Then came the Our Own team with a total of 1,185 points, and hard after the latter came the Hudsons with 1,188 points, the Excelsiors with 1,175. Then the Empires went in to do or die and fell back with a total of 1,195 points, or three points below their first entry. In the meantime, the Williamsburg contingent, under the leadership of Fred Ross, were quietly doing their best to get into the swim, and succeeded in getting together a total of 1,192.

The Harlem second team made a hard struggle, but the pace had been set at such a rate that they were out of the race before the start, the same can be also said of the Albig team, and also the Central Turn Verein team.

The race up to this point still gave the Greenville farmers the lead followed by the Empires, the Our Owns and the Williamsburg teams.

While the above teams had been doing their best to overcome the difficulties before them, Barney Walther was busy reforming the broken ranks of his team and getting into position for the second charge. About 11:30 P. M. Captain Walther sent in his team for the second time, and when the last man had got his shots down to the target the results showed that the Independents were out for sure, having a total of 1,211 points to their credit. From this point the condition of the race was getting to be very interesting, and it now looked as though the Independents were secure in their position for first place, but this is only the illustration of the uncertainty of everything pertaining to the affairs of this life, for in the case of the Independents with their remarkably fine total of 1,211 points, an average of 242.2 to each member of the team, they were in the end doomed to meet defeat.

The Empires, after their second entry had been simply laying low nursing their strength for the final struggle, which was to come later on. The members of this team met the difficult position in which the score of the Independents had placed them, and they placed them in the front rank among expert riflemen. The individual members of the team, with the aid of that well known veteran, Max Engel, as a coacher, stood up to their task in a way that caused many of the older shooters to marvel at the nerve of the boys under such circumstances. Wm. Rosenbaum, otherwise known to the fraternity as "Buff," was the last member of the team to shoot his score, and to say that the many shooters and visitors present were interested in hardly expresses the condition of affairs in the gallery at the time. Every one who could get within sighting distance of the target was there with both eyes open, some rooting for 25s or center shots, while others were pulling dinkies, hoping for a flyer. But "Buff" was equal to the task that had been laid out for him. He wound up his score with a total of 243 points, giving his team a grand total of 1,213 points, an average of 242.6 to each member, thus winning the first position by a lead of two points over the Independent team.

The individual trophy was a center of much interest to many of the experts in the contest, and there was a goodly number among them who had taken an extra pinch on his nerve with the intention of appropriating that "mug" to his own individual self. But the "best laid plans of mice and men gang aft aglee," and as the various teams shot through their scores the individual possibilities were reduced to thin men—Mr. Dorrier of the Independent, J. A. Boyken of the Harlem team No. 1, and F. C. Ross of the Williamsburg team, each with a score of 248 to his credit.

After Rosenbaum had closed his score, thereby defeating the Independents, the above gentlemen were called up to shoot off their ties. The fact that these men are known to be the best of all the Zettler experts, and the fact that in shooting ability and nerve there is hardly any choice between them, was enough to create a decided feeling of interest among the large assembly of sportsmen present. Mr. Dorrier was the first to face the target, and he finished his score with a total of 245. J. A. Boyken was next to shoot and he could do no more than tie Dorrier's score.

The condition of affairs was now decidedly interesting, hardly any one expected that Ross, under the then existing excitement, could do more than tie the other scores. To expect him to overcome seemed to be out of the question except to a partisan, and when Ross went in to shoot his score there was a rush made by all present to the rear of the gallery in order to witness the results of each shot as it reached the target. His first shot was a 24, and then the speculations of those present with a weakness for wagering their gelt became brisk, and the way the dimes and quarters changed hands as one shot followed another was a caution. But with all the excitement and uproar caused by the excited onlookers, Ross kept his nerve and never let go another point, but finished his score with a center shot and a total of 249, thus winning the individual trophy. This is remarkable work, as it approaches the limit of the possibilities of the arm and the ammuni-

tion. The scores of the several teams competing in the tournament will be found appended:

New York Revolver Work.

NEW YORK, Feb. 20.—The following record scores were made by the members of the New York Revolver and Pistol Club, at their last regular weekly practice shot, held on the 18th inst., at their gallery No. 12 St. Marks Place: 10 shots on Standard American target, at 25yds. C. B. Bishop, .44cal., S. & W. revolver, 90; H. Oehl, .44cal., S. & W. revolver, 84; F. Hecking, .38cal., S. & W. revolver, 77; E. Walz, .22cal. Stevens pistol, 83. F. HECKING, Sec'y.

Trap-Shooting.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

- March 7-8.—Ryersford (Pa.) Gun Club tournament. First day targets; second day live birds.
- March 8.—Boiling Springs vs. Union Gun Club, team match, also open sweepstakes, at Rutherford, N. J.
- March 15.—Union Gun Club, 25-bird sweep, \$20 entry, five moneys limited to twenty entries, Springfield, N. J.
- March 21.—Live bird tournament on Erb's "Old Stone House grounds," Bloomington avenue, Newark, N. J., beginning at 11 A. M.
- March 28-29.—Manufacturers' Trap-Shooting Association tournament, Savannah, Ga.
- March.—New Mexico Mutual Fish and Game Protective Association, second annual tournament.
- March.—Connecticut Trap-Shooters' League tournament, Park City grounds, Bridgeport.
- April 5-7.—Interstate live bird tournament, Dexter Park, Long Island, H. A. Pennington, Sec'y, New London, Conn.
- April 19-21.—Waverly (Iowa) Gun Club tournament. Professionals barred.
- April.—Manufacturers' Trap-Shooting Association tournament, Greensboro, N. C.
- May 2-3.—Independence (Ind.) Gun Club tournament. Added money.
- May 9-11.—Ohio Trap-Shooters' League tournament, Columbus, O.
- May 9-12.—Saratoga Springs (N. Y.) Gun Club tournament.
- May 17-18.—West Newburgh Gun Club spring tournament, at Newburgh, N. Y.
- May 23-25.—Knoxville (Tenn.) Gun Club tournament, \$1,000 added to purses. Also valuable merchandise prizes.
- May 23-25.—Minneapolis (Minn.) Gun Club tournament.
- May 23-25.—Nebraska State Sportsmen's Association tournament.
- May 30.—Eastern New York Trap League tournament, at Canajoharie, N. Y.
- May 30-June 1.—Iowa State Sportsmen's Association, Clear Lake, Ia.
- June 5-10.—Illinois State Sportsmen's Association, Chicago, Ill.
- June 12-16.—New York State Sportsmen's Association tournament, at Rochester. H. M. Stewart, Cor. Sec'y, 412 Ellwanger & Barry Building, Rochester, N. Y.
- July 3-4.—Portland (Ore.) Gun Club tournament.
- Oct. 19-20.—West Newburgh Gun Club fall tournament, at Newburgh.

DRIVERS AND TWISTERS.

The East Orange and East Side Mutual Gun clubs, of Newark, proposed shooting a team match on the latter's grounds in Wiedenmayer's Park, Newark, on Feb. 22, but owing to the storm the match was postponed and the day filled in with the following sweeps at 10 targets each:

1	2	3	4	5	6	1	2	3	4	5	6
Babbage.....5	6	9	6	5	6	Young.....5	5	5	8	5	5
Keight.....5	7	5	5	5	5	Koeller.....4	5	7	5	5	5
R. Dicks.....5	5	5	5	5	5	Fischer.....5	5	5	5	5	5
Wheaton.....9	5	4	4	4	4	Schork.....6	6	8	5	5	5
T. Dicks.....5	5	6	8	5	5	Koegel.....8	7	6	5	5	7
Trenton.....6	4	6	4	9	8	Hassinger.....6	8	7	4	5	5
Perry.....4	4	4	4	4	4	Hague.....6	4	6	5	5	5
Heinrich.....5	5	2	4	4	4	Bitz.....8	4	5	5	5	5
Schilling.....5	4	7	5	5	5	Dentz.....4	7	5	5	5	5
M. Dicks.....5	4	5	5	5	5	Noon.....6	5	5	5	5	5

An invitation shoot took place on the grounds of the West Side Gun Club, in Newark, on Feb. 22, between teams of 12 men each from the West Sides and the West End Rifle and Gun Club, each man shooting at 25 artificial targets. The heavy snow storm made the shooting difficult, as the scores show. West End—Sparrm 7, Burkhardt 10, Neigert 16, T. Freund 13, Bratsch 7, A. Freund 7, Lamb 10, Kollensky 15, Astalk 5, Beck 16, Weber 14, Heimhauser 9; total, 138. West Side—Meesel 17, Burt 16, Gerst 16, Meyer 19, Shepper 10, Trutvetter 12, Weber 13, Hilfers 15, Shelling 14, Reiboldt 11, Jaquin 16, Drastel 12; total, 171.

Early in the fall of 1892 the Knoxville (Tenn.) Gun Club announced that it would hold a tournament on May 23, 24 and 25, 1893. By virtue of said announcement the Knoxville Club should have been alone in holding a shoot on those dates, but now comes the news that on the same dates will be held the annual tournament of the Nebraska State Sportsmen's Association and also a tournament at Minneapolis, Minn., under the auspices of the Minneapolis Gun Club. Either of the latter two organizations could easily have chosen other dates than those chosen by Knoxville.

The first annual shoot of the Central Gun Club, of Newark, was held on Dreker's Farms on Feb. 22, and after the shoot there were refreshments, songs and instrumental solos at the club's headquarters at Central avenue and Norfolk street, where Captain John Gardner was given a reception. The scores made in breaking clay birds were, each man shooting at 25: Gardner 23, Sprague 21, Silvers 18, Oroner 19, March 17, George 16, Binn 10, Griffen 14, Traphagen 13, Saunders 11, Fink 17, O'Hare 10.

H. E. Buckwalter and "Father Time" Thurman will have charge of the tournament to be held at Ryersford, Pa., on March 6 and 8, and this is a guarantee that the affair will run smoothly. Targets will be used on the first day and live birds on the second.

MEPHISTO

331-333 BOWERY, BET. 2d & 3d STREETS.
New York, July, 1892.

Our "ONDINA" all Havana tobacco NEW YORK made cigar, our world-renowned "MEPHISTO" and all other finer grades of cigars made by us are superior in many ways to those made in the tropics. In addition to all the tobacco markets of the earth to which we have access, New York City always commands the best of every material as well as labor. OUR New York factory is a perfectly ventilated, clean abode. No sort of uncleanness is permitted, and our cigars, therefore, are not liable to contain matters other than tobacco, and smokers may confidently and safely use our cigars, not needing a mouth-piece or a cigar holder to prevent unpleasant consequences.

D. HIRSCH & COMPANY.

THE PROTEAN TENT.

Pat. Sept. 27, 1892.

Maybe you want to come in some place where your supplies have to be packed a considerable distance on foot. I can supply your PROTEAN with a jointed pole and my patent carry bag, which will hold your tent, pole, pegs and some blankets besides, and has a superior arrangement of shoulder straps. Send for circulars and prices to A. S. COMSTOCK, Evanston, Ill.

TENTS AND CAMPING

Is the subject of a new book called

Gypsy Tents and How to Use Them.

It gives a vast amount of information about how to live out of doors. Besides tents, how to make and put them up, it tells of camp fires, camps, pack saddles, cooking utensils, bedding and clothing, and the joys and sorrows of camping. All outdoors need it. Fully illustrated. Price \$1.25.

THE AMATEUR PHOTOGRAPHY COMPETITION.

We announced last week the decision of the judges in the FOREST AND STREAM Amateur Photography Competition, and sent the checks for all the prizes except to the winner of one of the fifth prizes, whose address has been mislaid. We shall publish each week one of the successful pictures, and to-day Mr. Bennett's wonderful deer picture is shown. No reproduction can fully bring out the delicacy and beauty of this photograph, which shows the wet hair of the deer which have just crossed the river, and the rime upon their coats where the water is just beginning to freeze.

All the pictures submitted in this competition have been loaned to the New York Camera Club, and will be exhibited at the rooms of the club at 314 Fifth avenue, in conjunction with their annual exhibition of photographs made by members of the club. The exhibition will open March 13 and close March 18.

Any contributor to the FOREST AND STREAM Competition who may desire to visit this exhibition will receive a card on application to Mr. Harry B. Reed, New York Camera Club, 314 Fifth avenue, New York.

Readers of FOREST AND STREAM who are interested in photography will not fail to visit the rooms of the Camera Club next week, and those who enjoy outdoor life and nature will find there much to interest them.

SECRETARY NOBLE'S MONUMENT.

We have more than once called attention to the broad and far-seeing policy inaugurated by Secretary Noble in the matter of forest preservation in the less-inhabited portions of the country, and it is satisfactory to see that the daily press is now giving him credit for the great work he has done.

It will be remembered that beginning with the Yellowstone National Park, which was brought to the notice of Mr. Noble early in his administration, he has given much attention to the question of our parks and timber reservation. To say nothing of the Grant, Sequoia and Tule River parks, the preservation of which we owe almost entirely to Mr. Noble, there were set aside soon after the act of Congress of March 3, 1891, six timber reservations, embracing an estimated area of three and a quarter million of acres. Of these three lie in Colorado, one in New Mexico, one in Oregon and one in Wyoming, adjoining the Yellowstone National Park. Besides these forest preserves Mr. Noble has considered as well the question of preserving our marine mammalian fauna of the Northwest coast, which is so rapidly disappearing under the constant persecution of white men and Indians, and has set aside an Alaskan island as a reservation.

In December last there was established in southern California a timber reservation near Los Angeles, including nearly one million acres. This will be known as the San Gabriel timber land reservation, and includes all the mountains from Salidad Cañon, where the Southern Pacific R. R. passes through the mountains, eastward to the Cajon Pass. A little later another reservation of about eight hundred thousand acres was announced, to be called the San Bernardino Mountain Forest Reservation. This adjoins the San Gabriel reserve and runs eastward from the Cajon Pass to San Gorgonio. Finally, on the

14th of February the Sierra Reservation was set aside. This comprises over four million acres and takes in the high Sierra extending southward from the line of the Yosemite National Park to the seventh standard parallel south. It includes the existing Grant, Sequoia, Tule River and Mount Whitney reservations, and also the wonderful Kings River Cañon, which has been described by Mr. John Muir in the *Century Magazine*.

This country is one of surpassingly beautiful scenery and contains some of the highest peaks to be found within the limits of the United States. It is of especial interest for its giant forests, many of which are yet untouched, and which contain the great sequoias, together with many other species of Pacific forest trees of remarkable interest and beauty. Besides this, the region is interesting as containing a considerable amount of game, and, on the high mountains, species of birds and mammals which are not found elsewhere in California.

Far more important, however, to the country, from an economic point of view, is the preservation of the water supply, which will be insured by the setting aside of these reservations. Throughout most of the Western country the question of water for irrigating purposes is the most vital one met by the settler, but it is only within a very few years that the slightest regard has been had to the farmer's needs.

It is proposed before long, we understand, to set aside a tract of about 1,000,000 acres in the State of Washington, which will be known as the Pacific Reservation, and will include Mount Rainier, and in southern Utah, about the Grand Cañon of the Colorado, President Harrison has made another forest reserve of 1,000,000 acres.

Much credit is due to Mr. R. U. Johnson, of the *Century*, who has been untiring in his efforts to secure proper legislation for the protection of the Yosemite National Park, and to Messrs. Hague, Phillips and Roosevelt, who have taken special interest in the Yellowstone Park. All this, however, would have availed little had it not been for the wisdom and far-sightedness of Secretary Noble. His broad mind was able to appreciate the needs of this country and he had the courage to lead public opinion where others would have been content to wait for the popular cry and then obey it. He has set on foot a work that will live long after he has passed away, and if in his administration he had accomplished nothing besides this work of forest preservation he would have deserved well of his country.

Much more remains to be done, and it is to be hoped that the incoming Secretary of the Interior may follow the example set him and carry on this good work.

THE "NESSMUK" MEMORIAL.

It is satisfactory to see that the interest in the memorial to be erected to "Nessmuk" is constantly growing, and the contributions received this week come from shores washed by the Atlantic, the Pacific and the Great Lakes. The work of modeling the portrait has been completed, the mould has been made, and we hope next week to give reproductions of the designs for the monument and for the bronze work.

It is evident now that the cost of the monument will exceed \$200, the amount originally set as the minimum sum needed, and but for the generous enthusiasm of Mr. George T. Brewster nothing nearly so effective as the present designs would have been possible for such a sum.

It may be regarded as certain that all friends and admirers of "Nessmuk" will wish to contribute to this fund and to assist in the completion of the work. No man, we believe, ever read the writings of "Nessmuk" without being better for that reading, and each such man owes a debt to the dead author and will be glad to add his mite toward the memorial, which shows our appreciation of the work done by the old woodsman.

The subscriptions received since last week, March 2, are from the following contributors to the fund:

WM C. HELD, Saginaw, Mich.
L. H. TROTTER, Philadelphia, Pa.
L. I. FLOWER, McDonald's Corners, N. B.
MRS. ROSS, Geyserville, Cal.
CASH, New York.
JOHN BEATTIE, New York City.

WHY "festive?" What is the significance of the adjective festive, as so frequently applied to a bass or a bear or a catfish or an armadillo?

WORLD'S FAIR AQUARIUM.

THE transportation of sea water for the live fish exhibit of the U. S. Fish Commission at Chicago has been arranged without expense to the Government through the liberality of the Union Tank Company and the Chesapeake & Ohio and Big Four railroads. Mr. Howard Page, vice-president and manager of the Union Tank Company, has lent Commissioner McDonald cars to hold 30,000 gallons of water, and Mr. M. E. Ingalls, president of the roads mentioned, will send the cars to Chicago free. The public spirit of these officers will materially aid the plan of making a unique and unsurpassed display of living water animals and plants at the World's Fair.

The new baggage car which is now being fitted up for carrying marine fish, etc., from Morehead City, N. C., and other sea coast collecting centers, will have two tanks 8ft. in diameter and four tanks 4ft. in diameter. The central portion will be fitted up with living rooms for the men, storage spaces for small articles, boiler, pumps, etc.

The first trip from Morehead City with live fish, corals, algæ, etc., was accomplished without loss. Some of the fish weigh fully 6lbs. Among them are spotted weakfish, red drum and mullets. These were brought up to Washington in the ordinary tanks used for carrying fish from the hatching stations.

Everything is promising for the great work of filling the aquarium with representative species from the ocean as well as inland waters, and Morehead City is exceedingly rich in marine forms of life.

DOMESTIC REINDEER IN ALASKA.

At the last meeting of the Biological Society of Washington, Dr. Sheldon Jackson, General Agent of Education in Alaska, reviewed the progress of the plan to rescue from starvation the natives of northern Alaska and to provide means for their increase in numbers. The approaching need of introducing the Siberian tame reindeer into Arctic Alaska was foreshadowed by Mr. Charles H. Townsend in the report of the cruise of the steamer *Corwin* in 1885, and the cruise of the *Bear* in the summer of 1890 gave ample opportunity for studying the condition of the natives of the frozen North.

Capt. M. A. Healy was sent in command of the *Bear* to distribute presents to the Koraks around Cape Navarin in reward for sheltering and feeding shipwrecked American whalers. He was commissioned also to take a census of the native population along the Arctic coast of Alaska and the islands of Bering Sea. Dr. Jackson was permitted to accompany Capt. Healy, and enjoyed unusual facilities for comparing the condition of the Siberian reindeer men with that of the Eskimo of Alaska.

The Koraks were found to be hardy, active and well fed, owning tens of thousands of tame reindeer. The Alaskans were equally hardy and active, but many of them were on the verge of starvation. This condition was due to the destruction and driving away of walrus and whales by the whalers, and the rapid decline in the number of caribou since the introduction of modern firearms.

Whales have become very scarce in their usual haunts and are now sought for off the mouth of Mackenzie River. Walrus and seal do not come every season. In the winter of 1890-91 food was ample at Point Hope; but during the next winter the same people had to leave their village and, in some instances, travel hundreds of miles to other villages, to keep from starving. Some of the natives of the Yukon Valley actually starved to death. The teachers supported by the Government saved the lives of a great many people during that period of famine. Not many years ago three large villages on St. Lawrence Island were almost exterminated by want of food, and but for the timely visit of the *Bear* to King Island in the fall of 1891, doubtless the entire population would have perished.

After the return of Dr. Jackson to Washington in the fall of 1890, he made a report to the Commissioner of Education, emphasizing the destitute condition of the Alaskan Eskimos. This report was transmitted to the Secretary of the Interior, and by him to the Senate. Congress was asked, not to treat the natives as paupers, but to introduce among them the domestic reindeer and make them self-supporting.

The Fifty-first Congress, however, failed to appropriate the necessary funds, and Dr. Jackson appealed to the generosity of the people through leading newspapers, and received contributions amounting to \$2,146 to in-

augurate the work. The public discussions of the reindeer project developed much adverse sentiment. The plan was believed impracticable because the Siberians would not sell live reindeer; further, it was supposed the animal would not bear ship transportation; that it is such a dainty creature that it will not eat food touched by human hands; that the native dogs on the Alaskan coast would destroy them or the Eskimos would kill them for food.

In 1891 the fallacy of nearly all these objections was demonstrated. Capt. Healy bought sixteen reindeer from the Koraks, kept them on ship about three weeks, during which time they traveled over 1,000 miles and passed through a severe gale without injury, fed them on moss collected in Siberia and some of it full of coal dust, and landed them on the Island of Amaknak in Unalaska Harbor. Far from being dainty, they freely ate potatoes and meat and even tobacco, which the sailors offered them. The danger from dogs has not yet manifested itself.

Congressional aid has not yet been given to the plan; but Dr. Jackson continued his purchases in 1892 with private contributions. The Treasury Department again made the work possible by furnishing him facilities on the Bear, and Capt. Healey entered into the project. On the way north the cutter stopped at Unalaska, where it was found that the small herd had wintered successfully and was in good condition with an increase of two. During the summer 175 reindeer were purchased in Siberia, and established at Port Clarence, Alaska, under the care of Miner W. Bruce and Bruce Gibson, assisted by four Siberian reindeer men and several young Eskimos. A house, 20x60ft., was erected as a residence and store, and dugouts were built for the herders.

When the Alaskan natives have learned to take care of the reindeer, a small herd will be given to each of them, and new apprentices will take their places at the station.

Up to the time when the Bear left Port Clarence last fall the native dogs had not injured the reindeer. The coast dogs, said Dr. Jackson, have not been taught to hunt deer, but if any of them molest the herd the attendants will shoot the dogs and afterward pay the owners for them. The Eskimos are anxious to have the reindeer because they value the pelts. Some of them tried to buy the animals from the officers of the Bear. The Cape Prince of Wales men are greatly interested in the matter. Three men actually discussed a plan by which two of them should support their three families while the third went to Siberia very late in the season, hoping to be frozen in and obliged to winter with the Koraks, from whom he would steal the trade of herding the reindeer.

Congress is now asked to appropriate \$10,000 to continue the work of introduction, and, as the results so far are very encouraging, it seems hard to comprehend why a measure of such importance and value should be longer discouraged.

The habits of the reindeer, according to Dr. Jackson, have been little discussed by recent writers, and information was obtained with great difficulty even from the governments of countries in which the animal is native. It feeds on "reindeer moss" and other lichens, grass and willows, preferably "moss." It is believed that Alaska will furnish food enough for 2,000,000 of the animals. If their introduction is successful they will serve the natives for food, clothing and purposes of transportation, and, in all probability, the people will increase greatly in numbers.

In the discussion of Dr. Jackson's address it was shown by Drs. Gill, Dall, Merriam, Nordqvist and Stejneger that there is a great deal of valuable, though scattered, literature about the reindeer, not only in the official documents of Sweden and Lapland, but also in the works of old writers. Leem's "Lapland's Beskrivelse," published about 1764, contains an excellent account of the animal and is profusely illustrated, but unfortunately the author's good sketches were spoiled by the engraver. Middendorff's narrative of his Siberian travel has many incidental notes on the reindeer, and so have Krasheninnikoff's "Description of the Country of Kamchatka" and other narratives of voyagers.

Kennan's "Tent Life in Siberia" includes graphic sketches of life among the reindeer men. The January *Californian* contains an illustrated article on the reindeer in Alaska by Lieut. Cantwell.

Before leaving the subject we will refer to the introduction of seven reindeer into Bering Island from Kamchatka in the spring of 1883. Dr. Stejneger saw the successful experiment and stated that there are now on the island about 300 animals as the result of this start. Prof. Evermann found the herd in a thriving condition when the Albatross visited Bering Island last summer.

On the opposite page will be seen a picture taken in Alaska, which shows a group of these imported domestic reindeer.

The Sportsman Tourist.

KELLUP'S DREAM.—I.

As the train moved off in the evening, Kellup stood on the platform of the little depot staring at the few muffled figures without recognition. Presently one reached out under the dim lantern and both stood there grinning and shaking hands with never a word. Nobody said "Hullo, Jake," nobody said "Hullo, Kellup," but just stood and smiled. They understood each other pretty well, those two. Then Jake took the bag and started:

"Come on. Left the sleigh down front the store." They crossed the track through a stretch of gloom to where the light came out well softened through frosted window-panes. They opened the door upon an atmosphere of molasses and salt pork and tobacco smoke, and Kellup found himself waiting near a big stove with its red, open warmth. There were several others in indolent attitudes. The conversation was well along on hunting topics, so he kept both ears open, and it wasn't long before he was wishing he knew half as much about woody things as that boy who was speaking up so pert and old-fashioned, calling everybody by his first name.

"Guess y' didn't git them bir-r-ds down by Cap'n Doone's, did ye, Earnie?"

A tall young fellow had just laid down a single-barreled gun and unsung a little bunch of quail and a woodcock. His hair curled out long under his cap; his coat looked thin for the time of year; his shoes beneath the overalls were broken and his feet were no doubt wet, but he didn't mind that. The thing Kellup liked least was the expression. It seemed to have been long looking on the dark side of something; and yet his eyes were not so bad, his eyes were pretty good, Kellup thought, but his face was somewhat soiled and that made it worse.

When the general guffaw had ceased, he was looking malevolently at the fire.

"No, dam 'im-m, I got a catrid-d-dge up 't'house I made f' him, especial: four drachms a powder 'n' a chunk a lead, three-cornered piece. I car' it along when I go his way. Dam 'im-m, he ever pull a gun on me-ee." He had a way of bearing down hard on the end of a word.

Kellup began to think he shouldn't care to go hunting with this fellow, not after small game, anyhow.

The boy's strident voice broke in:

"You git any rabbits Sunday, Richie?"

A smallish man, low down on a butter keg, took out his pipe and reached forward to spit on the fire. His face was smooth, except for wrinkles and little gray side-tabs, and the lines about the mouth fell into a wheedling smile. His smile would agree with you whether or no, but you couldn't tell so much about his eyes. They were blue and watery. You couldn't see in very far. He wore an old corduroy cap tied up on top and a short coat well wrinkled and molded to his form.

"No. A got no rebbits. A seen two fine ones a-sittin' on 'is nes'es, but one joumped. A popped at the other. No—a—ah missed he."

The last part of the sentence came back over his shoulder on his way out to see who was calling "Richie Moore!"

"Say, Earnie, y' know what Moore does if a rabbit's goin' by on the jump? Whistles 'n' hollers 'Zip!'"

The look of contempt on the dark fellow's face tickled the boy.

"Say, Earnie, Earnie, y' know what he done the other Sunday? He never started nothin', y' know, an' bynebye he heard a h'ound d'own the swamp, an' he sneaked through the brush 'n' shot a rabbit ahead a that dog. 'N' he kne-e-w them McCarron boys was in the swamp all the time."

By this time Jake had put the jugs and things into a yellow sleigh and was taking the buffalo from the horse. Kellup saw by the proud, smiling expression that he was expected to say something about that colt, so he got out in the snow with his hands in his pockets and looked wise. He could just make out in the gloom she was iron-gray, about nine hundred and fifty, and light-footed as a doe, with the snow all pawed out from under, where she was starting and backing and getting her haunches down in all sorts of graceful, reckless ways. He knew the sign of a horse judge was to find fault, so he looked hard. He looked in vain, though. He caught a glimpse that seemed as if the nose was rather aquiline in profile, slightly Roman, but she wouldn't keep it still long enough, so he said the harness was altogether too large. He said the collar was at least two sizes too big. Jake allowed it was an old harness and leaned on the reins, while she turned round with her neck arched in tight, sawing hard on the bit. They bumped over the tracks again and struck the road leading toward the woods, and then the snow commenced to fly in their faces, and the bells on the shafts got to clanging higher and higher till at last they sprang to the tune of "The Ride from Ghent to Aix." After a time she settled down and shook out her head. Kellup was glad he had said nothing about her nose, she kept poking it so rapidly into the future. The bells had settled down to a murmuring clamor—except at intervals. The faintest chirrup from Jake seemed to start them up like frightened things. After a time:

"What you sighing about, Kellup?"

The fact was he was just seeing himself standing on a rock and wondering if a dog should come driving a rabbit along, whether or not he should shoot, or, for that matter, whether any man would shoot—most any man fresh from town, used to the business morals of city life; and as for [saying "Zip!"] to a rabbit on the jump, it struck him that was an excellent way to stop a rabbit and put him in a proper position to be shot. But all that was gone now—brushed away. He realized there were unwritten volumes, whole volumes, on the ethics of rabbit shooting, outside the statute books. He knew his poor skill at best was no match for a decent bag, and now he must be deprived of these small aids. So he sighed:

"What you sighing for, Kellup?"

"Oh, just thinking. Jake, who's Captain Doone?"

"He's an old rebel lives on a farm down below," and Jake raised the mittened fist with the high rein indefinitely toward the valley. Kellup could see white acres and black forest and glittering stars, that was all.

"Some say he killed a nigger once on a whaler, but anyhow he shot Bass Bush last winter and got through the law some way, and now he keeps a rifle loaded in the

house—sure death to any hunter he catches on the place. Whoa!"

The mare had swung round a curve off the road and through the gateway, and stood steaming in the barnyard. The house was all dark except the window near the door with a big stone step. It was all silent except for a hound inside whining and jodeling.

"Yes," said Jake, getting out a little stiff, "Bass was drunk, I suppose."

He looked gigantic in his coonskin coat. The mare heaved a big sigh, and gave her nose readily to be led off to the barn. Kellup turned smiling toward the door to get acquainted with the dog.

When Jake came in, Kellup was telling his most interesting yarn in his most engaging way, but the old lady paid little heed and kept about her work with a querulous murmuring. Over 70 she was, with a wrinkle for every year, but nice wrinkles, more tracks of smiles than scowls. She was bent, too, but got about well and said she didn't miss her teeth—she could "gum it like a cow." But Kellup couldn't coax a flash of interest. She was looking back all the time, away across the years.

Jake looked up from the sink in the corner, with his hair brushed out wet across his forehead: "What do you think of him, Caleb?"

Kellup was just then trying to measure the dog's ears and having a hard time of it. Finally he announced: "Twenty-two inches," but he said he was sorry about the dog, he had grown so big. He bought that dog for a beagle puppy. After supper Jake said: "Well, if you're going to see we don't oversleep, mother, I better fix that clock. It's twenty-five minutes too fast. We'll leave it stopped awhile." It was quite a large clock with a faded print of Washington inside the lower glass. Then he pulled his chair over near the stove, where he could reach the hound's ears.

"Yes, it does well enough for her. She looks out an' sets it by the sun when I'm away; don't y', mother?"

"Yes, yes. Ain't it most time to set it goin' again?"

"Then, there she goes. Y' see that clock's her only company. She's heard it tickin', tickin' forty year or so. Well, no wonder. Old clock's made er wood, too, wooden wheels 'n' all. No, mother, it ain't time for twenty minutes yet."

When Jake came up from the cellar with the cider a little later he found it going again. JEFFERSON SCRIBE.

MY CHANCE ACQUAINTANCE.

WHEW, but it was hot. No air was stirring; the sun was just glaring down; not a cloud in sight. My venerable friend said "It were too hot to go out." I felt too limp to dispute him, so we opened the doors of the boat house fore and aft, gave the floor a thorough wetting, filled our pipes, hung up our hats and unbuttoned our shirt collars and gracefully gave ourselves up to smoke and lolling.

In a short time I called the attention of the old gentleman to a large turtle shell which was nailed up to the side of the boat house.

"Yes," he said, "he was a big 'un and I set great store by him at one time. He made it his home about the boat house for three or four year, and got to be quite tame and a good deal of a pet. We used to feed him with dead shiners and the cleanings of fish. The old feller would come out of his hiding place if you'd thump smartly on a boat pail. We all knowed him; used to call him Tim; had lots of fun feeding him. He'd snap a shiner off the end of a stick as quick as a hungry dog would a piece of meat, and stick to it so as you could at times lift him clean out of the water. A year ago last spring I were a mending my boat, had some iron rivets 'bout an inch and a half long lying around, and had a fire to melt some pitch with. There were some boys down here from the village skylarkin' round boy like. One of the young rascals, afore I knowed what he was up to, bet one of them ere rivets red hot and dropped it into old Tim's mouth. It burned a hole clean through him, and I cal'late it tasted about as the whisky we used to git here did, for I'll be durned if he didn't turn round and swallow it agin."

"Along toward fall I noticed the old feller didn't show himself as often as usual; sometimes he'd stop in his hole two or three days. He didn't move quite so lively; he weren't so pert, wouldn't eat well; acted like a feller with the grip. One morning I found him wrong side up. I pulled him out carefully but he were a goner; dead as a two year old robin's nest."

"I felt sorry like; my darter wanted to go into half mourning, but we finally decided to save as much of him as possible and give the rest a decent burial. I opened him very carefully and inside found what ailed him. That ere little bit of an iron rivet had growed till it were as big as a hen's egg. The chunk weighed more'n two pounds. It had disarranged and disrupted his entire innards; busted him wide open, in fact."

I quietly asked, "Have you that chunk now? I would like to send it to the FOREST AND STREAM."

"No; I let one of them ere fish commissioners fellers have it for an anchor to a net buoy; aint seen it since."

A. W.

GRAND RAPIDS, MICH.

Blooming Grove Park Association.

THE recently issued statement of this association shows the condition of the club to be a very satisfactory one. Many improvements have been made during the last year. The finances of the club are in good shape and constantly getting better. During the past year the club has reduced its floating indebtedness to \$8,632, and besides paying all the running expenses of the club, have spent \$5,457.31 in improvements. This does not include the bowling alley, which was paid for by voluntary subscriptions.

The various tournaments held during the year have more than paid for themselves, the receipts exceeding the expenditures by \$954.39. During the year 160,000 trout fry were deposited in Blooming Grove River and 165,700 in the Shohola River. There are now on hand in the retaining ponds 17,000 brook trout fry, 7,500 yearlings, 2,000 two-year-old and over, 8,000 landlocked salmon fry, 100 two-year-old lake trout.

The fishing record, according to the score books, showed 3,961 trout taken, 2,323 bass taken. The game account shows five bucks killed in the Park, 140 ruffed grouse, 61 woodcock and 24 ducks.

Various new buildings have been erected and some new land acquired. The membership of the club is 218.

NOTWITHSTANDING the fact that inauguration and political news has been crowding the columns of the New York daily papers for the past week, they have yet devoted columns of space to an alleged bear which was supposed to be ravaging the cheerful hamlet of Glen Cove, L. I. The story was a manifest "fake," but they printed it all the same.

Natural History.

SIERRA BIRD NOTES.

In looking over my ornithological notes, taken during the past year, I found a few which may be of some general interest, and present them for what they are worth.

American Goldfinch (*Spinus tristis*).—In a residence of 15 years in this portion of the foothills of the Sierra Nevada Mountains I never saw this bird until May, 1892. On the 7th of that month, and for every succeeding day, up to the 14th, I observed it at a point above Auburn having an elevation of about 1,500ft. It was seen every day in small numbers at the same spot, an open hillside, facing to the west.

It was seen in company with a flock of Arkansas goldfinches (*Spinus psaltria*), and mountain bluebirds (*Sialia arctica*). On one occasion I counted eight individuals of the species, the largest number seen at any one time. I believe this is the first time this bird has ever been reported from this locality.

Mockingbird (*Mimus polyglottos*).—This bird, like the last, has never before been reported from this locality. I believe it has never been observed at a nearer point than Marysville.

On Nov. 14 I watched a pair for some time in a large live oak tree. The male was singing all the time while I was watching, but was very wary. Its companion was less shy and moved about in open sight all the time. For several days in succession I heard and saw the birds in the same locality. It was in the hospital grounds, just in the edge of town, and the inmates of that institution informed me that the same species of bird had sung in that tree all the previous summer.

American Dipper, Water Ousel (*Cinclus mexicanus*).—Every winter since I have lived in this locality I have observed a few individuals of this species wintering on Auburn Ravine below the town. I have noted their arrival and departure closely for the past ten years and find that they arrive about the first of November and leave about the first part of February.

During the ten years that I have made notes concerning them they never appeared earlier than Oct. 26, nor later than Nov. 5. The departure seems to depend more upon the state of the season. If the season has been one of light snowfall in the mountains they may leave by Jan. 15. If heavy snows have fallen and the warm weather is a little delayed I have seen them as late as Feb. 20. These extremes, however, are rare and their average is about as first stated.

The dipper is one of the most interesting of all our California birds and the one that I take the greatest pleasure in observing. It has been many times written about, but yet I am going to venture a few observations, even at the risk of beating threshed straw.

I have written about the bird before in the columns of FOREST AND STREAM, noting some of its doings in its summer home in the high Sierra. But here it is a different bird entirely. Its clear and joyous song is silenced; it is not so shy, its time seems more busily occupied in procuring a living.

The highway runs down Auburn Ravine, close by the side of the stream, for some two miles. For this distance the road is at no point further than 20yds. from the center of the stream, and most of the way, built close beside it, are restraining rock walls. This gives an excellent opportunity of watching the birds from a carriage, of which they seem less afraid than of a pedestrian. On numberless occasions I have stopped my carriage and watched one of them sitting on a rock or gathering food, when so close that I could have touched it with the tip of my whip. On cool mornings they seem loath to move, and sit quietly with their heads drawn down between their shoulders and their recurved bills pointing upward at an angle of 65°. When aroused they fly swiftly away, following the center of the stream, never "cutting corners," but keeping at a distance of about 2 to 4ft. above the surface of the water. On taking flight they almost invariably give utterance to a shrill staccato cry of *chit-chit, chit-chit-chit*. This is sometimes varied by the continuous utterance of the same sounds, thus: *Chit-chit-chit-chit-chit-chit-chit!* in the same staccato manner, reminding one somewhat of the rattling cry of the halcyon. On alighting, which they nearly always do on a rock in mid-stream, they turn quickly around, facing the source of their disturbance, and perform a series of dips or courtesies. This gives them a clownish appearance, especially as they usually turn their bodies half round from side to side at every dip. Another thing that adds to their comical appearance is the fact that they have white eyelids and wink frequently and very slowly. About every second dip they wink, when their eyes look like large white beads stuck in their sooty brown heads. These things, taken in conjunction with their fat, squab bodies, their apparently up-tilted or snub-nosed beaks and short upturned tails, make them the feathered clowns of our Sierra streams.

They roost on midstream rocks. I have seen them on moonlight nights sitting on a rock within 10ft. of the highway; and had I not been looking narrowly would not have seen them, so closely do their tints blend with those of the rock they are upon. Only their bright eyes, glinting in the moonlight, or their bodies, silhouetted against the dashing spray, betrayed their presence. I have stopped and disturbed them when sitting thus in the night, upon which they flew quickly and noiselessly away to a new resting place. I have seen them sitting thus on some of

our coldest nights, with the thermometer 5 or 6° below freezing point, and the spray dashing over them continuously. Truly they love the vicinity of the rushing waters. I never saw them in companionship with others of their kind in the winter season. Each bird seems to have a claim of his own "staked off," and lives solitary and alone until pairing time arrives.

If the American dipper is clownish on the land, it is the embodiment of grace and action in the water. I have watched it while it was busily employed in earning its daily bread, and I fear that other more important matters were neglected in consequence.

I have observed the bird plunge into the boiling, torrential stream, after heavy rains, at a time when the most powerful horse and rider would have been instantly swept away in the uncontrollable current, and when the water was thick with the red soil washed down from the hillsides, and have seen it emerge some yards further up stream, as easily and lightly as the spark arises from the evening camp-fire. The bird flies underneath the water as easily as in the air, propelling itself with wingbeats in the same manner. I have watched it when almost directly beneath me, and when the water was clear, and I could see every motion.

When it enters the water a thin pellicle of air adheres to the bird, giving it the appearance of frosted silver, and giving it a beautiful appearance in clear water. When it emerges it never has to shake its head or make any other motion to rid itself of water, for none adheres to it. It just rises like a bubble of air, and is on the wing again, or sits lightly, like a duck, on the surface of the stream. I never saw it enter sluggish water. It seems to always seek its food where the current is swift—the swifter the better, apparently.

It enters the water in different ways. It will sometimes walk deliberately in from the shore, clinging to the bottom with its feet until totally submerged, and re-appear in the same manner or on the wing as may happen. It

REINDEER AT UNALASKA.

Photo by Mr. N. B. Miller.

will also plunge recklessly in while in full flight, and emerge many yards away or close to the same spot, as its fancy dictates. Sometimes while quietly swimming on the surface it will dive like a duck, but much more gracefully. And again, when on a rock it will slide down to the water, and let one wing down into the current, and then instantly disappear, generally coming up at the same point. This I have seen it do fifteen times in the same spot, by actual count. It will sometimes seek its food along the bank of the stream, turning over small stones in its search. I have observed this only twice, and then it was done by the same individual. At least I thought it was the same, as it was near the same spot, and within a period of two or three days that the bird was seen doing this. Previous to this observation, I had always supposed the dipper sought its food invariably in the water. But in all ways and at all times, the bird lover will be delighted in watching the actions of this sprightly, dapper little chap. And for the benefit of those, who, from circumstances, may never have the pleasure of thus observing him, these lines are penned.

AREFAR.

AUBURN, Cal., Feb. 17.

SOMETHING ABOUT WILD ANIMALS.

A FEW years ago, when the gold excitement was at its height in the Granite Creek section, and miners were scouring the country in every direction in search of new deposits, it happened that a group of tents sprung up in one night on the banks of the Tulameen River.

On the following morning a band of twelve deer, headed by a magnificent buck, appeared on the summit of the slope above the river and stood looking down with astonishment on the white tents of the miners. The place was evidently an old ford where the deer passed from one feeding ground to another. For a few moments they stood undecided how to act. Then the does turned and fled, but the buck threw up his head and with firm step strode down the slope, through the very center of the group of tents, into the river, and was half way across before the astonished miners took in hesitation. Then commenced a shower of lead from rifles, shotguns and revolvers; and the miner who told me the story said he stood on the bank and just prayed for the safety of that buck. And his wish was granted, for the noble beast reached the opposite shore, bounded up the bank and out of reach of the leaden shower, untouched.

Once while traveling along a road which led for several miles through a thick woods, a couple of deer came out of the timber about 100yds. ahead, stood for a moment and then commenced walking toward me. The road was

knee deep with mud, the only clear place being the narrow trail on the side on which we were walking. Now! I did not want to unnecessarily disturb the deer, neither did I care to wade through the mud to the opposite side, so I kept on, wondering what would be the result. When within 50yds. of me the hindmost deer jumped the ditch by the roadside and moved off a few yards into the brush and stood, but the other continued its course toward me, its great liquid eyes and gentle expression seeming to say, "I don't believe you'll hurt me." I kept as near to the mud as I could, giving the deer nearly all the trail, but when we passed each other my coat almost brushed the animal's side. I did not stop, but looking back over my shoulder I saw the deer turn, and, joined by its companion, follow me till a bend in the road lost them to view. I have had not a little confidence placed in me by people with whom I associated, but I look back to the actions of that wild animal as one of the greatest compliments ever paid me.

A mountain goat that I once kept in confinement was about as cunning as the average street Arab, and had he lived to maturity and kept on acquiring knowledge, the chances are I would have had to move out and give him the ranch.

He usually followed me on short excursions into the woods, and generally kept right at my heels; but on one occasion he lagged behind, and although I called him several times, he paid no heed. I finally walked back to see what he was interested in, and found him busy feeding on some moss that grew at the roots of a fir tree; so I left him and continued my tramp. But after I had got away a short distance the thought occurred to me to hide, and see how he would act; so I slipped into a hollow stump close by the trail and waited the result. Presently I heard him coming bounding along the trail, and after he had passed I stuck out my head to watch him. When he got about twenty feet beyond me, he stopped and commenced

looking around, and the comical expression of his face as he scanned every object that bore any resemblance to a human being caused me to burst out laughing, when he turned and saw me. Then he commenced to sulk and would not go any further, so I had to return home.

The next day he followed me, as usual, but in the midst of some thick brush and down timber I got interested in a bird that I was following up, and forgot the goat, and when I came to look for him he was gone. Walking back to where I last saw him, I called, but no "Billy" came in sight. Then I commenced a diligent search, and presently I caught sight of something white beneath a brush heap. Stooping down and looking in, I saw the little brute curled up in a heap, and not a move could I get out of him. Reaching in, I caught him by the leg and pulled him out, and gave him a good cuffing on both sides of his head. But he did not mind it a

bit, and seemed to enjoy the joke immensely, capering about in his usual manner all the way home, as if he would say, "You hid from me yesterday and I hid from you to-day, and honors are even."

JOHN FANNIN.

VICTORIA, British Columbia.

The Black-Billed Cuckoo.

CHEPACHET, R. I., Feb. 25.—*Editor Forest and Stream:* Your correspondent, Von Iffland, who wrote in issue of Feb. 23, may be interested in the following quotation, from Stearns' and Coues' "New England Bird Life," on the black-billed cuckoo. The quotation will apply equally well to the yellow-billed cuckoo, a rarer visitor to New England and Canada than the black-billed: "Nor is there any reason why the cuckoo should hide its head; it is an orderly member of a disreputable family, rarely practicing the vice which disgraces so many of its relatives, only lapsing occasionally into what the evolutionists call 'atavism,' when it drops an egg in some other bird's nest by sheer force of hereditary habit. The cuckoo might reasonably apologize for such misdemeanor by urging a weight of family cares which few birds have to bear; being unable through some defect of its eggging apparatus, to lay in rapid succession, and so incubate and raise a brood at one effort. The eggs follow at such long intervals, that some hatch before the rest are dropped; and what with gaping throats to be satisfied, eggs to be covered and more to come, the birds have a hard time of it. The wonder is not that they are sometimes remiss or amiss in their duties, but that they do not seek a watery grave in the nearest kingfisher's premises."

W. A. SPRAGUE.

A Hawk Invades a Locomotive Cab.

LAKEPORT, N. H., Feb. 26.—A little incident happened during the big storm we have just had that perhaps you may think worth publishing. As we were standing near Meredith station trying hard to keep the road open for business with the snow blowing as hard as I ever saw it, a small hawk with an English sparrow in its claws flew into the cab window, striking me and falling to the foot board. The sparrow was still alive. I started to catch it, but it flew away about four rods to a snow drift, where it commenced striking the sparrow on the head with its bill. The hawk was about the size of a bluejay, of the same color, with black spots. Was it a shrike or butcher bird?—GEO. B. THYNG. [It was very likely a sparrow hawk, which has a bluish back. Still it may have been a shrike, which, however, is distinctly gray—not blue.]

NATIONAL ZOOLOGICAL PARK.

The condition of the National Zoological Park at Washington, in which so much interest has been taken by our readers, seems far from satisfactory. This is due largely to the entirely inadequate appropriations granted by Congress. Of the popularity of the Park as a resort there is no doubt. The public interest in it has steadily increased from the time of its establishment, and even in its present unfinished state the number of visitors during a single day, in pleasant weather, sometimes reaches from five to ten thousand.

The area of the Park is about 167 acres, and before it can become a resort for the people it will be necessary to fence this whole territory, to make walks and drive-ways through it; fences and buildings must be erected to shelter the animals, food provided and men hired to care for them. Of course, after the initial expenses for fences, roadways, buildings and other permanent improvements have been paid, they will not recur and the Park can be kept in good order at a moderate annual outlay.

When Congress decided to establish this Zoological Park it assumed certain obligations to provide for its proper care and maintenance, and it is perfectly evident that since the Park is for living wild animals some suitable buildings for their restraint and protection must be constructed. Such buildings cannot be had without money.

In his report for the year ending June 30, 1891, the Secretary of the Smithsonian Institution asked for the appropriation of \$101,350, of which two-thirds were for buildings and the improvement of the grounds, while the remaining third, or about \$35,000, was for the care and food of living animals, the policing of the Park, and for the safety of the public. This appropriation of \$35,000 was reduced by Congress about one-half. The result of this was that the animals in the Park were insufficiently fed, improperly cared for by an overworked force of keepers, there was no money to expend on collections, and consequently they were not increased. As no sufficient appropriations were made for the care of the grounds, recently made improvements were greatly injured by rainstorms and freshets. New roads and gutters were cut out, new slopes of earth washed away, and recently planted trees and brush torn up by the roots. The bear pits were injured by the precipitation into them of tons of earth and rock. Through the lack of a sufficient number of watchmen, valuable animals were injured, and in one case lost.

In 1892 provision somewhat more liberal was made, amounting to \$50,000, a gross sum to be expended in the discretion of the Secretary of the Smithsonian Institution. That this will all be used up and more will be needed is apparent. Nearly \$50,000 will be required for the feeding and care of the animals, and for the pay of the employees. The remainder will be used in completing buildings and inclosures now unfinished, and in the improvement of the water supply and of the roads and slopes.

In any collection of captive animals of this kind, the death rate is high, and it is always found that the rarest and most valuable specimens are those which are most subject to disease. So long as the officials of the Zoological Park are without means to pay for specimens, or even to pay for the transportation of animals which may be presented to them, no progress can be made toward securing for the Park at Washington a representative collection of North American animals. Congress should take a broader view of this subject than it has in the past, and by cutting off a few unnecessary items from such bills as the River and Harbor Improvement bill, they could find abundant means for the improvement and maintenance of the National Zoological Park.

We give below a list of the animals now in the Park:

Animals in the National Zoological Park, Jan. 1, 1893.

MAMMALS.	
Kra monkey.....	(<i>Macacus cynomolgus</i>)..... 1
Macaque monkey.....	(<i>Macacus sp.</i>)..... 3
Diana monkey.....	(<i>Cercopithecus diana</i>)..... 1
Gray caparr.....	(<i>Lagothrix humboldti</i>)..... 1
Douroucouli.....	(<i>Myiophobus trinitatis</i>)..... 1
Squirrel monkey.....	(<i>Chrysotrichus sciureus</i>)..... 1
Apella monkey.....	(<i>Cebus apella</i>)..... 1
Capuchin monkey.....	(<i>Cebus capucinus</i>)..... 3
White-throated sapajou.....	(<i>Cebus hypoleucus</i>)..... 2
Coaita.....	(<i>Ateles paniscus</i>)..... 1
Lion.....	(<i>Felis leo</i>)..... 1
Puma.....	(<i>Felis concolor</i>)..... 2
Ocelot.....	(<i>Felis pardalis</i>)..... 2
American wildcat.....	(<i>Lynx rufus maculatus</i>)..... 1
Ferret.....	(<i>Putorius furo</i>)..... 9
Common skunk.....	(<i>Mephitis mephitis</i>)..... 1
American badger.....	(<i>Taxidea americana</i>)..... 5
Kinkajou.....	(<i>Procyon v. carolinensis</i>)..... 1
Red coatimundi.....	(<i>Nasua narica</i>)..... 1
Gray coatimundi.....	(<i>Nasua narica</i>)..... 1
Cacomistle.....	(<i>Bassariscus astutus</i>)..... 1
Raccoon.....	(<i>Procyon lotor</i>)..... 9
Black bear.....	(<i>Ursus americanus</i>)..... 5
Cinnamon bear.....	(<i>Ursus americanus</i>)..... 4
Grizzly bear.....	(<i>Ursus horribilis</i>)..... 2
Polar bear.....	(<i>Ursus maritimus</i>)..... 2
Gray fox.....	(<i>Vulpes velox</i>)..... 2
Swift fox.....	(<i>Vulpes velox</i>)..... 2
Red fox.....	(<i>Vulpes fulvus</i>)..... 7
Coyote.....	(<i>Canis latrans</i>)..... 4
Black wolf.....	(<i>Canis occidentalis</i>)..... 2
Klaskan wolf.....	(<i>Canis familiaris</i>)..... 2
European hedgehog.....	(<i>Erinaceus europaeus</i>)..... 2
Asiatic elephant.....	(<i>Elephas indicus</i>)..... 2
Collared peccary.....	(<i>Dicotyles tajacu</i>)..... 5
Angora goat.....	(<i>Capra hircus angorensis</i>)..... 2
American bison.....	(<i>Bison americanus</i>)..... 8
Zebu.....	(<i>Bos indicus</i>)..... 2
American elk.....	(<i>Cervus canadensis</i>)..... 2
Virginia deer.....	(<i>Cervus virginianus</i>)..... 2
Mule deer.....	(<i>Cervus macrotis</i>)..... 2
Agouti.....	(<i>Dasyprocta aguti</i>)..... 4
Acouchy.....	(<i>Dasyprocta acouchy</i>)..... 3
Paca.....	(<i>Catagonys paca</i>)..... 1
Capybara.....	(<i>Hydrochoerus capybara</i>)..... 2
American beaver.....	(<i>Castor canadensis</i>)..... 2
Musk-rat.....	(<i>Fiber zibethicus</i>)..... 2
Paririe dog.....	(<i>Cynomys ludovicianus</i>)..... 100
Gray squirrel.....	(<i>Sciurus carolinensis</i>)..... 3
Albino squirrel.....	(<i>Sciurus carolinensis</i>)..... 1
Red squirrel.....	(<i>Sciurus hudsonius</i>)..... 2
Chipmunk.....	(<i>Tamias striatus</i>)..... 2
Striped gopher.....	(<i>Perognathus tridecemlineatus</i>)..... 35
Flying squirrel.....	(<i>Sciuropterus volucella</i>)..... 2
Woodchuck.....	(<i>Arctomys monax</i>)..... 2
American porcupine.....	(<i>Erethizon dorsatus</i>)..... 2
European porcupine.....	(<i>Hystrix cristata</i>)..... 4
White rabbit.....	(<i>Lepus cuniculus</i>)..... 20
Opossum.....	(<i>Didelphys virginianus</i>)..... 4

BIRDS.

Golden eagle.....	(<i>Aquila chrysaetos</i>)..... 1
Bald eagle.....	(<i>Haliaeetus leucocephalus</i>)..... 1
Sparrow hawk.....	(<i>Falco sparverius</i>)..... 1
Red-tailed hawk.....	(<i>Buteo borealis</i>)..... 3
Marsh hawk.....	(<i>Circus hudsonius</i>)..... 1
Snowy owl.....	(<i>Nyctea nivea</i>)..... 1
Great horned owl.....	(<i>Bubo virginianus</i>)..... 6

Barred owl.....	(<i>Syrnium nebulosum</i>)..... 1
Yellow and blue macaw.....	(<i>Ara ararauna</i>)..... 1
Red and blue macaw.....	(<i>Ara chloroptera</i>)..... 2
Red, yellow and blue macaw.....	(<i>Ara macao</i>)..... 1
Sulphur-crested cockatoo.....	(<i>Cacatua galerita</i>)..... 1
Green parrot.....	(<i>Chrysotis sp.</i>)..... 6
Mockingbird.....	(<i>Mimus polyglottus</i>)..... 2
Common crow.....	(<i>Corvus americanus</i>)..... 7
American magpie.....	(<i>Pica pica hudsonica</i>)..... 2
Clarke's nutcracker.....	(<i>Picicorvus columbianus</i>)..... 3
Chachalaca.....	(<i>Ortalis vetula macalli</i>)..... 1
Curassow.....	(<i>Craz alector</i>)..... 5
Pea fowl.....	(<i>Favo cristatus</i>)..... 10
Bob white.....	(<i>Colinus virginianus</i>)..... 1
California quail.....	(<i>Callipepla californica</i>)..... 1
Cariama.....	(<i>Cariama cristata</i>)..... 1
Sandhill crane.....	(<i>Grus canadensis</i>)..... 2
Black-crowned night heron.....	(<i>Nycticorax nycticorax</i>)..... 1
Scarlet ibis.....	(<i>Guara rubra</i>)..... 1
Canada goose.....	(<i>Branta canadensis</i>)..... 4
Swan.....	(<i>Cygnus gibbus</i>)..... 4
Herring gull.....	(<i>Larus argentatus</i>)..... 1

REPTILES AND BATRACHIANS.

Alligator.....	(<i>Alligator mississippiensis</i>)..... 12
Snapping turtle.....	(<i>Chelydra serpentina</i>)..... 2
Mud turtle.....	(<i>Chrysemys sp.</i>)..... 3
"Gila monster".....	(<i>Heloderma suspectum</i>)..... 1
"Chuck molly".....	(<i>Saurornatus ater</i>)..... 3
Horned toad.....	(<i>Rhinoceros domaglossi</i>)..... 3
Tiger rattlesnake.....	(<i>Crotalus tigris</i>)..... 1
Diamond rattlesnake.....	(<i>Crotalus adamanteus</i>)..... 3
Confront rattlesnake.....	(<i>Crotalus confluentis</i>)..... 1
Ground rattlesnake.....	(<i>Caudisoma miliaris</i>)..... 1
Water moccasin.....	(<i>Aniastrodion piscivorus</i>)..... 1
Copehead.....	(<i>Aciastrodion concolor</i>)..... 2
Boa.....	(<i>Boa constrictor</i>)..... 2
Anacanda.....	(<i>Eunectes murinus</i>)..... 1
King snake.....	(<i>Ophibolus getulus</i>)..... 2
Pine snake.....	(<i>Ptyophis sayi</i>)..... 1
Black snake.....	(<i>Bascanion constrictor</i>)..... 2
Garter snake.....	(<i>Eutania sirtalis</i>)..... 2
Water snake.....	(<i>Apodionotus sphenon</i>)..... 10
Hog-nosed snake.....	(<i>Heterodon platyrhinus</i>)..... 4
South American frogs and toads.....	14

Antelopes' Horns.

CAN any of the readers of FOREST AND STREAM tell me if the antelope doe sheds its horns, and at what time of the year? Also, has any one any buck antelope over four years old in captivity, and at what time do they shed off the old horns? A SUBSCRIBER.

[The old buck antelopes shed their horns in the late fall or early winter. We have had the horn come off in our hand as we took hold of the head to cut a buck's throat. We should like to have an answer to the question about the horned does.]

Game Bag and Gun.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, Ill., March 4.—Mr. C. E. Willard, representative of the Colts gun, is back from an extended trip through the South. In this it was his intention to mix a little pleasure with his business, but as usual his business had a bit the best of it. I have told how Mr. Willard weakened before the dangers of the raging deep, and so failed to meet me at Stephenson's, across Galveston Bay. He tells me that at Houston he got an afternoon out after snipe and bagged 113. Near San Antonio he had a little quail shooting, and out of Montgomery he took a little dove hunt, in which he killed 263 during the day. These figures will seem large to the Northern shooter, but the Northern shooter knows next to nothing about really good shooting, if he stays in the North.

I imagine that Mr. Willard will kick himself swiftly and impulsively, sharing an emotion which I certainly feel myself on reading the following letter from Billy Griggs, with whom I was shooting at Stephenson's. I have already explained that during my stay we had no canvasback shooting, the weather being unsuitable. When I left the boys besought me to wait a few days longer, as the weather was on the point of change, and as a good day meant a sight such as I had never seen before among the wildfowl. Business, the relentless and heartless god which rules us and makes us miserable, took me away, the most unwilling slave that ever turned away from what he knew was a good thing. This letter from Billy, who has now finished his winter's shooting, and come back to his home in Browning, on the Illinois River, will show how good the thing in question was. It was the chance of a lifetime. The letter follows:

BROWNING, Ill., March 2.—Friend Hough: A few lines to you. I wish you didn't stay a few days longer with me. The day after you left Dick Barrow went in his box at the middle of the lake, and we had to follow him, of course. We took over 400 decoys and put around our boat. It was foggy as when you left until about 9 and no wind, so John and I took the box. Killed sixty-seven that day. The next day it was still foggy and Bud went in with me. I wish you had been with us. We took the box at 7 and at 10 we had 160 canvas on the water. The live birds decoyed to the dead ones and we had to stop and let John shoot. We were in all that day 11, and killed that week 567, all canvas. Our box is 6 ft. long and 2 ft. wide, so you see we had a little room to rent, and we spoke of you all day at times. Well, did you get any good pictures? If so, I would like to have two or three of them. I got two copies of the FOREST AND STREAM. Send some more if there is any Texas in them. I was out again this afternoon and killed a mess of ducks. There are a few here now. There plenty of water here and we ought to have lots of birds this spring. W. H. GRIGGS.

The above embodies one of the lost opportunities of my life.

It may be noticed how reluctant Billy Griggs seems to have been about going out into the open-water blind. This simply shows him to be what I have spoken of him as being, a man singularly considerate of game, though anxious as a market-hunter to kill as much as possible. It was against the wish of Griggs and his partners that any box was put down in the open water. They knew that the birds would be much less frightened if shot at only from the shore blinds. No shooting was done at the "puddle ducks" for fear of disturbing the canvas, and the latter were not worked except on stormy days, and even then only from the shore blinds. This was wisdom. The Barrow outfit was not equal to such a pitch of thought. Hence the open water day. This, I presume, closed their season.

Spring Shooting.

The more I learn of the game question all over the country, and the more I think over the facts which are presented to view by a little research, the more clear it seems

to me that spring shooting is something that ought not to be done. The following letter on this point is from Yorgey, keeper of the Diana Club, on the great Horicon Marsh, a market-hunter for years, and a life-long resident of the territory of which he speaks. He says:

HORICON, Wis., Feb. 28.—Have just read your article on "Spring Shooting" and "Horicon Marsh," in FOREST AND STREAM of Feb. 23, and wish to say that although spring shooting was allowed by law and that considerable of it was done on the edges of the marsh, the Diana preserve was patrolled and shooting effectually stopped thereon. The birds seemed to understand that the preserve was a safe place for them, and it was covered by thousands of ducks that stayed here to feed, that would have been driven off the marsh entirely had shooting been allowed. Have known this marsh and hunted on it for fifteen years and never saw more birds on it the last of May than there were there the last of last May. Any one that could have seen the birds here last spring pairing off and settling down for the breeding season would never want to see spring shooting again.

J. M. YORGEY.

Give the birds a chance. Fair play is a jewel. Prize fighters admit that. How about gentlemen? Who can read a letter like that and not do a little thinking?

From All Over.

One of the pleasantest things about newspaper work is the fact that one makes many friends—and enemies—all over the country, with whom only chance may bring him face to face, to be sure, but whom he comes to know by letter. Letters from these unknown well-knowns come from all over, and once in a while one of the well-knowns comes in person. This week enter to me Mr. Albert Bruning, of the Players' Club, New York, now here managing a successful dramatic organization. After the first few moments of preliminary talk it was pleasure to remember Mr. Bruning all at once as the gentleman who went bass fishing out at San Antonio over a year ago, who fell out of his boat in the swift little Santove River, and who wrote and told FOREST AND STREAM about it. How much nicer that than to meet a man to whose father, for instance, your brother had sold a yard of calico in days gone by. Commerce is not fairly in it with newspaper work. As this newspaper work naturally goes on in the house next door in the row to the dramatic house, it may be known that this well-known and I had a good talk together. The next man I meet will be from Australia, and that we should know each other will be natural. But of what paper in the world would these things be true except FOREST AND STREAM and its unique and well-knit brotherhood.

Mr. Ezra E. Howard, of Edgar, Neb., not long ago wrote me inquiring as to some taxidermy, saying he had some white goat heads. My inquiry as to the goats he answers as follows, and I think many big game hunters will read his letter with interest:

"My reason for writing you was that I have had two goat heads about spoiled by men who did not know anything about the appearance of the animal. The mounts are veritable scare-crows, and so I wanted to avoid getting the others set up by any but a good workman."

"I got my goats in the Coast Range about 150 miles northwest of Vancouver, B. C., where I went with a party two years ago and again this last fall. That is a great place for the goats, the only drawback being the almost inaccessible character of the country, which is very abrupt and mountainous. The timber and underbrush is almost impassable. We had to pack back into the mountains from five to eight miles, and carry provisions enough to last several days, as it took one day to go in and one day to come out; and this with a blanket apiece and our guns and ammunition made a good load."

"There are a good many bear in there, and also lots of deer on the islands. Two years ago we got all the goats we wanted, and three bears with deer, etc. This season we only killed a few goats for meat, as it was too early for the pelts to be good enough to bring home, though we saw plenty of them and they were quite tame."

"My brother found some goats a year ago in the Mt. Baker country in Washington, and brought out a fine head or two. He reported quite a number in that locality and very easily approached."

"The fishing is also good in all that country for both trout and salt-water fish. If at any time any of your friends want to take a trip to that country, or you want to go yourself, let me know and I will give you all the pointers that I can, and will esteem it a privilege to do so, as I look upon all FOREST AND STREAM readers as belonging to the brotherhood of true sportsmen and not to the game butchers. Yours truly, EZRA E. HOWARD."

Gumbo File and Creole Coffee.

At Opelousas it became necessary to do something to restore the Chief's waning appetite, which no longer was equal to more than three meals a day. He was wasted away until but a shadow of his former self. At times he would sit for hours lost in thought. In the field he always yielded precedence to the man who would walk up and take the shot over the point, and intimated that he would prefer having the bird flushed in such manner that it would fly over his way and give him a shot without necessitating his walking up to the dog. At all the fences, on the top of which we sometimes paused to rest a moment, he evinced a serious disposition to sit and argue on almost any question for almost any length of time, meantime letting the birds take care of themselves. In short, he began to manifest a repose of manner which out-Southerned the most Southern Southerner as ever was, and caused even our friends to the climate born to look upon him with apprehension as one not long for this world. Evidently something must be done to change the Chief's idea of a bachelor's vacation, or the most serious results might be expected. Fortunately he himself one evening furnished the solution of the problem.

"Old man," said he, after a long period of meditation in which I had watched him with some solicitude, "there's something I have just finished thinking of. I have been too tired to think of it all at once, but I began thinking of this some time ago. What's the use of going on a vacation if you've got to think of anything all at once? Well, you know I used to live here in Opelousas, a few years ago—wish I never'd left it. Now, you see, when I was down here, there used to be a nigger woman, just 'round the corner here, name of Millie, and she could make a cup of coffee that'd make your hair curl tight to your head. I thought maybe you'd like to walk around there some time."

So long a speech wearied the Chief. He had a relapse and lay down.

How far is it? I asked.

"Oh-er-ah-h-h 'bout a block."

"Do you think, pardner," I asked with trembling voice,

"that you could stand the exertion of walking around that far now?"
 "You in a hurry?"
 "Yes."
 "Do you insist on it?"
 "I insist. The coffee will do you good, if you can get to it."
 "Say?" said he.
 "Well?" said I.
 "Why can't you go around there and bring me back a cupful with you? No use of two fellows both getting all tired out on the same vacation. What's a vacation for?"
 "You forget, sir," said I with some dignity, "that I have not as yet been introduced to the lady."
 "That's so," said he. "Well, I reckon I'll have to take you around and introduce you."
 Millie's house we found to be low, white, green-shuttered, neat and clean, like many other houses on the narrow little side street down which we turned. Millie herself was tall, straight, turbaned, not uncomely and respectful after the enjoyable way of the Southern negro, male or female. She may have been a widow, a married woman, a divorcee or a spinster, although into her social status we did not inquire, short of a jest or two when she declared she found it "mo' inderpentah" living with no man around to bother her. But whatever her social classification, her claim in one degree was indisput-

able. She was a cook from 'way, 'way back yonder. Millie greeted the Chief as a long lost friend, and he having made known our wish we sat out on the tiny gallery, in the dusk of the early evening, while she busied herself about the fireplace. All the cookery on that street, and I dare say much of that of the entire town, is done at the open fireplace. And this is how Millie made the Creole coffee.
 In the first place she took down an iron kettle, be-spouted and black, which she swung on the crane, and at length had boiling over the fire. Then she placed on the brick hearth an iron saucepan into which she poured an inch or so of boiling water, and kept it hot. Near by, and on the hearth also, for she did all her cooking at the level of the floor, she had put the Creole coffee-pot, a tall, narrow pot of pottery (they say copper is better) with a deep, narrow cup, which, fitted with a shoulder at the top, projected into the pot proper by about a third of the latter's length. The bottom of this interior cup was perforated. The whole coffee-pot, after the insertion of this inner receptacle, closed with a lid, like an ordinary coffee-pot. Besides these utensils, and in front of the fire also, Millie placed a fourth vessel, a tall black tin box, with close-fitting lid, which she gave us to understand contained the ground coffee.
 "Yo' kain' mek no good *café*," said she, "thout yo' got good *café* to mek it wif. Thissheh *café* cos' me t'ree pou'n's fo' a dollah. Then, yo' has teh pah'ch the *café* be'hes mighty kyehful. They's a heap in th' pah'chin', befo' yo' goin' mek good *café*. Yo' kain' dar' buh'n a single beh'y; all mus' be jus' so, so w'en yo' goin' grine et, thissheh *café* goin' be all er light brown chock'late colah. Yo' has teh grine et purty fine, so's the watah ain' goin' to soak froo too quack. Yo' tek'n' smell thissheh *café*."
 She offered us the coffee box. It was full of finely ground coffee, not of a dark brown or black, but lightish or chocolate brown color. The aroma was delicious. I suspect some trade secret unrevealed, but this was all Millie told me, and others must guess as we did, at what makes the real difference between this coffee and the suspicious mixture of the North.
 Millie now nearly filled the inner receptacle of the coffee pot with this ground essence of Elysium, and her kettle having meantime boiled she began to pour the boiling water on the top of the ground coffee. But how did she pour it? In a stream, a pint at a time? By no means. With the greatest deliberation in the world, and in the serene consciousness that she had more time than any-

thing else in the world, she began to shovel that hot water in, a spoonful at a time. Meantime the Chief sat by with half closed eyes in a trance of contentment.
 "Old man," said he, "this is what I call Paradise. No coffee is good which takes less than an hour or so to make."
 I can't say whether it was one hour or two hours or so, that it took Millie to make the coffee, for she was so odd a character in her way, and withal so bright and shrewd, that I fell to cultivating her; forgot the coffee; but I know the moon was shining through the live oaks when at length she stopped ladling the boiling water in on the coffee, and rising, went to the box which served her as a cupboard, and took down two tiny china cups, of the size we call in the North after dinner cups, though they are just the same size, we found, and just as good, before dinner as after. The Chief and myself scorn conventionalities in dining, at least on vacations. These cups Millie set in the shallow hot water in the saucepan, until they were thoroughly heated. Then she poured out into them in a tiny, trickling, intoxicating, etherially ravishing stream, this nectar, this divine substance, this inspiration of genius, this product of refined art, the Creole coffee.
 Reluctantly it escaped, just a little bit for each cup, from the inner chamber into which it had been distilled. It was jet black, thick almost as a sirup, and had an aroma that would make a man see visions. The tiny spoon of

rice. In addition, I thought I detected a red pepper hull, and maybe a trace of tomato, though the latter I doubt. Pepper of some sort was there, for the gumbo was hot enough to make a gumbo tenderfoot weep. Other things also were there, and all through everything, making the subtle, indefinable, unmistakable flavor of this gumbo, was a keen, savory smack unlike anything I had ever met before. This was what I had missed all my life. I had been looking for this. If any gentleman has lost a chord, he can find it by applying to Millie, Opelousas.
 "It's the *filé* you taste," suggested one of my companions.
 "Now whatever is a *filé*?" asked I. Then they laughed.
 "Any cook in Opelousas has her *filé* jar," said my friend.
 "The *filé* gatherers bring it in. The *filé* [*feuille*?] is the young leaf of the sassafras bush. The cooks dry it and keep it in jars. Sometimes they make a kind of stock liquid of it, with which they flavor the gumbo. Millie, bring your *filé* jar."
 Millie brought the jar. It was full of thin, rolled-up leaves of some sort, soaking in a liquid, perhaps prepared for this particular gumbo-making. The leaves did not have the odor of sassafras bark, and the gumbo did not taste the least bit in the world like sassafras. The flavor was delicate and strange, but it wasn't sassafras, that I am sure. Yet this was gumbo *filé*, and they said the *filé* came off from the lowly sassafras vine; and there you are.

GROUP OF MULE DEER.
 Second Prize, Forest and Stream Amateur Photography Competition.
 Photo by A. S. Bennett.

sugar completed it, rounded it out into a perfect, finished work of art. It was not a drink, it was a creation. To taste it was not to drink, but to soar, to float, to dream, to touch the ineffable place where thrills grow on the trees.
 The Chief raised his tiny cup against the moon and gazed at it with the deliberation which is his wont. He tasted. Even in the moonlight I saw his eyes snap. Again he tasted. I saw him cross and uncross his legs—an unusual exhibition of activity. He drank. Wonderful! He rose and made a *pas* or two. "*C'est bon!*" said he. "Millie, do that *encore*, see?"
 Millie did it *encore*. The Chief was saved. Actually, he proposed a walk out to the edge of town. And so we walked out to the somber fringe of moss-garbed woods that shut in the quiet little city. The bright moon was over all and the February of the South meant May. The door of a cabin opened and against the light was framed the figure of a girl who sang, in a clear, sweet voice, not, I think, for two Northern barbarians, some words whose refrain seemed to be, "Abide, abide, my own, my own!"
 Was this the island of the sirens? Abide? We would never leave this land of calm, this place where men grew young again! And so we wandered on, babbling, garrulous, talking of our youth, our slips, our lost ambitions. Now we were going to be young again. We were going to do all we ever had set out to do. We were going to write books, to travel, to be great and to be good!
 Oh, wondrous Creole coffee!
 The next morning I was ashamed to look Tête Rouge in the face. Tête Rouge, by the way, is a horse, the horse I tried at Opelousas. But about Tête Rouge and the quail I really fear I shall have to tell another time.
 But the gumbo. I forgot about the gumbo. Many have heard of gumbo, who know not gumbo. You can't get real gumbo in the North, because it doesn't grow there, any more than bananas do. For gumbo, real gumbo, gumbo as is gumbo, you have to go to Louisiana, to Opelousas. Then, it may be, you will have to go to that same small side street and look up black Millie, who made the puissant coffee. At least, four of us went there one night and two of the party were Opelousas gentlemen who ought to know good gumbo when they see it.
 Millie had the gumbo ready. We had ordered it the day before. You have to order gumbo the day before, because it takes nearly a day to make good gumbo. This was good gumbo.
 Millie handed us each a dish containing what first seemed soup, then *pot au feu*, then heaven. Visible in the rich liquid were Eocene evidences of chicken, also of

"How do you make this gumbo, Millie?" I asked, after I had eaten two or three plates of it—it was purely a gumbo festival, nothing but gumbo and coffee.
 "Well, seh," said she, "et takes a good w'ile teh make gumbo. Yo' puts things in the pot, yeh, 'long in the day sometime, an' yo' lets et semmer, 'n semmer, 'n semmer." This seeming to her a rational explanation of the product of gumbo, I felt bound to press the matter further.
 "What things do you put in, Millie?" I asked.
 "W'y, chicken, 'n rice, 'n things," I asked.
 "What else?"
 "W'y, law! I dunno."
 "Any red pepper?"
 "Oh, yessah."
 "When do you put in the *filé*?"
 "W'y, I jus' puts et in; sort of afteh aw'ile you know seh."
 "How long do you leave the gumbo on the fire before you put in the *filé*?"
 "W'y, bress meh ha'ht, I kain' sca'sely jes' 'member, seh."
 "How much *filé* does it take?"
 "Oh, not er grea' deal, seh, jes' 'bout 'nuff to season up w'at yo' got on er-cookin' at the time, seh."
 "Well, how long does it take the gumbo to get done?"
 "W'y, I dunno; oh, quite er w'ile, seh."
 "And you can't tell me how you make it, so I can show the folks up North?"
 "W'y, no, seh, I kain' tell how all I makes et. I jes' makes et, seh, dat's all. I 'spec's yo' think et's a heap hah'deh teh make'n et is. Et's mighty easy teh make gumbo. I kain' jes' 'zac'ly 'scribe how I does et, but I jes' makes et."
 From the above directions I trust any one will be able to make gumbo on sight. For my part, I believe in letting well enough alone, and so I think I will only eat gumbo hereafter when I am somewhere around near Opelousas, and then I will eat it first, last and all the time.
 There are other sorts of gumbo besides gumbo *filé*. Of these, gumbo okra is the main one. This is a thicker, pastier compound, containing the okra plant. Gumbo may be composed also of game. For this the negress cooks prefer young squirrels. Quail are rather dry for it. Oyster gumbo is also made. But gumbo *filé* is the distinctive gumbo, and is acknowledged to rather lay over all other gumbos in the gumboine qualities of its gumbo-essenceness.
 E. HUGH,

175 MONROE STREET, Chicago.

"PODGERS'S" COMMENTARIES.

SAN FRANCISCO, Feb. 25.—*Editor Forest and Stream:* A few days only now remain of our shooting season, and guns will be relegated to their closets and the fishing rod will come to the front. March 1 ends all shooting and fishing opens April 1, by which time, as usual, the farmer's small boy has raided every creek and stream within fifty miles and caught the best fish.

From long experience I am convinced that the only way to preserve streams is to pass a law compelling every man and boy within twenty miles of any trout stream to fish three days a week and to begin March 1.

It is only necessary to know that he is breaking a law by not fishing and his soul will rejoice in breaking it, the spirit of pure cussedness will keep him from going near a creek. It is indisputable that more than half the fishing out of season is done in a spirit of resistance to the law, it gives a zest to the sport from that innate disposition to resist anything like being controlled or governed; it is the same spirit that prompts people to screen criminals and sympathize with them, and, as we all know how difficult it is to convict a poacher in the community where he lives, even when caught red-handed, and our laws are simply made ridiculous and their enforcement a farce.

It is a foregone conclusion that the illegal destruction of game and fish will go on unchecked until extinct, and then we will lock the stable door and kick up a great hullabaloo. The dear people, the scalawags that shoot and fish at all seasons regardless of law, have more consideration shown them than the man who pays the taxes and regards the law. He is branded as an aristocrat, forsooth, because he wants what he pays for, while the man who pays for nothing wants everything in sight and gets it, law or no law. It is enough to make a sportsman sick and disgusted and incline him to give away his guns and dogs, make bean poles of his fishing rods, to see the opposition to legislation looking toward the preservation of fish and game. Even here, where we pretend to be in a measure a liberal-minded people and not under the control of rings, we have an element that parallels your narrow-minded granger, and that is the vineyardist, who wants the privilege of poisoning quail *ad libitum*, because they eat a few grapes that he leaves to rot by the ton if he can't get his price, and in any event the wastage is ten times greater than a million quail could eat. He never in his selfishness stops to ask himself who gives him the crop anyway and what better right he has to it than the birds.

What suggests all this moralizing at the present moment, is seeing in my last *FOREST AND STREAM* reference to the legislation going on in Albany in relation to game and fish, and it so happens that we are at this time having the same wrangle over our game laws. What we want, and I suppose it is the same with you, is not more laws, but fewer, and those obeyed.

In consequence of the heavy rains we were treated to the last of January and early this month, wildfowl shooting has been indifferent, in fact very poor, consequent upon the vast area of water and overflow of the marshes that scattered the birds far and wide, and so scarce have canvasbacks been that a grand club game dinner had to be given up, as the required number of birds could not be obtained, something that never happened in this city before. We always expect canvasbacks galore in February, and cheap; but this year we are eating other kinds which are charged in the bill as the real article, which answers all purposes; and, inasmuch as epicures seldom know what they are eating, and as long as it is the proper thing to eat ducks raw, what's the odds? There are lots of smarties here, and in your town, too, that think it low-down business to drink California claret, that have drank nothing else, but as long as the label said it was French it was swell. Those are the fellows that call for reed birds and get sparrows, and don't know the difference; and by the same token, when you pay for chicken salad at the swell restaurants you get veal, with not the ghost of even a feather put in to give it character.

Speaking of trout fishing, we oldtimers who formerly went but a few miles for a day's sport must now make up our minds to go back into the wilds, a matter of a hundred miles, to get any fishing worth having, with considerable attendant expense. All our streams within reach of the gentlemen that play smart and get their work in early, have been fished to death, and the best ones, because the largest, have been ruined by paper mills that poison the water, and all the law we can bring to bear don't bother them a bit, they have a "pull" and defy us, so we must go to Oregon or back in the unexplored regions "way up North," so far away we can't get our fish home, but when you get there what fishing it is!

Speaking of game, our markets have been overloaded all winter with Mongolian pheasants from Oregon. Their presence at this season being another illustration of the manner in which game laws are regarded. The law allows shooting pheasants two months in the year—in the fall—but thousands of these beautiful birds are being hunted with dogs in the deep snow and run down and clubbed, as owing to their long tails, which get snow-clogged, they cannot fly and are easily taken, and are shipped down here by the carload, as the home markets are over-supplied. As many as 100 dozen were received here one day last week.

Such wanton destruction of this beautiful bird is simply damnable (excuse my French). Where are all the sportsmen of Oregon, and why do they permit this slaughter to go unpunished and unnoticed? Where is Judge Greene and other well-known sportsmen that should be alive to the destruction of such valuable game? It is to be hoped that this splendid game bird will work its way south to our State, which is much better adapted, as we have such a variety of winter climate that they would have their choice. Again, we have a much greater variety of feed. No doubt we shall have these birds eventually, and when we do we will endeavor to protect them from wanton destruction, although the liberal-minded vineyardist may howl and want to poison them, as they do the quail. It would not be a bad idea to pass a law compelling these same gentlemen to drink the wine some of them make. We should hear no more about quail, or them either.

I presume you can properly set this communication down as a growl, and evidently the result of being out last night, but I deny the insinuation. I am only mad and disgusted at seeing as I came through the market this morning such quantities of pheasants hanging up awaiting sale at less price than barnyard fowls, and no doubt

large shipments have been made eastward. Would that we had the right to shoot poachers, and that they were always in season, I would go out gunning to-morrow for the scalawags.

Our beautiful springtime weather is at hand, and at the present moment I am enjoying the bright warm sunshine that comes pouring into my windows and the green lawn in front with the first "flowers of spring" peeping out, while you, poor souls, are doubtless bundled up to your ears and crunching the frozen ice and snow beneath your feet. Serves you right for not living in a decent country.

PODGERS.

MASSACHUSETTS AND MAINE.

It seems that the Gilbert trout bill of 1893, that is, the bill to make the open season on trout in Massachusetts begin on Feb. 1 or Feb. 15, as later proposed, has been abandoned by its friends. The force of remonstrance was so great, over 3,000 signers against the plan of opening the trout season so early, having been obtained, the friends of the Gilbert measure saw that their case was hopeless. But they have not given up the fight by any means. Mr. Gilbert has now gone back to his original bill of last season; that is, a measure to give him the right to sell artificially-raised trout in close time. It will be remembered that this measure passed both branches of the Massachusetts Legislature last winter but that it was vetoed by Gov. Russell. Notwithstanding, the friends of the trout in this State believe that Gov. Russell would again veto the bill should it pass this year, they will fight the measure in both branches in order to open the eyes of the people to what Mr. Gilbert desires. Under the improved sentiment created by the remonstrances, so widely circulated and signed, it is believed that the measure may be defeated in either branch.

Some of the friends of trout protection attempted early in the season to see if a law could not be passed making the close season begin Aug. 1 instead of Sept. 1, as now. But this measure has not received the support of the Massachusetts Fish and Game Protective Association. Its advisers have considered it wise not to favor this measure in particular, though believing that such a law would be a good one. But it was considered that any attempt to close the season earlier would almost certainly be coupled with the measure of Mr. Gilbert. It would be the easiest thing in the world, if the friends of the trout had pushed the matter of closing August, for Mr. Gilbert and his friends to have asked that a month be taken off the end of the close time. As it is, it now looks much better for trout protection in Massachusetts, at least a year longer. There is very little chance that Mr. Gilbert's present measure will ever receive the Governor's signature, even should it get through the House and Senate.

In Maine the tendency of legislation on the subject of fish and game protection is now toward the general law, proposed by Gov. Cleaves. A measure providing that all the special protection asked for hereafter, on ponds and streams, shall be referred to the Commissioners, is under fair headway, and will doubtless become a law. Something of the form of the measure is that special protection or special open seasons can be obtained only through the Commission, the Commission to be petitioned by at least ten residents on or near the water in question. Due notice is to be given everybody, either through the newspapers or otherwise. The Commissioners are to appoint a hearing, and then, if they deem advisable, they may make rules and regulations affecting the special waters in question, and these regulations become a part of the game and fish laws of the State, with identically the same provisions for enforcement.

The proposition to make non-residents pay a license fee of \$5 for the privilege of hunting or fishing in that State came from the committee with four for it and four against it. I understand that a bill has been reported in the Senate, containing the license provision. Sportsmen reasonably look upon it as a very foolish measure, but it will not be altogether opposed by prominent hunters out of that State. I met a gentleman on Saturday who owns many thousands of dollars' worth of camp property in Maine. He has annually visited that State for fishing and hunting for at least 30 years. In the course of conversation he remarked that the license proposal was a very foolish one for Maine. "But," said he, "you and I want it. Aren't you willing to pay \$5 a year for the sake of keeping everybody out? I would gladly pay a license of \$125 a year if it would keep everybody but myself and a few of my friends away from our waters." This is only one case. I met another wealthy Boston sportsman the other day. He annually goes to Maine for both hunting and fishing. "It is a bad law for Maine," he remarked. "The license is not high enough. It should be \$25 or \$50; then it would keep the rabble out. I would willingly pay a license fee of \$25 a year, but a fee of \$5 I object to. It will be paid by too many duffers that we don't want there."

The weather, 2 or 3 ft. of snow on the ice, the ice 3 ft. thick, and almost impassable roads to the lakes and ponds, have made a rather hard season for the ice fishermen. The Maine papers have one or two accounts of fishermen bewildered and nearly lost in the snow on Moosehead Lake, where they had gone to fish for lake trout. Spring and summer fishing should be good this year, for it is certain that through all of New England there has never been less of ice fishing than during the whole of February and at least the first week in March. If the tremendous body of snow stays a little longer and then goes with a freshet, as it will be very likely to go, the season for ice fishing will have passed, with no fish caught. Nature seems to favor the fly-fishermen this time. SPECIAL.

Notable Shots.

COFFEYVILLE, Kan., Feb. 26.—*Editor Forest and Stream:* In your issue of Feb. 16 I notice "Some Notable Shots," where mention is made of two woodcock being killed at one shot. Many old sportsmen can recall something of the same kind, not wonderful shots, but very unusual shots.

While I was residing at Trenton, N. J., and had my kennels there, I spent at least half of my time hunting over the best woodcock and ruffed grouse grounds in America. It was a fall morning and the flight of woodcock had been good. On the same grounds ruffed grouse would frequently get up and shoot toward the adjoining hills, and a quick shot would catch them in their flight, thus making a bag of different birds, but the two best of

all the game birds. A woodcock got up on the edge of some alders and darted in. I shot, reloaded my gun and went in to pick up my bird. Within two yards of each other I found two woodcock fluttering, certainly killed by my one shot. I never saw but the one, yet my shot killed the two. Where did he come from?

At another time, in the Pinebrook Meadows, on a cold spring morning, I saw a very remarkable shot made. Jack snipe were very wild that day and would get up before you at long distances off, so that it was hard to get even a fire. If I remember right it was a brother of Scott Rodman who made the shot, but I saw it made. He fired at a single snipe; at the same instant a snipe coming from some distant part crossed and he killed the two. I could tell of some very remarkable happenings of what I have seen on my hunting trips and experiences during my stay in the fields, and so can others, and if they will relate them the "notable shots" will appear as numerous.

AL. WADDELL.

ONTARIO GAME AND FISH COMMISSION

ON Nov. 13, 1890, ten commissioners were appointed by the Lieutenant-Governor "to make inquiries, take evidence, and report generally, upon the game and fish of the Province of Ontario, and the laws relating to their protection." The members of the Commission were: Dr. G. A. MacCallum of Dunnville, chairman; A. D. Stewart of Hamilton, secretary; Richard Allen Lucas, Robert G. Hervey, John H. Wilmott, Walter S. Pulford, John Mitchell, Alex. H. Taylor, H. K. Smith, and E. W. Thompson, the last of whom resigned on account of removal to Boston.

The report of this commission has recently been issued. It is a large octavo volume of 483 pages besides numerous illustrations of mammals, birds and fishes.

The Province was divided into four districts, and each of the districts was assigned to a sub-committee for the purpose of the inquiry. Evidence was received from hundreds of persons representing nearly all classes and lists of questions relating to game and fish were answered by practical sportsmen and others who could not attend the meetings of the commissioners.

The lists of questions are published, together with the names and addresses of the persons who answered them, and a summary of the replies. Upon the basis of the evidence derived from witnesses and the answers to questions sent out, the commissioners recommended:

1. The prohibition of deer killing for five years in the counties south and west of the northern boundaries of the counties of Bruce, Grey, and Simcoe, as far north as the Severn River and the eastern boundary of Ontario.
2. The limiting of the open season for deer so as to be from Oct. 15 to Nov. 15.
3. The hunting of deer with hounds from Nov. 1 to Nov. 15 only.
4. That sportsmen be allowed to kill two deer each season, and no more.
5. That foreigners be permitted to kill deer upon payment of a fee.
6. That all dogs found running deer out of season should be allowed to be killed at sight.
7. That wardens be appointed for the protection of game and fish.

The protection of moose, elk and caribou, which are still illegally slaughtered, is strongly urged.

The destruction of game birds for export to the United States is almost incredible, according to the evidence, and has led the commissioners to urge the prohibition of the exportation of all kinds of game from the Province. They strongly recommend the abolition of spring shooting at ducks and of duck shooting from sail-boats and steam yachts. They would allow foreigners to shoot birds in season upon payment of a license fee. The shooting season for all birds except quail they believe should begin Sept. 15 and end Dec. 15. The burning of marshes should be forbidden, and permits for scientific purposes should be limited in number and issued under stringent conditions. They recommend a heavy penalty for trespass on private game preserves. Shooting between sunset and sunrise they would prohibit altogether. The wild turkey, in their opinion, should be closely protected for a period of five years.

With regard to fish, the commissioners advise the establishment of hatcheries for trout and whitefish, the abolition of pound nets, restriction of gill-net fishing, the prohibition of winter spearing in certain waters, limiting the weight of fish to be taken by camping and fishing clubs, and the appointment of a permanent game and fish commission.

Game laws of the Province are given in detail, and also the proceedings of the International Conference for the purpose of procuring uniform legislation concerning the fisheries in waters between the State of New York and the Dominion of Canada.

Fully one-half of the bulk of the report is devoted to chapters on the game and fur-bearing animals, the game birds, and the fish and fisheries of Ontario, the last by Prof. Ramsay Wright of Toronto. The accounts of the mammals have been compiled chiefly from "Baird's History of North American Mammals," and the information concerning the birds has been derived mainly from the writings of Baird, Cassel, Wood, Nott, and the essays of W. P. Lett. Some additional facts have been obtained also from trappers and hunters of repute.

The report on the fish and fisheries is both entertaining and instructive. It is to be regretted that the author could not examine extensive museum collections of Ontario fishes, as the number of species treated might have been largely increased.

Dr. Henshaw will be surprised to find himself referred to as Mr. Henshaw on page 454, and if Hoys' whitefish knows its own relations it will object to being placed in the same group with the common whitefish. It belongs in the series with projecting lower jaw.

We are confident that further investigation will show the existence of other kinds of trout in Ontario, besides the lake trout and brook trout; a form of the säbbling is certainly to be looked for in the Province.

On plate 30 the names of the several sunfishes are all transposed. The account of the nesting of black bass contains the statement that both parents protect the fry. The rate of growth of the young is much more rapid in the latitude of New York than it is in Ontario.

According to Prof. Wright brook trout have been observed to spawn in Central Ontario in August, three weeks before the beginning of the close season.

New Jersey Game Law.

A NEW game and fish law which is a codification and revision of the old law has been passed by the New Jersey Legislature and signed by the Governor. Some of the open seasons are as follows: Deer, Oct. 14 to Dec. 16; squirrels, Sept. 14 to Dec. 16; quail and rabbits from Oct. 31 to Dec. 16; ruffed grouse, from Sept. 30 to Dec. 16; woodcock, the month of July and from Sept. 30 to Dec. 16; English snipe, March and April, and from Aug. 25 to Dec. 16; reed birds, rail and marsh hen, from Aug. 25 to Dec. 16; upland plover, from July 21 to Dec. 16; pinnated grouse and wild turkey, from Oct. 31 to Dec. 16; hen birds of the European partridge, European grouse or European pheasant, protected for five years from the passage of this act; male birds of the above species can be killed from Oct. 31 to Dec. 16. Small birds generally are protected at all times, but game commissioners may issue licenses to collect for scientific purposes. It is forbidden to capture deer or game birds by means of traps, snares or nets, except that incorporated associations may trap such animals or birds alive for the purpose of preserving them alive during the winter, providing that they be released again in New Jersey not later than April 15 the following spring. Black bass or Oswego bass may be taken between May 30 and Dec. 1; trout between March 1 and July 15. Black bass measuring less than 9 in. and trout less than 6 in. may not be taken, except for stocking purposes. The act will be published in full at a later day.

The Spring Slaughter.

CANTON, Mo., March 3.—Ducks are now abundant on the Mississippi waters from St. Louis north for 200 miles, and the boom of the 10-gauge is heard everywhere throughout this whole region. It is a mystery how the ducks manage to get anything to eat, for gunners lie in wait for them at every pond and along every stream. It seems strange that men can't realize that for every half dozen lean, tough, old ducks they bag in the spring, they could have half a hundred plump, fat young ones next fall if they would stop spring shooting. If men showed as little forethought in their financial matters as they do in spring shooting, their friends would have guardians appointed for them.

Quite a damaging explosion of nitro powder happened in Rawling's gun store in St. Louis a few days ago. The accident occurred in the shell-loading department and the cause is not known, the only theory being that in some way a primer on one of the shells was exploded. About 100 lbs. of the powder went off, wrecking the store and firing everything of an ignitable nature in it. Adjoining buildings were shaken till much of their furniture was wrecked. A number of people were injured, but none killed outright. It is another sharp warning to be very careful with explosives. O. H. H.

How it is Going.

CHATHAM, Ontario.—*Editor Forest and Stream:* I have killed about all kinds of game in western Canada. I have killed a great many wild turkeys in my time. This used to be the best place in Canada for birds of that kind. But the country is getting cleared up so much now, the bush is pretty nearly all gone, and the deer and wild turkeys are pretty near all gone, too, and this winter has been very hard on the small game, such as partridges and quail. The best shooting we have now is duck shooting in the fall down at the St. Clair flats, and out at the Rond Eau, along Lake Erie. W. W.

Who Sent It?

HERE is an order—all of it, every bit of it—received last week. There was in the envelope twenty-five cents in stamps—the receipt of which is here acknowledged. No address. No name. Postmark blurred and undecipherable.

Dear Sir
inclosed \$2.50
for book of game
laws

If the man who sent the money will supply name and address he shall have a copy of the *Game Laws in Brief*, which is the twenty-five cent book.

A Snake's Hot Meal.

A young professional gentleman of this city recently traveled overland to Tappalaunook. On the route he discovered a large black snake slowly crawling among the branches of a tree that stood by the roadside. Following the snake with his eye, the observer saw an unusually large hornet's nest attached to one of the branches of the tree, and toward which the snake was advancing. When close to the nest the snake coiled itself about a limb, released its tail, and with it gave several hard raps upon the exterior of the nest, as if knocking for admission. The noise of the blows and the swaying of the nest caused the hornets to leave their home and prepare for an attack upon the intruder. The snake ceased tapping with its tail as soon as the hornets left the nest, uncoiled itself and quickly disappeared, taking the place of the hornets within their nest.

Presently the snake's head was seen to peer out, and his bright, black eyes glistened as he anticipated a feast from which the bravest man would shrink with fear. The snake drew his head within the entrance hole to the nest until nothing was seen of it except an occasional forked tongue that darted in and out with lightning rapidity. Thinking the coast clear, the hornets began to return to their nest, when the snake took them in as rapidly as they could enter. Watching the proceeding for some time, our informant concluded that all the hornets had been safely lived, and he stood up in his buggy, tapped the nest with his whip, and awaited the result.

No hornets appearing, the nest was then knocked to the ground, opened, and his snakeship discovered in a torpid condition, with his size greatly increased. The snake was killed and a post-mortem held, with the following result: Stomach stuffed with dead hornets. W. S. White, attorney for the commonwealth for Stafford county, vouches for the truth of the story.—*Fredericksburg (Pa.) Lance.*

A New-Subscriber Offer.

A bona fide new subscriber sending us \$5 will receive for that sum the *FOREST AND STREAM* one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the *FOREST AND STREAM* during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

Sea and River Fishing.

The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, Ill., March 4.—If Director-General Davis, of the World's Fair, will apply to Mr. Harry Lacy, kennel editor of the *FOREST AND STREAM*, he can hear of something to his advantage. A short time ago I accompanied that *débonnaire* young man on a short trip to the World's Fair grounds. Like all New York men who have actually been there upon the grounds, he became impressed with the feeling that there may be, might be, something in it after all, and on one point he rose to a point of enthusiasm. We were peering through one of the doors of the vast Manufactures building, whose vast aisles stretched away till the men at the other end looked about as long as lead pencils. A gleam of thought lit the dog man's eye. "What a place this would be to hold a dog show!" he said, with a sigh, as I led him away. If Gen. Davis will look in the snow on the outer edge of the covered walk of the Manufactures building he may perhaps see at intervals of every 100 yds. or so of its quarter of a mile length, the marks of Mr. Lacy's cane, where he was classifying bulldogs, dachshunds, pugs, toy terriers, etc., etc. These marks may be of service to Gen. Davis yet in allotting space, because I am confident from what Mr. Lacy said that he is satisfied in his own mind that the coming dog show ought to occupy the entire floor of the biggest building on the grounds.

The Fair goes on, and it is now a wonderful, wonderful place, so vast, so stunning in its mental shock at first sight that the usual first impression is one of bewilderment. After that the feeling is as when distant music comes nearer and nearer. The pulses quicken, the nerves begin to thrill, until finally the soul is carried along impetuously with the surge of the commanding motive. You will hear many men say, in a complaining, resentful way, that they can't go to the Fair and see the buildings and the buildings without coming away feeling subdued, more quiet and "better." Much of this may be due to the grave and serious beauty of the vast statues of the decorations which are now so abundant, either aloft in place, or upon the ground, either finished or in formation. Every day new things are brought into the grounds or are created there, which it makes a man wiser and better to see. Every day the Fair now grows more cosmopolitan, with its growing wonders from Ceylon, South America, all Asia, all Greece, all Egypt, all the world, new, old, ancient. The Eskimos have long been in evidence, and many tribes of Indians will soon be represented. Incidentally there stepped into town the other day the courier of the Indians of British Guiana, and just in time for the cheerful blizzard of yesterday, a delegation of fifty thin-skinned Singhalese arrived to begin work on a few sample pagodas and temples, for which they think they can work up a good demand.

The sportsmen who have visited the grounds have no doubt noted the colossal figures of wild animals which surmount the bridges over the lagoons, a lioness, a panther, a grizzly bear. Others of the wild animals of America will be thus represented, and this will be a pleasing feature of the artistic decorations. Mr. Edward Kemys, the celebrated wild-life sculptor, is now hard at work in his studio at the grounds. Mr. Kemys I must see again some day, because he is a man of whom many sportsmen would gladly know more. He has spent years among the wild animals of the great West, and is an adopted member of one or more Indian tribes—the Blackfeet for one, if my memory serves. Mr. Kemys measures his own grizzly, sits down on him and measures him, right there in the chaparral. Moreover, he first kills his own grizzly himself. I have confidence in Mr. Kemys's grizzlies, his mountain lions, his buffaloes, because he is first sportsman and then artist. The work of his hand will delight many a visiting sportsman at the Fair.

Dr. James A. Henshall, special agent of the U. S. Fish Commission, and in charge of the angling exhibit, now has his office located at the north entrance of the main Fisheries building. All of the officers in charge of these special departments are very busy, and are supposed to live behind barred doors which have red sealing wax run into the keyholes, but I imagine Dr. Henshall's door occasionally gets broken in. More delights here for the angling men next summer.

The out-of-doors idea will not be lacking in the Fair, it seems, whether the view point be that of the enthusiast or of the utilitarian. The South Shore Tenting Company has been incorporated, with grounds near the lake and near the Fair. The company intends to supply tents, cooking conveniences, etc., for those who prefer a low-priced tent to a high-priced hotel. A chance for an outing can here be combined with a go at the Fair. The perch fishing is excellent just a little way out in the lake.

News Item.

The *Fishing Gazette* prints the following in its issue of last week.

"Frederick Barbarossa, Emperor of Germany, was drowned while crossing a small river in Asia Minor when on his way to fight the Turks."

I beg pardon, but is this offered as an item of news?

Chicago Fly-Casting Club.

The Chicago Fly-Casting Club held its regular meeting last Friday evening at the Grand Pacific Hotel, and transacted interesting business. It is the purpose of Dr. Henshall, in charge of the angling exhibit of the Fisheries Department at the World's Fair, to hold several contests in both fly and bait casting on the lagoons of the grounds. Plans for this are not all formulated, but the assistance of the Fly-Casting Club will probably be enlisted.

175 MONROE STREET, Chicago.

E. HOUGH.

CHICAGO, Feb. 28.—*Editor Forest and Stream:* It is rumored that Gov. Altgeld will abolish the Illinois State Fish Commission as an expensive and worthless board. I should indeed be sorry to see the Governor do anything so rash, and yet at the same time, if the Governor was as well posted as many Chicago anglers are as to how worthless the said board is when it comes down to actual busi-

ness, I have no doubt he would feel justified in his action. Were it not for the retaining influence of the true sportsmen of Chicago and the large cities, and the fear of exposure in the columns of *FOREST AND STREAM* I have no doubt the "pot" fishermen would ere this have seined dry every river and lake of Illinois.

It is a serious mistake to appoint any man living on a lake or river the fish warden of that particular lake or river, all theories to the contrary notwithstanding. I have watched carefully the workings of this theory, and will now say candidly that it is a failure. Take for an example Channel Lake, Ill. As an illustration we will assume that J. S. is fish warden. J. S. has a nice little snug home on the east shore, and knows every man, woman and child for miles around. Mrs. J. S. is acquainted intimately with all the "women folks." Joe Bassett and Ike Bruce rig up a jacklight and start spearing bass and pickerel early in May. J. S. sees the light and takes his boat and goes on a tour of investigation. He finds that the law-breakers are sons of his two nearest neighbors whom he has known intimately for years. He threatens the boys with arrest and they put out their light and pull for home. J. S. scratches his head, he is in a quandary. When he gets home he and his better half talk it over. Mrs. Bruce and Mrs. J. S. are particularly "chummy," and it will never do for J. S. to put Ike in limbo. On the other hand J. S. has sworn to do his duty. Old man Bassett and J. S. are very friendly, in fact old Bassett worked three days on J. S.'s new barn last fall, and received in payment two meals a day for three days. The end of it is that J. S. visits the stern parents of Joe and Ike and informs them of the crime committed by their offspring, and there the matter rests. Joe and Ike take advantage of the first dark night to continue the sport, and so the matter ends.

As a matter of fact, it is not to be expected that a man who has for years resided in any community in peace and quietness and on the best of terms with all his neighbors, will wantonly rend asunder all these ties of friendship by arresting and prosecuting the son and heir of his neighbor. The natural consequence is that spearing, ice-fishing and netting goes on as of yore, and the fish market of Chicago is steadily supplied with the choicest of bass, pickerel and pike the year around.

Oh, how I love my fellow man, particularly the variety who wears the long hair, the crownless straw hat and the blue overalls, and who meets you with that winning smile at the country station. The variety who patiently baits and hauls in some thousand and odd hooks all winter and ships regularly his two to three hundred pounds of fish weekly to the commission man in Chicago, and then wonders all summer why the bass do not bite as they did twenty years ago when he first came to live on the lake. The fellow who patiently "does you up" all winter and then takes your cool silver dollars for keeping you in the summer. Gentle reader, his name is legion. You point me out the exception to the above if you can.

There is only one class that is worse than the above, and that consists of the wretches who are not content with fishing through the ice all winter, but who on the quiet seine all summer. Now, Mr. Fish Warden, who has charge of the Illinois River district from Peoria Lake north for 25 miles, will you kindly tell us who ships those 5 to 10 barrels of game fish every Wednesday evening? You didn't know any one did, did you? Well, you just take a run up to Bureau Junction on the C. R. I. & P., and watch the baggage men on the two express cars roll in barrels. Just do as I have done; hand the express agent a good cigar and draw him into conversation. He will tell you something that might be of value to you as a fish warden. Ask him what is in those barrels.

"Fish. Oh, all kinds—bass, pickerel, pike, suckers, red horse and buffalo."

"Where do they come from? Oh, out of the Illinois. Caught with pole and line? No, hardly; they're seined."

"Who seines them? (shrug of the shoulders). Don't know; that ain't my business, I never asked."

"But say, is it not against the law to seine fish in Illinois?"

"Yes, I guess it is, but that is the business of the fish warden." "Yes, he captures a seine now and then, and advertises for the owner to come and get it—but I guess they don't care for them—leastways I never heard of one being claimed."

"Where do all these fish go? To St. Louis; get there for Friday."

Try it, Mr. Fish Warden, and perhaps you can get some pointers that will prevent Gov. Altgeld abolishing the State Fish Commission.

Yes, the fish wardens of Illinois have been a grand success, the fishing has improved so much since they have been appointed. A man can purchase in any fish market in Chicago for a silver dollar, a string of bass that would cost him \$12.16 to catch in any lake in Lake county. True, the sportsman does not go fishing for the brain food he may bring home, he goes for the sport that he has in acquiring said brain developer, and that is the only redeeming feature in the whole case.

And these miserable wretches who are rapidly exterminating the game fish in Illinois. What do they receive as a compensation—a paltry two cents per pound. Gentle reader of *FOREST AND STREAM*, just imagine a noble bass of 6 lbs. avoidupois, selling for twelve cents, a fish that any true sportsman would give ten silver dollars to hook any day in June, and you will feel your choler rising as mine does often when I hear and see such things and know that the State pays some lusty game warden for preventing this kind of slaughter. Candidly, I do not believe that there is a barn in Lake county, Illinois, in which you could not find a fish spear if you tried very hard. They "don't use them now" they will tell you, but they are not for sale.

HENRY G. ABBOTT.

Legalized Destruction of Fish.

UNION SPRINGS, N. Y., March 1.—*Editor Forest and Stream:* There is great destruction of bass and pickerel upon the Seneca River in the vicinity of the fyke nets, where they are allowed to catch bullheads and return the game fish that are taken in these nets.

In operating the nets in the winter they have a large hole cut through the ice. When they take up the nets they loosen the tail rope and lift the net out upon the ice in the frost and snow; then they dump the fish out of the nets and pick up the bullheads first. Of course they must have their meat first. Then they proceed to put back the black and Oswego bass and pickerel that they chance to have, and no way is so easy as to kick them into the hole

with a No. 11 rubber boot. Some of the fish are nearly frozen stiff before they reach the water. Such is the method practiced in the central part of the State upon the Seneca River. Any one knowing anything about such fishing and such methods of treatment knows that they may as well put a knife through a fish, for it means certain death.

The winter being long and the weather very cold, it has been a hard one upon the game fish, and I think one may as well stay at home as go a-fishing with a hook this season upon these waters. Thousands of the best game fish now lie frozen in the ice, and hundreds of crows and gulls are feeding upon the flesh of the gamey bass.

Please spend a day and see for yourself, and you will favor protection. If this should continue for another year it would deplete Cayuga and Seneca lakes and the Clyde River of their best fish. The time has come when the sportsmen should take some action in this matter and have this law amended so that this wholesale slaughter will not go on upon the best spawning grounds in the State.

H. C. CARR, Protector.

FINLAND FISHING.

DR. OSCAR NORDQVIST, president of the Fishery Association of Finland, is now in the United States studying our system of fishculture and the methods of our fisheries. He has visited Washington to make himself familiar with the work of the U. S. Fish Commission and will go from there to several of the important stations to examine their operations with trout, salmon and whitefish.

He will also visit the great fishery centers of the United States and the World's Columbian Exposition and return to Finland in June.

Finland, according to Dr. Nordqvist, has a goodly number of the finer fishes known to American anglers. Chief among them is the Atlantic salmon, which is represented by the common form so well known in the rivers of New England and Canada, as well as by a land-locked variety much like our sebago or winninish, but larger.

There are five principal salmon rivers in Finland, the Kymmene (in South Finland), Kumo (Southwest Finland), Ulea, Kemi and Tornea (in North Finland). The Ulea is the chief river for rod fishing and salmon are taken by this means chiefly in its upper waters.

In the Tornea they take the hook rarely in the upper portion. The Kumo furnishes more sport for the angler in its upper waters, while in the Kymmene no salmon are caught with rod and line.

The landlocked salmon occurs in Lake Ladoga and its tributaries. The sea trout of Europe is a common fish in Finland waters. The silbling, or red-spotted char, is another choice species for the angler. The grayling completes the list of the salmon family for line fishing, but three kinds of whitefish are found in the waters.

The common pike is abundant, but not highly esteemed. Yellow perch abound, and if they differ from our own species it is hard to define the points of difference. A very fine pike-perch is among the choice game fishes. Curiously enough the golden ide, which we have introduced into the United States from Europe, is one of the prized anglers' fishes of Finland. The bream (*Abramis brama*), a large species of the carp family, is considered a very good fish and its capture furnishes considerable sport.

The only catfish known in the country is the *Silurus glanis*, and this is found rarely in only one lake of Finland.

The caprice of the salmon in taking the hook is quite as noteworthy in Finland rivers as it is in our own. Some streams contain many salmon, which are caught freely in nets, but seldom or never on hooks. In some severe winters the salmon that run up to spawn are imprisoned by ice before they have finished spawning, and when they finally escape seaward in the following spring, some of them die in the rivers. There is, however, as a rule very little mortality after spawning.

Helsingfors is a center of considerable angling interest. Anglers' outfits made in the country are sold here, but better appliances are imported from England. A paper, *Sporten*, devoted to out-of-door amusements, is published here. Dr. Nordqvist says FOREST AND STREAM is read in Finland with great interest.

BOSTON AND MAINE.

BOSTON.—Ice-fishing all over New England has received a setback that it may take several weeks to recover from, or possibly it may not be of much value again this season. The lakes and ponds are covered with 3 to 5 ft. of snow, in addition to the remarkably thick ice already mentioned. A party from Boston, that was made up for Cobbosseecontee, Me., the first of March, has postponed the trip till the outlook is better; doubtless indefinitely. Another party that went to Lake Winnipisogee, N. H., a year ago, and was intending to make the fishing trip again this spring, will postpone it till better weather and till there is less snow on the ice, if indeed they go at all. From Maine there are but few reports of ice-fishing. The snow has been so deep and the roads so blocked that to go to the ponds and lakes has been almost an impossibility, to say nothing of the storm that has raged. A friend writes that he knows of a fisherman who has kept a hole or two open in the Androscoggin River, at Barkerville, just below Lewiston, Me., all winter, and has taken out some very nice pickerel. At this point, so near to the city, no one else has thought of fishing.

Some of the Waltham fishermen have recently had a big time fishing for bass at Hurd's Pond in Wayland. It is against the law to take bass at this season, and for that reason the names of the boys are not mentioned. They seem to think they had a good excuse for having taken the fish, for the reason that the fish had already caught themselves. It seems that the pond drains into the Sudbury River by a very shoal creek, and that the creek has been lower than ever the past winter. During the recent rain and slight rise of water it seems that the bass in great numbers went from the river up the creek toward the pond, till they were caught in the ice some way, and it was an easy thing for the fishermen to secure them. They claim that if they had not taken the bass, they would have been frozen in and destroyed by the cold weather, which immediately followed the thaw. One party secured 12 pickerel and some 20 black bass. One bass is reported to have weighed 5 lbs. Another party got more bass than the one just mentioned, but they do not say how many.

A petition has been handed in to the present Massachu-

setts Legislature, asking that the open season on black bass in this State begin on June 1, instead of June 15. The petition is signed by several prominent members of the Fish and Game Protective Association, but it is understood that Commissioner Brackett is opposed to the opening of the season at this time.

An amendment to present game laws has been introduced, making the penalty for the second killing of moose in that State to be imprisonment, in addition to a fine. The amendment also adds the last ten days of September to the open season on moose, caribou and deer. It also provides that no deer shall be killed in any lake, pond or river in the State. This is a direct attempt to prevent jack-shooting in a very awkward way, and by a means that it will be utterly impossible to enforce. There is very little chance that the measure will ever become a law, however. It is attached as a rider to the bill making a part of September an open month on big game; a bill that the lumber people will not permit to pass, if they can prevent it, and there is no more powerful interest in Maine.

Our good friend F. R. Shattuck, so well known to the FOREST AND STREAM, has a letter from Capt. Jenkins, of West Barnstable, giving a more encouraging feature to the attempt to plant prairie chickens in that part of the State. Two years ago the restocking committee of the Fish and Game Protective Association put out three or four pairs of these birds on Capt. Jenkins's place. Some time after two of the birds were seen. Since that time, and up to within a day or two ago, nothing had been seen of the birds, and they were given up as gone forever. But now Capt. Jenkins has seen a fox hunter, in whom he puts confidence, who says that the other day he saw two of the birds. He not only saw them, but he watched them for some fifteen minutes. This is encouraging news to Mr. Thayer and other members of the committee, who have taken so much pains in the way of restocking the game covers of the Bay State. They can see that the prairie chickens have not wholly disappeared, though they feel that if they had been a success at West Barnstable, that there should have now been dozens of birds instead of two. This season they are putting out prairie chickens in the western part of the State rather than on the coast. But they are thinking of the present tremendous winter with a good deal of alarm. The snow is remarkably deep all over the State, and the chances for food for the prairie chickens and quail that it was hoped to acclimate are greatly reduced. The committee feels that if the birds survive the present winter that there is not the least doubt but what they are a fixed fact in Massachusetts. There has not been a winter so severe in twenty years. The men who have charge of Franklin Park, Boston, say that they have seen nothing of the quail that were there through the summer and fall since the very cold weather early in the winter.

SPECIAL.

BROOK TROUT OF WAUTOMA.

Editor Forest and Stream:

At the request of one of your enthusiastic subscribers I write this article, hoping it may prove of general interest.

Last June, having heard much of the trout fishing at and near Wautoma, the county seat of Waushara county, Wis., I concluded to try for myself and see if the fishing there was, in regard to sport, comfort, quality and quantity, all it had been recommended.

Wautoma is a lovely village twenty miles from the railroad at Berlin, embowered in shade trees, with tasteful and varied residences, while through its emerald meadows brawls a silver brook, one of the many tributaries which here abound, fretting along "to join the brimming river."

A few years ago not a single trout inhabited these streams. The noble enterprise of far-seeing men induced the State, after encountering much opposition, to stock these streams with trout fry. Now the number caught in a season is simply prodigious. The size of the fish is unusual, and in some instances, phenomenal. Speckled trout, rainbow trout and an occasional silver salmon are taken.

Last summer I saw a rainbow trout, caught eight miles from there, that weighed 5 lbs. 7 oz. and measured 3 ft. 4 in.

There are two hotels there; the one at which sportsmen generally stop is kept by W. A. Bugh, a young, enthusiastic and true partisan of the rod and gun, with all those words imply; and when I say truly that no sportsman who has once "put up" with him has yet failed to come again, I have said it all.

Bright was the morning, the fog rising through the trees, blushing with the first rays of the rising sun, as with lunch and rod and a few choice flies I stood on a bridge which spans the stream at the outskirts of the village. A crippled veteran, I could not go far or fast. Years had passed and, alas, gone forever since I had thrown a line for trout.

As I gazed on the bubbling waters as they rushed under the bridge, now here, now there, with many a curve and foaming ripple, I thought of the old bridge away off in York State, where a happy boy with only the ignoble worm, with wild delight, "dear Tom," I caught these beauties of the brook "just forty years ago." The brook sang the same old song again; my heart felt the same old thrill again, and I thanked God that while many never can renew their youth, the sportsman always can.

Slowly and cautiously, with the eye of a hawk and the tread of a cat, "afraid of my own shadow" flitting on the golden shoals, I cast the gossamer's frail, gaudy lure as tenderly as maiden's glance upon the form she loves. Slowly down the stream I hitched along (for better I could not). No bogs, no thorns, nor superfluity of brush, but just enough to hide and cast without inconvenience.

Not a fly, not a "no-see-um," not a single "skeet," and this is true of all the streams in this part of the country. Of course in August there are some deer-flies, and in thick shaded lowlands some "mosquitoes," but no other torments have I ever seen such as drive the sportsman wild in the northern woods.

Several fine trout, but none too small, was my reward. The air seemed pulsing with the songs of robins and a thousand happy birds. The grateful shade along the brook at intervals mellowed the sun's too ardent rays, while I quaffed long draughts of the spring-cold stream. At last, at one deep hole, where the waters found their channel by a mass of roots, one gorgeous beauty leaped with seeming clumsy splash (a funny imitation of the younger graceful "kids") to take my fly, but missed. Once more I teased him to respond, and darting again at the lure, he would not bite, but only made a feint.

Again, again and again I cast and trailed the silly little myth along up the fretful tide. Then he got mad, I suppose, and darting, seized it with a vim, and soon I had him safely on the bank. He measured 12 in., and I could scarcely squeeze him in my closed basket. Great, beautiful, gaudy, sparkling, fat fellow! And yet I have seen a dozen such, the result of one day's fishing there with a party, who brought in 200 or more as their day's catch.

So ended a perfect day, but which will come again, I trust, to all who try their fortune at or near Wautoma, along its many attractive streams.

PLAINFIELD, WIS.

THE ANGLER'S DREAM.

WHAT memory more pleasing than green fields and shady glen, silent pools and rushing stream, and cheery laugh luring the leopard of the brook from his watery home! As I sit poring over the last issue of dear old FOREST AND STREAM, and being alone and in meditative mood, my thoughts revert to my favorite pools and swirling eddies, and as I sit and ponder, it pervades my whole being with an eager, restless longing for the return of the open season again.

Strange are the human likes and fancies of this world. There are plenty among us who sneer at the sportsman's innocent, happy life—a waste of time and money, say they. Those who care naught for the charm of nature, even in her brightest moods, know little of the thoughts and feelings of the child of nature; of the intense longing for the fields and forest, the birds and flowers, and, best of all, the healthful, life-giving sports that nature provides.

Ah! the scenes that in retrospective pass before me, seem to be realized only by the sportsman-angler. See! a glorious June morning; the sweet bird-songs and chatter of gossiping squirrels (they your only companions) ringing in your ears; a wild, rollicking mountain stream tumbling and foaming among the boulders, or falling over some mossy old ledge, forming a deep foam-flecked pool, the home of some wary old trout. Or again, the same brawling stream, toned down to a calmer mood, flowing silent and swift over beds of yellow sand or shining pebbles between banks of soft, wavy meadow grass, thickly dotted with buttercups and daisies, with here and there a clump of blue iris, or anon stretching away in long silent reaches—the very spot to throw the gaudy fly and lure the crimson-spotted trout to destruction.

Ah! 'tis now the angler is in his element; 'tis here you catch the music of his reel and the swish of his leader as he sends it far out o'er the water with a skillful cast, acquired by long practice. This is pure, unalloyed pleasure; it is grand. There is something in this kind of life that in all true lovers of the gentle art produces a joyous disposition and tends to promote a brotherly feeling toward others. Constant companionship with the charm and solitude of nature softens man's harsher feelings and implants a feeling of good fellowship in his breast.

How the quickening blood courses through the veins as you see the magic words "the opening of the trout season." How the fingers tingle to the very ends as you grasp the trusty old rod once more! What an overhauling of tackle as you hasten to get ready for the summer's campaign! When the day arrives you are ready and sally forth to your favorite stream. Soon you see the pool before you, and sundry dimples and ripples on the surface tell you that the spotted quarry is there as of old.

With caution you approach and make the first cast. Soon there is a yellow flash, a bulge in the waters 'neath the fly, a turn of the wrist and you have him fast. Now begins the struggle. The well-oiled reel revolves with lightning speed as he runs off the line; see! he is going for that brushwood on the opposite side of the pool. Ah! he is a crafty old fellow; but you draw him gently away, and as he feels the cruel barb in his flesh, like a flash he is away again. Poor fellow, he is making a hard fight for liberty; but no use, you soon land him, dripping upon the bank.

What a beauty! Every curve and line perfect in contour, and the crimson spots upon his golden sides bright and glowing, fresh from his native element.

Ah! is not this kingly sport! And so you go on from pool to pool, from ripple to ripple, and trudge home at dusk with a well-filled creel, tired, but happy and contented.

So I awake from my reverie to realize that it is but a pleasant dream; but mayhap for the moment it will have some interest for a brother angler, for some of the many readers of FOREST AND STREAM.

PRESTON, CONN.

TROUT SPAWNING IN JUNE.

WE are indebted to Mr. F. W. True, of the National Museum, for copies of the following letters relative to late spawning of trout in certain New York lakes. It seems hardly possible to frame laws which will serve to protect trout of such unusual habits and still give anglers the opportunities to which they are fairly entitled:

TRENTON, Jan. 27, 1893.—*My Dear Friend William:* Yours of 26th is before me. I do remember fishing in Moorehouse Lake in June with you and taking trout in my hands and the spawn would run from them, and we both talked about it at the time, I think. Dr. Hamlin, of Middleville, is one of the party which has purchased the lake and a man by the name of Mosher. I think Dr. Hamlin would give you all the information you want.

H. S. STANTON.

MIDDLEVILLE, N. Y., Feb. 2, 1893.—*Wm. Calverley:* Dear Sir—Dr. Hamlin handed me yours of the 28th inst. to answer. We frequently catch trout in Moorehouse Lake that have two sets of spawn. Catch them in May and June and they are generally from 1 to 2 lbs. in weight. I have always concluded that the two sets of spawn were caused from some disease; once caught a three-pounder in Big Rock Lake with two sets. Trout in that condition always discharge the large spawn with very light pressure; will frequently discharge them in the boat in death struggle.

Yours truly,

W. W. MOSHER.
BARNEGAT, N. J., Feb. 8, 1893.—*Prof. F. W. True:* You will find inclosed two letters which I have received in regard to trout spawning in Moorehouse Lake. Mr. W. W. Mosher states that he caught a trout in Big Rock Lake which had ripe spawn in it. He speaks about the trout in Moorehouse Lake having two sets of spawn in them at the same time. That was the case with the ones I caught. Big Rock Lake is in Hamilton county, southwest corner, about seven miles from Moorehouseville. I wrote to another party (Joe Lane) but have not heard from him; but the evidence I have given you I think is enough to prove my statement about the trout spawning there in June.

Yours respectfully,

WM. CALVERLEY.

Black Bass of the Thornapple.

MICHIGAN CITY, Ind.—If C. J. L., of Detroit, wants fishing in his cruise and makes that one of the chief considerations, there is no better stream, in my opinion, than the Thornapple River, in his own State. From the lake of the same name in Barry county to the mouth where it empties into the Grand River the cruise will take about a week, for although the distance seems short upon the map, the stream is so crooked and the fishing so good that a week will easily be consumed on the trip. It is a rapid stream, that is, there are numerous riffles from a hundred yards to a quarter of a mile in length, and the boat used should draw very little water. There will probably be two or three "drift" jams encountered also. I have fished this stream a great deal and never saw its equal for black bass. When they are on the riffles, which is in July and August, but preferably in July, they take the artificial fly as readily and in the same manner as trout. I caught 14 small-mouth black bass and two rock bass in about one hour last summer, all in wading a single riffle about a quarter of a mile long. There is a very pretty and well managed summer hotel at Cascade Springs, two miles from the mouth of the Thornapple and ten miles from the city of Grand Rapids.

Here the voyager can spend a few days very agreeably at the close of his trip. I would like to take a trip of two or three weeks this season, and would be much obliged if some one could tell me of a stream possessing the characteristics of the Thornapple as I have outlined them (I can dispense with drift jams). Such a stream usually flows through a rather pretty country. I want about 150 miles of boating, say 10 miles a day, and rather a small stream. Your correspondent in "Chicago and the West," Mr. Hough, could probably put me on the right track.

LEXDEN.

That First Tarpon.

THE statement that Mr. Hugh O'Neill is entitled to the credit of taking the first fish of the season, which has appeared in the FOREST AND STREAM is not warranted by the facts, as the following item from the Fort Myers Press of Feb. 23 shows:

"Tarpon record at Fort Myers. We only make record of those caught with rod and reel: Feb. 14, Judge T. A. Gill, 6ft. 4in., 144lbs.; Feb. 15, George A. West, 6ft. 3in., 101lbs.; Feb. 16, H. O'Neil, 5ft. 9in., 114lbs.; Feb. 17, J. W. Cole, 5ft. 9in., 98lbs.; Feb. 18, Jas. E. Hendry, Jr., 6ft., 112lbs.; Feb. 19, J. E. Mitchelson, 6ft. 2in., 102lbs.; Feb. 21, Geo. H. Hulings, 5ft. 7in., 94lbs.; Feb. 21, T. P. Newton, 4ft. 7in., 45lbs. Previously reported 10. This week 8. Total 18."

As appeared in a previous issue of the same paper, Mrs. A. M. McGregor took a tarpon on Feb. 9. Last season I was an eye witness of the capture by the same lady of a fish weighing 160lbs.

I am informed by letters received from Fort Myers that the tarpon are extraordinarily abundant there the present season.

F. S. J. C.

Origin and Evolution of the Fishes.

In the Department of Biology of Columbia College in the city of New York a series of lectures are being given with the above title by Dr. Bashford Dean. The course is as follows:

Thursday, Feb. 16, The General Structure of Fishes; Thursday, Feb. 23, Sharks and Rays—Fossil and Recent; Thursday, March 2, The Teleosts; Thursday, March 9, The Ganoids; Thursday, March 16, Chimæra and the Lung-fishes; the Newbury collection of Giant Placoderms; Thursday, March 23, The Embryology of Fishes. These will be followed by a course on the amphioxus and other ancestors of the vertebrates by Arthur Willey, B.Sc.; Thursday, March 30, introduction, History, Mode of Life and Distribution; Thursday, April 6, General Structure; Thursday, April 13, Nervous, Vascular and Excretory Systems; Thursday, April 20, Reproduction and Development; Thursday, April 27, Larval Growth and Metamorphosis; Relationships of Amphioxus to other Types.

Fishculture.

Rearing Black Bass.

WE published recently a note of inquiry from Chas. S. Powell, Esq., concerning the propagation of black bass, following which we mentioned the names of several persons who have had experience with this fish. Mr. Powell has corresponded with Mr. Page and others and we are permitted to give below Mr. Page's letter.

It will be observed that the writer is strongly opposed to the use of live minnows for feeding the bass, because it encourages cannibalism, and this habit is one of the most serious obstacles in the way of bass culture. Bass are often reared, however, in ponds which contain minnows of various kinds in abundance, and which have never been freed from these small inhabitants. The waters in Arkansas and Texas, so wonderfully rich in bass, swarm also with shiners, gaspergon, mud shad and many other fish upon which black bass naturally feed.

In the pond in Washington in which the first experiment with bass was tried last year, were hosts of small sunfish, roach, gudgeons and carp. The feeding of the bass was so active that even the pestiferous sunfish were practically exterminated. Although some of the small bass were destroyed also, the cost of food was so small as to almost compensate for the loss. The letter is as follows:

NEOSHO, Mo., Feb. 7.—Mr. Chas. S. Powell, Richmond, Ky.: DEAR SIR—Your letter of Feb. 3, 1893, is to hand and in reply I would say, very little is known practically in artificial fishculture about raising black bass because very little has been done. It is true that there are a good many ponds devoted to bass under the care of amateurs; but professional fishculturists have done very little in this direction.

In fact, pond culture as an art is in its infancy in America. My small experience of only the past three years in raising black bass scarcely warranted FOREST AND STREAM in referring to me as an authority, for if my eighteen years' experience as a fishculturist has taught me anything, it is that our early experience with any particular fish is sure to be modified in the future. However, what little I know is at your service.

Your idea is to remove the large fish as soon as the fry are able to take care of themselves. May I ask how? I know of but one way you can do it and not kill, or at least materially injure, the young, and that is by book and line. To do this with a barbless hook will depend upon your skill and the disposition of your fish. (Let me digress here to say that while the bass is very tenacious of life, he is the most easily killed by a sudden change from warm to cold water.)

If your spawning pond is properly constructed, the best way now known is to remove the young bass as soon as they are hatched, before the food sac is absorbed, while the brood is huddled over the nest. This is an easy matter, and requires only a good skimming net of mosquito bar in the hands of a skillful workman. A little practice will soon give the "turn of the wrist" which enables one to slip a net under the school, lift them out, and quickly transfer them into the rearing pond.

The rearing ponds, of which there should be several, should be built immediately alongside of the spawning pond. They should have in three-fourths of their area not over four inches depth of water, and the greatest depth need not be more than two feet. At least one-third of the spawning pond should be quite shallow—too shallow to be inviting to the large fish. In this shallow water the young fry which escape your net and the jaws of the big fish will find a safe home.

If around the edge of your spawning pond, in water from one foot to three feet deep, you place gravel, allowing the balance of the bed of the pond to be earth, the bass will there make nests. Do not place the gravel so far out that you cannot work your net over it from the bank, or else you will have nests of fry which you cannot get, but which the big fish will get.

Your spawning pond and rearing pond should have mosses—and mosses in abundance. In the Hatchiecon Lake of Arkansas, and in San Marcos Spring of Texas, are more bass than is credible even in fish yards; both these waters abound in mosses. The mosses serve as hiding-places from fish hawks, kingfishers and the hot sun of summer; but above all they furnish a home and breeding-place for the insects which provide so large a proportion of bass food.

I have not yet been able to feed bass on any vegetable food, but I yet intend to do it. At present we use nothing but raw beef liver, and that fresh and sweet. Talk of a trout being an aristocrat! Trout will eat putrid meat, and I have carried them six months at a stretch on a strictly vegetable diet.

Nothing would induce me to put a minnow in a bass pond except as bait on a hook. It is too hard to break bass of their natural tendency to cannibalism to foster it by an occasional taste of their old evil habit. If you feed liver let it be every day at a stated hour and place. The result will please you. Feed about 1½ per cent. of their weight per day. At first this is more than they will eat. Start with a small quantity and gradually increase.

WM. F. PAGE,
Supt. Neosho Station, U. S. Fish Commission.

FIXTURES.

DOG SHOWS.

March 14 to 17.—Washington, D. C. F. S. Webster, Sec'y.
March 21 to 24.—City of the Straits Kennel Club, at Detroit, Mich. Guy D. Welton, Sec'y.
March 22 to 25.—Elmira, N. Y. C. A. Bowman, Sec'y.
March 28 to 31.—Illindio Kennel Club, first show, at Indianapolis, Ind. Chas. K. Farmer, Sec'y.
April 4 to 7.—New England Kennel Club, at Boston, Mass. J. W. Newman, Sec'y.
April 11 to 14.—Continental Kennel Club, at Denver, Col.
April 19 to 22.—Fifth Annual Dog Show, at Los Angeles, Cal. C. A. Sumner, Sec'y.
May 5 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.
June 13 to 17.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.
Sept. 5 to 8.—Hamilton Kennel Club. A. D. Stewart, Sec'y.
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y.

FIELD TRIALS.

Nov. 20.—Eastern Field Trial Club's Trials, at High Point, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

Don't forget that Detroit entries close March 7, with Guy D. Welton, 56 Cadillac Square, Detroit, Mich.

Elmira entries close March 12, with C. A. Bowman, Elmira, N. Y.

The Chicago Kennel Club and the A. K. C.

CHICAGO, March 1.—*Editor Forest and Stream:* The Chicago Kennel Club was organized in January of this year and incorporated under the laws of the State of Illinois with a paid up capital of \$4,000. Within five weeks of the date of organization it opened the doors of its first dog show, which proved a brilliant success in every way. At the time of receiving entries it gave notice to intending exhibitors, when asked, that it had applied in due form for admission to the American Kennel Club, and that it knew of no reason why it should not be admitted. Its application for membership, with its check, was received and acknowledged by the American Kennel Club and the check was used. At the meeting of the American Kennel Club in New York last week the application of the Chicago Kennel Club was arbitrarily rejected.

The Chicago Kennel Club has been organized to stay. It has claimed a date for its second annual show, which will be held here in February, 1894. Its premium list will be liberal, and its prizes and all other expenses will be paid promptly, as they were this year. Its management will be characterized by the same business methods and courtesy which prevailed this year, and it will receive the same liberal patronage from exhibitors and the public that it received this year.

The Chicago Kennel Club believes in being associated with a proper governing body, and in good faith applied for membership in the only such organization now existing. It believes there should be an organization which is truly national, and that the time is at hand when such an organization should be started. The widespread dissatisfaction now existing among members of the American Kennel Club; its pronounced local tendency and its control; its arbitrary and unwarranted rulings in the matter of membership; these all warrant the formation of a new organization, which shall be national in its fullest sense, and not a New York city club. We invite correspondence from clubs interested in this matter or a discussion through the sporting press.

If any such national organization shall be started the Chicago Kennel Club will do its share toward its support; but whether or not such a club shall be formed, or whether or not the Chicago Kennel Club may be hereafter admitted to the American Kennel Club, it will keep its promise to hold its second show in 1894. Its club rooms in the Unity Building, suite 725 to 727, will be open to receive visitors from this date on, where they will be welcome and where they may make their headquarters.

The underhanded methods employed by members of the American Kennel Club in New York, just previous to the opening of the first show of the Chicago Kennel Club, their repeated attempts to prevent judges and exhibitors from attending the show, their assertions that prizes would not be paid and that the Chicago Kennel Club would not be admitted to membership, these all show a spirit contrary to the proper appreciation of their position, and an entire lack of fairness and manhood.

The Chicago Kennel Club will, in the future, represent the real interests of dog owners in Chicago; it will be a real kennel club, existing to promote dog matters, and will be conducted on business principles with ample capital behind it.

It has secured commodious kennel grounds near this city and will own one of the best equipped kennel establishments in the country. The by-laws require the treasurer to make a report "at least" once a year, and the directors are pledged to see this rule enforced.

CHICAGO KENNEL CLUB.

Indianapolis Dog Show.

Editor Forest and Stream:

From the numerous applications for premium lists of our bench show to be held March 28 to 31, we feel that our efforts will be appreciated, and would further state that our premium list will be ready for mailing about March 1. It will represent about \$1,800 in premiums besides a liberal amount of specials. The money will be distributed about as follows: \$10 first in all challenge classes; \$15, \$10 and \$5 in open mastiff, St. Bernards, Great Danes, greyhounds, pointers, English, Irish and Gordon setters, collies and beagles, with \$20 kennel prize for each above breeds. All other classes, first prize, \$10. The merchants and business houses of this city have very liberally subscribed to a guarantee fund of over \$2,000, and this fund will no doubt reach \$3,000 before the list is complete, which is a guarantee that all premiums and expenses will be paid, thus assuring those coming from a distance that they will receive what is due them. The newspapers of this city promise us their hearty support, and with our excellent accommodations for the dogs and the promise of such a large entry, we look forward to the usual liberal patronage of our citizens. The hotels have all made special rates for exhibitors. We will have at least three and possibly four of the best known judges and everything will be done to facilitate their work so as to have the marked catalogue ready on the morning of the second day. We will figure with the various owners of trained troupes of dogs to give exhibitions, as the hall has a fine gallery all around, from which the spectators can be comfortably seated during the performance. Reading and smoking rooms will be provided with writing material for the use of our guests, and we will also arrange suitable place for the washing and grooming of dogs.

Dr. Van Hummel, so well known in greyhound circles, will officiate as chairman of bench show committee, which leaves no room for further comment on this subject. While we feel confident that nothing will be left undone to mar the regularity and order of things, we will be glad to receive suggestions from our various friends relative to any department of the show. This show will be under A. K. C. rules and wins will count.

CHAS. K. FARMER, Sec'y.

Gunshyness in Dogs.

Editor Forest and Stream:

In your last number there was a communication relating to gunshyness. I will give your readers a method which, if followed patiently, will, I think, prove effective, as it has never failed for me. Instead of giving your pup his regular exercise, shut him up where he can see all you do. In the morning fire two ordinary charges in plain sight of him and open the inclosure for him to come out. Should he refuse, leave him and close the gate or door. Repeat this daily without coaxing him and he will soon come to the gun. Should he become frightened in the field, leave him and he will soon look you up. Paying too much attention to him will only cause him to think that the shot was fired for his benefit, and if left alone he will soon come to his master, especially if it is a kind one. Dogs trained by kindness are the most willing workers, and unless you have a good store of patience don't attempt to train a dog, for you may ruin a dog that kindly but firmly handled would be first class. The dog whip is a most excellent thing properly used, as is also the check cord, but either, if used to excess, make sulky or cowardly dogs of those which otherwise would be cheerfully obedient.

H. M. T.

NORTH ONTARIO, Cal., Feb. 11.

Editor Forest and Stream:

In response to Mr. N. D. Elting would say that working a cord on a dog had reference merely to its uselessness when breaking him of gun shyness. A gun shy dog does not pull on a cord, but against it, and is probably trying to pull the collar over his head half the time. The cord on a bird dog is not to lead him with, but to hold him or control him. I think a great many dogs learn to "potter round" by not being kept on a chain as much as they should be. Another word—when your dog is cured of gun shyness keep him to heel or on a cord when going to or from your hunting ground, and you will not be apt to have a "potterer."

HORNET.

CHARLOTTE N. C.

P. S.—The FOREST AND STREAM in its new dress seems trying to outdo itself in getting up an ideal sporting paper.

American Pet Dog Club.

Editor Forest and Stream:

The American Pet Dog Club is now in a very flourishing condition, having a membership of fifty and a nice balance on the right side in the treasury.

They intend to hold their first show May 30 to June 2 at Lenox Lyceum, New York, and although they have only just started a show subscription list, they have \$300 subscribed by each of the following members: Mrs. Wm. R. McKee, Mrs. Horace Stokes and Mr. Wm. J. Feyer.

Everything points toward splendid success and many new dogs will be purchased by the members to exhibit at the show. A splendid special has been promised by Mr. Franklane Sewell, the artist, who has just returned from abroad. This special is to be a picture, painted from life, of the most popular dog at the show, the prize to be awarded by the votes of visitors to the show.

At the annual meeting of the club, held Friday, Feb. 24, at Madison Square Garden, officers were elected as follows: President, Mrs. S. C. Barnum; Vice-Presidents, Mrs. Horace Stokes, Mr. Charles Wheatleigh and Mr. A. F. German; Secretary, Miss Marion E. Bannister; Treasurer, Mr. Wm. J. Feyer; Executive Committee, President, Secretary and Treasurer, Mr. T. Farrer Rackham, Miss Chapman, Mr. E. H. Morris and Dr. Sherwood; Delegate to the American Kennel Club, Mr. T. Farrer Rackham; Trustees, Mrs. Horace Stokes, Mrs. Wm. R. McKee, Mrs. W. E. Randolph, Mrs. A. M. Cunningham and Mr. Chas. Wheatleigh.

Mr. Rackham was elected superintendent of the coming show.

A meeting of the executive committee was called for Wednesday, March 1, 8 P. M., at 329 Lexington avenue, to arrange show matters.

MARION E. BANNISTER, Sec'y.

Gordons in the West.

Editor Forest and Stream:

It might be of interest to you and the readers of your paper to learn that the much-maligned Gordon setter is coming to the front in the West. The demand for this class of field dogs has been steadily on the increase, and where a year ago there were not over half a dozen well bred dogs of this breed in Chicago and vicinity, they can now be counted by the dozens. As a test against other setter breeds I entered a fine litter of nine Gordons in the late Chicago bench show, and sales for the entire lot were effected before the close of the third day, and at good prices too. Could have sold twice the number if I had had them, many who procrastinated being disappointed. I am satisfied that with more attention paid to breeding and handling for field work instead of bench shows we should not be obliged to strain our vision in an attempt to find the names of our beautiful Gordons among the list of entries of field trials.

WILL H. WORTH.

CHICAGO, Feb. 28,

PHILADELPHIA DOG SHOW.

THE second show held by the Keystone Kennel Club was brought to a close last Friday night. We regret to say however, that though the management will scarcely suffer any loss, as their expenses were very light, still they cannot possibly have made much money. In these days however, to come out even is a consummation to be devoutly thankful for. As before, the show was held in the Tattersall's building, which is scarcely the best place imaginable for a dog show, owing to the absence of heating arrangements. On Tuesday the atmosphere was simply frigid, and every one complained of the extreme damp cold; outside it rained and snowed alternately, and effectually precluded any idea of a large attendance. If some of the dogs that intend to do the circuit do not come out of it the worse for wear, we shall be much mistaken.

Judging commenced promptly in three rings upstairs, the show being held on two floors and proceeded with little interruption till 6 P. M., when everything was judged excepting foxhound bitches and harriers, which might well have been done as well as the few specials that Mr. Mason had still to award. The judging on the whole seemed to give satisfaction, and the show was remarkable for the debut of three new judges: Messrs. Anthony, Smith and Elliott, who acquitted themselves well. The show hardly seemed to go with the swing and easiness that was apparent last year, though Mr. Watson and Frank Smith worked like beavers. Aisles were not cleaned up as soon as they might have been in the mornings, but the dogs seemed to be comfortably housed and had plenty of clean straw every day.

A number of well-known dogmen were present. Besides the judges we saw Messrs. T. G. Taylor, W. West, G. Muss-Arnolt, A. H. Heppner, Geo. Bell, F. R. C. Clarke, Dr. Glass, J. H. Winslow, H. A. Harris, Frank Dole, W. Peirson, J. F. Hall, Ed. Maher, Arthur Trickett, Geo. Thomas, Andy McGregor, Donald Monroe, J. Otis Fellows, Dr. H. M. Cryer, Harry L. Goodman, W. H. Ashburner, Henry Halsey, Carl Heimerle, George Jarvis, F. Senn, C. E. Connell, Murray Mitchell, A. S. Bradbury, Joe Lewis, Ben Lewis, W. W. Kendall, Dr. Dixon, C. T. Thompson, R. P. Keasbey, Edgar Huidekoper, F. R. Carswell, Henry Jarrett, German Hopkins, H. A. Darby, G. W. Price, Ed. Lever, E. Adams, J. Foster, F. H. Hoyt, Jos. Hunter, etc. Marked catalogues were issued on Wednesday morning. Spratts Co. benched and fed, and, on the whole, in their usual efficient manner, though we regret to say some of the dogs were benched on the floor through some misunderstanding and the judging fence could have been made stronger. The show was well disinfected and at all times sweet. The attendance Wednesday was good, but hardly came up to expectations the rest of the week, the weather being execrable. The judges' names are given with the breed as criticised. An interesting competition was that awarded to the best dog in classes judged by Mr. Mason. These specials are somewhat of a nuisance, as they generally give rise to dissatisfaction and are largely divided on personal tastes when one man makes the award. Three and Gem of the Season were eventually the two last to leave the ring and the locket finally went temporarily to Three, the Scottish terrier. Lady Livingston and Lady Alton or Scottish Leader might well have had something more to say in the matter.

MASTIFFS (*Mr. James Mortimer, Judge*).—After the good showing at New York the collection of this breed was poor, for with the exception of Merlin and Miss Caution there was little to commend, with the possible exception of the old dog Brother. First went easily to Merlin, who keeps his New York form and would almost make two of Brother, second, who takes a good deal after old Homer, though not so heavily built throughout, but is his size and type. Bruce Caution is better on his legs than Duke Caution, vhc., but loses in head; neither are good—leggy and not substance enough. Don, hc., is weedy and long-faced. The bitches had two entries and Miss Caution beats Ethel decisively in head properties but loses in depth of body, size and bone. The local class winners were Bruce Caution and Duke Caution. When the American Mastiff Club is making such good efforts this year to advance the breed by donating its handsome cups at different shows, the mastiff breeders should do better than this, especially as good money was put up in the regular classes as well. Merlin took the American Mastiff Club's \$150 challenge cup for best American bred dog, also the \$100 for best in show, while to Miss Caution was awarded the silver cup, value \$100, for best bitch.

ST. BERNARDS (*Mr. Mason, Judge*).—Although the entry list here was a mere echo of that at New York, with Mrs. Smyth and Mr. Moore exhibiting, there was lots of quality on the benches. The New York St. Bernard Kennel was drawn blank with Sir Bedivere and King Regent away. In bitches, however, the beautiful Lady Livingston was alone, showing no effect of the full week she put in at New York. With Marvel out of the open dog class, the issue lay between Bevis and Eboracum, Mrs. Smyth's new dog, as there was nothing else in the class to touch them. With some more flesh and a more massive head, Bevis is a very likely looking dog, handsome in appearance and coloring, trifle long in muzzle and not deep enough for breadth of skull; he loses to Eboracum in type of head, he stands a little narrow in front, needs more rib, good bone, legs and feet, but pastern could be stronger. Eboracum, second, has a better head, deeper and squarer muzzle, skull not volume enough, nice markings, is not deep enough in body for height, but he is young yet and will develop here; nice shoulder and width of chest, good bone, but hocks not bent enough, eye should be darker, and he is under-shot a quarter of an inch, not good in hind action and short of coat; when in better condition will probably do better. King Regent had no interest in the competition. Operh bitches (5), the winning ribbon fell to that well-made bitch Sunray, who, I think, is getting more massive in head, which is improving her looks greatly. Lady Taylor, second, is a very pretty animal; good coloring, especially in head, and this would be an excellent one had she a more defined stop; she could do with more bone; take her all around, barring stop, she runs the winner close, especially in quality and type. Border Bell, third, has a long, plain head and eye too deeply sunk; her body, legs and feet are the best parts, as she lacks quality. Lady Juno Jacques, reserve, is a sort of liver-orange, with flesh-colored nose, and there is nothing about her to commend but good forelegs. The best puppy was Duke of Alton, by King Regent, a fairly good-headed dog, showing quality. The others need no comment. Eboracum won in locals over Nanciebel, a nice little bitch, with good bone and showing quality. Border Bell loses to both in legs and head.

In smooth challenge dogs, Scottish Leader, as lusty as ever, was alone, and Miss Alton, that sweet lump of quality, had also a bloodless victory. Then Melrose had no opposition in open dogs. He was light in flesh. It is a pity that more flesh cannot be kept on these Alton dogs. They need it in the fierce competition they must meet. Open bitches brought out four, but there was only one in it, the beautiful Lady Alton, who could be truer in her feet and is a little slack between the shoulder. She beats Leitha decisively in size, quality; head needs a little more stop, is a little back on pasterns, rather good body and hindlegs; a bitch with scarcely enough character, somewhat like her litter brother in this respect, and has quite enough coat for a smooth; in fact, few of the smooths we see out nowadays have the correct coats of Hector, Daphne or Flora II. Lady Leeds has little to commend—faintly in head. In puppies Lady Janette should be squarer in muzzle, otherwise promising. Leitha won in the local class, Scottish Leader beat Melrose for best smooth. There is little between them, for what one loses in quality and expression the other gains in size, substance and condi-

tion. The latter will always play an important part between the two. Mr. Moore won the kennel prize with a little to spare.

NEWFOUNDLANDS (*Mr. Mason, Judge*).—There were five of these and one of them was better than we usually meet. The winner, Carlo, much better than average, correct ear, small and lying close to the head and not covered with long hair, like most of those we see; his head is well shaped, but not big enough; coat pretty flat and fair bone; a nice little dog. Surpass, second, has a light eye, sour expression, long ear, faulty in head; a better boned dog than the winner; fair coat. Captain, reserve, has a light, long muzzle and is too straight in face, none too good on his legs and much inferior to the winner. There is a good field for some one to take hold of this breed.

GREAT DANES (*Mr. Mortimer, Judge*).—Quite a healthy showing in this breed, which seems to be making progress both in numbers shown and quality. In open dogs Maj. McKinley, whom we have noticed before, won again. He is faulty in head and hind parts, but is an excellently fronted dog, but scarcely of the correct type of body. Hepburn Hero's badly constructed forelegs and shoulders may account for his secondary position, yet he is of a smarter type than the other in body. Theseus, third, is a heavily boned dog, little too straight in loin, open in feet and not strong enough in pasterns; little slack behind shoulder, throaty and muzzle should be squarer. Bismarck, vhc., a dog of fair type, dipping a little too much behind shoulder, good front, and had he a better head could have been placed higher. Tannhauser, hc., is too straight behind, shelly and too much on the leg. Leo, c., is a plain-headed, lanky dog. In bitches Minerva caught the judge's eye for first. She beats Lufra, but her forelegs are not true, elbows set in too close, muzzle not strong enough, neck clean and well arched. Lufra, second, was too fat, but has a better shaped head than the winner and good bone and front. Third went to Flora H., whose poor muzzle and straight face, light eye, cheek and throatiness put her out of good company. Fairy, vhc., is far too straight behind, faulty in muzzle and carriage of stern not as it should be. Maj. McKinley won the special for best.

BLOODHOUNDS (*Mr. Mason, Judge*).—The only one shown was Belhus, Jr., a capital son of Belhus, good deep, lengthy head, excellent wrinkle and length and hang of leather, good bone and front; a credit to the home-bred ones, and has improved since Washington show.

The only deerhound entered, Alice, was absent. **RUSSIAN WOLFHOUNDS** (*Mr. Mason, Judge*).—There were four of this breed shown, all hailing from Mr. Hanks's kennels. Svodka took the challenge prize, and Groubian, late Sorvanates, was the only dog entered; he was hardly so well shown as we have seen him. In bitches, Vinga, who beats her kennel mate, Flodeyka, pretty well all round, and especially in shoulders and bend of stifle, was placed first. She is a nicely formed bitch all round.

GREYHOUNDS (*Mr. Mason, Judge*).—There were not many on hand, though with Mr. Purbeck's and Manatag Kennels' entries, there was no lack of quality. In challenge class, smart little bitch as Bestwood Daisy is, she was fairly beaten by Gem of the Season, who is getting heavier in the shoulders, but is still able to hold his own, though not in first-rate trim at present. Two dogs were shown, and Henmore King easily beat Nero, who loses in head and hindparts. King has good forelegs, but shoulders could be better placed, ribs should be better sprung, in addition he was not shown in as good condition as he might have been. Chips, another new one to us, won in the ladies division; her head is a trifle short, and not strong enough in muzzle, feet broken and not as strong as a greyhound should be in pasterns, forelegs hardly straight, a well-ribbed bitch with good hindparts, shown soft and tail has been nipped in one of the joints near the end. Wild Rose, second, is light but nicely formed, better in front than the winner. Idlewild, reserve, I could not find.

FOXHOUNDS (*Mr. Mason, Judge*).—It is exceptional to see so many good English hounds shown, but thanks to the Radnor Hunt and Mr. Harrison we are likely to see better stock on the benches than heretofore. It is a pity the different hunt clubs do not send their best specimens more frequently to the shows, as nothing adds more to the picturesqueness of a show than a bench full of these "beauties," and their music often adds a charming tone to the prevailing discordant din. That capital hound Specimen was again placed first over Denmark, whom he excels in head but loses in strength of knee, being apt to buckle over at times; they are both much better hounds than usually seen out; Pensioner, reserve, loses to the others in head, ribs and body generally. In bitches first went to Rosemary, whose beautiful head, straight front and nicely turned body proved just a little too much for Poetess; third went to Queen W., who loses to the others in muzzle and skull, and clearness of neck. The two harriers that won at New York were each alone in their class and are infinitely better than any so-called harriers that have hitherto been exhibited. They are of correct type and well made.

BEAGLES (*H. W. Lucy, Judge*).—An entry of 23 faced the judge, and though we would have liked to have seen more out, still those shown were some of the best we have. In challenge dogs Roy K. had a bloodless victory, but in challenge bitches in the absence of ch. Lou the issue lay between Twintwo and Betty R., and were placed as named, the former beating the other in front and hindparts. Over 13 inches, dogs, saw five to the fore, and Forest Hunter's better type, action and front placed him ahead of the Nashville winner. Doctor, who in turn beats Hawkeye, third, in hindquarters and body, but shows a good deal of quality, perhaps more so than Doctor; Trifle II. might well have had another letter for his general type and formation is good, but he is out at elbow and not straight in front, and hind parts not strong enough, and he is heavy in shoulders. Mr. Winkle, c., is bad in front, feet too open, light in loin and coat soft, but his head is fairly good in expression and formation. The bitch class had five and competition was very close. Here we were introduced to the English champion Lonely, and if the old country can supply us with a few more of this sort we need have no fear of losing the correct type by running too much on legs and feet at the expense of head and cobbliness of body. Lonely and Emeline were quickly placed aside for chief honors. The former is a beautifully modeled bitch of fine carriage and action, a trifle long in muzzle, good true front, excellent bone, cobby deep body with strong quarters and well bent hocks, pasterns are a little down now, the bitch is nearly seven years old, skull nicely formed and ears well hung but a trifle thick, plenty of coat, brush may have been correct in her earlier days, but is now a little too full; her mouth is good for her age, but in sprightliness of carriage she is a two year old and showed up conspicuously in this respect compared to Emeline who felt strange and would not show herself in her usual form. The picture of Lonely published sometime since in FOREST AND STREAM, does not do her justice by any means. Emeline must play second fiddle in everything but ear and brush. After these came Vick R., who loses in body, head and front to these two while Fanny Read is longer in head and muzzle, wide in front, longer in body and not deep enough, but she shows well and has good action. Snow is well known to lose in head, forelegs and quarters to a good one. Under 13in., Rockland Boy won easily, he is filling out nicely, but his muzzle is not square enough; second was withheld, and third given to Prince II., whose faulty weak loin and bad hind action more than affects any merit he may have in front, he is too light throughout. Among the ladies of this height, Mr. Ashburner showed quite a nice little one, Judy, with more substance and type than is usually seen in this division; she is a little fine in muzzle and full in skull, needs filling out in quarters and should run on hard ground a bit to wear

her toenails down. Gypsy A., second, was too heavy and loses in general quality to the other, while Queen Racer is also too fat and is beaten in body and hindparts by the other. Two very indifferent pups were shown, and prizes should have been withheld altogether as they are both too leggy and light throughout. Oak View Sally has good forelegs and some quality in head, so I gave her second, first withheld.

POINTERS (*Mr. Anthony, Judge*).—This was Mr. Anthony's first appearance in the ring in this capacity, and he certainly went at his work with all the aplomb and readiness of a veteran. A good class of dogs met him and it was thought he judged a little too fast and hardly examined the dogs sufficiently; be this as it may, if a man knows his mind and is familiar with his breed, too much handling is only apt to confuse him and is not necessary with a judge of quick decision. Many of the dogs are so well known that comment is not necessary. Lad of Kent and Duke of Hessen met in challenge dogs and this time the former had his revenge. Duke did not seem himself and lost decisively in loin and quarters to the other, who never showed himself better. Woolton Game was again placed over Revelation, but was afterward beaten by Lad of Kent for best in show; this bitch is aging fast, and good and well made one as she is, cannot always hope to be in front. In open dogs the judge reversed the New York decision by placing Duke of Kent II. over Ridgeview Prince, and though the former loses in muzzle and forelegs to a good one, is so well built behind the shoulder that he will always be well up in any company, and our criticism of last week is borne out if the word "better" had followed "like him" as it should have done in our report. Duke of Dexter, third, loses to the other in front and hindlegs. Sandford Druid needs more flesh. Boxer, vhc., had he a better stop would not have a bad head, was in fair shape only. There were six absentees in this class of the eleven entries. In bitches (3) Duchess of Naso proved the winner, and for reasons stated last week she beats Westminster Gladys. In light weight dogs (8), two absent, Ridgeview Donald was again ahead of Ridgeview Faust, and our remarks last week stand again, while Rock II. and Glamorgan were graded as at New York. Lad of Nimrod, vhc., is light in bone, snipy and would do with more meat on him. Doc Daniels, hc., is thin, straight-faced and feet too open. Redemption, also two letters, is too broad in skull, good muzzle, splay-footed, but his formation of body quite deserved the notice he got. Legerdmain, c., is too long in muzzle and should be better sprung in ribs. The bitch class contained several well known faces and Bloomo II. headed them, reversing the New York decision, where Lass of Kent was placed over her. Hempstead Blossom, third, should be closer in toes and pasterns stronger; rather plain in head and quarters fall away too much. Clancarty, reserve, is better in head; deserved her letters, and so did Ridgeview Venus for her good front and quality, though she is tied in elbow and plain in muzzle and quarters. Beppo's Glen, first in puppies, really deserved his place for his good body and bone, though very narrow-chested. The other three entries were absent.

ENGLISH SETTERS (*Major J. M. Taylor, Judge*).—It does one good to see the quiet, methodical way in which the Major goes about his work, and he is fairly at home with his specialty. His classes were pretty well filled. Breeze Gladstone and Donna Juanita supplied the challenge winners. In open dogs Ben Hur of Riverview received better treatment than at New York, where he was unnoticed; though faulty in shoulders, he has so many other good points that he more than deserves recognition and his placing here fully carries out Mr. Waters's estimate of him in last week's issue. Glendon, second, is well known as a good one, but seemed tucked up in flank here; he could be truer in feet. Prince Ben Ali, third, is rather flat-ribbed and low in flesh, and a plain head is against him, still he is well formed in other respects. The Earl, reserve, had he a better longer head and cleaner neck would command a higher position. Benzine, vhc., is well known and in his right place, while Lewis's Rod vhc., well deserved his three letters, being a strongly made dog that could be improved in muzzle and should be flatter in coat. Fifteen were entered in bitches and one full of quality, Spectre, caught the judge's eye. She is a bit narrow in head, pitched in muzzle, but good outline, while her body and legs are good. Prima Donna, second, made the placing the same as last year, if our memory serves. Katie Noble II., third, has been recently commented on. Eastern Queen, reserve, a pup, was sent home early. The others call for no particular mention, he being the best card given. Eastern Queen won in puppies, Druid Dick, who has good bone and a fair head, coming in for second. Breeze Gladstone won the special for best in show.

IRISH SETTERS (*Mr. Max Wenzel, Judge*).—While the entries might have been larger to welcome this popular old breeder, still the veriest pessimist could not grumble over the quality, for both Seminole and Oak Grove had their best out, and that always means some hard work for the judge. Seven showed up in challenge dogs, and to old Tim again fell the honors. When he goes under, which I hope may not be for many a day, Duke Elcho or Kildare will probably get a chance. Right here one must say that all credit is due these two kennels for the good they are doing this breed. Show after show we see entered eight to twelve challenge Irish setters for two first prizes. The expense must be great, but the benefit to the public is greater. In bitches Laura B. once more wore the mantle of superiority, which Norma has rudely snatched from her at late shows. The second is better in hindlegs. Open dogs had eleven entries, headed by Blarney, Jr., who excels Montauk, Jr. second, in chest and ribs, is not so good in hind parts nor so rich in color; Kildare Beverly, third, has a capital, well formed front, but a snipy muzzle spoils his head, and his neck is too short, otherwise he is all right. Mark Antony, vhc., turns his feet out, has a good head and strongly made body and legs. Duke of Kildare, vhc., is rather heavy in shoulders and should have more rib, and is rather coarse all over. Tim's Dandy, hc., we have spoken of before. Queen Vic proved the winner in bitches (5). As at New York, while second went to The Marchioness, a nicely formed bitch all round; third to Delphine, whose straight face is against her. Clairmont Heather, reserve, must thank her plain muzzle and light eye for being set back. Mark Antony was the dog puppy winner, only entry, while Lady Cleveland, a nice all round bitch, won nicely from Blarney, Jr., in local class.

GORDON SETTERS (*Mr. J. F. Smith, Judge*).—Here was another specialty judge making his debut as a judge and there was no kicking made over his awards. Ivanhoe in challenge dogs and Duchess of Waverley in bitches seem stereotyped now. Four dogs in the open class. Duke, first, beats Consul especially in tan markings, which are entirely too dark on muzzle. Archibald, third, is a rather long-backed dog, nicely-shaped head, but light eyes spoil expression. Robert Burns, vhc., loses to the winners in muzzle and body. Three bitches faced the judge and first and second went to Lady Gordon and Princess Louise, both well known and in same places at New York. Third to Sallie Beaumont, light in muzzle and stop should be better defined, good coloring. Robert Burns was the winning pup.

SPANIELS (*Mr. A. C. Wilmurding, Judge*).—It is unusual to see this popular judge with such light classes, but somehow this seemed to be the rule in many of the breeds throughout the show. Many of the dogs are so well-known that simple mention of their position will be sufficient this time. Newton Abbott Laddie can always beat Brantford Mohawk in challenge field dogs, while Bridford Ruby is *faible princeps* in her color at any rate. In open black dogs Judex had no trouble in disposing of Sorry Jake; scoring much in body and quarters. Laddie O., third, is leggy and falls away too much behind, has a topknot and muzzle should be stronger. In bitches only one came out, Rosedale Bess; she

is a little on the leg and coat could be improved. In any other color Newton Abbott Farmer, in nice shape, had a bloodless victory.

Cockers were well represented by the New York winners, Fascination in challenge dogs, and I Say and Troublesome in bitches; good little bitch as Troublesome is, she is small, and Mr. Wilmerding preferred more size and substance in I Say. Open dogs saw Middy first, the rest nowhere. King W. has too much stop and is high on leg. In bitches there was more competition, and Miss Wagglers turned the tables on Realization, whom she beats in head and perhaps in forelegs. Woodstock Dora, faulty in head and front, is hardly in it with these two. Miss Chip, vhc., is another one well known, and little if any inferior to Dora. In dogs, other than black, that cocky little fellow, Gay Laddie, a red, was placed over Redfellow, whom he beats in body, the latter's being too long; the cobby little chestnut coming in for third; he needs coat, but is improving in body as he gets older. Seminole Cherry Ripe proved the winner in the ladies division (5), she was first at Toronto. Lady Gay, second, a nice-bodied little red, came next, she loses in squareness and depth of muzzle. Mary Queen of Scots, third, is too high in skull and not cobby enough in body. Ditton Brevity, vhc., has a plain head which is not improved by a full eye, and her front is none too straight. Puppies were a warm lot, with Realization, Gay Laddie and Redfellow placed as named, while Rose and Jack of Clubs had to be content with hc. and c. A fairly good Irish water spaniel in Trouble was shown, lots of curl, fair topknot, legs well clothed with hair, and plenty of bone, fairly clean tail. Geo. Bell had a field day with the specials, kennel and best cocker going to the Walker House.

COLLIES (Mr. E. B. Elliott, Judge).—Some fairly well filled classes met the judge on his first appearance in the ring and his decisions met with favor. The challenge entries were The Squire in dogs and champion Flurry II. and Metchly Surprise in bitches. A sterling good dog in Wellesbourne Charlie proved just a little too much for Woodmansterne Trefoil in size, bone and substance, though in expression and coat the is in no way ahead. Jim Crow, third, a fair little dog, loses in head and coat to the other, and also behind. Curzon, reserve, is quite the equal of Jim, and I like his head better. Roslyn Colin, vhc., has a coarse, common head, but in coat he is good, though scarcely dense enough. A new face appeared in bitches, Dorothy, certainly about the best yet bred on this side, very nicely modeled, splendid straight, dense coat, good legs and feet, a model behind; in head she is good, little full in skull, but expression and carriage of ears could not be improved; she was far ahead of Crissey, well known. The others did not amount to much, four being absent from Hempstead Kennels. Another new one of the same litter as Dorothy, Dominie by name, won in puppies, with the same good coat, might be better in pasterns and loin, nice length of head and expression, ears well carried. The class was divided and Dorothy took the bitch prize and also won in locals, the others being outclassed.

BULLDOGS (Mr. Mason, Judge).—Not many entries, two present in open dogs, and King Lud scores over Rustic Sovereign in every direction. In bitches, Addiscombe Gipsy defeated Fly, who is not deep enough in stop or muzzle, nor has sufficient volume of skull. Lena Langtry, reserve, is well known.

BULL-TERRIERS (Mr. Mason, Judge).—Quite a good entry of these. Carney, in challenge dogs, shows superior to Dusty Miller in head, front and body, while Attraction beat a good lot in the corresponding female division (5). Edgewood Fancy excels the other in front and shoulders, the winner excels in head and body. Open dogs, five present, first went to Surefoot, who scored for his new owner. He beats Prince Gully in body and front, while he might be better in muzzle and cheek, stronger in loin and better muscled behind. Aristocrat, reserve, was in his proper place. Chatham Prince, vhc., is open in feet, light in loin and not in good fettle. The New York winner, Mermaid, could not be denied in open bitches, beating Loumont Kit decisively in front and quarters. Thelma is promising and needs furnishing, while Countess Dufferin is getting cheeky. Mermaid easily vanquished Prince Gully in puppies.

FOX-TERRIERS (Mr. Mortimer, Judge).—The classes in this popular breed were well filled and some good ones were on hand. Raffle, looking well, was alone in the challenge class. In open dogs Ripon Stormer beats Raby Trigger in head, front and loin. The latter, however, was well shown and

Jack Briggs being placed over champion Boxer IV.; as these will be shown probably next week we shall have more to say on them then. Dummurry easily scored over Breda Tiney and Kathleen in the corresponding bitch class. Jackanapes and Merle Grady met again in open dogs, and were correctly placed, Merle losing in body, coat and muzzle to the other. Play Boy II. loses in head and front to the others. In bitches Candour repeated her New York victory, her skull might be improved, but in front and body she was well over Chancery Lass, whose coat is better. Red Rags, reserve, is undershot. Rosabelle, third, loses in skull but has a good body.

BLACK AND TAN TERRIERS (Mr. Mason, Judge).—Most of the winners here are so well known and will be shown so frequently that it is unnecessary to comment very freely on them. Prince Regent beat Meersbrook Maiden in the challenge class; neither come up to Queen III. in true terrier character, but are better in markings. Prince, who is badly breeched and in poor condition, beats second in back and length of head, but is not so good in markings. Monarch, although dark in tan, beats Rochelle Abdallah in chest, forelegs and head. That smart terrier Louie won nicely over Gypsy Girl in markings and forelegs; while Mespah, reserve,

WELLESBOURNE CHARLIE.

First, Philadelphia, 1893.

Owned by Mr. Henry Jarrett, Chestnut Hill, Pa.

is also not true enough in front and black runs into the tan too much on legs.

SKYE TERRIERS (Mr. Mason, Judge).—Some good ones were shown here, but the decisions were wrong. Endcliffe Maggie, first, should not have beaten Barnaby Rudge, the latter being so far superior in head, length and strength of jaw, length of body and coat, although poorly shown and low in flesh. Islay, reserve, is also a better bitch than Maggie; better length of body and coat.

SCOTTISH TERRIERS (Mr. Mason, Judge).—First went to Three, a capably formed dog, who beats Rhudman in head, body and bone; the latter is better in ear.

A poor lot of dachshunds and none of them worthy of particular mention. First was rightly withheld.

YORKSHIRE TERRIERS (Mr. Mason, Judge).—With the exception of Young Ted there was nothing to command attention in dogs. In bitches first was withheld from Fanny, the only entry who was said to be colored. If so, why give her second at all? Her tan is bright, but we question the "fake" part of it, as it was not correctly placed.

PUGS (Mr. Mason, Judge).—Most of the winners here are well known. Bob Ivy was alone in challenge dogs. In the open dogs Seminole Dixie rightly won over Little Fritz. Both are well known. Ivy Bob has a nice ear and skull, a deep, square muzzle; needs furnishing in body, and is well up with second. Midget won in bitches, but of the other two we cannot speak, as they were stalled together without anything to identify them by. The winning puppy is too fat. Again we must protest against this "bunking" up together to save a little trouble. It is unfair to the public and those who have to criticize the dogs, three or four pugs cuddled together in one cage without collars or any means of identification, are of no interest to any one and tends to confusion.

TOY TERRIERS (Mr. Mason, Judge).—There was only one good one and the best we have seen out yet since the old days of Pepita et al. Lady Clyde has a capital head, with length and no suspicion of "apple," nice tan and thumb marks; would we could see a few more like this one.

TOY SPANIELS (Mr. Mason, Judge).—Two good King Charles. King of the Charles beats the other, Royal Duke, in muzzle, deeper stop, better coat and action. Mrs. Senn's Bell and Jap, two "Japs," won easily over Portsmouth Minnie, a dull-colored Ruby.

ITALIAN GREYHOUNDS (Mr. Mason, Judge).—The winning dog, Byron, has a capital head and is of nice size. Tony, second, is larger size and shows too much stop, and ears not well-carried. Nixie, the winning bitch, is rather apple-headed and ears not correctly carried. Second went to Goldie, whose large ears and full eye are against her, but she beats the other in head and symmetry. Berri was an easy winner in poodles, the other two losing in texture of coat, no cords and mixed. Shirley, reserve, especially losing in loin and front. In miscellaneous division the Welsh terriers were in force, at least, so-called terriers. Dawn was the best in head and type, though fat. Mephisto Dick was second.

AWARDS.

MASTIFFS.—Dogs: 1st, Mrs. C. Wallack's Merlin; 2d, C. Porter, Jr.'s Brother; 3d and very high com., D. Woodson's Bruce Caution and Duke Caution. High com., J. McCann's Don. Com., Mrs. R. W. Bailey's Hero V. Bitches: 1st, C. E. Bum's Miss Caution; 2d, B. F. Lewis's Ethel.—LOCAL CLASS—1st and 2d, D. Woodson's Bruce Caution and Duke Caution.

ROUGH-COATED ST. BERNARDS.—CHALLENGE—1st, E. H. Moore's Lady Livingston.—OPEN—Dogs: 1st, W. Peirson's Bevis; 2d, Swiss Mountain Kennels' King Regent. Bitches: 1st, Swiss Mountain Kennels' Sunray; 2d, C. J. Bousfield's Lady Taylor; 3d, A. Burgess's Border Bell. Reserve, T. S. Carrington's Lady June Jacques. Puppies: 1st, C. M. Bull's Duke of Alton; 2d, withheld; 3d, H. B. Cobb's Philip. High com., J. C. Hecker & Bro.'s Marquis of Hospice.—LOCAL CLASS—1st and 2d, Swiss Mountain Kennels' Eboracum and Nanciebell. Reserve, A. Burgess's Border Bell. High com., J. F. Hall's Fairhill Queen.

SMOOTH-COATED ST. BERNARDS.—CHALLENGE—Dogs: 1st, Swiss Mountain Kennels' Scottish Leader. Bitches: 1st, E. H. Moore's Miss Alton.—OPEN—Dogs: 1st, E. H. Moore's Melrose; 2d, B. F. Lewis's Ethel; 3d, C. S. Baker's Lady Leeds. Puppies: 1st, Swiss Mountain Kennels' Lady Jeanette.—LOCAL CLASS—Swiss Mountain Kennels' Leitha.

NEWFOUNDLANDS.—1st, P. J. Walsh's Carlo; 2d, J. Condon's Surpass; 3d, T. Beatty's Captain.

GREAT DANES.—Dogs: 1st, J. M. Studebaker's Major McKinley; 2d, Hepburn Kennels' Hero; 3d, Cumberland Kennels' Theseus. Very high com., com., Weisbrod & Hess's Bismark and Leo. High com., C. E. Norris's Tannhäuser. Bitches: 1st, Cumberland Kennels' Minerva;

2d, A. M. Jaggard's Lufra; 3d, Weisbrod & Hess's Flora II. Very high com., M. F. Klander's Fairy.

BLOODHOUNDS.—Dogs: 1st, G. F. Pollock's Belhus, Jr. RUSSIAN WOLFHOUNDS.—CHALLENGE—1st, C. S. Hanks's Srodka. OPEN—Dogs: 1st, C. S. Hanks's Groubian. Bitches: 1st and 2d, C. S. Hanks's Vinga and Flodeyka.

GREYHOUNDS.—CHALLENGE—1st, A. W. Purbeck's Gem of the Season.—OPEN—Dogs: 1st, Manatung Kennels' Henmore King; 2d, Capt. S. S. Houston's Nero. Bitches: 1st, Manatung Kennels' Chips; 2d, A. W. Purbeck's Wild Rose. Reserve, E. V. Paul's Idlewild.

FOXHOUNDS.—Dogs: 1st, Radnor Hunt's Specimen; 2d, M. Harrison's Denmark.

BEAGLES.—CHALLENGE—Dogs: 1st, Rockland Beagle Kennels' champion Roy K. Bitches: 1st, Forest Beagle Kennels' Twin-Two; 2d, R. C. Rinearson's Betty R.—OPEN—Dogs (over 13in.): 1st, Forest Beagle Kennels' Forest Hunter; 2d, B. F. Lewis's Doctor; 3d, W. H. Harding's Hawk-Eye. High com., G. Laick's Tivlie II. Com., W. H. Child's Mr. Winkle. Bitches: 1st and 2d, Rockland Beagle Kennels' Lonely and Enelme; 3d, Forest Beagle Kennels' Nick R. Very high com., Glenrose Beagle Kennels' Fanny Reed. High com., Middleton Kennels' Snow. Dogs (under 13in.): 1st, Rockland Beagle Club's Rockland Boy; 2d, withheld; 3d, W. H. Ashburner's Prince II. Bitches: 1st, W. H. Ashburner's Judy; 2d, Glenrose Beagle Kennels' Gypsy A. Puppies: 1st witheld; 2d, W. H. Child's Oak View Sally. High com., J. H. Avil's Cleopatra.

POINTERS.—CHALLENGE—Dogs: 1st, G. Jarvis's Lad of Kent. Reserve, Hempstead Farm's Duke of Hessen. Bitches: 1st, Hempstead Farm's Woolton Game. Reserve, G. W. Laikuo's Revelation.—OPEN—Dogs (55lbs. and over): 1st, H. Dutton's Duke of Kent II.; 2d, P. H. & F. E. Lewis's Ridgeview Panie; 3d, C. D. Robert's Duke of Dexter. Reserve, Hempstead Farm's Sandford Druid. Very high com., Dr. J. R. Daniels's Boxer. High com., J. H. Winslow's Redemption. Bitches (50lbs. and over): 1st, Rinada Pointer Kennels' Duchess of Naso; 2d, Elkwood Kennels' Westminster Gladys. Dogs (under 55lbs.): 1st, F. H. & P. E. Lewis's Ridgeview Donald; 2d, A. G. Houley's Ridgeview Faust; 3d, G. Connell's Kock II. Reserve, L. A. Biddle's Glamorgan. Very high com., C. Heinerle's Lad of Nimrod. High com., Dr. J. B. Daniels's Doc Daniels. Bitches (under 50lbs.): 1st, Rinada Pointer Kennels' Bloomo II.; 2d, G. Jarvis's Lass of Kent; 3d, Hempstead Farm's Hempstead Blossom. Reserve, J. G. Cook's Clancarty. Very high com., Dr. J. R. Daniels's Ridgeview Venus. Com., Elkwood Kennels' Ellen Kent and Elkwood Kate. Bitches: 1st, Dr. J. E. Daniels's Beppo's Gem; 2d, C. E. Connell's Fan Fan II. Reserve, D. E. Connell's Eddie P.—LOCAL CLASS—1st, Dr. P. Longuecker's Phil Croxteth.

ENGLISH SETTERS.—CHALLENGE—Dogs: 1st, Francis G. Taylor's Breeze Gladstone. Bitches: 1st, Jas. W. Wood's Donna Juanita.—OPEN—Dogs: 1st, Francis G. Taylor's Ben Hur of Riverview; 2d, Rosecroft Kennels' Glendon; 3d and reserve, Victoria Kennels' Prince Ben Ali. Very high com., W. C. Downing's Benzine and Joe Lewis's Lewis's Rod. Bitches: 1st, William Bryce, Jr.'s S. Spectre; 2d, E. J. Myers's Prima Donna; 3d, Francis G. Taylor's Katie Noble II. Reserve, Wm. H. Brush's Eastern Queen. High com., J. E. Borden's Edgemark's Nellie, P. Machener's Lullie and Elkwood Kennels' Virginia. Rockingham Com., Harry Northwood's Amy Robsart, P. Machener's Bessie B., Mahoning Kennels' Guinevere and Genivere. Puppies: 1st, Wm. H. Brush's Eastern Queen; 2d, W. S. Boody's Druid's Dick. High com., John J. Mink's Signal.—LOCAL CLASS—1st, H. K. Smith's Flora B.; 2d witheld.

IRISH SETTERS.—CHALLENGE—Dogs: 1st, Seminole Kennels' champion Tim. Bitches: 1st, Seminole Kennels' champion Laura B.—OPEN—Dogs: 1st, Townsend Sharpless's Blarney, Jr.; 2d, Seminole Kennels' Montauk, Jr.; 3d and reserve, W. L. Washington's Kildare Beverly and Duke of Kildare. Very high com., Edw. H. Burwan's Mark Antony. High com., Seminole Kennels' Tim's Dandy and Edw. Burman's Dennis the Gossion. Bitches: 1st, W. H. Beazell's Queen Vic; 2d, F. C. Fowler's The Marchioness. Reserve, Seminole Kennels' Claremont Heather. Very high com., W. W. Kennels' Leda Glencho. Puppies: E. H. Burman's Mark Antony.—LOCAL CLASS—1st, Dr. L. L. Dixon's Lady Cleveland; 2d, Townsend Sharpless's Blarney, Jr.

GORDON SETTERS.—CHALLENGE—Dogs: 1st and 2d, Dr. S. G. Dixon's Ivanhoe and Leo B. Bitches: 1st, Dr. S. G. Dixon's Duchess of Waverly.—OPEN—Dogs: 1st, McCallum's Duke; 2d, J. B. Blossom's Consul; 3d, Iolanthe Kennels' Archibald. Very high com., J. W. Graham's Robert Burns. Bitches: 1st and 2d, Dr. S. G. Dixon's Lady Gordon and Princess Louise; 3d, J. B. Blossom's Sallie Beaumont. Puppies: 1st, J. W. Graham's Robert Burns; 2d, D. B. Holton's Edgewood.

FIELD SPANIELS.—CHALLENGE—Dogs (over 24lbs.): 1st, G. Bell's Newton Abbott Laddie. Bitches: 1st, R. P. Keasbey's Bradford Ruby.—OVER—BLACK—Dogs: 1st, A. E. Foster's Judex; 2d, Owahona Kennels' Worry Jake; 3d, Miss T. E. Hoffman's Laddie O. Bitches: R. P. Keasbey's Rowland Bess—OTHER THAN BLACK—Dogs: 1st, R. P. Keasbey's Newton Farmer.

COCKER SPANIELS.—CHALLENGE—Dogs: 1st, G. Bell's champion Fascination. Bitches: 1st and 2d, G. Bell's champion I Say and Troublesome.—OPEN—BLACK—Dogs: 1st, Swiss Mountain Kennels' Middy. High com., L. N. Walton, Jr.'s King W. Bitches: 1st and very high com., Swiss Mountain Kennels' Miss Maggies and Miss Chip; 2d, G. Bell's Realization; 3d, Thomas & Dole's Woodstock Dora.—OTHER THAN BLACK—Dogs: 1st, Mrs. M. H. Hegeman's Gay Laddie; 2d, R. S. & F. H. Gowans's Redfellow; 3d, G. Bell's Chestnut. Bitches: 1st, F. Dundore's Seminole Cherry Ripe; 2d, Swiss Mountain Kennels' Lady Gay; 3d, G. Bell's Mary Queen of Scots. Very high com., A. W.

THE NOTED SIRE GULLY THE GREAT.

Second at New York, 1893.

Owned by Mr. Frank Dole, New Haven, Conn.

improved on former form, Mr. Hopkins having him in tow. Raby Palissy, third, needs more flesh and is hardly the dog of last year. Warren Daysman, reserve, is beaten in front and coat by the other. Grove Tipster, vhc., has been spoken of before. Vandal is thick in shoulder; shows lots of character. Lansdowne Pavino is long in body. Mr. Rutherford supplied the two winners in bitches, Dusky II. and Warren Dorothy, placed as named. The winner is heavy in shoulders and not so good in fore part as the second, though the latter is pinched in muzzle. She also excels in body and coat and I preferred her for first. Lady Roseberry, third, could be improved in skull, feet and pasterns; ears well carried. Ripon Regina, reserve, should be stronger behind and is not true in front, while Miss Domino and Maystown won vhc. The latter is weak in muzzle, should be better ribbed up and is soft in coat. The former has been out before.

In wires first went to the New York winner, St. Broom, who beats Dandy Jack in head, coat and front. Jack Prompter, vhc., loses to both in length of head. Sister Pattern scores over Jess First in front, length of muzzle and ribs. Warren, a little heavy in skull and front, was placed over Seacroft Myrtle, whom we could not find in puppies, Grove Tipster coming in well as reserve. Temple won in "locals" over Paverino. Neither were up to form.

IRISH TERRIERS (Mr. Mason, Judge).—These were good and contained the best we have, all of them well known

CHAMPION CARNEY.

First, Philadelphia, 1893.

Owned by the Tubby Hook Kennels.

Pancoat's Highten Brevity. Puppies: 1st, G. Bell's Realization; 2d, Mrs. M. H. Hegeman's Gay Laddie. Very high com., R. S. & F. H. Gowans's Redfellow. High com., W. Thompson's Rose. Com., Swiss Mountain Kennels' Jack of Clubs—LOCAL CLASS—1st, Mrs. J. C. Meacham's Guess Again.

IRISH WATER SPANIELS.—1st, E. G. Fink's Trouble.

COLLIES.—CHALLENGE—Dogs: 1st, Seminole Kennels' The Squire. Bitches: 1st, Chestnut Hill Kennels' champion Flurry II.—OPEN—Dogs: 1st, Chestnut Hill Kennels' Wellesbourne Charlie; 2d, Hempstead Farm's Woodmansterne Trefoil; 3d, F. F. Carswell's Jim Crow. Reserve, Seminole Kennels' Curzon. Very high com., G. Spencer's Roslyn Colin and Seminole Kennels' Chrysolite. Com., E. Huidekoper's Sir Walter. Bitches: 1st, Chestnut Hill Kennels' Dorothy; 2d, Seminole Kennels' Grissie. Reserve, J. Watson's Charm. High com., J. McGluchey's Floss and E. Huidekoper's Rhoda. Puppies: Equal 1st, Chestnut Hill Kennels' Dominie and Dorothy; 2d, A. L. Frazier's Merle; 3d and high com., E. Huidekoper's Sir Walter and Rhoda. Reserve, R. G. Konover's Modeste. Very high com., T. Pension's Cloverdell.—LOCAL CLASS—1st, Chestnut Hill Kennels' Dorothy; 2d, John Yewdall's Scotch Chris; 3d, O. C. Wolf's Chrisona. Reserve, G. Spencer's Roslyn Colin. Very high com., J. H. Shepherd's Shepherd Lad and A. L. Frazier's Merle. High com., H. H. Diddlebock's Blair Athol.

BULLDOGS.—Dogs: 1st, Illwis Kennels' King Lud; 2d, Iolanthe Kennels' Rustic Sovereign. Bitches: 1st, A. B. Graver's Addiscombe Gipsy; 2d, J. Simpson's Fly. Reserve, Retnor Kennels' Lena Langtry.

BULL-TERRIERS.—CHALLENGE—Dogs: 1st, Tubby Hook Kennels' Carney; 2d, Retnor Kennels' Dusty Miller. Bitches: 1st, F. F. Dole's Attraction. Reserve, Tubby Hook Kennels' Edgewood Fancy.—OPEN—Dogs: 1st, W. H. Keeler's Surefoot; 2d, H. A. Harris's Prince Gully; 3d, withheld. Reserve, P. C. Pettit's Aristocrat. Very high com., H.

BALTIMORE DOG SHOW.

A. Howes's Chatham Prince. *Bitches*: 1st, H. A. Harris's Mermaid; 2d, H. M. Howes's Lounet on the Kit; 3d, Darby & Price's Lansdowne Thelma. Reserve, W. J. Bryson's Countess of Dufferin. *Puppies*: 1st and 2d, H. A. Harris's Prince Gully and Mermaid. Reserve, Darby & Price's Lansdowne Thelma. *LOCAL CLASS*—1st, Darby & Price's Lansdowne Thelma.

FOX-TERRIERS.—*CHALLENGE*—1st, L. & W. Rutherford's Raffle. *OPEN*—*Dogs*: 1st, Iolanthe Kennels' Ripon Stormer; 2d, Grove Kennels' Ruby Triggs; 3d, E. A. Harris's Ruby Pailley. Reserve, L. & W. Rutherford's Warren Daysman. Very high com. German Hopkins's Grove Tipster and W. C. & A. S. Cushman's Vandal. *High com.* Darby & Price's Lansdowne Paverino. *Com.* N. Knowles's Kupid. *Bitches*: 1st and 2d, L. & W. Rutherford's Dusky II. and Warren Dorothy; 3d, Toon & Symonds's Lady Roseberry. Reserve, Iolanthe Kennels' Ripon Regina. Very high com. Iolanthe Kennels' Maytown and Miss Domino. *High com.* Cambridge Fox-Terrier Kennels' Cambridge Gull. *Com.* C. S. Hanks's Seacroft Zarina. *WIRE-HAIR*—*Dogs*: 1st, H. W. Smith's Saint Brook; 2d, Iolanthe Kennels' Dandy Jack. Very high com. L. A. Rice's Jack Prompter. *Bitches*: 1st, H. W. Smith's Sister Pattern; 2d, Iolanthe Kennels' Jess First. *Puppies*: 1st, L. & W. Rutherford's Warren Daysman; 2d, C. S. Hanks's Seacroft Myrtle. Reserve, German Hopkins's Grove Tipster. Very high com. Cambridge Fox-Terrier Kennels' Cambridge Gull. *High com.* Rogers's Kennels' Ebor Larchmont and W. P. McAlee's Temple. *Com.* Darby & Price's Lansdowne Paverino. *LOCAL CLASS*—1st, W. T. McAlee's Temple; 2d, Darby & Price's Lansdowne Paverino.

IRISH TERRIERS.—*CHALLENGE*—*Dogs*: 1st, Toon & Symonds's Jack Briggs. Reserve, W. J. Comstock's Boxer IV. *Bitches*: 1st, W. J. Comstock's Dummurry. Reserve, Chestnut Hill Kennels' Breda Tiney. *OPEN*—*Dogs*: 1st, Iolanthe Kennels' Jackanapes; 2d, W. J. Comstock's Merle Grady. Reserve, Edward Lever's Play Boy II. *Bitches*: 1st, Mitchell Hanson's Candor; 2d, reserve, Iolanthe Kennels' Chancery Lass and Red Rags; 3d, C. T. Thompson's Rosabelle.

Rutherford's Warren Daysman. Kennel, L. & W. Rutherford.

BULL-TERRIERS.—Best, Tubby Hook Kennels' Carney. **PUGS**.—Best American bred pug, Dr. Cryer's Bob Ivy. Best kennel, Dr. Cryer's.

The Brunswick Fur Club Rules.

A SPECIAL meeting of the Brunswick Fur Club will be held at Mechanics Hall, Boston, Mass., on Tuesday, April 4, at 11 A. M.

Among other matters to come before the club at this meeting, is the report of the committee on the revision of the running rules. The committee recommended that the rules be amended so as to read as follows:

Rule 1. The president shall assume general charge of the trials.

Rule 2. There shall not be less than three judges, who shall be elected by the officers of the club.

Rules 6 and 7 are abolished.

Rule 8. The master of hounds shall have charge of the hounds in the field. He will give notice at the nightly business meetings of the hour of starting on the following morning, the classes to be tried and the ground to be drawn. He will give the handlers orders to cast loose, blowing the bugle at the same time, and will have the retreat sounded at the end of each trial.

Rule 9. After the cast-off, the hounds are not to be interfered with in any way, except for their own protection, or that of private property, till the retreat is sounded.

Rule 14. A hound thrown out and coming in, refusing to hunt or back to others in full cry within good hearing distance, shall be barred.

Rule 17. Bitches in season shall not be allowed at the trials. Castrated dogs and spayed bitches shall be debarred from running in these trials, and any so run shall forfeit to the club all prizes won.

Rule 19. The shooting of foxes will not be permitted during the trials.

Rule 22. All the hounds in the All-Age class shall be run together on the first of the three days. In the evening the judges shall post in a conspicuous place the names of the hounds they wish to see run on the second day. In the evening of the second day the judges shall post the names of the hounds they wish to see run on the third day. In the evening of the third day the judges shall make the awards. Provided, however, that no hound shall receive a prize for style or giving tongue unless he has been placed in one of the following classes: hunting, trailing, speed or endurance.

Rule 23. No person or persons shall attempt to influence a judge or judges either before, after or during a race. Any one so doing can be expelled from the club.

Rule 24. The Derby shall be judged before the All-Age class is started.

Rules 22, 23 and 24 are new; rules not mentioned above remain unchanged. BRADFORD S. TURPIN, Sec'y.

BALTIMORE, Md., March 7.—*Special to Forest and Stream*.—This show opened auspiciously this morning. Weather fine and attendance fairly good for daytime in this city and very much better in the evening. The judges commenced their work at about 11 A. M., and everything was finished to-day. There are 339 entries, and no novice, puppy or local classes, or entry would doubtless be larger. The quality of dogs here is, however, first class. In every breed some of the best we have are present. The St. Bernards, with Princess Florence, Sir Bedivere, etc., present are full of quality, while pointers, fox-terriers, setters and beagles are also good, and in some breeds the competition is very keen. Among those we noticed round the ring side were W. C. Reick, Pottinger Dorsey, Geo. Raper, J. Otis Fellows, Frank Dole, Arthur Trickett, Ed. Booth, Harry Friend, Harry Jennings, E. H. Morris, Harry L. Goodman, Gillette, Henry Jarrett, George Thomas, Joe Lewis, E. W. Hughtlett, W. E. Gray, George Bell, Dr. Conrad, Dr. Glover, E. G. Elliott, Fred. Lewis, and the judges, James Mortimer, G. Muss-Arnolt, W. Tallman, C. D. Cugle. Several ladies watched the judging, Mrs. Buckbee and sister, Mrs. W. S. Diffenderfer and others. The rings were well served, and the committee, including Messrs. W. S. and C. D. Diffenderfer, W. Farber, T. G. Sheubrooks, W. F. Riggs and W. Thompson, are all very busy doing their utmost to please every one. A cosy exhibitors' room is provided, and the arrangement of awards on the blackboard as usual under Will Farber's personal supervision is just what is required at every show. The full list of awards follows.

H. W. L.

MASTIFFS.—*CHALLENGE*—*Bitches*: 1st, C. E. Budd's Miss Caution. *OPEN*—*Dogs*: 1st, Mrs. C. E. Wallack's Merlin; 2d, W. P. Riggs's The Moor; 3d, C. Porter, Jr.'s Brother. *Com.*, J. B. Berryman's Ben.

BULLDOGS.—Best in show, Illvis Kennels' King Lud. Best in show, Rockland Kennels, Rockland Kennels. Best in show, Rockland Kennels' Loney.

FOX-TERRIERS.—Best kennel, L. & W. Rutherford's.

Flaps on the Beaver's Tail.

TORONTO, Canada.—The dog poisoner occasionally gets his deserts. At the police court in Hamilton one day this week a man named Henry Huntsman was charged with poisoning a valuable dog owned by Joel Jerome. The evidence appeared plain, as Huntsman was seen giving the dog something which eventually caused its death. An examination by Dr. Hennessey, a veterinary surgeon, proved the presence of strychnine in the dog's stomach, which had been given in a piece of meat. Huntsman was found guilty by the presiding magistrate and fined \$5, together with costs of \$6.95 and \$50, the value of the dog. If not paid he will board at Her Majesty's expense for three months.

Mr. C. H. Corbett, Kingston, has sold the blue belton English setter bitch Lady Brummell, by Beau Brummell out of Maid of Kent, to Mr. W. C. Burns, of Adrian, Mich.

Mr. Jack Massey's friends will regret to learn of a serious accident which befel him a few days ago, while tobogganing in Rosedale ravine. The toboggan ran off the side of the chute and struck against a post, throwing out Mr. Massey and his son, who was with him. Mr. Massey sustained grave injuries, having the bones of his left leg broken and his ankle dislocated, besides minor injuries to his cheek and right hand. He was at once removed to his residence and a physician called, who says he cannot be about for some weeks. Mr. Massey has been connected with dog shows in Toronto for a great many years, and is quite as familiar to devotees of lacrosse and other athletic sports.

Messrs. Geddes & Cunningham, Ottawa, have registered the prefix "Carleton" for the kennel of Irish terriers, and their kennels will henceforth be known as the Carleton Kennels.

At a meeting of the Toronto Kennel Club, held on Thursday last, nominations for officers for the ensuing year took place. The following is the result: President, William Brodie; First Vice-President, Dr. W. Mole, R. P. Forshaw; Second Vice-President, C. A. Stone; Secretary, F. Martin; Treasurer, H. J. Hill; Librarian, A. Trebilcock; Executive Committee, Messrs. Kelly, Mead, Donovan, Habart, J. O. Bennett, Armstrong, Smillie, Elmore, Lyndon, Davis, Mabey and Fraser; Auditors, Messrs. Sweetnam and Williams; Visiting Committee, D. J. Kelly, H. P. Thompson and R. P. Forshaw. Several of the offices were filled by acclamation; the rest will be voted on at the next meeting.

Mr. R. S. Williamson, Guelph, is sending the imported rough-coated St. Bernard dog Nero II. (C. 468) to Mr. H. M. Williamson, Detroit Mich. Mr. A. H. Messon, of Cheshire, bred Nero in 1885, so he is now pretty well up in years.

The few collies in Montreal have had a recent addition to their ranks in Glen Davie, got over by Mr. Fred Whiteley. He

York, the bitch Floretta (A. 23,194) and three young bitches from her by Kingston Regent. Floretta is by Pilgrim out of Flora II. He will show a strong kennel at Toronto next fall.

Mr. George Douglas writes me that he has a new red bitch to bring out at Detroit, which he thinks is good enough to put them all in the shade.

H. B. DONOVAN.

DOG CHAT.

Spaniel Club Dinner.

One of the most enjoyable reunions was that on the occasion of the annual dinner given by the Spaniel Club at the Hotel Bartholdi on Wednesday evening of the show. There is always a feeling of joviality and good fellowship among the members of this club and this gathering was a climax. The fun commenced when the menu cards were opened, an account of which *chef-d'œuvre* we published last week. The president, Mr. Wilmerding, at once informed his friends that the "meeting" was informal, and after introducing Mr. C. A. Stone, secretary of the Toronto dog show, as a guest of the evening, speeches and toasts followed fast, interspersed with capital songs by Messrs. Charles Daly, E. M. Oldham and E. B. Elliott. Mr. Fellows when asked his opinion on the cigars (Watson's "long and low") remarked that "While the weed was good the type was bad;" and so it went till "Auld Lang Syne" was sung by those present—A. Clinton Wilmerding, C. A. Stone, Rowland P. Keasbey, Chas. H. Nelles, W. S. Dayne, Dr. S. Bradbury, W. A. Power, E. B. Elliott, Charles Daly, N. Rowe, G. Bell, J. J. Spracklin, F. H. F. Mercer, "Uncle Dick," Henry Jarrett, Will S. Brooks, A. E. Rendle, G. S. McAlpin, F. W. Kitchell and the FOREST AND STREAM representative. We should like to have published a plate of the signatures on our menu card, but space forbids.

International Coursing Match.

A committee consisting of J. Herbert Watson, John R. Price, A. J. Cattanauch and J. R. Dickson announce an international coursing match for 1893, provided \$2,500 added money is guaranteed by subscription before June 1. It will be a 64 dog stake to be run in October, under National Greyhound Club rules, between 32 greyhounds from outside the North American continent and 32 owned in America. The place of meeting will be in Kansas, South Dakota or California, as the committee may decide. Entrance fee will be \$50, and nominations accompanied by \$25 will be taken on or before Aug. 1. They may be sent to J. Herbert Watson, 371 Fulton street, Brooklyn, N. Y. The programme is as follows: The Columbus cup, for 64 all-aged dogs, at \$50 each, to which the club will add \$2,500; winner, \$2,500; second, \$1,000; third and fourth, \$150 each; fifth, sixth, seventh and eighth, \$75; winners of two courses, \$50 each; winners of one course, \$25 each. The Columbus purse, for 32 dogs beaten in the first round of the cup; winner, \$300; second, \$100; third and fourth, \$50 each; fifth, sixth, seventh and eighth, \$35 each; winner of two courses, \$20 each.

Washington Dog Show.

We are sorry that we were unable to publish the list of specials sent out by the W. C. K. C., but space would not allow at the time and entries will have closed before this issue is out. The specialty clubs are doing well for the show, and especially the Mastiff Club. The little dogs we have given this club have borne fruit and now they are encouraging the breed in a proper manner and their efforts should be well appreciated. We may say that no such list of specials has been given outside of the New York show, and the show is bound to benefit thereby, for every one seems to be going to Washington.

Bulldog His Lordship.

The match between the bulldogs His Lordship and Dock-leaf, which has created so much interest on the other side, resulted in a victory for His Lordship. Mr. Alfred George was the judge. Immediately after the match His Lordship was to sail for this country, Mr. Frank Dole having purchased this noted dog for \$1000 for one of his customers. At New York Mr. Dole, with sundry winks of the other eye, told us that he had something good in store for us in the way of news, and this must be "the bit." His Lordship is by Don Pedro out of Ruling Passion, and his victory over Dock-leaf stamps him about the best in either hemisphere, so his acquisition to this country is most fortunate, as his blood is

ENGLISH SETTER SHELDON.
Second prize, New York, 1893.

highly prized by bulldog breeders. The bull bitch White Venn comes over as well and to the same buyer; she cost \$500. Mr. Alfred J. Smith was the owner of His Lordship. We learn later that His Lordship and Lady Venn were purchased for a well-known young society man of Newport, who does not wish his name to appear. They will be shown under a kennel name.

Elmira Dog Show.

In the Elmira premium list we find that the scale of prizes is on the \$10 and \$5, with \$10 challenge classes for most of the breeds, and novice classes with prizes of \$5 and \$3. The panel classification is good, being No. 1, and, therefore, sets the Spaniel Club's \$20, which is divided into \$5 specials. Colliers there is a sweepstakes for colliers whelped in 1892, try \$2, 50 per cent., and 30 per cent. to second. Beagles are the same, as well as English and Irish setters, pointers and St. Bernards. Entries close March 12 with C. A. Bow-

man, Elmira, N. Y. Entry fee is \$3. The judges are Mr. A. C. Krueger for deerhounds, greyhounds, Russian wolfhounds, beagles and foxhounds. Mr. J. Otis Fellows takes the rest. C. S. Wixom superintends. The show is under A. K. C. rules and should be well patronized.

Bulldog Breeding.

Although it is proverbial that bulldogs are difficult to raise, even if breeders are fortunate enough to get the pups, Mr. Woodward supplies a bright lining to the cloud. He tells us that out of Graven Image's litter of five by King Lud three are living; also out of Duchess of Parma by the same dog three are living out of the litter of five; and a bitch by Rabagas had eight by King Lud, all of which are alive and are now six months old; another bitch had ten pups and seven are living at nine months old. So it will be seen that it can be done and no one need despair, though it does seem hopeless sometimes.

Sale of Lady Alice.

Mr. H. R. Anderson writes: "I have sold to Mr. Jas. B. Blossom, of New York, the well known Irish setter bitch Lady Alice. In Lady Alice Mr. Blossom has one of the best Irish setter field bitches in the country. She was placed equal third in the Irish Setter All-Age Stake last fall, and had had only a few weeks' handling. Lady Alice will be

ST. BERNARD EBORACUM.
Owned by Swiss Mountain Kennels, Germantown, Pa.

bred to Mr. Blossom's field trial winner Bedford, and I predict great results from the union, as both dogs are high-class Irish setters in the field and both are good looking. Lady Alice having won prizes on the bench. Mr. Blossom has long been identified with Gordon setters, but he has also a kennel of Irish setters that will stand considerable beating. I wish Mr. Blossom the success that his pluck and perseverance deserves."

Boston Terrier Specials.

The following are specials offered by the Boston Terrier Club for competition at Boston. Open to members only: One silver medal for best dog, best bitch and best puppy. Open to all: One silver medal for best dog owned and bred by exhibitor, and one for best bitch.

"Kennel Secrets."

Dr. Perry has his new book, "Kennel Secrets," on sale at the Madison Square Garden and it took well. We regret, however, to add that a fire consumed the whole of his plates, but as he has 5,000 copies of the book, this untoward event will not incommode him in any way.

Sale of Surefoot.

Mr. T. S. Bellin, of Albany, N. Y., has sold the bull-terrier Surefoot to Mr. Wm. H. Keeler, of the same city. Surefoot is making quite a record for himself in his new country.

Sale of Inspiration.

Mr. Frederick L. Grablin, of Baltimore, purchased, about two weeks since, Mr. Winslow's well known pointer Inspiration. He was purchased more with a view to work in the field than for showing.

Entries for Illindio K. C. show to be held at Indianapolis, March 28-31; entries close March 21. The secretary is Chas. K. Farmer, 25 Ruehle street, Indianapolis, Ind. The judges are: John Davidson, Monroe, Mich., great Danes, mastiffs, St. Bernards, all spaniels, English, Irish and Gordon setters; Roger D. Williams, Lexington, Ky., bloodhounds, greyhounds, deerhounds, Russian wolfhounds, dachshunds, foxhounds, Italian greyhounds; James Mortimer, New York, pointers, bull-terriers, bulldogs, terriers, collies and beagles; Frank C. Wheeler, Cincinnati, O., Newfoundland, whippets, toys, pugs, poodles, miscellaneous. The club reserves the right to appoint other judges. The prizes in St. Bernards, great Danes, greyhounds, pointers, English, Irish and black and tan setters, collies, beagles and pugs, are \$10 in challenge classes and \$15 and \$10 in open classes. In most of the other open classes the prizes are \$10 and \$5. The entry fees are \$2 and \$3. With such liberal prizes a large attendance is expected.

The chairman of the bench show committee writes: "Come, boys, your money is sure and a good show is certain. We have a \$4,000 guarantee fund subscribed by the business men of our city. The premium list is first class and our kennel prizes for the large breeds are \$20 cash for each class. In barzois and greyhounds I will give \$25 cash for the best four barzois or greyhounds, the cash to go to the breed of these breeds having the largest number of entries. In other words, if more barzois than greyhounds are entered, then the best four barzois owned by one exhibitor will get the \$25 cash, and vice versa. We are a member of the A. K. C. and the date follows the Detroit show, so there is no reason why we should not have a large and very good entry. Spratts will bench and feed. I wish to state that my greyhounds will be entered for exhibition only, but will count in their breed of greyhounds in awarding the \$25 cash kennel prize."

The New England premium list gives some good money for their next show under the new regime. Mastiffs, St. Bernards, pointers, setters, smooth fox-terriers get \$15, \$10, \$5 and \$3, and the other breeds \$10, \$5 and \$3. Puppies, \$5 and \$3. Collies, \$15, \$10 and \$5. Challenge prizes are silver

medals. The specials are especially good, and besides valuable trophies given by the different specialty clubs and the N. E. K. C. kennel prizes, a good deal of money can be picked up in the different breeds by good dogs. The show will be benched with new wooden benching and fed on Austen's biscuits. The entry fee is \$3 and entries close March 13, and should be made to the club committee, 125 Tremont street, Boston. C. H. Mason will judge St. Bernards, great Danes, deerhounds, greyhounds, barzois, dachshunds, collies, bulldogs, poodles, pugs, spaniels, selling classes and miscellaneous 25lbs. and over; John Davidson, pointers, setters, bloodhounds, foxhounds, beagles and Chesapeake Bay dogs; T. S. Bellin, terriers of all kinds, except Boston, and miscellaneous under 35lbs.; Arthur Trickett, mastiffs; N. A. Knapp, Boston terriers. John Read, Superintendent.

Owing to the crowded state of our columns a number of notes and other matters must lie over this week.

Mr. Tom Evans, of the San Francisco *Chronicle*, has sold to T. L. Brophy, of Brooklyn, the rough-coated St. Bernard bitch Nell Gwynne for \$625.

Mr. John Howard Taylor has purchased from the New York St. Bernard Kennels the rough-coated bitch Zenith by Plinlimmon ex La Pucelle. Price \$350. Mr. Taylor is starting a kennel of St. Bernards, and will make other important purchases shortly.

Mr. Oldham acquitted himself well at the New York show, and it was the general opinion among the exhibitors that, while they might not entirely agree with his awards, still he was consistent throughout and stuck to his types. We are pleased to see the action that the Spaniel Club has taken in regard to the implied collusion between Messrs. Oldham and Bell. We have no more thorough, conscientious judge in the ring than Mr. Oldham. We would like to give Mr. Keyes the benefit of the doubt that he ever intended such reflection on Mr. Oldham.

On the steamer Dania, which arrived last week from Hamburg, there came consigned to E. B. Goldsmith, forwarding agent, of 58 Wall street, a Great Dane bitch, the property of Mr. Geo. W. Schenck, of Lyons, Iowa. The bitch was bred in the kennel of Mr. B. Ulrich, of Doos, near Hamburg, Germany, and comes to this country with a full pedigree. She was intended for entry at the recent bench show at Madison Square Garden, but arrived after the show was over. The bitch was forwarded to the kennels of Spratts Patent at Northvale, New Jersey, where she will recuperate for a few days previous to her journey to Iowa.

FOREST AND STREAM has received many compliments over the New York report, and not only do the reports by the judges meet with general appreciation but also the illustrations with which our March 2 issue was embellished. In the picture of the smooth St. Bernard receiving the ribbon the name of the dog is Melrose, not Alton, Jr., they being so much alike that we were in doubt which was which; then the bulldog titled Bo'swain is really Ch. Harper. With these two corrections the list is correct.

A dispatch to New York from Philadelphia stated, in connection with the competition for the "Ashmont" locket, which the terrier Tinee won, that "Sir Bedwin, Marvel and the other great fellows of the New York competition were entered in these classes and were only saved from being beaten by being absent." Where is the fool killer?

Miss Griffin, of Detroit, owner of the newly formed Belle Isle Kennels of St. Bernards, was an interested visitor at the New York show and also at Philadelphia, returning to Detroit on Tuesday evening. She expressed herself as much pleased with having seen the cracks of the St. Bernard fancy and with the opportunity of becoming acquainted with the leaders of the fancy.

Mr. A. W. Smith, of Buffalo, has purchased the black and tan terrier Louie from Mr. Dole.

Mr. F. E. Hege, owner of Wachovia Kennels, who, it will be remembered, contributed the pleasing picture of the pug and little baby published a few weeks since in FOREST AND STREAM, tells us that he has had the misfortune to lose the litter of eight by Scottish Leader out of a daughter of ch. Victor Joseph. One of these puppies was very peculiarly marked. Very large head, perfectly marked, but blaze extended entirely back to the rump, where it divided and made a perfect collar again, the pup thus being "collared" fore and aft. The sides were solid dark orange with a clear white spot three inches square on each side.

Hia, first in small beagle bitches at New York show, was bred to Mr. Roberts's ch. Racer, Jr., Feb. 28. This gentleman has claimed the name of Shrewsbury Beagle Kennels.

The Continental Kennel Club has compiled the premium list for its fourth annual bench show to be held April 12 to

DORA AND DOMINICA.
Owned by John E. Thayer, Lancaster, Mass.

14 inclusive. Provision has been made for ninety-five classes and the list foots up \$750, which includes among the specials one of \$300 for handlers, divided as follows, viz., \$200 to the handler showing the largest number of dogs, provided the number reaches fifty or more, \$65 to second and \$35 to third. Mr. John Davidson judges all classes. Premium lists will be furnished by C. H. Wethington, superintendent, 1,225 Sixteenth street, Denver, Col., or by the secretary, F. W. Rand.

Mr. Geo. Raper sails for England on Saturday, in time to judge at Manchester, returning April 5, on the Teutonic, when he will proceed to the Pacific Coast and judge at Los Angeles and San Francisco, Cal., and Seattle, Wash.

The Maryland Kennels, of Baltimore, Md., have purchased the St. Bernard Kamehamaha I., from Mr. Graham, of New York, and very rightly changed the name. He will be known as Grand Master hereafter. He won third at New York and took the same place here.

Mr. E. G. Roberts is getting together quite a kennel of beagles. He has just purchased Doctor, the beagle Ben Lewis dropped on at Nashville and which is a pretty good stamp and should do well in the stud. Another one he has secured

No distemper this year at Boston. We shall furnish new wooden benching free from disease and draughts.

is Prudence, by Forest Boy out of Lady Lee, and so is litter sister to Butterfly and Forest Hunter. At New York Prudence won third and was thought to be superior to the second by several breeders.

Mr. Hobbie, now that he has had his meteoric flight through the bull-terrier and bulldog fancies, is talking quite earnestly of going into "shipwrecks," or in common parlance schipperkes. At the same time, we can scarcely give credence to such a tale.

We note among our new ads. this week the following offers for sale: Painters: Albany Pointer Kennels, C. A. Paetzel, H. D. Weeks. Setters: Glendyne Kennels, R. H. Burr, M. A. Hanchett, Redstone Kennels. Wanted: Position as manager by W. G. Martin, house dog by T. J. Fox. The Woodlawn Kennels offers the services of the Greyhound Lord Neverstill at stud, and the St. Lawrence Kennels the services of the cocker spaniel Prince W.

Dachshunds at Boston.

Editor Forest and Stream:

Through your columns I would beg to call the attention of all breeders and exhibitors of dachshunds to the very liberal premium list of the Boston show for this breed. Four classes have been provided and I have every reason to believe a puppy class will be added. Furthermore, the dachshund challenge cup, value \$250, and sweepstakes will be competed for at this show. The conditions governing this cup have been somewhat changed, so that only American bred dachshunds can compete. I trust that this breed will be well supported by all.

EDWARD A. MANICE.

STOCKBRIDGE, MASS.

Breeding of Antevolo.

Editor Forest and Stream:

In your report of Southern Field Trial All-Age Stake you report Antevolo, winner of second money, as being by Count Noble out of Gladstone's Girl. This is a mistake, she is by Count Noble—Trinket II. In justice to Trinket II. and breeders of Antevolo, Messrs. T. F. Taylor, Chas. E. Bruner and Ben T. August, of Richmond, Va., I ask you to please make the correction. Antevolo is now with Gladstone's Boy, and her dam, Trinket II., is in whelp to Antonio. We expect extra field trial pups from this breeding.

C. TUCKER.

STANTON, TENN., March 1.

Working Spaniels.

Editor Forest and Stream:

Occasionally we read in your paper a few lines from J. Otis Fellows on cocker spaniels, and I, for one, with much interest. Last week he mentions a cocker bitch that had 392 birds killed over her. Now, as an admirer of spaniels, I would like some of the readers of FOREST AND STREAM who hunt their spaniels to give their experience in the field. We have all read the wonderful performance of setters and pointers. Now let us hear from the spaniel men.

COCKER.

BIRMINGHAM, CONN., Feb. 25.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Victor Gladstone. By E. A. Carrier, Westchester, Conn., for blue belton English setter dog, whelped July 14, 1892, by champion Paul Gladstone (Gladstone—Lavette) out of Victress Llewellyn (Moss—Nora III).

Sultan. By J. By Watkinson, Colchester, Conn., for orange and white St. Bernard dog, whelped Nov. 29, 1892, by Sultan (Alton—Cloister) out of Cleo F. (Mayor of Leeds—Remmie).

Larry Doolan II., Dean Swift, Glendyne II., Ballinratray, Molly Glendyne III., Lady Glendyne, Kitty Glendyne and Miss Glendyne. By Glendyne Kennels, Bristol, R. I., for Irish setters, four dogs and four bitches, whelped Jan. 1, 1893, by Glen Jarvis (champion Elcho, Jr.—Maid) out of Molly Glendyne II. (Glen Jarvis—Molly Glendyne).

BRED.

Prepared Blanks sent free on application.

Rosie—Patsy Bolivar. Mr. Schultz's (Cincinnati, O.) pug bitch Rosie to Eberhart Pug Kennels' Patsy Bolivar (Eberhart's Cashier—Lady Thora), Jan.

Mabel E.—Patsy Bolivar. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Mabel E. (champion Kash—Lady Thurman) to their Patsy Bolivar (Eberhart's Cashier—Flossie II.), Jan. 24.

Addie—Spot Dash. H. Will's (Rathbone, O.) pointer bitch Addie to Liberty Kennels' Spot Dash (Sir Philip Sydney—Topsy), Nov. 24.

Delaware Girl—Bin Cambridge. Liberty Kennels' (Hyattsville, O.) English setter bitch Delaware Girl (Belton Star—Rose) to Wm. Fies's Bin Cambridge (Roderigo—Nellie Cambridge), Jan. 31.

Athol—Totter. Rec. B. Clark's (Detroit, Mich.) English setter bitch Athol to R. W. Eddy's Toledo Bee, Jan. 30.

Lassie—Barnaby Rudge. L. J. Adams's (St. John, N. B.) Skye terrier bitch Lassie to C. H. Smith's Barnaby Rudge (Medoc—Nip), Jan. 15.

Prairie Flower—Barnaby Rudge. C. H. Smith's (St. Stephens, N. B.) Skye terrier bitch Prairie Flower (champion Old Burgundy—Lowland Maid) to Barnaby Rudge (Medoc—Nip), Dec. 11.

Wanda—Corktown Crusoe. J. P. Eder's (Williamsport, Pa.) cocker spaniel bitch Wanda (imported Bob Obo—Cleo) to his Corktown Crusoe (Obo, Jr.—Dot Smirle), Jan. 31.

Columbia's Pearl—Jack Prompter. C. F. Dolan's (New Haven, Conn.) fox-terrier bitch Columbia's Pearl to his Jack Prompter, Jan. 1.

Fannie K.—Happy Toby. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Fannie K. (champion Kash—Flossie II.) to their Happy Toby (Spokane—Lady Verne), Feb. 11.

Spy—Beaumont. S. E. Seelusen's Gordon setter bitch Spy to J. B. Blossom's champion Beaumont, Jan. 17.

Oonah—Kelso. J. B. Blossom's Irish setter bitch Oonah to his Kelso (champion Glencho—Sweetheart), Jan. 15.

Buck's Nell—Bradley. C. K. Kummer's English setter bitch Buck's Nell (champion Edgemoor—Nellie G.) to D. A. Goodwin, Jr.'s Bradley (Rowdy Rod—Breeze Gates), Feb. 9.

WHELPS.

Prepared Blanks sent free on application.

Countess Addie. A. D. Fiske's (Worcester, Mass.) English setter bitch Countess Addie (Count Noble's Boy—Clip Roderigo), Feb. 9, six (two dogs), by Coham Kennels' Kent II. (Count Howard—Lady Westmoreland).

East Lake Virgie. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch East Lake Virgie (champion Bradford Ruby—Puss B.), Feb. 4, six (three dogs), by their Eberhart's Cashier (champion Kash—Lady Thora).

SALES.

Prepared Blanks sent free on application.

Victor Gladstone. Blue belton English setter dog, whelped July 14, 1892, by champion Paul Gladstone out of Victress Llewellyn, by S. L. Boggs, Pittsburgh, Penn., to E. A. Carrier, Westchester, Conn.

Sultan. Dark orange, white markings St. Bernard dog, whelped Nov. 29, 1892, by Sultan out of Cleo F., by Wm. Firth, Winchester, Mass., to Irving Watkinson, Colchester, Conn.

Minnetac. Black, white and tan ticked English setter bitch, whelped June 21, 1891, by Belton Star out of Rose, by Liberty Kennels, Hyattsville, O., to A. M. Haggin, Knightstown, Ind.

Scott. Silver fawn pug dog, by Seven Dollars out of Lavinia Belle, by Eberhart Pug Kennels, Cincinnati, O., to J. D. Baker, Menard, Ill.

Penrice—Mint whelp. Silver fawn pug dog, by Eberhart Pug Kennels, Cincinnati, O., to Mrs. L. P. Eastman, Ottumwa, Ia.

Tyras—Irene II. whelp. Brindle and white great Dane dog, whelped Oct. 3, 1892, by Eberhart Pug Kennels, Cincinnati, O., to Dr. Geo. W. Fleming, Shelbyville, Ind.

Fogg says he should like to see a man who, loving his neighbor as himself, is as considerate of his neighbor's dogs as of his own hens.—*Boston Transcript.*

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

J. A. W., N. Y.—Can you give me the sire and dam of Polo, a St. Bernard dog, who was the sire of Dido? Ans. We cannot find that this dog was ever registered.

J. M. OWENY.—Should say the Cincinnati—Toledo Blade pup, Monk of Furness stock, has not been tried much. The English setter is considered the best at present.

W. J. S., New York City.—My dog has had a twitching in his hind leg. He is now about helpless; does not seem to get worse or better, but is gradually growing weaker. Ans. See reply to R. W. S.

G. C., Providence, R. I.—I have noticed in the discharges of my dog—an English setter, white worms from a half to three-quarters of an inch in length. Will you kindly tell me the best way to treat him. Ans. Use any of the advertised worm remedies.

H. D. W., Milford, N. Y.—Is there any law in this State exempting dogs and bitches that are registered and kept for breeding and show purposes from taxation? You will confer a great favor if you can answer this. Ans. There is no such law.

H. D., Kansas City, Mo.—1. We do not know where you can buy Web collies. The term Web collies, compared to Scotch collies all depends on training. Write to Mr. W. Wade, Hulton, Pa., on the subject. 2. We know of no book that treats of cats or their training.

E. W.—My setter dog had what looked like a water blister, come o his foreleg on the joint; I washed it with tar soap, now it looks as if a piece of the skin and flesh had been cut out; how shall I treat it? Ans. Apply a little zinc ointment and bandage daily.

THE SENATE, Waterbury, Conn.—The pointer Beaufort was not a field trial winner. He only appeared once in field competition, but was considered at the time a good worker. 2. The only field trial winner he sired was Belle B., second, Puppy State, Western trials, Abeline, Kan., 1885. We have only public records to go by, and must therefore say no.

E. L. B., Belvidere, N. J.—My cocker spaniel puppy, six months old, has swellings on his belly that seem to be like little cups in the flesh, get matted and then something like a large wart comes out which is also inclined to discharge. Have done nothing for him as they do not seem to be sore but they are increasing. Has about ten in all, of different sizes. Ans. Without an examination we cannot very well advise you. Take the dog to a veterinary surgeon.

H. C. S., New York City.—Will you kindly give us the meaning and explanation of the term known as dog breaking as the "Force System." Ans. It is a term limited in its application to the punishing method of teaching retrieving, which is taught by forcing the dog to retrieve from fear of punishment caused by the spike-collar, whip or nose pinching. It is a misleading term since kindness and patience in teaching are important factors in teaching by this or any other method.

J. R. P., Watertown, N. Y.—Will you have the kindness to prescribe for my Gordon setter dog, 1 yr. old. First showed distemper about one month ago. Gave two or three doses of sulphur, which seemed to check the distemper. Kept him in warm pen, but his eyes are not right. Pupils are very much enlarged, and under the advice of an eye doctor have been giving small doses of arsenic, but without favorable results, also used an eye lotion. What would you advise? Ans. Keep the dog warm and quiet. Give one dessertspoonful of syrup of hypophosphites three times a day. The pupils being enlarged is due to the eye lotion you are using.

R. W. S., Tate, Ga.—I have a young pointer dog 8 mos. old which I purchased in Michigan; when he got here he was just getting over the distemper and apparently came out all right; he looks all right every way, has a ravenous appetite, but his food don't seem to do him any good; he is very poor and don't seem to gain in flesh at all, and I notice occasionally when he stands still that his body quivers all over, as if I would express it, teeters up and down, and he acts occasionally as though he was weak in the hind parts. His hind legs don't seem to work right. I notice this more when he is playing with my other dogs. Ans. Probably chorea after distemper. He may also have worms. First treat for worms and then give him the following mixture:

R	Syr. hypophos co.	3iv
R	Tr. nucis vom.	3i
R	Liq. arsenicalis.	mxviii
Q	ad.	3vi

Mix. Give one tablespoonful three times a day.

H. D. S., Oneida, N. Y.—Eczema. First treat for worms. Apply the following lotion to the raw surfaces frequently: Liq. plumbi, subact. 3ii; aq. ad. 3vi. Give this mixture twice a day:

R	Ferri sulph.	grx
R	Acid sulph. dil.	mxviii
Q	ad.	3iv

Mix. Give one teaspoonful twice a day. Also apply the following ointment to the affected parts twice daily:

R	Ung. zinc.	3i
R	Oleat. zinc.	3ii
R	Acid carbolic.	mx
R	Glycerine.	3iii
R	Vaseline.	3iss

Mix.

THERE is something extremely amusing in the flutter which has lately disturbed some New York yachtsmen in consequence of the rumor that Gen. Paine was to be in the fight not only with a fin-keel, but with one of but 70ft. waterline; and, as the story went, with the over-all length and sail plan of Volunteer. The prospect of giving time to such a terrible creation actually sent the cold chills down the backs of some members of the New York syndicates, and they were on pins and needles until "Commodore" James D. Smith had posted off to Boston and secured Gen. Paine's word that he would not do anything so shocking, but would build to the specified limit of 85ft. Even with the immediate danger removed the matter was considered so serious that the committee was moved to issue a special circular warning all smaller yachts off the course, so to speak.

Is itself the decision of the committee is a fair and sensible one, and a complete indorsement of the contention long urged by FOREST AND STREAM, that the matching of vessels of widely different sizes has long

since passed out of date. It does seem, however, as though the New York Y. C. was destined this year to repudiate almost every position which it has taken in the past in connection with international racing. For some years the club has labored diligently to retain the right, or more properly the power, in spite of the obvious unfairness of such a course, to meet a 70ft. vessel with one of 90ft. Not only was the new deed framed with that object in view, but as long ago as 1886, just after the Puritan-Genesta races, an amendment was quietly slipped into the racing rules providing that the established classification of the club should be inoperative in the cases of all challenge cups, thus preventing a possible objection on the part of a challenger to the effect that he must be met by a boat from his own class. When Lord Dunraven's first challenge was accepted in 1892, a motion was made before the club to the effect that he should be met with a yacht of the same size as Valkyrie, 70ft., but it was promptly smothered before a vote could be taken by the arbitrary and absurd ruling of Com. Gerry. The words of the present Cup Committee, though applied to the trial and not the Cup races, exactly fit the case and if the club indorses and accepts them it not only admits the unfairness of its course in the past, but establishes a precedent which must apply to all future Cup races. The committee says: "A sensible equality in size would be most conducive to the interest and suitable to the importance of the coming international contest, and would, by minimizing the always objectionable element of time allowance, conform to the spirit of the deed of trust." If this is so, and what fair-minded yachtsman will dispute it? It is the strongest possible condemnation of the plea made by a similar committee in 1889, composed in part of the same men, that it was the "duty" of the club to defend the Cup by putting the 85ft. Volunteer against the 70ft. Valkyrie.

The fifth annual sweepstakes of the Corinthian Y. C., of New York promises to be one of the most interesting yet sailed, as the entries of at least three 85ft. yachts are practically assured. In one way the contest will be hardly more exciting than the splendid race of 1890 between Minerva and Gossoon at the time when the rivalry between Fife and Burgess was at its height, but the imposing size of the new class, with sail plans far exceeding anything ever seen on single stick vessels, unless possibly the old Maria, lends an additional element of interest to a contest which, with two Herreshoff boats, one a keel and one a centerboard, and a Paine fin-keel, will be exciting from its technical merits. The Corinthian sweepstakes is no longer an experiment, but an established institution in the yachting world.

WHAT with the early races of Valkyrie 2 in her home waters and the possible presence of Navahoe in the trial races on this side after her try for the Royal Victoria and the two Bennett cups, some strange combinations of winning and losing are possible, and the question of the standing of one vessel or the other as a "representative" yacht is very likely to come up, as it has in the past in England. Before attempting to decide whether a given yacht can fairly claim the title of representative, it may be well to decide the exact meaning of this term, which has thus far been used very loosely by yachtsmen. According to the common usage, a representative yacht is one which has shown an unquestioned superiority over all her fellows; but apart from this meaning being incorrect, it is unsatisfactory in that it gives rise to endless disputes. As we understand the term it is of much wider application, and includes every product of a recognized and successful designer, such as Herreshoff, Watson or Fife, regardless of success or failure, unless the yacht is manifestly an experiment. To illustrate, Wasp, after the success of Gloriana, was most certainly a representative yacht, the representative American yacht of last year, and no defeat or failure could have altered her standing. In the same way the forty foot boat built by Mr. Burgess in 1889 and '90 were no merely nominally but actually representative of the latest and best work of America's leading designer; the Gossoon, the most successful of the lot, having under the circumstances even less claim to the title than some of the unsuccessful ones. In the case of a yacht by any of the less known designers it may be necessary for her to show her quality in racing before she can claim to be truly a representative of the national fleet; but in the case of a Herreshoff or Watson boat she is of necessity a representative. The new Navahoe stands as the latest conception of the recognized leader among American designers and should she be defeated abroad and later at home, it will show a very poor spirit if she be repudiated as not a representative of the American fleet. The same applies to Valkyrie 2. She comes here as the latest work of the designer of Queen Mab, the best that Great Britain can produce to challenge for the Cup.

A NOTABLE instance of the unfair use of the term is found in the treatment of Galatea by British yachtsmen after Lieut. Henn's plucky fight for the Cup in 1887; she being repudiated as not being a fitting representative of the British fleet after it was made plain that she was not only unsuccessful here but slower than Irex at home. The winning boat of the class in 1884 was Genesta, she scoring more wins than the other new boat, Irex. Her designer, Mr. J. Beaver Webb, after the success of Freda, Tara and Genesta, ranked among the first three or four British designers. Galatea was designed by him to be Genesta, but, as events proved, she was never anywhere near the latter boat, while Irex was so much improved by O'Neil's tender ministrations before her second season, that she was unquestionably the fastest of the three. Under the circumstances, however, considering that the entire expenses of the unsuccessful expedition were borne by Lieut. Henn, and that his conduct here both in making a plucky fight and bearing defeat bravely, reflected the highest credit on the nation he represented, it would have been far more gracious in his countrymen to have accepted Galatea's failure in the same spirit that he did and to have said nothing of the superiority of Irex. It ought to be clearly understood on both sides before the two yachts cross the Atlantic that each party has done its best to insure success, and that in the event of failure he may be sure of the sympathy of his fellow yachtsmen at home, who share with him neither the labor, the responsibility nor the heavy expense of upholding the national credit.

The Trial Races.

THE America Cup committee of the New York Y. C. has issued the following circular:

"The America's Cup committee of the New York Y. C. announce the following addendum to their circular dated Feb. 1, 1893, bearing specially explanatory of the committee's views as to the selection of vessel to defend the America's Cup.

"While it appears technically necessary that the trial races shall open to vessels within dimensions on the load waterline possible under the terms of agreement, namely, between 65 and 86-7/10ft., the committee consider that a reasonable approximation to the length on the load waterline of the challenger is an element of paramount importance in the vessel to be chosen as the representative of the New York Y. C. A sensible equality in size would, in the judgment of the committee, be most conducive to the interest, and suitable to the importance of the coming international contest; would insure a more reliable defender of the Cup under all conditions of weather, and would, by minimizing the always objectionable element of time allowance, conform to the spirit of the deed of trust.

"In justice and fairness to intending competitors in the trial race the committee would respectfully warn them that a deficiency of 5 or 5 ft. in the load waterline length of any vessel, as compared with that of the challenger, will almost certainly preclude the selection of such vessel by this committee for the defence of the America's Cup.

"In conclusion, the committee would announce that, by agreement with Lord Dunraven, manual power only shall be permitted for working the competing vessels in the race for the Cup, and that the same proviso will apply to the trial races."

The Cruise of the Cy-pres.

TWO WEEKS IN A 23-FOOT BOAT.

[Concluded from Page 197.]

The wind went down in the night, and the morning of July 25 was warm and sultry. We took the little steamer Forest City from Peak's Island and went over to Portland to see the place and do some shopping. Portland as seen from the harbor is a beautiful city; it lies on two or three hills that rise gently from the water, and the morning sun lighting up the spires and domes of the buildings made a very pretty and attractive picture. The public buildings are fine and the whole city impresses one as being a prosperous and substantial town. We found it intensely hot on shore and regretted that we had left the cool, breezy deck of the yacht, but we had errands to do and hurried on with them, getting back to the steamer landing as quickly as possible. We wanted to walk through the residential portion of the town, but the sun was too much for us and we gave it up. We found the boat at the dock and were soon enjoying the cool breeze of the harbor as we steamed along toward the island.

Before going on board the Cy-pres we took a lunch consisting of very hot chicken chowder and very poor ice cream. We went ashore immediately after reaching the yacht, and with a nice little breeze ran over toward Fort Gorges; leaving it on our port hand, we turned north and ran between the fort and Little Hog Island and then turned northeast past Chebeague Island, keeping close up to Little John to avoid the sand-spit that makes out to the westward from Great Chebeague. The channel is broad and deep from this bar up to Mosher's Ledge, where we turned northward to the docks of Strout's Point, dropping our anchor midway between them and about 100 yards from shore.

Our anchor had scarcely reached the bottom before a fisherman rowed alongside and told us of a good mooring a little further up stream, that would not be used that night, as the owner had just gone off for a few days. We hoisted our foresail and crept up slowly to it, only to find that the road line was foul of the stern and could not be hauled on board; so we passed the point and picked up the tide gauge, and then turned and made both ends fast to the bits. We noticed quite a crowd of people on one of the docks or piers as we came in, and we thought for a time that they had been attracted there by the unusual arrival of a yacht in these waters, but soon learned the cause of the commotion when a little sidewheel steamer came up the river and made fast to the dock.

This day's sail was the most delightful one of the cruise. We glided quietly but swiftly along, running before a steady southerly breeze, through a clear, well-buoyed channel, without a care of any kind. The sky was clear, dotted here and there with white, fleecy clouds, and the rippling water reflected back the deep blue of the vault above. The air was soft and balmy, and we had nothing to do but enjoy to the full the beauties of the ever-changing landscape. We turned in soon after sundown, as we wished to make an early start next morning and take advantage of the last of the summer sun. The morning and lake adventure was wonderfully quiet, the only sound to be heard was the calling and occasional splashing of some wild water fowl, and toward morning the distant rumble of a passing thunder storm.

We were up at 4 o'clock (Tuesday, July 26) and thoroughly enjoyed the beautiful sunrise in this secluded place. A light southerly breeze sprang up on the sun rose, and at 5:45 we weighed anchor and slowly tacked down the river and ran in between the sand-spits of the river. We retraced our course of yesterday as far as the buoy at Mosher Ledge, when we turned northeast and skirted along the eastern side of several small islands—Busting's, Bibber's, Sow and Pigs, Pettinell's, Williams and Sister Isle—to Mare Point Neck, which is one of the numerous points of the main land that runs down into Casco Bay. It is sixteen miles in a straight line from Portland Breakwater, and is covered by quite a village of summer cottages, some of them being groves of apple trees and others perched on rocky points or sloping grassy plateaus.

A yacht must have been an unusual sight here, for our appearance seemed to excite the dwellers on shore very much. They ran out to the furthest extremity of the point and waved their handkerchiefs to us till we disappeared from view around the end of the Upper Goose Island.

We turned south at this point, and between Shelter Island and Upper Goose Island met the flood tide, which was so strong that we could not stem it with the light breeze we then had. The sun was very hot by this time, and we sweated and stewed as we drifted backward and forward, hoping each minute that we would get more breeze or less current, and so work out into the middle of the bay where there was more room and probably a better breeze. We saw a small schooner in this part of the bay for ten miles from the shore, and several other boats at it. There were also a number of seals swimming lazily about, with their dog-like heads just above the water.

We gradually worked down past Shelter Island and across Middle Bay to Harpswell Neck, where we could see a church steeple over in Harpswell village, and hear the bells strike the hours. We had the most vexatious successions of puffs and calms, and the result of our efforts was we never got out of the same direction. We were between the beats of two opposing breezes, and first one and then the other would prevail momentarily. It was slow, hot, tedious work, and had the islands been less lovely we would have given it up and anchored in some little cove till we got a better breeze.

Nothing could be more beautiful than the islands of Casco Bay. They are of all shapes and sizes, and of every conceivable kind, from the bare rocks to the high, wooded mountains. The water is so clear that we could see the bottom and there a solitary fisher, but tucked snugly away in some sheltered nook. We drank in their beauty with every breath, and our only sorrow was that we must leave them.

We worked our way down slowly past the Goose and Gosling, Little Whitehead and Great Chebeague and Long Islands, and then ran close to Marsh and Overst Islands into Hussey Sound, where we met a strong tide and sharp, choppy sea, and the great grey waves of the current ran back and forth between the two islands. We saw a most wonderful mirage. Our attention was first attracted to it by a brilliant white flash, apparently from the sky and out at sea about five miles from us. It came again and again, and we soon noticed that right under it the sea was breaking on a reef; once or twice the flash of white from above joined the surf from below, and the effect was like a huge sheet hung in the sun, and above it a blue sky. We went on about half past five, and about 4 P. M. we reached our old anchorage off Peak's Island, tired and hungry, for we had eaten nothing since half past five but a pilot biscuit washed down with raspberry vinegar. We found the same yachts at anchor near us, including the Cape eat, whose crew again made night hideous with their gun, cat calls, songs, and college yells. We couldn't understand how men who pretended to enjoy sailing could lie at anchor day after day when the magnificently beautiful Casco Bay lay spread out right before them, inviting them to enjoy its quiet waters and picturesque islands.

The next morning, Wednesday, I went over to Portland again to see if our long lost anchor had arrived, but was again disappointed. About eleven o'clock we tripped our anchor and bade good-by to Peak's Island, turning the bowsprit of our little ship homeward. We ran slowly down the harbor before a very light breeze which died out entirely as we neared the mouth of the river. We seemed to be in a calm beat between opposite currents of air, for back of us we could see boats running along with a nice little westerly, and outside of us were others with a good easterly, while we would get a puff first on one side and then the other. The tide was with us, however, and we gradually worked out past Cape Elizabeth and turned southwest, heading for Wood Island.

As we passed the point of Richmond Island we met quite a choppy sea coming out of the west, apparently kicked up by a stiff breeze from the land which did not reach out as far as we were. We turned in toward Old Orchard Beach hoping to strike this breeze, and soon did so, and were surprised to find how strong it was. It heeled us down plank sheer to, and we flew along in the same shape, running into Winter Harbor and dropping our anchor between the Monument on Sloop Island and the Spindle on Fletcher's Neck. Close to us lay the Sloop Georgia, which had left Portland two hours before us and experienced the same baffling winds or lack of winds, that we did, and ran in here fearing that they could not make any other port that day.

After getting things shipshape on deck, we took the tender and rowed round the harbor, sounding as we went. We found on 1 1/2 fathoms of water well in toward the Monument, and concluded that for small boats that was the best place to anchor, as there was very much less current there than over by the Spindle, where the tide runs

very strong out of the Pool. The soundings were made about an hour before low tide, but we figured that a boat drawing 5 or 6 ft. would have no trouble if she anchored well over toward the Monument, unless there was a big sea running.

While sitting on deck after supper enjoying the lovely sunset we saw a very peculiar-looking stern-wheel steamer come out of the Pool, run round Sloop Island and go in the Saco River toward Biddeford. It was a queer, antiquated, wheezy little craft, evidently of very light draft; in some respects it resembled the Ohio River boats, whose captains stoutly swear that they can run on a heavy draft. Numbers of racing parties in their hotel up in the Pool came out into the more open part of the harbor, taking advantage of the slack water, as they are shut in there by the powerful current except for a short time at each turn of the tide. The two yachts lying at anchor seemed to be the center of attraction, and they hovered round us for some time, the ladies and children singing and laughing and enjoying themselves hugely. After they had all left us and we had taken a plunge in the cool, clear water, which looked very tempting in the heat of the day, we turned in and slept like logs until 4 o'clock next morning, July 28, when we were awakened by the light of the rising sun.

We got under way at 5:30 but the air was so very light that we could scarcely keep storage way on the boat, and came very near imploring ourselves on the bowsprit of a schooner that lay at anchor in mid channel near the Spindle on Goose Island. We saw a fishing schooner with a man at her foremast head and another on the end of her bowsprit. The crew seemed very much excited, and lowered a dory over the side, which pulled rapidly past us, guided by signals from the masthead man. After rowing on some little ways they seemed to give the chase up and were recalled to the ship. As they came back past us we called to them and asked them what they had seen, and they told us they had caught the same fish that we had, but promised to offer them to us if we would come back to the yacht as the tide was running strongly up the river and the sun was very hot indeed.

As soon as I got on board we bore away for Cape Neddick, and as we left Kennebec Port behind we also left our breeze with it, so that we scarcely moved for some time. A black cloud in the west looked very threatening for a while, but finally passed on, and we were left at a calm, with the sun shining brightly at all home of reaching Portland or even York before sundown, so headed for Wears Cove, which we managed to reach before dark, and found it a very snug little harbor. Two reefs make out on either hand and break the seas, and the stream which flows into it comes in at such an angle that there is very little current on the west side at any stage of the tide. We found about 10 ft. of water at low tide all over the cove and were delighted with the place, and glad to turn out of such a well sheltered spot where we could not take any more future time.

Next morning, Friday, July 29, we got under way at 6:30 and passed near a catboat anchored in the cove, which had come in quite late the evening before. The weather did not look very promising, as the sky was overcast and a heavy fog bank hung over the sea to the eastward, but as the barometer was high we hoped it would disappear as the fog advanced. But it did not, and we were doomed to disappointment. Shortly after leaving Cape Neddick we noticed that the fog was slowly, but surely, creeping nearer, and as we approached York we could see it sweeping across the land between us and Whale Back Light. On looking seaward we could no longer find Boon Island Light and concluded the best thing to do was to make for York with as little delay as possible. We could see the buoy at the entrance of the harbor with the glass and had scarcely fixed its bearing and distance when the fog was so thick that it was impossible to see anything from our sight. We picked up the buoys one by one without difficulty and at 8:30 dropped our anchor in the little cove below Rocks Nose.

The fog by this time was so dense that we could not see the huge hotel on Stage Head, which is up on high ground and only three or four hundred yards away. About noon we rowed up to the dock and were very much surprised to find on walking up the dock that the fog was so thick that it was impossible to see anything from our sight. While we had been sitting on the cold wet decks, knocking our heels together for lack of better employment, the sun had been shining brightly on land and a game of lawn tennis was in full blast almost within hailing distance of us. We were strongly tempted to stay on shore the rest of the day and enjoy the sunshine, but feared some accident might befall the yacht, so we went reluctantly back to the boat after getting a good look at the sun and a Boston paper. About 3 o'clock a fishing boat came in and picked up a mooring near us, having been driven in by the fog several hours earlier than usual.

When we turned in we expected the fog would continue for twenty-four hours, as there was no appearance of a change, but between 9 and 10 o'clock a violent thunder storm arose and swept down on us from the northwest, clearing the fog off in a twinkling. The rain was very strong, and the water was so high that we could not get our anchor hauled up, and it slipped on a rubber coat over his night-shirt and went on deck to look around. He found everything all right and in a few minutes was sound asleep in his berth, emitting occasional blasts from his nasal fog horn that it seemed to me could be heard a mile, and served much better than a riding light to warn off any stray boats that might be seeking an anchorage at that late hour.

Next morning, Saturday, the day was clear and bright in the northwest, but the rest of the sky was low in the northeast, with every indication of wind from that quarter. When we left our anchorage at 5:30, the barometer was high and rising, the wind was from the northwest, but soon after getting out of the river it changed to north-half-east. We noticed a good deal of fog hanging over the water to the southeast of us and as we approached Portsmouth heard the fog horn on Whale Back blowing its dismal horn, and not liking to go so near the coast, we decided to make for the mouth of the river and make developments.

As we rounded Whaleback the wind hauled round more to the northeast and freshened, until we were rail under. We had an exciting thrash to windward beating up to our old berth in Pepperells Cove, where we dropped our anchor at 9 o'clock. There were but few boats out, and all of them had all the wind they could stand. One man in a new boat of the open type came close up to us, just as we were about to drop anchor, and he told us that he had just filled him full of water. It was a close call and evidently all he wanted, for he put for shore at once and did not appear again.

Having noticed that the barometer was high and steady we discussed the weather for a few minutes before going ashore. I insisted that every indication for the past twelve hours, except the barometer, pointed to an easterly storm and that the breeze from the northwest was only a temporary respite. The weather was settled. F. admitted that the indications were not those of a fair day, but insisted stoutly that the barometer does not guess, it knows, and that we ought to take advantage of the fair breeze and continue on our homeward journey. We finally decided to wait for a few hours and see what chance, if any, took place. We made a short excursion on shore and on returning to the yacht noticed that the breeze had changed to a westerly, and that the clouds were coming in, and that the clouds showed signs of clearing away. Concluding that the barometer was right, we decided to make sail for Rockport and tripped our anchor at 10:15 with the wind fresh and steady from the east.

As we got clear of the land we found quite a sea running and white-caps flying. The Cy-pres rode the waves like a duck and steered without the slightest effort. We laid our course S.W. and ran her under the raised Harbor Point, where we steered for that headland until we could see Cape Ann's two lights, when we took a course midway between these two landmarks until we could make out the little lighthouse on Straitmouth Island, when we made for it and so ran into Rockport, making the twenty-four miles in four and a quarter hours.

We sat on deck enjoying the lovely summer evening till the village bells rang out their nine o'clock warning that it was time for all good citizens to go to bed, when we turned in. The breeze was from the west, and we were very comfortable, as we had but a short run to make to reach Magnolia, our home port. I made a dish of scrambled eggs for breakfast and although it was my first attempt it proved to be a grand success. The only drawback to our thorough enjoyment of it was the great difficulty we found in cleaning the utensil in which it was cooked. The morning was perfectly beautiful, with a moderate breeze from the east. We weighed anchor at 8 o'clock and beat down the river, taking our usual course, and at 10 o'clock we were in the harbor, a schooner going our way and were surprised to see how easily we walked to windward of her. Off Thatcher's Island the wind died out almost completely and we scarcely moved for some time, but it freshened again as we drew near to Eastern Point, which we rounded about 11 A. M. On shore sharp eyes were watching for us, and soon recognized our familiar rig. With the glass we saw a boat in the harbor, and as the white sails were up, and we returned their signals with a will. We picked up our mooring in Kettle Cove just at noon and as we pulled ashore found all of our friends waiting for us on the dock.

We found we had been the objects of much commiseration, and had been expected home any day by part of our friends who had very little knowledge of the seaworthiness of our little ship. The ladies promised to send us a letter, and we saw that the Capt. across Cape Ann on our second day out filled them with alarm for our safety, and unlimited quantities of peanuts were staked on our returning the following day. We had scarcely reached our cottage before it began to rain,

A cold easterly storm came on that lasted three days, and we congratulated ourselves on reaching home just in the nick of time and on the exceptionally fine weather we had enjoyed during the whole trip.

The best season of the year for making the trip is probably from July 10 to Aug. 1, as there is apt to be better weather then than later on. In August there is more fog, and usually less breeze. If any lover of single-handed sailing is encouraged by this lot to make the same trip the object in writing it will have been accomplished.

Yacht Building at Lawley's Yard.

Outside of the four or five large racers, the present winter has been a dull one for the builders and little improvement is promised as the spring approaches, but the Lawley Company have kept a good number of hands at work all winter and will have quite a fleet to launch in the course of the next month or so. For some time the firm have been building a very desirable type of small steam yacht, designed by Mr. George F. Lawley, craft of 50 to 90 ft. l.w.l., of strong but not unduly expensive construction, and giving good accommodation and a fair speed for cruising at a moderate cost. During the winter they turned out several of these yachts and this year they have four under way of various sizes.

The largest of these is now just in frame, a craft 104 ft. over all, for a New York yachtsman, whose name, of course, is a profound secret. She will be of composite build, the first steamer of this construction which the yard has yet turned out. The keel, stem and sternpost will be of oak, the frames of steel, their heads and stems and the floors rivetted to a plate of steel, and the planking will be of yellow pine. She is intended for a speed of 16 knots and will be fully fitted for cruising, her owner contemplating a cruise to Chicago. She will be flush-decked, with a deck house 20 ft. long, of which 14 ft. will be given to the dining hall. The engine space is 17 ft. long, containing a triple expansion by the Fore River Engine Works, of Weymouth, and an Almy boiler.

The crew and officers will be berthed aft and the owner's quarters will be forward. The main saloon will be 13 ft. long, finished in butternut, with the owner's stateroom and large bathroom forward. Aft the main saloon, on each side of the passage, are two staterooms 8 ft. long. The work is going ahead rapidly, and the yacht will be ready for launching early in the season.

The next largest steamer is for Mr. R. H. White, former owner of Viking, a member of the Boston and Hull clubs. She will be 90 ft. over all, 16 ft. beam, 7 ft. draft, with a flush deck. She is now nearly completed in the big shed where Puritan and Mayflower were built, and is a very trim looking craft. She has a deck house 16 ft. long, the dining room being 11 ft. with the pilot house in front. The galley is directly beneath the dining hall, with a dumb waiter. The engine space is 16 ft. long, with a compound engine 10 and 20 x 14 in. and an Almy boiler 8 x 6 ft., with 30 sq. ft. of grate surface. The galley, with the main engine quarters are forward, and the owner's quarters and the main cabin are aft. On the starboard side forward are two staterooms, the first for the owner, and the port is a passage, with toilet room and a smaller stateroom. The joiner work is all in mahogany, on deck and below. The headroom in the cabin is 6 ft. 3 in. under beams. The frame is of oak, sided 3 in. and moulded 5 in. at heads, the planking of 3 in. yellow pine, and the deck of 2 x 8 in. white pine, matted with Jelfries marine matting. The yacht will be lighted by electricity throughout, and will carry two boats 14 and 17 ft. She will be in commission early under the charge of Capt. S. S. Rich, formerly in command of the steam yacht Seneca.

Alongside of her in the big shed lies a similar but smaller yacht for Mr. F. B. McQuesten, former owner of the 46-footer Thelma, 55 ft. over all, and with a trunk cabin, the finish and general style being similar to the White yacht. Out in the small shed is a fourth steamer much like the McQuesten boat, with trunk cabin. Each will have a Fore River engine and Almy boiler.

In one corner of the big shed is a neat little cruising schooner, also of Mr. Geo. F. Lawley's design, for Mr. Fales, of Providence, a deep centerboard craft of 55 ft. l.w.l. and good beam, with a heavy lead keel. She is quite wide, and with moderate overhang, has a large amount of deck room, and the ordinary crooked construction is used, with rich workmanship and neat finish to all parts, making an attractive little vessel. The mainmast is stepped practically on deck in a steel tabernacle or tube secured on top of the trunk. Below she has ample headroom and very good accommodation. She is nearly finished, but the tons of ice on the ways outside give little promise of launching for a long time to come.

During the winter the lack of enlarging the basin has been going on, and while the lack of enlarging the basin will be room for even the large fleet which annually winters at Lawley's, including many of the most noted American yachts. This new basin will add materially to the facilities of the yard, which, however, will not be complete until the big shed, originally built as a temporary structure to cover Medusa in 1883, and later enlarged to take the Puritan and Mayflower, gives place to a more modern and convenient structure, such as is required for the elaborate construction found in the latest yachts.

In this shed were built, beside Medusa, Puritan and Mayflower, Sachem, Pappoose, Merlin, Harbinger, Wayward, Mariquita, Baboon, Gossoon, Mineloa, Sayonara and other noted craft. It is now full, the new composite stainer being set up partly outside with a temporary shed over the forward part.

Back of the plates where the steel plates are cut and punched, is another temporary shed, beneath which is set up a big canoe, the Foster fin-keel designed by Waterhouse. She is 70 ft. over all, 46 ft. l.w.l., about 12 ft. beam and some 7 ft. extreme depth amidships. As she is built on the ground, no signs of the fin yet being visible, she looks very much like an overgrown canoe. The hull is of steel throughout, the deck frame well braced with diagonal ties. There will be ample space below and it will cut up well. No doubt the new steel is yet to be seen of the Paine boat, which will be a mould and a much larger fin-keel, of about 85 ft. waterline, but the moulds are all ready and the angles on the ground, so the yacht will soon take shape in the new building shed put up last year to cover the schooner Alcega.

The finest piece of work in the yard is the Stewart & Binney 21 ft. fin-keel, which is nearly finished in one of the small sheds. She is 21 ft. over all, 21 ft. l.w.l., about 7 ft. beam and 15 in. draft of hull. The depth and weight of fin, sail area and owner's name are not known. The model is notably fair and easy, with canoe section, and the lines are well carried out into the ends with a clean sweep fore and aft. The construction is quite elaborate: the keel is an oak plank about 12 in. wide and 2 in. thick amidship, tapering into the stern to a quarter timber; the transoms are all of steamed oak, bent, about 1 in. square and framed 6 in. and the inwale is of oak, about 2 in. square, the heads of the frames being gained in flush before planing. The planking is double, an inner skin of white cedar about 1/2 in. thick and an outer one of Spanish cedar 3/4 in. thick, the wale being a single thickness of 3 in. Spanish cedar, the transom, which is worked out to a fine edge, being of the same wood. The deck is made of oak, bent, about 1 in. square, and the frame is all of steamed oak, bent, about 1 in. square. The hull is in the same shop as some lifeboats of improved model, one of which has just been shipped to Cuttyhunk. A large number of yachts are on the beach, Volunteer being on the railway, while Wasp, Tadpole, Freak and many more of last year's flyers are visible out of water. Mayflower will be hauled up shortly for alterations.

Tarpon Springs Y. C.

Editor Forest and Stream:

The weekly regatta of the T. S. Y. C. was sailed Feb. 18 in a brisk N. N. W. Imp started last as usual, but soon passed the fleet and again won the champion flag in the best time ever made over our course. She is the smallest boat in the fleet and wins without claiming time allowance. Capt. Clemson sailed Topsy with pluck and judgment, and if he keeps on improving will make it hot for the boys before the season is over. After the race the Women's Bayou Boat Club entertained the members of the T. S. Y. C. Refreshments were served at Mrs. Com. R. W. Clemson's new cottage. Both clubs enjoyed an hour of sociability and good fellowship led to be remembered by all present. The commodore of the W. B. C. C. Mrs. Clemson, presented the winner of the champion flag, Com. Phinney, with an elegant bouquet of rare and exquisite roses tied with the colors of the boat club. As the little Imp wins the prize pretty regularly, Capt. Clemson suggested a large prize be given to the second yacht. The ladies promised to consider the matter, and something handsome is expected at the next regatta, as they are never backward in doing good. We have been living under summer skies, without a rainy day for the past month. We fish, shoot turkeys, deer, etc. five days each week and race boats every Saturday. Come and visit us.

The times of the race were:				
Imp.	Com. Phinney.	Length.	Start.	Finish.
15.00	2 37 47	3 33 52	1 06 05	
20.00	2 30 30	3 34 55	1 08 25	
25.00	2 25 57	3 36 30	1 10 32	
Regatta committee, Com. J. P. Phinney, Vice-Com. Disston, Rear-Com. Noblet, Capt. Knapp and Capt. Clemson, secretary.				
J. P. PHINNEY.				

Messrs. Clay & Torbensen, steam launch and engine builders of Gloucester City, N. J., have issued a very attractive catalogue of their yachts and engines, the illustrations showing the interior of the shops and also different steam and sailing yachts being specially good. The firm makes a specialty of steam house boats, two sizes being illustrated.

Kwasind.

We are indebted to the designers and builders, Read Brothers, of Fall River, Mass., for the accompanying plans of the cruising yawl Kwasind, built last year for Oliver Adams, Esq., of the Larchmont Y. C. The yacht was designed as a comfortable family boat, for sailing and cruising about Larchmont and Long Island Sound, requiring but one paid hand and giving plenty of room in cabin and cockpit for the owner's wife and young boys.

While similar below water to the sloops and catboats of Narragansett and Buzzard bays, the model has been carried out above water into the fashionable long ends, giving greatly increased deck room and improving the appearance. The waterline of the average sloop, hollow forward and very full aft, has been retained, with hard bilge, but in a later design of the builders, for 30ft. l.w.l. which we have seen, these extreme features have been modified with advantage.

Kwasind was in use all of last season and proved very satisfactory for her designed purpose, besides showing considerable speed at times. The rig is effective and easily handled, the spars being light. The main cabin is 12ft. long with 6ft. of headroom and wide floors on each side of the centerboard trunk. There is abundance of room for lockers, closets, shelves, etc. The forecabin is very long, owing to the fore overhang, and gives an unusual amount of room. The cockpit is 10ft. long, fitted with fixed seats, a water breaker being stowed on each side beneath the seats. The yacht steers with a wheel. The keel is of iron, 4,600lbs., and about 3,000lbs. of iron is carried inside, with which ballast the yacht draws nearly 3in. more than is shown in the design, making her racing measurement of waterline 28.36ft. in place of 27ft. Her general dimensions are as follows:

DIMENSIONS AND ELEMENTS YAWL KWASIND.

Length, stemhead to taffrail.....	41ft.	1½in.
l.w.l.....	27ft.	
Beam, extreme.....	12ft.	
l.w.l.....	11ft.	8 in.
Draft.....	3ft.	10 in.
with board.....	3ft.	3½in.
Freeboard, least.....	2ft.	2 in.
Sheer, bow.....	2ft.	10 in.
stern.....	7ft.	
Fore overhang.....	7ft.	1½in.
After overhang.....	8.02	
Displacement, long tons.....	2.07	
Ballast, keel, iron.....	1.33	
inside, iron.....	3.40	
Total.....	15.17

Boom, length.....	26ft.	14ft. 10in.
Gaff, length.....	24ft. 6in.	12ft. 6in.
Mainsail area, sq. ft.....		710.00
Mizen.....		185.00
Jib.....		209.00
Total.....		1113.00
C.E. forward of c.l.r. of hull.....		1.13ft.
and board.....		1.95ft.
above l.w.l.....		13.80ft.
mizen and jib only.....		13.50ft.

The positions of the centers of effort of whole sail and mizen and jib only are shown on the sail plan; also the positions of the center of lateral resistance of hull only and of hull with board lowered to its full drop.

The yacht is built with oak keel, stem and sternpost, steamed and bent oak frames, clear yellow pine planking and selected white pine deck, the deck and cabin joiner work being neatly and tastefully finished. The cost is but little over \$2,000 with sails and ballast, making an unusually cheap and comfortable craft. The lines of an earlier but similar yacht designed by Read Bros., the cat sloop Rahnee, will be found in the FOREST AND STREAM of Sept. 25, 1890.

Corinthian Y. C. Sweepstakes.

The Corinthian Y. C. of New York has issued the following circular relating to its fifth annual sweepstakes:

The fifth annual renewal of the above race: a sweepstakes at \$250 each (\$125 only if declared out prior to July 31), will be held during the season of 1893, as heretofore, under the auspices of the Corinthian Y. C. of New York. The following conditions as to time, place, course, prizes, etc., will apply thereto:

1. Open to all single masted yachts exceeding 80ft. sailing length (formula, $\sqrt{S.A. \times L.W.L.}$) Measurement and time allowance as per by-laws of the club, copies of which will be furnished to yachts making entry.

2. Owners must furnish certificate of sailing length [under C. Y. C. rule] by their club measurer to the sailing committee at least ten days before the race. Same will be accepted as final unless a remeasurement (by the measurer of the C. Y. C.) be demanded by a competitor in writing (and \$20 measurer's fees deposited) within 24 hours after the race.

3. Seventy-five per cent. of the entry moneys will be given in silver plate to the winner, and the remaining 25 per cent. in silver plate to the second.

4. The race will be sailed off Newport Harbor, R. I., on the Monday after the termination of the New York Yacht Club's cruise (probably Monday, Aug. 28).

5. The course will be a triangle of 30 nautical miles (as near as may be equilateral) one leg (if practicable the first) to be laid dead to windward.

6. Start and finish at Brenton's Reef Lightship.

7. The start will be flying and at 11 A. M., as near as may be. Three minutes allowed to cross line.

8. No time limit for race (unless otherwise agreed prior to start). Yachts will be timed by the bowsprit end.

9. Full professional crews and the use of any sails allowed.

10. The sailing regulations of the Corinthian Y. C. of New York will apply to and govern the race (except as modified by the special conditions of the sweepstakes).

Entries will close June 30, 1893, and may be addressed to sailing committee, Corinthian Yacht Club, 62 Stone street, New York city.

Dated March 1, 1893. AUGUST BELMONT, Admiral.

The New 85-Footers.

In spite of a long yarn in a New York paper last week, the Stewart Binney boat was still an uncertainty until Monday, but she is now finally decided on and will be commenced at once. Mr. R. S. Palmer, of the schooner Marguerite, who was hailed as the savior of the project, had been in the syndicate for some time, and it has been settled that if built Captain Sherlock, in his employ for several years, would be her skipper. The steel for the Palme boat has been received at Lawley's and she is now in hand, and as there is nothing ahead of her in the steel department, save the Waterhouse fin-keel, now well along, the work should go on quickly. The Carroll boat, Navahoe, is being finished at Bristol; the Rogers boat is in frame and partly plated, but the keel of the Morgan-Iselin boat has not yet been laid. The former will be a keel boat and the latter a centerboard, but the firm still declines to give out any particulars or to admit anyone to the works. Although the particulars relating to Mr. Carroll's proposed challenge for the Royal Victoria cup are also withheld by the New York Y. C., it is generally understood that his challenge has been sent, and that the holders of the cup have made such changes and concessions in the terms as to make them perfectly satisfactory.

The Marine and Field Club of Bath Beach has elected the following officers: Com., F. B. Fiske, sloop Fanny; Vice-Com., F. L. St. John, cutter Chipsa; Rear Com., G. E. Brightson, sloop Penguin; Sec., Louis J. Boury, sloop Badger; Meas., Chas. A. Deshon; Regatta Committee, Louis J. Boury, Chairman, F. L. St. John, Chas. A. Deshon.

CRUISING YAWL KWASIND. DESIGNED AND BUILT BY READ BROS. FOR OLIVER ADAMS, LARCHMONT Y. C., 1892.

YACHT NEWS NOTES.

Marguerite, steam yacht, has been sold by Wm. M. Harriman to S. R. James, Schenectady, N. Y.

Messrs. Waterhouse and Chesebrough have just designed a 35ft. cruising cutter for James R. Hopkins, of Philadelphia, brother of the owner of Gloriana. She will be 44ft. over all, 30ft. l.w.l., 9ft. 6in. beam, 7ft. draft, with a polemast rig similar to Drusilla and Handsel, mainsail, staysail and jib only. The interior will be quite roomy and well arranged. The yacht will be built by George H. Saunders, at Bristol.

At a special meeting of the Boston Y. C. on March 2 memorials on the deaths of Gen. B. F. Butler and Thomas Manning were adopted. Mr. Paul Butler, the present owner of the schooner America, was elected a member of the club.

Lancer, schr., has been thoroughly overhauled this winter at Winttingham's yard, and will be fitted with new masts. Her new owner, George E. Chisholm, will change her name to Enigma.

Murray & Tregurtha, South Boston, Mass., report business as very good, in spite of the inclement weather. They have orders for several complete launches, one of which, designed for high speed, is being built for a New Hampshire gentleman and is intended to be used on Lake Winnepesaukee. This launch is 35ft. 7in. over all by 5ft. 6in. beam, and will be fitted with a Tregurtha water tube boiler and a compound engine capable of developing 35 h.p. They are building a 28ft. launch and a steam tender for Boston parties. The demand for the Tregurtha water tube boiler, built by this firm, increases with every season, and they have now in hand, besides local orders, boilers for parties in Maine, New Hampshire and Texas. These boilers are now in use in the British Provinces and in various parts of the United States from Maine to Florida, on the Great Lakes and on the Pacific coast, where they are being built under license. The firm has just issued a very attractive illustrated catalogue of engines, boilers and fittings.

The Essex Y. C. of Newark, N. J., has elected the following officers: Com., Edwin Goldsmith; Vice-Com., Walter Wickelhaus; Rear-Com., Joseph Sonnenberg; Treas., Fred Hartung; Sec., W. C. Rothe; Fleet Capt., B. Mullaney; Trustees, Charles Dumont, Emil Kiehle and John Hahn.

The Baltimore Y. C. has purchased a part of the Walkers Pavilion property on the Patapsco River and will establish a station and club house there. The club, organized in 1891, has a membership of 54.

Arthur Welland Blake, a member of the Eastern Y. C. and former owner of the cutter Vindex, died on Feb. 28 at his home, Brookline, Mass., at the age of 50.

A special meeting of the Savin Hill Y. C. was held on Feb. 23 to hear the report of the committee on changing the measurement rules. The committee consisted of Messrs. Sears, Swallow, W. B. Bird and A. L. Kidd. Communications on the subject were read from N. G. Herreshoff, H. H. Sears, of the Cape Cod Club; W. F. Eaton, of the Eastern and Corinthian clubs, and from the Plymouth Club. The committee recommended that the sailing length be the load waterline, substantially as laid down by the Massachusetts Club rules of 1892. The adoption of the rules will come up for action at the next meeting.

At a meeting of the Atlantic Y. C., on Feb. 27, Lord Dunraven was elected an honorary member and the privileges of the club house were extended to the members of the Royal Yacht Squadron.

Messrs. Seabury & Co. have about a dozen electric launches under way in their shops at Nyack. They are from 16ft. to 40ft. length.

The monthly meeting of the South Boston Y. C., on March 1, was well attended, and a general intention was expressed to make the quarterly-centennial season of the club a notable one. The usual appropriations for prizes have been increased one-half and the following events have been announced: Open regatta, May 30, open to all boats, no restrictions as to enrollments or occupation; first championship race, July 8; second championship race, Aug. 5; third championship race, Aug. 19. Other fixtures will be published as soon as arrangements are completed.

Wm. Skinner & Sons, of Baltimore, are at work on a house boat 84ft. long, 18ft. beam and 2ft. 6in. draft.

Mystery, keel sloop, has been sold by H. W. Lamb to A. L. Pope through Waterhouse & Chesebrough.

Mr. S. W. Small, of Boston, owner of Ustane, has sold her and will replace her with a new boat of his own design for the 25ft. class. The yacht will be 32ft. over all, 22ft. 6in. l.w.l., 10ft. beam, 7ft. 11in. draft, with a metal center plate of about 600lbs. weight, and mainsail and jib. Drake, in Williams' old shop at City Point, will build her.

Clara, cutter, has been sold by R. S. Osborn to J. H. Adams.

We call attention to the advertisement on another page of Mr. Alfred H. Brown, designer of steam yachts for all services. Mr. Brown is prepared to superintend the construction of yachts abroad, or to furnish designs for building in this country, and he has a large list of cruising steam yachts for sale and charter.

The engines of the steam yacht Neaira are illustrated in the *American Shipbuilder* of March 2.

The fixtures of the Larchmont Y. C. for the season of 1893 are as follows: Spring regatta, June 10; annual regatta, July 4; annual oyster boat race, Aug. 26. The date for the fall regatta and the Larchmont cups of 1893 for schooners and first class sloops will be fixed hereafter, so as not to conflict with the trial races.

A musical entertainment will be given by the Seawanhaka C. Y. C. at the club house on March 16 at 9 P. M.

The steam yacht designed and built by Ambrose Martin at East Boston for Wm. Amory has been launched and towed to the Fore River Engine Company's Works for her engines. She was christened Sylvia.

Messrs. Stewart & Binney have designed a steam launch for the use of the Harvard crew, which is building at Wood Bros. shop, East Boston. She is 48ft. over all, 43ft. l.w.l., 6ft. beam and 3ft. draft.

The Portland Y. C. has elected the following officers: Com., Chas. W. Bray; Vice-Com., Walter Woodman; Fleet Capt., William Willis Gould; Sec., Charles F. Flagg; Treas., C. F. A. Weber; Meas., Abial M. Smith; Fleet Surgeon, Charles D. Smith, M. D.

The new driveway along the Dorchester Bay shore of South Boston will interfere with some of the clubs, the Boston and South Boston being compelled to move their houses back.

Changes of Racing Rules.

Editor Forest and Stream:

The excellent report of the New York Y. C. committee published in the *Field* of Feb. 11, concludes with a proposal somewhat similar both in its tendency and in its method of procedure with one which I recently suggested and which was published in the *Field* of Jan. 21, viz., to use the area of immersed mid-section as a divisor in a cubic rule, thereby producing linear ratings like those used in America for time allowance and for classification.

The Y. R. A. rule, or the French rule, or the Danish rule, all of which give a cubic rating, or the American rule cubed, can each be used in this way. It matters not whether the internal or the external MS be applied; and I submit that the former is preferable because it can be more easily measured without encroaching so much on the legitimate secrets of design, and when the yacht is afloat.

The proposal in its most generalized form is: American $R = \frac{F}{CM} \dots I.$ where F is the rating formula (cubic) to be modified.

M is the area of immersed mid-section, internal, and C a constant particular to any special F. Thus if I. be applied to the Y. R. A. rule it will be found that the conditions are satisfied when C = 72, and if I. be applied to the Seawanhaka formula cubed, C must be about 600, hence

American rating = $\frac{L \times S}{72 M} \dots II.$

or = $\frac{(L + \sqrt{S})^3}{600 M} \dots III.$

The following is a simple and effective way to measure M. Bore two minute pin holes through the yacht's sides at M. S. and 1ft. above the waterline. Thread a wire through these holes and draw it tight. Find the height of this wire above yacht's floor at half beam, deduct 1ft., and call remainder H. Find height of wire above planking at quarter beam, using a plumb line, deduct 1ft. and call the remainder h. Measure in-

side beam of yacht 1ft. below the wire, call this B, the beam at W. L. Then, by Simpson's first rule, the internal area of immersed M S is $= \frac{B}{6} (H + 4 h)$, and substituting we get:

American rating = $\frac{L \times S}{12 B (H + 4 h)} \dots II.$

or = $\frac{(L + \sqrt{S})^3}{100 B (H + 4 h)} \dots III.$

II. being Y. R. A. modified, and III. Seawanhaka. The individuality or distinctive characteristic of each rule in its bearing on L. and S. is retained and this should be remembered when the following table is examined, the long boats having a better handicap (irrespective of divisor) in the Y. R. A. rule than they have in the Seawanhaka:

Name of Yacht.	L	S	B	H	h	TABLE SHOWING THE ACTION OF THE RULES.	
						$\frac{(L + \sqrt{S})^3}{100 B (H + 4 h)}$	$\frac{L S}{12 B (H + 4 h)}$
Genesta	81.0	7643	14.8	.9	.7	87.32	94.21
Volunteer	85.9	10270	25.0	8.5	5.2	89.28	100.24
Chiquita	45.5	2836	10.1	5.8	3.2	48.38	53.90
Ghost	48.5	2377	9.7	6.2	3.8	44.24	48.10
Minerva	40.0	2700	9.5	6.0	3.2	43.60	50.39
Dis	36.0	1658	8.0	4.8	2.7	33.63	36.23
Decima	36.0	1666	10.0	4.6	2.0	39.73	39.67
Oread	28.2	1102	6.2	3.7	2.3	28.87	32.38
Quinque	33.0	900	8.0	3.7	1.5	30.94	30.63
Valentine	29.8	996	7.0	4.0	2.1	26.61	28.50
Bedouin	30.0	1000	9.6	2.5	1.7	26.31	28.00
Madcap	21.0	714	6.5	3.6	1.4	18.14	20.80
Lady Nan	23.0	653	7.0	2.6	1.2	22.03	24.16
Dolphin	25.7	551	6.8	2.5	1.2	24.88	25.07

These examples are only approximately correct, because H is not shown on drawings, the floors seldom being indicated. Moreover, it often occurs that the actual position of W. L. differs from the designer's plan. But the results are probably of sufficient accuracy to demonstrate the effect of my proposals, and to indicate that boats having M S like Ghost, Dis and Valentine, would rate low, and that this is not confined to deep-bodied craft, as can be seen by comparing Valentine and Bedouin, the reason being that Bedouin's immersed M S area internal is 15.18 and Valentine's 14.47sq. ft.

I venture to assert that it is better in every way to bring all yachts under one formula, such as $R = \frac{F}{CM}$ see I., and to get the best results possible out of the rule adopted than to bolster up a rule which is acknowledged to be defective, by the application of an arbitrary limit of any nature.

For instance, the N. Y. committee deems 40 per cent. better than 30 for excellent reasons well given in its report. The same argument shows that 50 is better than 40, and states that Magic has 53, "and other cup defenders nearly 50 per cent." Then why fix the limit at 40? Surely it is better to fix no limit whatever, but to endeavor, with a little patience and ingenuity, to discover a rule which will have a similar tendency and apply to all yachts that race under it without "favor and affection" for any special limit, however well and carefully it may be selected.

Again, the proposal of the New York committee aims at increasing M S by encouraging yachts possessing the desired percentage of area as compared with the circumscribing parallelogram, but it should be remembered that a ratio can be increased in two ways (1) by increasing one member, (2) by decreasing the other, and the suggestion of the committee would be almost certain to produce a form of keel with a minimum of draft at M. S. A bad form of keel, very deep at the rudder post and triangular in form.

The committee has invited yachtsmen to consider the suggestions made in the report, and this must serve as my excuse for sending you such a long letter on the subject.

THALASSA.

Trap-Shooting.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

Gasper Surprises the Talent.

The afternoon of Feb. 28 was anything but favorable for trap shooting or any other kind of outdoor sport. Up to 1 P. M. the air was full of moisture, the wind raw and chilly and the clouds dark and heavy. At the above hour the snow began to fall and this soon settled down to a heavy north-east storm, which lasted until late at night. So heavy was the snowfall during the afternoon that the trap shooter who was obliged to face toward the northwest to locate a light bird was likely to get left.

All these disagreeable conditions were mere trifles to those who had business before the trap, as well as those who liked to witness exhibitions with the smooth-bore, as was shown by the party who gathered on John Erb's "old grounds" to add to the total Newark to wit: the contest between Howard Gasper, the massinging young amateur from New York, and Allen Willey, the blonde amateur from Hartford, who looks after the destinies of the Hartford *Globe* and incidentally takes a little fun out of shooting live birds or targets.

It will be remembered that some weeks ago these men met in a 50-bird sweep on these grounds, Willey pulling out a winner, Frank Class being second and Gasper withdrawing on the forty-third round. Gasper was dissatisfied with this result and at once challenged Willey to a 50-bird match, 30yds. rise, for \$100 a side, less price of birds. This match resulted in favor of Willey by 44 kills to Gasper's 28, the latter being in bad form and terribly nervous as well. Gasper then challenged Willey to another match at 50 birds each for \$250 a side, rose to pay for the birds. The match was set for Feb. 13, Willey to allow Gasper two dead birds, these he added, but the match was postponed. (The mediocre Gasper had met and defeated W. S. Pierson, of Plainfield, N. J., in a 50-bird match for \$50 a side, Pierson conceding him two dead birds in addition to his kills.)

Before the above date Mr. Gasper had requested a postponement as he wished to attend the Reading (Pa.) tournament, and the date was changed to Feb. 28.

Mr. Gasper, a quite a number of local sportsmen, as well as a number of prominent target snashers from Middletown, Conn., reached the grounds shortly before 1 o'clock, but it was an hour and a half later before Mr. Willey arrived. The match opened at 2:50, in the presence of fully 150 people, a big crowd for the day. Among them were E. D. Fulford, who had run down from Utica to look after a gun shot; Milton F. Lindsley, of Hoboken; W. G. Hollis, of Kearney; Wm. S. Canon, of New York; J. C. Wright, of New York; W. S. Pierson, of Plainfield; Thos. Franisco, of Newark; T. B. Bills, T. R. Pitt and Mr. Douglass, of Connecticut.

E. D. Fulford was selected as referee and C. H. Townsend scorer; Samuel Castle, Sr., looked after the interests of Gasper, who went to the score first and put a quick first into a good left-quarterer. Willey followed with a ragged first, but better second on a right-quarterer. From the very start it was evident that Gasper was shooting in a different form and was much sturdier than in his previous matches, this being in part attributed to the judicious coaching of Mr. Castle. He kept moving down his birds regardless of speed or light, some of his kills being phenomenal. Willey was also scoring steadily, but he was obliged to depend in a large measure upon his second barrel, his first not being used as effectively as usual. He killed seventeen straight, lost his next, but towered in the corner which did lead just back of the boundary and let his twenty-first and twenty-fourth get over the fence, leaving his score twenty-two kills on the first half. His twenty-first bird was an awfully vicious right-driving zig-zagger which any one would be likely to miss.

On this half Gasper killed thirteen straight, and lost his fourteenth, a medium-paced right-quarterer, which he undershot with both barrels. This was his last shot, making his aggregate forty-seven, twenty-four kills, this, with his allowance, giving him a lead of four birds.

On the second half Gasper lost his third, fifteenth and twentieth, all of which were right-quartering incomers which towered and zig-zagged in puzzling fashion, and also let his twenty-fifth, a fast twisting driver, escape. This gave him a total of forty-five kills, to which were added two dead birds, making his aggregate forty-seven.

Willey began the second by losing his first bird, an ugly left-quartering twister. He also lost his twelfth, an easy left-quarterer; his thirteenth, a fast twisting incomer; his twentieth, another twisting incomer to the right which did just too far back to be scored, and his twenty-third, of same flight as the last. This gave him an aggregate of forty-two kills, giving Gasper the match in an easy canter.

The birds thus noted were on the following birds: Gasper, 7th, good second; 15th, 16th, 21st, 25th and 27th, both quick seconds on good flyers; 31st, one of the best birds of the day and calling for a fine second; 25th, fast climber; 39th, very fast; 4th, towering zig-zagger; 43d, fast towerer. Willey, 2d, awfully fast zig-zagger; 7th and 13th, fine, quick second; 16th, long second on a fast bird; 19th, after killing one on ground got another bird which was a lightning right-driver which changed direction at every yard—this was an elegant kill with the second; 21st, fast towerer; 27th, fast twister; 32d, long second; 35th, 42d, 45th.

The score of match is shown below by our graphic score type: Trap score type—Copyright, 1893, by Forest and Stream Publishing Co.

1 5 1 5 3 5 4 1 1 3 4 2 3 4 3 2 4 1 3 3 5 5 5
H Gasper..... 1 2 1 2 1 2 2 2 1 1 1 1 1 1 1 1 1 1 1 1 2—24
3 1 5 1 3 2 3 4 3 4 3 3 2 3 2 5 4 5 3 3 1 4
A Willey..... 1 2 1 2 1 2 2 2 1 1 1 1 1 1 1 1 1 1 1 1 2—22
0 1 2 2 1 2 2 1 2 1 0 0 1 1 1 1 1 1 1 1 1 1 2—40

Nothing daunted by the heavy storm, the shooters present insisted upon having an inning after the match was ended, and they were soon busy shooting in a 6 bird sweep, \$5 entry, two moneys. Three of these events were shot, the results being shown below. In event No. 2 those who tied for first money decided to carry it over to No. 3, when it was captured by Hollis, Castle and Fulford. All other ties were divided:

Canon..... 000211—2 121011—5 11121—5
Lindsley..... 22222—6 22222—6 21222—5
Fulford..... 112121—6 11111—6 21112—6
Castle..... 02101—4 11111—6 11111—6
T B Bill..... 30021—5 2111—6
Pierson..... 221110—6 21120—5 12121—6
Pitt..... 0000—6
Hollis..... 21121—6 11212—6 20111—5

At the instance of Mr. Fulford the closing event was made a "star" miss and out, \$1, with the privilege of re-entering up to and including the third round. There were eight entries, and Hollis made two and Willey one re-entry, this swelling the pot to 2, which was divided on the ninth round by Hollis, Castle and Fulford. The scores:

Canon..... 122220—6 Castle..... 11112123
Lindsley..... 21121220—6 Fulford..... 11112111
Gasper..... 20—6 Pierson..... 001220
Hollis..... 12112112 Willey..... 300

C. H. TOWNSEND.

New Jersey Trap-Shooters' League.

The initial shoot for 1893, of the New Jersey Trap-Shooters' League was held on the grounds of the Union Gun Club, at Springfield, on Feb. 28, and drew out a fair number of local athletes, and a few were expected. The weather in the morning was raw and threatening and shortly after noon there set in a snow-storm from the northwest, the snow falling so thickly so as to render target shooting difficult. The storm continued all the afternoon and kept number of shooters away.

The clubs which entered teams were the Passaic City Gun Club, of Passaic; Independent Gun Club of Plainfield; Myrtle Avenue Gun Club, of Irvington; South Side Gun Club, of Newark; Endeavor Gun Club, of Jersey City; Maplewood Gun Club, of Maplewood; Union Gun Club, of Springfield, and Boiling Springs Gun Club, of Rutherford. Each team comprised 5 men and each man shot at 25 Keystone targets under the rapid-fire system. As shown by the scores the Boiling Springs Gun Club were short 3 men, and T. H. Keller, Neat Apper and Ed. Collins shot on the fourth day earlier in the day than the other men had shot on other teams. This is not forbidden by the rules of the league, but that it is wrong no one will dispute.

The highest score in the team shoot was made by the Union team while McPeck and Apper tied for the highest individual score on 23 breaks each.

The result of the day's shooting is detailed below:

TEAM RACE.

KAVERLIGG.

Vernon Rod and Gun Club.

The members of the Vernon Rod and Gun Club made a poor showing at Dexter Park on Friday, Feb. 24. It was their regular monthly shoot for the best averages at 7 birds, H and T traps. Dr. Little and A. Osterhout divided first money in the club shoot. The scores: Osterhout..... 1221212—5
Dr Little..... 121212—6
F A Thompson..... 121202—6

Shooting in a Blizzard.

The tall end of the blizzard which struck Newark, on March 4, made target shooting anything but a pleasure, but it did not deter the East Side-Mutual and East Orange Gun Clubs from facing the traps in the first of a series of three friendly matches. The shoot took place on the grounds of the East Side-Mutuals, in Weidenmayer's Park, the teams comprising 10 men each and each man shooting at 25 artificial targets. With the strong, tricky wind and the driving fine snow, good scores were out, one man managing to put up a score of 24 while no one else beat 21. The team shoot was followed by 5 sweepstakes at 10 targets each, the scores being as below, the team scores leading:

East Side-Mutual Gun Club.

No. 5, Schrafft 3, Hague 5, Hassinger 6, Parment 3, Koegel 6, Hilfers 4.

Hotel-Keeper Morfey vs. Jockey Goodale.

WEDNESDAY, March 1, was a perfect day for live bird shooting, the sun shining bright and clear, the air having an edge keen enough to make the birds feel lively and the W. N. W. wind being just strong enough to prompt the birds to start at 25 and Goodale, who was sprung. John Erb's Newark grounds were visited on this day by a goodly contingent of sportsmen from Paterson and Brooklyn as well as by a number of the locals, all anxious to see the contest between the well-known jockey Frank L. Goodale, of Brooklyn, and boniface Thomas W. Morfey, of Paterson.

The conditions of the match were 50 live pigeons per man, for \$50 a side, Morfey to start at 25 and Goodale at 25yds. rise, E. D. Fulford was referee and Rody Maher scorer.

The jockey-shooter was out of form and seemed unable to get up on his birds, continually undershooting, while Morfey was in the best of shape and had the race well in hand after the first half. The birds were as fine a lot as have been trapped in this vicinity for a long time, being quick to take wing, tricky and fast in their flight and hard to carry lead in good shape.

The score:

1101012212122101201002—19	2021221202021201221202—19—38
1211110212122121212121—23—45	

The above match was followed by a race at 10 birds each, for \$10, between T. W. Morfey and C. G. Wright, of Paterson:

Morfey..... 22212121—10
Wright..... 21211201—9

Then followed a series of sweeps at 6 birds each, \$5 entry, with 2 moneys in each, which are shown below:

No. 1.	No. 2.	No. 3.
Lindsley..... 22221—6	22212—5	02222—5
Castle..... 121210—5	22011—5	11111—6

C. H. TOWNSEND.

New York German Gun Club.

EIGHTEEN members of the New York German Gun Club held their second live bird shoot of the year at Dexter Park on Tuesday, Feb. 21. P. Garms, Jr., was the only one to make a straight score of seven and he again won the first medal. J. Goerlitz, M. Borden and A. Schmidt tied with six each for the medal given by Louis Miller. Schmidt won on the shoot off. The scores:

F Sauter..... 20102—4	G Winter..... 1120200—4
-----------------------	-------------------------

Big Tournament in Ontario.

ST. THOMAS, Ont., Feb. 27.—The first annual tournament of the Carleton Gun Club was held on their ground just outside the city limits on Feb. 23, 33 and 24. The attendance was good, several shooters from a distance taking part in the various events. The weather was fine on the first and third days, but on the second a snow storm raged all day. The traps and birds were those of the U. S. Pigeon Co., but a few of the Hamilton bluecocks were used. Everything passed off without a hitch. That the tournament was a success financially and otherwise was in a great measure due to the efforts of Mr. James Haight, who managed it, and Mr. W. J. Kiefer, who performed the duties of secretary. Below please find the scores:

No. 1, 10 singles, unknown traps, 75 cts. entrance, \$10 guaranteed, four moneys:

Atlantic Rod and Gun Club.

THE semi-monthly shoot of the Atlantic Rod and Gun Club was held at the West End grounds, Coney Island, on Thursday, Feb. 23. Fifteen competed for the two cups given by Judges R. Newton and K. Sutherland. The highest number of wins and best averages to count at the

close of the season. Frank Goodale, the well-known jockey, won the first, and C. Hubbell took the second added moneys. The scores:

C Morris.....110221232—9	T Buckley.....2120201011—7
F Goodale.....231231212—10	J B Voorhis.....120121100—7

C Hubbell.....101112211—9	

New Utrecht Rod and Gun Club.

ON account of the inclement weather of Saturday, March 4, the members of the New Utrecht Rod and Gun Club did not turn out very strong at Woodlawn Park. Eight were present and indulged in sweep-stake shooting. Good scores were made, especially those of the two young rising wing shots, C. Furguesen, Jr., and W. Lohman, Jr., both about 10 years of age. Their performance with their featherweight guns and light charges was remarkable. They shot a race at 20 birds each. The scores:

Sweepstake shoots, \$2 entrance, 3 moneys:			
	No. 1.	No. 2.	No. 3.
C Furguesen.....	111121111—10	11212—5	11111—5

Match, boys 10 years old, 20 birds, 10 yds. rise: Lohman, Jr. 111211102100122—14 Furgu' n, Jr. 102210103011211110—14 C. Furguesen has recovered from his recent sickness and is now getting into his old form, killing 56 out of 60 shot at during the day.

The Crescent Gun Club.

OWING to the great exodus of Kings county sportsmen to Washington the attendance of Thursday, March 2, at the Park of the members of the Crescent Gun Club was greatly diminished. Only nine were present to compete for the annual prizes, the best averages to count at the close of the season. The birds were very fast, and considering the snow-covered ground the scores made were good. The scores of shoot follow:

Club shoot.....Sweepstakes.....	
E H Moorey.....03002—2	0302—2
W Coulston.....1002125—5	21010—3
J Vagt.....1001021—4	02010—2

J Collier.....0301125—5	20211—3
C Winslow.....2210301—5	12001—3

The ties in the club shoot for the added money for first and second decided in the next sweepstake shoot. Referee and scorer, C. A. Dellar.

Glenmore Rod and Gun Club.

THE smallest attendance for many months at the Glenmore Rod and Gun Club's meeting was that of Thursday, Feb. 23. This was partly on account of the postponement from the previous day, which was given for W. Mills's benefit. Only six faced the traps to shoot at 7 birds. J. Bookman won the Claus diamond badge after tying W. Vorbach. The scores:

R Phister, Jr.....2121230—6	J Schliemann.....2100011—4
W Levens.....0322220—5	J Still.....3022222—6
W Vorbach.....1212121—7	J Bookman.....1212111—7

Erie Gun Club.

THERE was a small attendance of the members of the Erie Gun Club at Woodlawn Park on Wednesday, Feb. 23. Only eight competed for the club medals at 7 birds each, the best average to count. C. Plate, H. Dohrman and Sam Northridge tied with 7 each and divided first money. The scores:

C Plate.....121211—7	D Lynch.....1101211—6

Comment Needed.

LONDON, Eng., Feb. 10.—*Editor Forest and Stream:* In anticipation of reports in the United States concerning the capture of Mr. Robbins, who claims to have defeated every one in America, including Carver, Brewer, Fulford, Wolstencroft, Budd, etc., at both live pigeons and clays, for what I see of Robbins I am sure he will try to make capital out of having beaten me. So I take this the first opportunity to explain to the shooting world the cause of my defeat and the subsequent shabby treatment of Mr. Robbins to me and to show how the match came about.

I brought over to London Mr. A. Preuss, of Berlin, Germany, who, I claim, is one of the finest clay-pigeon shots in the world; and not being able to get any match on for him we decided, prior to Mr. Preuss returning home, to give a shoot here for a few friends, to which the press were invited. At the moment of starting Mr. Robbins appeared, and claiming to be the editor of the *Sportsman and Bicycle News* of Chicago and a great advocate of clay-pigeon shooting, he was invited. It was then he told us of his great exploits in America, of having beaten everybody. He claimed to have killed 105 sparrows straight at 30 yds. rise, 5 traps, use of one barrel only; also having broken 247 clays straight, and having given both Fulford and Brewer several live birds and a beating, and that Carver was only a fourth-rate shot.

Naturally we fought rather shy of such a champion, but as we are in the habit of being talked down I persuaded Mr. Preuss to wait a few days, while I got the measure of this man, he having offered to shoot me a match for a small trophy. I therefore made a match with him and gave him all his own way, as I did not think he could shoot a bit, and I am quite convinced he cannot. The next day I deposited a check for £20 in the hands of Messrs. Moore and Gray, who were to

have all control of the match, Robbins having said he would shoot any man in England for \$100; that he had \$300 at his hotel, etc. But as he had seen Mr. Preuss break 91 out of 100 was it likely he would shoot a match with Preuss if I beat him? I therefore decided to let him win my match in order to get the £100 match on for Preuss and claim my right to a return match, under recognized club rules. You see the trick he has played. Two days after my defeat I challenged him for a return match, which was accepted. I also challenged him for a match with Preuss, according to his public challenge in *Land and Water*; this was not accepted, but left over for a few days, he being then in Birmingham. This is now twelve days ago, and he won't come to the point; but he has now sent word that he cannot shoot any more as he must sail for America next Wednesday, six days hence. Now, I find as I am writing this very letter he is shooting in Birmingham a match with Kynoch's ammunition man.

Now he must have known this some days ago, therefore why has he not accepted my challenge, and asked me to shoot him in Birmingham, which I would gladly have done. The answer is simple, he dare not, but will return to America and trade on the reputation of having beaten me. He also said on Wednesday night, at the gun trade meeting, that he was quite willing to give some sort of a challenge shoot, before he left for America, if he can do that why does he evade me, simply because he dare not.

To prove what I say let any one count the scores as printed in *Land and Water* and they will see he led me up to the 40th round, when I went to the front and led him, to make him shoot up to the 85th round, when I dropped behind and let him win. I now find that he did not deposit one cent with Moore and Gray; they trusted to him on his reputation of being editor of the *Sportsman and Bicycle News*; and when he found we were prepared to put up £100 for Preuss, he then had to leave for America.

In conclusion allow me to say, we hope you have not many men in America of the Robbins stamp, if so, pray keep them on that side as we do not want them.

Can any one tell me what this man Robbins has ever done at the traps, for according to him there is no one in the States but himself who can shoot. Will no one take him up? Surely 64 out of 100 would not take much beating.

G. H. FOWLER.

[We have referred the above to our Chicago representative, who indorses it back: "No such man in Chicago or America. No Robbins ever shot Carver, Budd or Brewer. Must be Jack Robbins. Boys will die laughing when they see this. Jack Robbins is the poorest shot in Chicago, or probably in the world.—E. HOGCH." It is impossible to feel any sympathy for our English correspondent, who states that he resorted to a trick to make money out of a sharp American, whom he suspected of being editor of the *Sportsman and Bicycle News*; and when he found we were prepared to put up £100 for Preuss, he then had to leave for America.]

Interstate Association Announcement.

PITTSBURG, Pa.—*Editor Forest and Stream:* The Interstate Manufacturers' and Dealers' Association is now ready to receive applications from gun clubs who contemplate holding tournaments the coming season and desire our assistance.

One point I wish to call especial attention to and that is as follows: A great many small towns have flourishing gun clubs which desire to hold one day tournaments, but who are somewhat timid about taking the risk. We are going to take that supposed risk and do all we can to boom trap-shooting for them. No matter how small the population of a town, their application will be carefully considered, and if possible to include it in our circuit it shall be done. Let me say right here that there is a prospect of the rule "first come, first served" being enforced, so gun clubs should hurry in their applications to H. A. Penrose, Sec'y, New London, Conn., or to the undersigned, at 122 Diamond Market, Pittsburg, Pa.

I will manage all shoots, giving my personal attention to them, and will be on the grounds several days in advance of each event with all necessary paraphernalia, such as traps, screens, tents, etc., as well as to attend to all details during the progress of the shoot.

The handicap for target shooting will be the "Novelty Rule," 5 traps in line as in rapid firing system and 3 traps, 30 yds., in the field, throwing incoming. All traps will be pulled by indicator. The rise for experts will be 10 yds., semi-experts 15 yds., amateurs 14 yds. We shall endeavor to ascertain the average of all shooters who attend our tournaments that they may be properly classified, and I assure you "no favorites will be played" by.

ELMER E. SHANER, Manager
Interstate Manufacturers and Dealers' Association.

Fulford Will Not Meet Brewer.

UTICA, N. Y., March 4.—*Editor Forest and Stream:* In answer to Mr. Brewer's challenge, will state I will never shoot another pigeon match with him for no consideration whatever.

Mr. Brewer says I am a third-rate man. Well, a third-rate man has beat him in five matches and tied in one.

He acknowledges I am his master when he wants to shoot 200 birds, for if he can beat me so easily 50 birds would be sufficient, 100 at the most.

He says there are too many goose eggs and stars in my matches with Work, Thompson and Sam to rank first class. I am on paper, at the same time, all things considered, I am not ashamed of it, for the birds were the best that could be furnished, and flew like rockets; the traps were fast and the boundary small, and I doubt if the champion wing shot of the world could have done as well.

While the public in general don't hear much about the men I met at Larchmont, they rank among the best shots in the world.

Hereafter I shall pay no attention to any communication from John L. Brewer.

E. D. FULFORD.

Answers to Correspondents.

STEVENS
Rifles and Pistols.

Rifles for Ladies,
Boys and Men
In various calibres, weights and styles.
Used by experts, professionals and ama-
teurs. The most accurate rifles made.

STEVENS PISTOLS,
in several models
are used by the best
living pistol shots.
Their acknowl-
edged superiority
chosen arms of the experts.
heavy, plain or elaborately finished
and in various calibres.

STEVENS POCKET RIFLES.
The most compact
rifle made. Will shoot
with the greatest accuracy at various dis-
tances.
These arms are carried by Anglers, Bicy-
clists, Hunters and Tourists.

Send for a catalogue and special circular
describing the latest triumphs in modern
firearms.

A STEVENS ARMS AND TOOL CO.,
P. O. Box 410,
Chicopee Falls, Mass.

MOTT'S SPARKLING CIDERS

In Quart and Pint Champagne Bottles.
Moderate cost, exquisite quality.

GOLD LABEL.
DRY AND SLIGHTLY STIMULATING.

WHITE LABEL.
SWEET AND NON-ALCOHOLIC,
— ALSO —
Choicest Quality Cider Vinegar.

Order of your Grocer, or write for pint sample,
enclosing ten two cent stamps. We pay expressage.

GENESEE FRUIT CO.,
NEW YORK and ROCHESTER, N. Y.

MEPHISTO

331-333 BOWERY, BET. 2d & 3d STREETS.
New York, July, 1892.

Our "ONDINA" all Havana tobacco NEW YORK made
cigar, our world-renowned "MEPHISTO" and all other finer
grades of cigars made by us are superior in many ways to those
made in the tropics. In addition to all the tobacco markets of
the earth to which we have access, New York City always com-
mands the best of every material as well as labor. Our New
York factory is a perfectly ventilated, clean abode. No sort of uncleanness is per-
mitted, and our cigars, therefore, are not liable to contain matters other than tobacco,
and smokers may confidently and safely use our cigars, not needing a mouth-piece or
a cigar holder to prevent unpleasant consequences.

D. HIRSCH & COMPANY.

THE "NESSMUK" MEMORIAL.

THE illustration on another page gives a capital representation of the bronze tablet designed and modeled by Mr. George T. Brewster for the "Nessmuk" memorial. The piece is 28in. in height by 14in. width. Those who knew Mr. Sears will recognize the portrait as most happy and faithful. The artist's work has been a labor of love, and in labors of love we look for a man's best performance. This "Nessmuk" bronze is a credit to its author. We hope that it may please all the friends whose co-operation have made the memorial a possibility.

The bronze piece will be set into the face of a granite shaft, which in turn will be set upon a natural boulder, to be sought in the vicinity of Wellsboro, and if practicable to be chosen from some spot known to "Nessmuk."

The amount now subscribed is \$214. This exceeds the minimum sum proposed, but still more will be required, and further subscriptions are invited from persons who have not already joined in the undertaking. Dollar subscriptions are in order; but contributions will not be limited to that sum. Subscriptions not previously acknowledged have been received from the following:

MR. O. O. SMITH, Newtown, Pa.
MR. WM. N. BYERS, Denver, Col.
COL. SAM'L WEBBER, Charlestown, N. H.
MR. J. EDWARD STRONG, Chicago, Ill.
MR. C. H. MATHEWSON, Greenville, R. I.
MR. FRANK ROBINSON, Philadelphia, Pa.

MR. J. H. RUSHTON, Canton, N. Y.
ANONYMOUS, Cleveland, O.

NEWSPAPER UNNATURAL HISTORY.

FOR several days recently the New York newspapers entertained their readers with accounts of a bear that was reported to be wandering round in a peaceful Long Island community seeking what it might devour and spreading terror among the native population till, as one highly veracious journal put it, they were on the point of petitioning the "Governor to call out the militia" to their assistance.

Now this "news" was pure invention from beginning to end, and was no doubt known to be a fake from the beginning, yet the papers printed it and enlarged on it day after day for nearly a week. Mr. Chas. A. Dana, the accomplished editor of the *Sun*, has a handsome residence in the very center of the region supposed to have been ravaged by the alleged Glen Cove bear; and he certainly should have known that the whole bear story was a fake of the kind he is so fond of exposing in a "wicked" rival. And yet he allowed the doings of a bear that had no existence outside the beer-soaked brains of some village toppers to be chronicled daily and at length in his paper.

In one of the best New York dailies this week there appeared a moving story of a mother and two little children camped alone out West near a stream, on the borders of which were found the tracks of a great panther. Mother and children were afraid that it would return and attack them. When night fell they built a large fire and sat by it, waiting, watching and listening. After a time they

heard far above them, on the mountain side, the heavy tread of a great animal. They heard the rocks, loosened by its feet, rolling down the mountain, and, as it drew nearer, the stones rattling under its feet. It was the panther—the panther, which, in austere truth, is the stealthiest, quietest animal that walks.

One New York journal publishes every Sunday a column of information for sportsmen that is full of glaring inaccuracies in every possible connection. It advises sportsmen to hunt or fish at times and places where it is illegal or impossible to do so, and it makes misstatements with a recklessness that is surprising. Its facts are on a par with the Glen Cove story, and that such things should be allowed to pass editorial supervision and go unchallenged is really disgraceful to American journalism.

A POSSIBLE ROAD TO COOKE CITY.

WE learn from Helena, Montana, that a bill has passed both houses of the Legislature and been signed by the Governor, which authorizes the construction of a toll road with bridges from Rocky Fork to Cooke City. It is reported that the Rocky Fork Town and Electric Co. will begin the construction of this road as soon as the weather shall permit, and that it must be completed within a year. It is stated that the road will follow the survey made last summer by Engineer Blanding.

This is by no means the first time that it has been authoritatively stated that a road would be built from some point on the Northern Pacific to Cooke City without passing through the Yellowstone Park, but such promises have never been carried out. The construction of such a road would benefit Cooke and the town of Red Lodge through which it would probably pass. It would also open a new route of travel to and from the Yellowstone Park, and parties could go in by one route and come out by the other.

It is greatly to be hoped that such a road will be constructed. If it were in operation, it would go far toward settling the question of segregation and a railway along the Yellowstone River.

"FOREST AND STREAM" PHOTOGRAPHS.

THE FOREST AND STREAM Amateur Photographs are now on exhibition in the club rooms of the New York Camera Club, No. 314 Fifth avenue, where they will remain through this week. Admission is by ticket, without charge; and we shall be glad to supply tickets to any reader of the paper for himself and friends. The hours are from 2 to 6 in the afternoon and 8 to 11 in the evening.

The Society of Amateur Photographers of New York is showing a collection of pictures by club members in its rooms, No. 111 West Thirty-eighth street, extending to March 25. Admission is by ticket, which may be had without charge on application by letter to the secretary, Mr. T. J. Burton, at above address.

SNAP SHOTS.

THE Connecticut Senate has passed a bill imposing a fine of \$10 and thirty days imprisonment for fishing on Sunday. At a game law hearing the other day United States Attorney George P. McLean expressed the opinion that the gradual decrease of the ruffed grouse was due to snaring for the market, the great bulk of the game sent to market being snared in December. Mr. A. C. Collins, president of the association of farmers and sportsmen, believes in a substantial fund for enforcing the laws, and advocates some form of license fee or gun tax. However such a suggestion may be regarded, there is no disputing that Mr. Collins speaks with exact truth when he says, "There are many too anxious to get the last bird that flies, there are many too much afraid if they don't get the last bird some one else will. There is too much human nature and too little public spirit in each one of us."

Capt. J. W. Collins, Chief of the Department of Fish and Fisheries, of the World's Fair, and Dr. James A. Henshall in charge of the Angling Exhibit, report that the early promises of a notable exhibit are to be fulfilled. Both gentlemen are working with characteristic enthusiasm and efficiency. The angler who is wise will make provision for a visit next summer to the beautiful Fisheries Building in Jackson Park, even at the expense of a part of the time set apart for the fishing grounds. No such display for the fisherman has ever been made before in this country, nor will any of us live to see its equal.

The bright, warm days, which in this latitude come as fitful intervals in the blustering weeks of March, have a powerfully unsettling influence upon the man who owns a fly-rod and a fly-book. They breed a certain malady for which the Pharmacopoeia affords no relief. The symptoms are well defined moodiness, preoccupation, restlessness, inattention to business routine and a tendency to glance out of the window up to the blue sky. The victim fumbles over his fly-book, joints and unjoints his rod, and practices the manual of arms with his minnow bucket. The remedy is hydrodathic; and some men who have the malady in an aggravated stage are never completely restored until they have had a thorough sousing in an icy trout stream.

Virginia ducking waters, from the Broadwater to New Inlet Bay, have been persistently farmed during the past months by market hunters, in arrogant and unpunished violation of law. Big-guns and night-hunting have so effectively done their work that legitimate shooting in a lawful manner has been put out of the question. The chief offenders are well known; they might be easily and promptly brought to justice and punishment if some one had the "sand" to undertake the abatement of the nuisance. The ducks are sold to Old Point Comfort hotels or shipped to city markets.

There is righteous complaint that many a game law is tinkered before it has been in operation a sufficient time to test its actual working, before people have had a chance to learn it, and before any special respect can have been established for it. Contrast some of our deer statutes, enacted to-day and repealed to-morrow, with the deer law of Ireland, which has been in force since 1698. There is hoariness for you. The public has had opportunity to learn that law and to respect it, if for nothing else than its old age.

Whether town game constables are good for something or worse than worthless, depends upon their personal character. In a recent local campaign in a county not more than one hundred miles from this city, the two candidates for the office of game constable have been, both of them, convicted by the district game protector of violations of the game law. In some instances the constables are the most notorious offenders, and use their office only for practical blackmail.

For the new game and fish protector law just adopted by Oregon, the sportsmen of that State are in large measure indebted to the intelligent activity of our prized contributor Judge S. H. Greene, of Portland. The newly appointed Protector, Mr. H. D. McGuire, is well spoken of and we trust that it may be our satisfaction to chronicle good work by him.

Orra A. Taft, who died in Boston last week, was widely known as the proprietor of Taft's Hotel at Point Shirley, near that city. The hotel has been famous for nearly a half-century for the fish and game dinners served there. Many distinguished men of this country and from abroad resorted to Taft's.

The Chicago Fly-Casters' Club proposes to build an exact reproduction of Izaak Walton's fishing house. Dr. Henshall has chosen a suitable site for it, near the Fisheries Building, and it will be headquarters for the fly-casting tournaments and other gatherings projected for the summer.

Mr. Charles Hallock recalls the very interesting fact, and it is here placed on record, that the very first subscriber to this paper was the Hon. Horatio Seymour, ex-Governor of New York, who paid \$15 in advance for a three years' subscription. A big superstructure was built on this beginning.

The taxpayers of New York pay on an average \$734 for each new statute enacted by the Legislature. Many a local fish and game law gained at this price is actually worth less than seven dollars and thirty-four cents.

Posterity will have the advantage of us, in that while we do not know when, if ever, District-Attorney DeLancey Nicoll will try the Delmonico woodcock case, posterity will know when, if ever, it was tried.

Canadians are anticipating an early spring, and are preparing for fishing this year earlier than usual.

The Sportsman Tourist.

A CHAPTER OF HUNTING HISTORY.

THE lovely autumn days had come and gone, and not until the opening days of the present winter did the wished-for holiday become a possibility, and then only after many busy weeks of toil and care, during which the faithful Sharps hung all unheeded on the wall while the yellow autumnal foliage of the tamarack and the cottonwood slowly sifted downward through the net-work of naked twigs, carpeting with the fading glory of the forest the deer paths and game trails which wound around the mountain crags and crept down into the cañons, where the baby brooklets crept out from beneath the overhanging rocks and took their first toddling steps of the long journey to the Pacific.

Others, more fortunate than the old uncle, had long since gone on their usual fall hunt into the mountains, but he, with nose pressed to the grindstone of care, stolidly held on the treadmill round of daily toil, and the chance discovered track where the big buck had crossed the road in the ravine just below the cabin caused only a firmer compression of the lips, and the recalling of the sage counsel of the negro philosopher—"jes' yo' hol' yer breff an' wait!"

And now that his opportunity had really arrived—when the dawning light of the long-promised day showed that the earth had really donned the first whiteness of her winter garb, and that across the bosom thereof were strung long lines of irregular dots which kept silent record of the nocturnal wanderings of vagrant deer—just as he had succeeded in working himself up to a quite unnecessary pitch of the old-time enthusiasm—he was gently, but quite firmly, confronted with the fact that he was a married man and that a consideration, all undreamed of in his heedless morning philosophy, awaited his immediate recognition.

The absurdity of the idea that any other than himself could grow weary and jaded with the load of responsibility and care—that a certain uncomplaining little somebody should also need a holiday—was, upon an instant's reflection, plainly evident; but most unfortunately the said instant's reflection was deemed entirely insufficient for the occasion or the subject, and the aforesaid consideration was suddenly found planted squarely across his path demanding a regular "stony British stare" of recognition, instant and peremptory.

"When she will she will, and you may depend upon it;
And when she won't she won't, and that's the end on't!"

With true Henry Clay statesmanship a compromise was effected on the basis of a sleigh ride to the home of our married daughter (the little lady who killed the bear), where, after the midday dinner, the old crank should be free to turn himself loose on an adjacent hunting ground which experience had taught him to be good. The willing horses were hitched to the cutter for a five-mile spin, and the sleigh ride and the visit with the little bear-hunter and the two small tots of grandchildren, together with the dinner which followed, were perfect. As all things come to him who waits, the old trailer finally found himself following a line of punctures in the snow, which led him by devious windings, through, over, under and around the most absurd places, but just the course of travel in which *Cervus virginianus* delights. Our route led across the bed and bottomland of a mountain brook, then over some low hills, and finally northward back again to the creek in a deep ravine, where the half-melted snow had slipped from the tops of the overhanging firs, and falling to the ground in the dense shade of the ravine, had there crusted just enough to insure noise sufficient to prevent the most careful approach surprising a sleeping deer. Here the trail was regretfully abandoned, and the slow journey continued along the bank of the creek until a crossing was effected, when the search was resumed on the north shore, where the ground sloped to the southward and the rays of the sun had softened the crust still to be found beneath trees, and as a number of short ravines here furrowed the southward slope, the ground was found to be sufficiently broken to render a quiet advance practicable, and hope rose once again in the heart of the silent hunter.

With searching gaze and silent tread the course was now directed toward the crest of a brush-crowned ridge, and just as the bushes were being parted sufficiently to permit a glance over the ridge and across the lower ground in front, the upper half of the body of the hunter grew suddenly statuesque and motionless as though cast in bronze, while the moccasined foot, upraised for the next step of the slow advance, sank gently into the snow beside its fellow, as the hunter's eye caught the outline of a large deer couchant in its snowy bed 80yds. distant, directly in front, and with great liquid eyes staring wonderingly into the thicket, toward which the ears steadily pointed, intent to detect by sight or sound the cause of the disturbing movement. Could the rifle be raised for an aim without further alarm to the watchful game? Possibly; but could aim be taken among the crossing twigs sure to be raised by the elevation of the rifle?

This was the real problem, for not a hand must be moved to sweep away the bushes after the rifle was raised, save at the peril of the loss of the watchful creature ready to spring from sight at the first alarm. Slowly and silently the rifle rose to the level of the hunter's eye, and enough of an opening among the twigs was detected to show that the white front bead was slowly swinging across the body of the deer.

Bang! A hundred echoes responded to the sharp call of the rifle, as the hunter took a step forward to see that the deer still lay in its bed, struggling in almost instantaneous death. A sweep of the eye across the ground in front revealed nothing of note, and as a careless step or two succeeded, up, seemingly out of the very earth, rose two deer between the careless hunter and his prey, and with mighty leaps and waving flags, bounded off down the creek behind trees and over the next ridge and were gone. All plain in an instant. Two large fawns, both hidden in a little depression which no still-hunter of a year's experience should have failed to detect on the instant.

Disgust profound waltzed right in and pre-empted a lodgment in the heart of the mortified crank who had presumed to call himself a still-hunter. Could he never learn anything? Was plain horse-sense utterly impossible to him? Or even the exercise of the common prudence of

hiring a cheap boy to share his wanderings, and who, while seated on a log during an occasional halt, might talk common sense to him, in small doses, according to his capacity to assimilate it. As there was scarcely time just then in which to hope for improvement, much less to solve puzzling questions, a shell was hurriedly slipped into the empty rifle, and the back trail taken until the ridge again screened every movement, when creeping down to the bank of the creek an advance was made alongside the stream, the noisy babble of which drowned the small racket of the forward movement, until some eighty rods further down stream, a glimpse was caught of the two fawns high up the steep hillside 150yds. distant, following the silly counsel of Edward Bellamy.

Again the faithful Sharps outroared the noisy brook and filled the woods with sound as the doe fawn dropped in her tracks, and, sliding half way down to the creek bed ere a friendly bush stopped her quick descent, painted the long snowy hillside with her swiftly gushing life, while the "fool of the deer family," wondrous wise for once in his short career, sped away swiftly and stayed not upon the order of his going. And now the asthmatic old uncle tugged and toiled to drag the fallen fawn to the top of the hill that it might be reached with the cutter, and as the sun neared the horizon he hurried down to secure the team and gather in his game before nightfall. As the team was being hitched up the women and children became suddenly clamorous for a sleigh ride and the double-seated rig was quickly loaded with noisy humanity eager to assist grandpapa in retrieving his game.

The open timber land allowing the use of the sleigh, the doe was soon secured and the fawn almost reached, when, in passing a pine tree, the cutter slid unexpectedly to one side and the muzzle of the Sharps—the faithful Sharps—(which lay crosswise in the cutter in front of the front seat under my legs and projected slightly over the side), caught against the obstructing tree, and, before the danger was realized or a movement to prevent it could have been made, the matchless old rifle barrel was bent in the middle until its back was humped worse than that of a dromedary.

A halt was made and all gazed in open-mouthed amazement at the wreck.

No word was spoken, for each one felt that the hurt was "past all surgery."

Where could another Sharps be procured at once deadly as the mountain thunderbolt and light enough to be carried in his lonely wanderings, was the problem clamoring suddenly for solution in the mind of the old uncle, and not even a woodland echo vouchsafed a comforting reply.

And this was the ending of my long-anticipated holiday! Silently the fawn was pitched headlong into the cutter and stowed under a seat, its graceful beauty all unnoticed save by the curious little ones, even who were now becoming infected with the contagious quiet.

The home of the little bear hunter was reached, the game divided, and the wandering little ones deposited at their papa's door almost in silence. "Why does grandmamma hug us so quietly, and isn't grandpapa going to kiss us all before he goes home?" In the deepening dusk of nightfall the eager horses sped onward toward the coveted comforts of their stable home, while a very sober old crank struggled to reason down the lump in his throat with the reflection that in all the long list of splendid shots made for him by the Old Reliable, never had it done more perfect work than on that rapidly fading day.

Home was reached, the old rifle again hung up on the wall, and for many days the certain little somebody (who was nearly as deeply pained by the calamity as the old uncle himself), strove with unobtrusive kindness to lure the old enthusiast into forgetfulness of his trouble, and even of the old gun itself. It was love's labor lost. He was incorrigible. When the woodcock forgets to whistle with either bill or wing, when the panther forgets to scream or the duck to swim, when again we have buffalo hump for dinner or the eggs of the great auk hard boiled for luncheon, then will the old buffalo hunter forget the Sharps rifle which for years has been inseparably connected with his loneliest wanderings, and the very appearance of which recalls the faded glories of the old days on the ranges with loved and trusted brethren of the guild long since gone over the Great Divide.

But what was to be done? Should he trust the old rifle to the hands of the average gunsmith of to-day? To the old Mexican artist of Spokane, for instance, who called himself a gunsmith, and filed mainsprings and mended keys for a living? Nay, verily!

He did not need to be told that Hawkins of St. Louis; Gove, of Council Bluffs, and Walter Cooper, of Bozeman, were out of print, and it remained for him either to mortgage the ranch, buy him a treble cross-grained Greener, and a Northern electric, or Southern political or some other kind of "pull," and join the mighty host of pigeon, wing, hind leg, or some other sort of "champion shots of the world," or else, in sheer desperation, trusting to the inherited drop of the Yankee blood of grand old Puritan ancestry, to brace up and turn gunsmith himself. It came to a focus at last; when with no tools save those to be found on the ranch, and with no assistance save that furnished by the little sympathetic somebody (who would turn gunsmith, or even superintend the Lick observatory if the old crank could be thereby placated, and the benison of peace again rest upon the troubled matrimonial waters), the dear old gun was straightened until—barring the tiniest hump, in its long bore, where in the middle of the barrel a paltry sixteenth of an inch of crook still lingers—the two ends of the tube were again brought into line, and the terrible express bullet again "drove center" at 80yds.

Richard was himself again!

In the mean time dear old Mother Earth had robbed herself anew in another garment, the bosom of which the sad-iron of Old Sol's heated rays soon polished into glistening crust, and the time arrived for another hunter to have a holiday.

I was hauling logs from a low ridge a few hundred yards from the house, when my son Bruce, who had been hauling hay to feed cattle some distance away, came hurrying along to inquire if I had seen the deer which had just run along the road to avoid the crust. The deer had come bounding out of the swamp with frantic leaps and protruding tongue, evidently chased by the "pestiferous" coyotes. The boy was eager to follow him, and—"Could he take the old Sharps?" Certainly; and I turned to my work, leaving the eager youth to enjoy the sport his short holiday might afford.

Returning to the ridge, I paused for a glance across the open field to the westward, when I saw a chase as exciting as could have been wished. The poor deer—which proved to be as big a white-tail buck as I ever saw—plunging through the crust about every third jump—struggled to distance the eager boy who raced after him on the snow, and who, gaining at length a standing shot at 100yds., brought down his game with a ball from the old Sharps, heralding his triumph with a yell which would have shamed a Comanche.

Cruel, do you say? Certainly; but what would you have? The wolves had run him out of the swamp, and two others were seen in waiting a short distance in front of the fleeing deer, and took to their heels only when they saw the boy advancing with the rifle. They would have had him down in 10 minutes had the boy not appeared upon the scene.

Most of the deer leave our hills on the coming of the deep snow, and migrate southward to the banks of the Spokane River and the more sheltered winter ground in that vicinity, where they pass the winter, and those which remain here do so, as Artemus Ward says, "at the peril of their hazard individually." Knowing these things full well, the boy made the most of the enjoyment furnished by the exciting foot race, and I enjoyed the moving panorama.

The skin of the deer's legs was not cut, but when the hindlegs were skinned they were found to be bruised in front until the skin had become a veritable blood sack, and every leap must have been an agony.

And now for a time the coyotes became the hunters and held high carnival. Evidences of their merciless work appeared upon the snow, and my little son Paul, riding on an errand to a neighbor's house, found a fresh deer track in the snow of the road, the long leaps blood-sprinkled, and with the tracks of two racing coyotes alongside. So for a few terrible days the work of blood and death went on unchecked.

Again, with the caprice of changing winter fashion, dear Mother Earth proceeded to clothe herself anew, and several pairs of white blankets, a robe of purity and an overcoat of snow were donned successively, until—

"The white drift piled the window frame,
And through the glass the clothes-line posts
Looked in like tall and sheeted ghosts."

No more holiday for the coyotes. A life and death struggle with hunger and cold instead, through 30in. of snow fluffy as cotton wool. All rejoiced and fervently wished it to continue until every cruel vulpine sneak found a shroud of white, cost free.

And so, for the present season the record closes. No more holidays for man or brute. The advancing sun is making war on the snow drifts, and now the old uncle is impatiently awaiting the coming of the gentle Chinook, whose soft breath shall kiss the ghostly paleness from the cheeks of our mighty hills, and prove the harbinger of the gentle summer time, when the timid fawn shall come forth to romp among the loveliest and most fragrant of wild roses which ever wasted their sweetness on the mountain air, in the gathering twilight of those—

"perfect days,
When heaven tries the earth if it be in tune,
And over its bosom her warm ear lays."

ORIN BELKNAP.

THE CHARM THAT LURES US.

In a recent issue "Kuskuski" takes the brotherhood of the rod and gun to task for concealing, as he declares, the true desire which prompts its members to make shooting and fishing trips, asserting that they do so for the simple desire of killing.

Since he invites sportsmen to relate to the readers of your valued journal what wishes led to their becoming devotees of the rod and gun, I, as an humble member of the craft, would like to narrate briefly the reasons which have caused me to become a lover of the sports that bring me to the sylvan forests and murmuring streams of nature's realm.

While I admit that I hunt and fish with the hope of obtaining some reward for my labors, and a long series of blank days has, for the time being, a disheartening effect, still I distinctly assert that if shooting and fishing were shorn of the pleasures of warm companionship and beautiful surroundings, and if no skill or care were needed in the capture of the finned or feathered prey they would quickly lose all their fascination to me.

Ever since I began to shoot and fish I have tried to do justice toward the game, and have been liberal in my estimation of what size fish should be kept, a principle which many farmers, and many who are not, might adopt with advantage both toward the fish and toward themselves.

If "Kuskuski" were encamped in a dreary country and with ill-natured comrades he would learn that though the woods and waters might teem with game and fish, still it could not fill the gap that the absence of picturesque scenery and cheerful campmates would make. One mean or selfish person can utterly destroy the pleasure of the best camping party ever organized, while with gay and light-hearted companions there may be bad luck, but never lack of pleasure.

I think that a person who has an eye for the beautiful, and who loves to read the secrets of nature's endless scroll, which she is continually unrolling before him, experiences more pleasure and contentment than can ever befall the man who sees beauty and pleasure in her woods and waters only when looking at them through glasses stained with blood.

EURUS.

Doubles on Woodcock.

CENTRAL LAKE, Mich., March 8.—In your last paper one correspondent doubts the existence of any person who has shot two woodcock with one barrel. I presume that there are not a few among your readers who have done it. I cannot claim for myself an experience of this kind, but early in the season I have seen the young birds rise so nearly in range that had I wished, I think I could have shot two, if not three with one barrel.

Something over 40 years ago Mr. Rufus Eager, a well-known woodcock shooter of Lancaster, Mass., missed a woodcock with his first barrel, and the shot started another within 10ft. of the sportsman. Both the first and the second birds were killed by the next shot, though unintentionally on the part of Mr. Eager.

KEPLER.

ESKIMO CHILDREN'S AMUSEMENTS.

In the far North, with its intense cold, it seems there can be but little pleasure for these children, doomed to pass their days among the almost eternal snow beside the frozen ocean. Yet even here life to these little people has its enjoyments, and every season brings to them its round of games and sports as regularly as it does to the youth dwelling in more genial climes.

In summer a portion of the inhabitants leave the winter villages and scatter along the coast for the purpose of hunting and fishing. Others go to distant points along the coast and trade oil, guns, tobacco, powder, lead, etc., with natives of the interior, receiving in payment valu-

BOYS NETTING PHALAROPES ON THE BEACH.

able furs and the skins of reindeer, which they use exclusively for clothing.

At these meetings a round of feasting and games are indulged in before any trading is done. Whenever a camp is made the little folk will be found with their bows and arrows shooting grass birds, which are abundant, or

KICKING THE SNOWBALL.

the numerous varieties of shore birds to be found in that region.

A group of the little hunters is often seen, followed by the girls, the latter provided with little pails, very often a tomato can with a wire bail, and when a number of birds have been killed the girls pluck them, start a fire

JUMPING THE ROPE.

and cook them, and all sit down in the sand and have a feast. If eggs are in season some of the party will have gathered some and a banquet is the result. Two kinds of food at one meal are surely a banquet to them.

Another method of catching birds by the children is by means of a net stretched across an old iron hoop, taken from some wrecked whaler. All through the summer months great numbers of phalarope are to be found along the shore. The little boys set the hoop net in the water, about three feet from the beach, working it into the sand until it will stand alone; then, with a small line attached to the top of the hoop, they go up the beach and scoop out a place in the sand to hide in, and await the coming of the birds, which are constantly going to and fro near the beach; and as they feed in the ripple or wash along the shore, the most of them will pass between the hoop and the beach. When a number of birds are directly in front of the trap, a smart pull on the line brings the machine down over the birds, often catching from three to six at one fall of the trap. In a few hours they will catch a hundred or more birds.

In May and June immense numbers of eider ducks fly along the coast bound for their breeding grounds far to the east of Point Barrow. At this season every person, male and female, is supplied with the Eskimo implement called by them *ke-love-i-tow-tin*, which is made as follows: Eight balls, three-quarters of an inch in diameter, are cut from ivory or bone, with a little tip or ear through which a hole is drilled; eight strands of finely-braided sinew are tied to these balls. At the opposite ends the strands are brought together, each of exactly the same length, and tied to ten or twelve quills of some sea fowl, when the implement is ready for use.

The bunch of quills is grasped with the right hand, while the fingers of the left comb out the strand, and when all clear the balls are held between the forefinger and the thumb. This is done in a few seconds, when a flock of ducks are seen approaching. When the game is near enough, with a quick circular motion just the same as in throwing a stone with a sling, the missile is launched among the flying birds, when if one of these strands crosses the neck or wing of a duck, it brings it to the

ground, where it is then captured. The action of the air on the strings tends to separate the balls in their flight, so that they cover quite a space, and if the birds are bunched they often bring one down, and the boy or girl that can do this is both proud and happy.

Just before the flight begins the boys may be seen with their *ke-love-i-tow-tins* practicing with a dummy duck, which is made of narrow strips of whalebone 18in. long, tied in the center, with a string tied to the ends, which curves the strips into a dish-like form. This is scaled into the air by one boy, when all the rest throw their *ke-love-i-tow-tins*, and the dummy is most always struck by several of the boys. In this way they become quite expert throwers.

When approaching winter drives all summer visitors, "birds and duck," southward, and the earth is covered with snow, the boys and girls practice house-building. With a couple of long knives and a wooden snow-shovel they will work several days on a miniature house, which must be fashioned exactly as father and mother build their snow houses, with its long entrance passage, with room for storage on one side of it, on the other a cook room, with snow fireplaces and chimney, in which a real fire is built, at the far end of the passage a small hole, through which one can just creep on hands and knees into the living room, with its bench of snow across the end covered with moss gathered from the tundra for a bed, and a sheet of thin ice set in the end of the roof for a window. An Eskimo lamp completes their happiness. With the thermometer 30° or 40° below zero they still manage to have a good time, for they are well protected from the cold by their fur clothing.

About the middle of November, when the sun disappears for the long Arctic night, great preparations are made for the festivities of this season—theatricals, games and dances. All the Eskimos now appear in clean, new, and really handsome clothing. To see them at this time no one would call them a dirty, filthy people.

All the females at this season color the eyelids and around the eyes with plumbago, with a stripe or two across the face. The men also stripe the face with the same material, which gives them a very quaint, yet not altogether unpleasant appearance.

These good times last about four days. All keep open house. All send contributions of food to the *cuddigan* igloo or council house, where all the plays are held, accompanied by dancing, singing and beating of drums, the monotonous and continued repetition of *young-ah, young-ah, young-ah, young*, in the minor key by all the singers. The dim light, the strange dress and features of the audience, packed as close as possible, men, women and children in a sweltering mass, give the place a weird aspect, and we realize that we are among a strange people whose habits and customs are all intensely interesting, and withal a cheerful, kindly race.

Football is played by the boys, and they are sometimes joined by their elders. In the game the ball is never touched by the hand, but is kicked for all it is worth.

The girls also play a game with balls of snow, wet with water, frozen solid and stained with soot. Each girl has a ball and all start from a given point, going in the same direction, and the ball is kicked along this line. It must not touch the ground, but must be kept in the air by catching it on the top of the foot near the toe, first with one foot, then the other as they walk along. If the ball falls to the ground the player must return to the starting point and begin again. They will often make 100yds. or more without being put out by the ball's falling to the ground. The one covering the greatest distance is winner in the game. Boys do not play this game.

The greatest good nature prevails among them at all times while at play, no quarreling or disputes occurring.

Often at night, when the aurora is very brilliant, the voices of the children can be heard as they swing around

WOMEN TOSSED ON WALRUS SKIN.

in a circle hand in hand, singing: *Keolia ka, keolia ka ha, yarger yarger yarger yar, hay, hay, hay, hay*. Then all join in a laugh; and so they go on with little variation to the words: *Halitonar! Halitonar, ha, yarger yarger yar, hay, hay, hay, hay*—all laughing.

Keolia is the Eskimo name for Aurora. At these times to hear the sweet voices of the children ringing out

on the still air of night, where every word could be distinctly heard a distance of half a mile, was a relief to the stillness that pervades an Arctic night.

Coasting down the steep bank by the sea side, where

ESKIMO DUMMY BIRD.

the drifting snows have made a road to the sea ice, is a favorite pastime.

In the fall, when the ice has made along the shore, the boys and girls fish in three or four feet of water with a short stick and line enough to reach bottom, a barbless hook, with a small red bead attached for bait, these little folks will catch as many tomcod as they can drag home, and seem to enjoy the sport hugely. Day after day they will be found fishing in the tide cracks or drilling little four-inch holes to fish through. If hungry, they take frozen fish, break off the head, and devour the rest as it is.

Eskimo boys know a good thing when they find it, as the following will show: A half dozen little fellows were waiting around my place one day; the snow was drifting and very cold. Pitying, but not caring to take them in, I told them if they would go home I would give each of them a cake of bread. They were more than willing, took the bread and left. In about an hour they returned with every boy and girl in the village. The joke was on me; all received a cake of hard tack, and were sent home with the assurance that this joke could not be repeated.

After a successful whaling season a great feast is given by the lucky ones, to which all are invited. All the delicacies of the season are to be had at this feast—*muck tuck*,

KE-LOVE-I-TOW-TIN, OR BIRD SLING.

or the thick skin of the whale, walrus meat, seal and bear meat, fish and wild ducks, all boiled except the *muck tuck*.

In addition to the feasting, singing and dancing are indulged in, but the favorite game with the women and girls is being tossed on a walrus skin. A large piece, about 8ft. square, is suspended by the four corners 3ft. from the ground. Strong ropes are used and fastened to

ORNAMENTED FEMALES.

posts firmly fixed. Around the skin are cut holes for hand-holes; as many as can get around the skin take hold and a girl gets on, standing up, when by pulling on all sides of the skin, the performer is thrown into the air, she assisting by springing up. As long as she can come down squarely on her feet they will keep on tossing her, but if she falls, another at once takes her place. They will often

be thrown up twenty or thirty times before they lose their balance. From 8 to 10ft. is about as high as they are ever thrown, and there is always a good-natured scramble to get on the skin.

Jumping rope is another pastime enjoyed by the children, but with the young men and women an inflated seal-skin poke is used. In this the object is to trip the per-

former by striking his feet when off the ground. The players are seldom hurt, for if tripped they fall on the inflated skin of the seal. In this game the greatest activity is displayed by both sexes.

They all enjoy looking at pictures and will gather around a pictorial paper and study it for hours, and it makes but little difference what the point of view is to them—top, side or bottom—it is all right.

Playing "cat's cradle" with a string is a pastime enjoyed by old and young, and is played alone. Many intricate patterns are evolved from the manipulation of the string, which in their imagination they have likened to various things and named accordingly, such as the *tooktoo* or caribou going to the mountains, the walrus, the breaking up of the ice, the wolf, etc., etc. All these require a patient changing of the loops and crossings of the string.

Wrestling is a constant source of amusement to them, and they are all experts. Little boys will pair off and wrestle for hours with great firmness and good nature. Running, jumping, and all feats of strength are constantly practiced. E. P. H.

WILD LIFE ON THE PAMPAS.

ONE of the most interesting classes of literature is that which describes places visited and experiences with which the reader is familiar. For this reason Mr. E. A. Robinson's graphic account of "Life on the Pampas of Entre Rios" leads me back to the sixties when I was managing an estancia in Buenos Ayres. It brings back vividly to my memory the happiest days of my life, and as I sit writing I can almost imagine I can hear the bell of the "madrino" of the "trouppilla" of riding horses as they are driven to the corral the first thing in the morning.

As for sport, the pampas cannot be discounted. Ducks, geese, swans, spoonbills, snipe, partridges, etc., are to be met with in abundance. In those days I was not familiar with the different varieties, but it appeared to me that there were all the different members of the duck family, from one very large variety which strongly resembled the domesticated Rouen, to the widgeon. Many a time have I gone down to a small river which flowed through the estancia, hobbled my horse, and under cover of the thistles which attain a growth of 8 ft. or over, have I bagged so many ducks, that when strung together by the legs they have been quite a load for the horse to carry home—where they were given to the puesteros (shepherds).

In the rainy season lagunas form in any slight depression on the pampas; here waterfowl of all descriptions congregate. About a quarter mile from the estancia one of these lagunas had formed, and contrary to the custom of the country, thither I hied on foot, for no one thinks of walking out there, horseback being the mode of transportation whether the distance be 100 leagues or 100 yds. On approaching the laguna the ducks rose in myriads. There seemed to be nothing but ducks, high, low and at all points of the compass. I was so confused that I laid down my gun, made a cigarette and also made a row that I would not fire at a duck that afternoon, but turned my attention to jacksnipe, of which I bagged twenty-two brace. Being intent on the sport I did not notice a herd of cattle approaching until a great black bull commenced bellowing and showing signs of anything except amiability. Knowing the consequences of delay, being on foot, I dropped my snipe, discharged my gun at old blackie, then dropped my gun and ran for the house, faster, I think, than I ever ran before or since. When about half way I met two "peons," who had seen my plight and were riding to my aid. One of these fellows I sent for my gun and snipe, then mounted behind the other and got home all right.

Mr. Robinson's account of the "chakar" reminds me of a little experience I once had with one of these birds. I was standing at my door one day and saw two of these birds alight close to a small laguna. Getting down my gun I mounted my horse, and hobbling him some distance from the laguna proceeded to try and get a shot at one of them. This I succeeded in doing, but only wounded the bird. On my catching hold of it, it immediately brought its wings into play, and the first thing I felt was something sharp penetrating my flesh whenever struck by a wing. After despatching the chakar I proceeded to examine his anatomy, and found that the first joint of each wing was provided with a weapon exactly like a rooster's spur. The natural supposition is that I was pretty sore for several days after this encounter, and the supposition is strictly correct.

The "taro taro" (so named by its cry) is a bird very similar to the English pe-witt; these are very common on the pampas, and like the chakar are armed with a similar spur on the wings. It is most amusing to see these little fellows standing over their nests, flapping their wings and keeping off any sheep which they think are coming too close to their domicile. I do not know whether the spur appears in both sexes of these birds, or if it is only confined to the males.

Mr. Robinson's account of branding cattle further reminds me of a very narrow escape I once had on an occasion of this sort. Several beasts were lassoed, one being an old bull. Now, there are several ways of throwing cattle when lassoed, one being to run your horse full force into the animal's quarter, when the beast has the lasso at full tension. A well trained horse is called a "pechador." I was mounted on one of these and ran him into the bull's quarter. The bull went over, but something failed to connect, for the horse went over him and I over the horse's head. This was a most dangerous position to be in, as several other animals were surging and jumping about, lassoed by different men, and I in the midst on foot. But luck was with me, for by dodging I at last managed to get a chance, and it would have taken a pretty smart monkey to mount the cross bar of the corral quicker than I did.

A branding is the signal for a general gathering of neighbors, and ends up with a feed of "carne conquero." A good fat beast is killed and the hide stripped off all except a certain portion of the carcass. This remaining piece is then rolled up in the hide and cooked on a fire made of bones. I can assure you that you never tasted such delicious meat as this is when it has been freed from the charred hide. After the "carne conquero" there is generally a dance. Ladies are invited, but men, as is customary out there, come uninvited, and it is no uncommon thing to see 30 or 40 horses with their silver trappings tied to corral posts all night, as dances do not break up until daylight, and not always even then.

The only fishing we had was with a shovel, which took

the place of rod, line, bait and every other article necessary to a fisherman's outfit. The mode was as follows: There is an animal there called the "nutria," in shape it resembles a rat, but is as large as a cat. These animals have their burrows in the banks of rivers, and when the water rises higher than the burrows the fish (and only catfish at that) enter these holes in great numbers. With the spade we made dams at the outside of the holes; then bailed the water out of the dams, and as it lowered and ran out of the holes the fish came with it of course. There was no sport in this, but there was lots of fun. It was the only class of fish we could obtain, and the mode applied for their capture was the only sure one.

For enjoyment and health the life in the Plate is the life of lives, but I am afraid it is not now the country it was when Mr. Robinson and I were there. It was then fully a century behind any other country—everything primitive. Now a certain amount of civilization has crept in and spoiled the good old times. JOHN H. WILLMOTT.

BEAUMARIS, ONT.

Natural History.

"DOWN THE BAY!"

SERGEANT DUNN with his cold waves has at last given us an old-fashioned winter, and filled our beautiful New York harbor with ice.

Miss Liberty, though she be a statuesque damsel, cannot fail to appreciate the beauty of the scene that is spread before her contemplative eyes in all the glow of these crisp sunlit mornings.

To the ornithologist the ice fields are an interesting study during long continued cold snaps. The ever present gull is in his element, and rich pickings "glacé" he finds among the flocks. The common gull, from the modest gray clad form of adolescence to the full-fledged dignity of snowy waistcoat, lavender back and jet-tipped wings, glides, graceful as of old, o'er the glistening ice, or stands with scores of his kind in solemn conclave, as though debating an affair of moment.

In couples here and there, or more often in solitary occupancy of some detached ice raft, the black back graces this arctic scene with his presence. A superb gull, with his immaculate white head and tail, neck and under parts, and a back and upper coat of glossy raven black, the black-backed gull is at once the peer of his family in our vicinity.

A living study in black and white, haughty, extremely shy and difficult of approach, with an expanse of wing of often 4 ft. from tip to tip, he is a striking figure among the feathered frequenters of the ice in the Upper Bay.

On a hummock that tops the otherwise even surface is perched a dark form which the glass resolves into that of an eagle. Near by the ubiquitous crows are gathered. Like heelers they dance attendance upon this king of feathered politicians. Let him spread his immense wings and sail ponderously off, and in an instant they are clamoring after, ready to avail themselves of anything his eagleship may put in their way.

The bald eagle is not often with us, although by no means uncommon during prolonged cold. The golden eagle, as generally known, is fairly numerous, and a trip down the bay at this season will frequently discover several to the keen observer.

These royal birds give a touch of majesty to their bleak surroundings, and being of great size, are conspicuous objects amid the frozen expanse.

Occasionally one will meet with the snowy owl; motionless he sits, and were it not for the crows, who have rare sport with this white-clad stranger, he would often pass unobserved, so perfectly does his dress harmonize with the unbroken whiteness of the flocks. These birds rarely frequent the ice at any considerable distance from shore. They seem to prefer terra firma, where, perched on a fence post or in the top of some tall cedar, they sit and blink their big eyes in the brilliant sun glare for hours at a time.

This bird life on the ice-clad bay is seen at its best during the morning hours, when all is glow and animation with the ebb and flow of the tides. As the day fades the chill of winter asserts itself with a rigor not felt before, and at once a sense of loneliness steals over one.

An Atlantic liner is just leaving quarantine; her bows and high bulwarks, with delicate tracery of ice-clad rigging, tell of wintry weather outside. As she plows her way through the complaining ice, like fate, irresistible, silent, a flash of white wings, as a flock of gulls rise ahead and scatter like living snowflakes, complete the picture as seen from a distance, while the impressive stillness lends an effect which is indescribable.

The sun sinks, the gulls in silhouette against the glowing sky are winging their way to their night camps in the Lower Bay. Liberty has lighted her torch and harbor lights are throwing a glimmer over the ice as we seek the fireside, leaving our feathered friends to rest under the stars, amid the mystery of the darkness and silence of the wintry night. WILMOT TOWNSEND.

BAY RIDGE, N. Y.

Curious Fatality Among Crows.

CUMBERSTONE, Md., March 5.—I can not remember that I have ever seen any notice by naturalists of a common fact in the natural history of our common American crow. I refer to the freezing of the cornea, followed of course, by blindness and death from starvation. During the winter just past hundreds of them died in this manner near my house, although feeding plentifully in a neighboring cornfield, where a large amount of corn was, and still is, left out in the shocks. I have observed the same thing during several severe winters in former years, but this winter greater numbers than I ever before knew have perished. The frozen eyes become entirely opaque and finally much swollen. Besides those dead from losing both eyes there are now, all about here, numerous individuals blind of one eye, which are in good condition in all other respects. I have never seen any other bird similarly affected. I have seen several notices of crows starving to death in large numbers in local newspapers; no doubt all blind. Doubtless many thousands have so perished. I do not think our game birds have suffered materially, nor have I seen a single frozen small bird as I

have often in former years. This peculiar weakness of the eye in the crow it seems to me a highly remarkable fact. I take it to be a particular case of survival of the fittest eye. I think perhaps five per cent. of the crows in this immediate vicinity have suffered loss of one or both eyes. From my own observations I think that two or three successive days of zero temperature will always cost some crows their eyes, and especially if there be high wind. I never knew any other creature to have the eye frozen, nor can I find anything in the anatomy of the crow's eye to account for it. Perhaps some of your readers wiser than I know all about it.

M. G. ELLZEY, M.D.

Aquarium Doctors.

ONE of the most unsightly and dangerous enemies of fish kept in close confinement is fungus. Persons who breed and rear fish dread its appearance because of the extensive mortality following its attacks upon eggs and fry. Readers of FOREST AND STREAM have seen its accounts of the salmon fungus (*Saprolegnia ferax*) which has devastated salmon rivers in various quarters of the globe.

The most efficacious remedy for the disease aggravated by fungus is salt, and many fish, both young and old, have been cured by temporary immersion in brackish water. This treatment kills, not only the fungus, but also the parasites which frequently set up the inflammation in the cuticle of the fish which makes the conditions favorable to the lodgment of the fungus.

The Fish Commission aquarium in Washington, D. C., has other aids in the destruction of fungus. A stone toter or black sucker living in company with a large school of crappies eats the fungus from their backs as fast as it forms, leaving them clean and entirely free from the pest. Some goldfish in a large tank with carp and buffalo, perform the same service for the buffalo which were somewhat injured in transportation and became objects of attack. These fungus doctors, the sucker and goldfish, are very expert in removing the vegetable growth, and especially the former. The sucker is admirably suited to aquarium life, and is in itself an interesting animal to keep under observation. In youth the fish has several broad, dark bands on the sides and in adults the eye sockets are greatly elevated and the space between them on the top of the head is concave. The general shape of the head is quadrangular, giving the fish a grotesque appearance.

The National Zoological Park.

WASHINGTON, D. C., March 13.—*Editor Forest and Stream:* Under the head of "National Zoological Park," in your last issue, is given what purports to be a complete list of animals now in said park. The list as given, however, is incomplete, inasmuch as one of the most important groups in the whole collection is omitted, viz.: the llamas (*Anchenia llama*), of which there are eight fine specimens.

These animals were sent to the Zoo by Col. Wm. P. Tisdell, while he was in South America in the interest of the World's Fair. They have been at the Park since last July, and under the careful attention of the management seem to thrive and feel perfectly contented in their new home. This group is an especial attraction to the thousands who visit that natural oasis in this city of beautiful artificial parks.

The benefits to be derived from a good collection of (mainly) our native animals, placed in a situation of such natural beauty and attractiveness as Rock Creek Park, are many. One evidence of this is the great interest manifested in the Zoo by the public.

After establishing the National Zoological Park, and knowing the great good it is accomplishing, it will be a perfect shame if Congress now fails to properly support it.

The project ought to have been completed years since, but better late than after some of the species have become extinct.

I inclose a photograph of the picturesque llama house, situated on a hillside in a lovely valley in the Park. I took the picture last January, when snow covered the landscape. CHARLES H. COE.

The Cuckoo.

BETHEL, Me.—I noticed in a late number of FOREST AND STREAM an article on the habits of the cuckoo. There is but one species that occurs in northern Maine—the "black bill," and it makes its appearance the last part of May. Farmers in these parts say it is time to plant corn when they hear the cuckoo. They make their nests of sticks, very rudely and loosely put together, in some scrub or bush about four or five feet from the ground, in a thick cover—often near human habitation. One summer one built her nest and laid eggs on a snowball bush within a few feet of my house, but she was so often disturbed that she abandoned it. They lay a pale blue egg, always two, and never more, a little larger than a robin's egg, but not so deep a color. One can easily distinguish the bird when flying by the unusual length of its tail. I have never known this bird to use other birds' nests for incubation. There is no other bird that makes so rough and cheap a nest as the cuckoo. They are a prominent morning bird, commencing their singing soon as day break, not very far from where they nest. Our evening bird is the whip-poor-will, commencing about sundown and continuing well into the night, and on some moonshiny nights, all night long. J. G. R.

Specimens of the Musk Ox.

PHILADELPHIA, March 7.—*Editor Forest and Stream:* As the question of the number of musk ox specimens in American museums has recently been raised in your paper, it may be of interest to call attention to the mounted specimen in the Museum of the Academy of Natural Sciences, of Philadelphia, presented by Dr. Kane many years ago. At the time Prof. Baird published his work on North American Mammals (1857), this was the only specimen in any museum in this country.

The specimen is a very large male, but the skin was probably somewhat stretched in mounting, as the work of the taxidermists of fifty years ago was very inaccurate compared with that of the present day. Nevertheless the hoofs and horns both exceed the measurements given by Mr. Webster. WITMER STONE.

Game Bag and Gun.

"Game Laws in Brief," United States and Canada, illustrated, 25 cents. "Book of the Game Laws" (full text), 50 cents.

KELLUP'S DREAM.—II.

THE next evening, upstairs in the farmhouse, Kellup was sitting on the edge of the bed gazing at the fire on the hearth, with an expression somewhat doubtful. And yet this was the day of the hunt. This was the day he had long been looking for. The events were all before him in the fire, but he passed them over quickly. Some of them he tried not to see. They were not all pleasant.

In the first place they got away all right in the punga with an old bay horse, sure-footed and short-gaited like a goat. In the second place, the dog worked well—he worked first rate, but every individual rabbit put right for a hole. It was one of those days when they would. So it got to be along toward noon-time when Jake said they would cross the road and head for a big ledge over on the hillside, looking south. He said a big rock hung over and made a nice place to have dinner. As they drew near the place, a little smoke was curling up over the rock and soon they made out a gun leaning there. Jake said he knew whose gun it was. A moment later, the occupant looked up in grinning recognition.

"Well," said Jake, "how's this, Richie? You've got one gun and no dog and five rabbits, and here we are with two guns 'n a good dog and, well—"

Jake held up two rabbits and glanced at Kellup. Kellup gave a shrug and laid his hand fondly on the game pocket where it bulged a little. There was just about one rabbit in there. Moore laughed out heartily on a small scale. He was not a very big man anyhow, and the tones of his laughter were something repressed in the manner he had learned in the old country. His laugh was sort of "Heh, heh, heh!" "A teld 'im thet dog was no goode yet. 'E's too young. But no, 'e thinks it's a great dog, that."

As a rule that handsome hound made gracious acknowledgment with his tail on finding himself the center of observation, but now he detected a note of criticism in the air. He glanced at Jake, he glanced at Kellup and lowered his head and shook out those long ears with the brier marks on them and took on such a dejected aspect that Jake stooped and slapped him hard on the ribs and half raised him so he could slobber all over his face and told him he was just the best dog in South county, if he was young yet, and whispered when he started another in the afternoon not to drive him quite so hard. There was some chaffing as to how Richie got his game, there were no gun marks on them. He could track them easily to hole, but what then? Finally he acknowledged how he got them out. He told them just how he did it. He fetched along a "crooked stick." After much persuasion from Jake, Kellup consented to have Moore come along, with the strict understanding that the ferret should only be used after the dog had put the quarry to hole, and then merely to start him out to be shot ahead of the dog. Very well. So they started. Jake said that for once he wanted the old man to get a big bunch to bring home and show the boys. In fifteen minutes the hound was clamoring at a burrow. A little later Moore was down beside it on all fours. The look of grinning complaisance was gone. He gave orders. He told Jake to hold the dog. Crouching there, he seemed a ferret of a larger growth, sharp, hungry, converging toward that hole. In a moment he flung aside a rabbit with a broken neck and got up. The ferret was in the bag. His hard face was relaxing when he met the look on Kellup's countenance, as if a murder had been done, and turned away to let them fight it out.

At this point in his musings before the fire Kellup got up. He would go no further. His conscience was still painful. He tried extenuation, but it wouldn't extenuate. He reasoned that in a State where rabbits were plentiful and obnoxious it might have done, but here comparatively scarce and recognized as good clean game, under protection, it was different. He wondered whether he ought to go and pay his fine. He wondered in what class of felons he belonged. He reflected that a man who would ferret rabbits would shoot a deer in mid-summer. He was sure that the man who shot a deer in Maine in July would poach a buffalo on the edge of the Park any time he got a chance. And this man probably had a place of trust. Then what was it kept that trust inviolate, since he couldn't go off to the woods and bring back whole his moral obligations? It must be the business laws and associations that hedged him round so close. Remove these, so he could be alone with his trust as he was with his gun in the wilderness and the trust would suffer. Kellup felt glad on the whole that his business life was humble, of small responsibility, in view of this weakness he had just discovered, this path he had set foot on so late in life. He resolved to carry home just one rabbit, and that was the one he shot fair and open on the jump.

The room was full of the odor of kerosene. He blew out the lamp. He glanced at the charred remains of the fire and went to sleep. It might have been that his brain simply kept the train of thought in motion: it

might have been that his digestion refused to nourish a diet that his conscience disapproved of, or it might be that he ate altogether too much of that rabbit stew for supper. The fact is he had a dream. He had a long, bad dream.

Of course he never could tell just how long he slept, or when the dream commenced. He remembered blowing out the lamp and glancing at the dead fire, and then he seemed to be in unknown woods with Richie Moore. Jake had disappeared. The gun had gone too, unaccountably, but it was evident they hadn't needed that—not when Richie Moore was on hand with his own peculiar methods of rabbit getting—for when they parted in late afternoon Kellup found himself tramping down the road heading north with rabbits hung all over him. There were twenty-seven bunnies with their legs tied together and strung on a rope. So he trudged along musing in glee, as he saw the look on Susan's face when he should fling down that burden on the kitchen floor. She would no longer say it with sarcasm when she called him "Nimrod." But first he thought he would tramp down the principal street in the town, past the post-office, where his friends, the scoffers, worked, and they would stand in the doorway. He smiled right out when he thought how the children would

the edge of the wall with his legs dangling. His entire clothing consisted of a hunting coat, man's size, with the sleeves rolled up and the length reaching his ankles. The head and feet were bare. The terra cotta face was all drawn out of shape, supporting a hideous gaze bearing intently on the intruder. Kellup stood shivering in his tracks. Then the Pixie took another look. His face was plastic, like putty. He could rearrange his features with his fingers, and he did so in fearsome combinations. He had a repertoire of bad looks, and he tried them all for his visitor's benefit. And with good effect, for the old man stood paralyzed. A tree or a fence was no obstacle to his vision. Then he got gracious and motioned Kellup to advance. When he spoke you would think a guinea fowl had learned to talk. He said:

"I want to see those rabbits. I'm the game warden here and I'm strict. Aha! just as I thought; there's not a shot mark on one of them, not a shot. How did you get those game?"

"I tracked them in the snow."

"Yes; but how did you get them out?"

Kellup was nonplussed. He hesitated. He pondered. Happy thought: "I fetched along a crooked stick and so I got them out."

"Ah-h-h-h." He said it like a music lesson, beginning on a high note and running down the scale, ending on a low tone, with a furtive look from under his eyebrows and a non-committal "Hm'm'h?" He jumped down from the wall and then it appeared he was somewhat lame, one leg being drawn up, leaving only the toes on the ground.

"A crooked stick! Was it anything like this?"

The staff was about 2ft. long and 2in. thick, of light wood somewhat warped.

"Yes, it was like that something. Very much."

Just then something happened, something disturbing; something that started the blood from his heart with a rush. The Dwarf threw the stick on the ground. It fell from his hand a staff, but touched the ground a ferret and sprang for Kellup's throat. The Dwarf seized it by the neck, shook it out like a whip and again leaned calmly on his crooked staff. "You'll have to go to Town House with me to-morrow. To-night you can stay here. We'll have some supper."

So he built a fire and stripped a rabbit and had him roasted in a jiffy. He laid the pieces on a shingle. In spite of all his troubles Kellup felt hungry, so he selected a meaty chunk and put it to his lips. It was nothing but well-picked bones. He looked surprised and tried again, and over and over with no other result.

In the meantime the Warden was making a hearty meal in great amusement, and soon there was nothing left but the bones and the shingle to go on the fire.

Then he wiped his mouth on his sleeve and said, "Have some water?"

So Kellup turned to a little spring that welled up beside the road. The snow was melted here. There was grass growing in the current. There was fine golden sand bubbling in the pool. As Kellup stooped on hands and knees, with his lips approaching the brink, the water suddenly receded, down, down a deepening well, till at last he could just see a glimmer in the depth and the trickling sound seemed children's voices floating up:

"Come down, come down. There's water here. Come down."

He had no desire to go in that position head first, but there seemed no alternative till the voice of the Dwarf aroused him. He was cackling and shrieking in glee. He was rolling on the ground. He was more repulsive in mirth than in anger.

The next instant Kellup was flying down the road devoid of extra baggage. A panic of fear was in his feet. He was making good time. Bye and bye he began to lag. He was making the motion of running, but his most strenuous efforts were not taking him faster than a walk. However, he must have gone a mile, he thought, and the warden would be far in the rear, no doubt, on account of his game leg. Just then something plucked his elbow and said: "I can't go along any further to-night. You'll have to excuse me."

Kellup couldn't speak for a minute, he was panting so and holding his sides. Then he said he was sorry. Such a genial companion, he said, with graceful ways—versatility of expression, too.

But the dwarf said "No," on account of his flock. He had to attend to his flock.

Kellup said "Flock?" softly to himself and looked all round. Then it was his gaze encountered the same old house, and he knew with a shock he had gone in a circle. He had run a mile for nothing. He didn't mention that, though, but said out loud:

"Flock, what flock?"

So they stepped across the road and stood leaning on the bars overlooking the pasture. The moon was up, and under its influence the snow had disappeared—evaporated. A moss and lichen-covered pasture, with clumps of bushes and brambles and grass patches between, that might have been cropped out by sheep. But no sheep were visible. The flock was there, though, and Kellup counted them. There were twelve or fifteen heads—just the heads—of old men, hopping about contentedly among the bushes, nibbling bay berries. Some of the heads looked prematurely old, and the Dwarf explained they were taken young, mere boys, and the hair and beard had grown out long and gray. He said they were all his, though, all legitimate game, Poachers caught in the act,

"DAR'S HE!"

point and cry "Old Rabbit Man." The rope hurt his fingers here, so he stopped and unsung the load. Then he took a look over the vast, desolate landscape and realized he was lost. He was miles and miles from everywhere. He had passed no farms, there was none in sight. The woods were not with him now, but tumbling walls gave occasional hints that a field had once been planted and abandoned. On the west the sunset, in the north a sort of violet haze, in the east the sombre woods, all else the snow-whitened landscape. The effect was glorious—like a picture. He looked down and discovered the print of a bare foot in the snow. At first he said, "It's a boy's foot; but no, that foot was tough and hard, with seams of age. At any rate it must lead to human habitation and a place for the night." It was easy tracking in the snow, and by and by the prints left the main road and followed the turn to the right. Kellup stopped. Probably in summer, long ago, grass grew and cows wandered there, but there were no tracks now but the footprints in the white solitude with brown grass tufts showing through. At the foot of the lane stood a post with a weather-beaten board, "Keep off." Had it been a well-painted sign with a politer admonition he would have gone on, confident of making peace with the owner, but this was forbidding, uncouth. The gory, paint-like stuff had been daubed on with a brush picked up in the yard and hung in dried blisters on the letters. He paused and then went on. He passed a clump of bushes that might be lilacs in the spring. A glare of light here made him stop and wince. At the right a little way the ruins of an old house had tumbled into the cellar except a portion least ancient, but black-stained. This clung to the steadfast chimney. A slant from the western sun had touched the windows, and that made him stop and wince. The next moment he encountered the author of the footprints. The Dwarf was seated on

At this Kellup noticed on some of the flock a drawn scar on the neck. He thought quickly of the ferret and felt of his own neck.

The warden went on to say that there was a big bounty on poachers down at the town clerk's office but the treasury had been poor for a good many years. By and by, when they got some money, he would fetch in the pates and get the bounty. He said, "That's where I keep 'um. I let 'um out on moonlight nights," and he pointed across the wall to a little old country graveyard. By this time Kellup was sick at heart again but felt somewhat rested in the legs and contemplated another run. He thought to get away pleasantly, though, so he backed off graciously and said he "must be going, now," and bowed and smiled, "be going, going."

The warden said, "Hold on, though," and gave an upward nod of the head confidentially. "Little matter I want to speak about."

Kellup kept edging off and didn't want to wait. "On account of catching the train," he said.

But the dwarf insisted. "I notice something wrong about you. If you'll step over to the office I'll give you something to help it. A little peculiarity in your gait. Walk too fast."

Kellup said he didn't mind it in the least. An old family trait. Hereditary. He couldn't help it, but he followed the warden into the one low room of the farmhouse. The moon came through the window where the sun had struck in the afternoon. The air was heavy and bad, and he wasn't surprised when a half dozen hens cackled and fluttered from a roost. The warden invited him to a seat on the edge of an empty barrel standing upright, and then he adroitly shoved him in so that only his head and feet were visible above the top. He called that his "operating chair."

Kellup could think of nothing less than amputation now, but the Dwarf read his thoughts and said: "No; I'm going to give you a little dose of hot shot." So he busied himself awhile at the fire in the chimney and then bored a nice hole in the top of the old man's head, poured in about 25lbs. of molten lead at white heat and plugged it up. Then he broke away the barrel, led him staggering to the door and dismissed him with a benediction.

"Now, another time, if a nice old gentleman overtakes you on the road and wants to go your way perhaps you'll be able to accommodate your gait to his. And furthermore, you better get you a *Book of the Game Laws* right away. Study that for your Bible a while, and don't meddle any more with crooked sticks."

Kellup awoke and sat up in bed. He felt his neck and head and seemed relieved. His nerves were somewhat rattled, though, and he had to fix his attention on the objects about the room familiar from the night before. The moon came in and shone on an old engraving of "Wellington and Nelson," and showed the lines of age and midew starting out from the frame. There was a little mirror in a frame with painted flowers. It cost a trifle once, but that was years ago, and now it has a value not intrinsic, like the rust on rare coins. There was an old wooden bowl, a sort of mortar and pestle affair, chip-chopped clean, with a faint aroma of sage that spoke of cheesemaking days, and best of all was his own gun, standing in the corner, and that reassured him.

JEFFERSON SCRIBE.

Some More Notable Shots.

BERTHIER EN HAUT, P. Q., March 4.—*Editor Forest and Stream*: I once shot a large osprey or fish-hawk with a .22 short cartridge, fired in a Merwin and Hulbert rifle, at a distance of 120yds. The little bullet struck him in the neck, killing him almost instantly. This bird measured 5ft. Sin. from tip to tip.

Some of us were shooting at different improvised targets, one afternoon, when I made a most peculiar shot. I fired at a tin cup placed with the side toward me, about 30yds. away. The bullet made a hole in the bottom of the cup without touching the sides. It struck a trifle too low, and hitting some hard substance (a knot I think), ricocheted through the bottom of the cup.

The force of a .22 long rifle cartridge is shown by the fact which follows. I shot at a lightning rod on top of an ordinary sized house. What was my surprise to see the upper part snapped clean off by the bullet. The rod was an ordinary one, though there was very probably a flaw in it at the place where the bullet hit.

I once shot a crow with a .32-40 rifle, Lyman eight, at 108 steps or paces (as near a yard as possible), the bullet going fairly in the middle of his breast.

I very often practice at birds on the wing with a .22, though with indifferent success. On one occasion, however, I shot a swallow flying at about 30yds. distance.

While shooting sparrows (a great pest here as elsewhere) a few days ago, I happened to fire at one sitting on the end of a tin water-gutter. I shot a little too low, and the bullet went through the gutter and then hit the sparrow. It had become so flattened in passing through the tin, that it simply tore that sparrow to pieces, though only a .22 short cartridge was used.

I shot a crow in three different places with one bullet. He was pluming himself when I fired, and the .22 bullet broke one leg, went through his head and then, striking the breast, came out of his neck. L. D. VON IFFLAND.

A Colorado Wolf Chase Fiasco.

DENVER, Col., March 4.—The hunters of Boulder and surrounding country had a grand wolf round-up Feb. 26. It was a grand success in everything but wolves. At the close there were two inside of the circle, but Jack Shaeffer got excited and started after them, and the rest of the crowd followed Jack, breaking the circle and allowing the wolves to escape. They will try it again next week and hope to profit by experience. Any one who breaks the circle will be given an old-fashioned cowboy "chapping." TESEEBY.

Some China Shooting.

NEW YORK, March 11.—I have been sending your paper since October to Shanghai, China, regularly. My correspondent writes, and reliably, from Shanghai Feb. 10: "Have just returned from an up country shooting trip of 19 days' duration. Our party, three in number, bagged 778 pheasants, 83 ducks, 115 teal, 9 widgeon, 12 geese, 8 deer, 12 hares, 41 woodcock and 2 bittern—1,060 head in all—rather better than the average. C. J. ASHLEY."

WHOLESALE SLAUGHTER OF CARIBOU.

NEW YORK, March 10.—*Editor Forest and Stream*: That certain hunters know where caribou are still plentiful and easy to get at is proven by the fact that the writer received within a certain ten days this season twenty-five heads and five whole specimens, all fresh and frozen within a day or two previous to shipment.

Our place had the appearance of a "slaughter house" when the fresh blood began to thaw and trickle down over the floor from the heads of the thirty once harmless, roaming caribou. These heads and skins all came forward in two shipments, which would seem to show that the hunters found the animals in herds where they had never been disturbed or shot at, and that they simply stood at short range and slaughtered the poor innocents.

Dr. Edward F. Brush, who has hunted a good deal through Maine and Canada, tells of hunting carefully and noiselessly, using every precaution known to a hunter not to startle their game, for three days in search of caribou, and finally giving up in disgust, their party numbering three, himself and two guides, started off at a reckless noisy pace, laughing and joking as they clambered through the brush or paddling along with their canoe wherever there was water enough to float. They had not traveled but an hour or two in this way when one of the guides stopped suddenly at the end of a swampy flat, bordered with small fir trees, and pointed out not over 40yds. ahead a herd of sixteen caribou, consisting of one old bull, two or three younger ones, six or eight cows and some pretty little calves.

The Doctor shot one young bull for meat, but refused to allow any further slaughter, which would have been a simple matter, as the animals stayed curiously around within easy gunshot, while the party skinned and quartered the meat. The calves frolicked and played near by, once or twice came so near in their innocent, inquisitive way that it would not have been difficult to have lassoed them.

There are many strange and interesting stories told of the peculiarities of the caribou, most of which are true. They are frequently attracted by the human voice, instead of being frightened, as many would believe, and in winter they do not yard like moose and deer, but keep up their roaming day and night alike, nibbling the moss from the trees. Should the snow be deep, they would follow roads or paths to find easier traveling, and are known to follow the footsteps of man so closely that lumbermen and woodsmen have turned suddenly in their tracks to find one of those strange docile, seeming half-domesticated animals following him.

The shippers of the thirty specimens above referred to, although they may follow hunting as a means of support, represent the class whose wholesale slaughter has the greatest effect toward exterminating the large game from our near-by forests.

Although naturalists and taxidermists are, to a certain extent, blamed for encouraging this wanton slaughter by offering prices for the specimens, this impression is unjust, as their intention is simply to obtain a few choice heads or skins. While the native hunter learning that heads and horns have a value, and not caring to discriminate, shoot all that come within range, and forward them to the nearest market.

Although I am a collector and anxious to claim ownership to the finest specimen of large game heads, I have enough of the blood of a true sportsman in me to aid in any attempt to put a stop to this wanton slaughter.

WM. W. HART.

A GAME PROTECTOR FOR OREGON.

PORTLAND, Oregon, March 4.—*Editor Forest and Stream*: Your readers have already been apprised of the fact that the sportsmen of this State were making a strong effort to secure better protection for our fish and game. Flattering success has crowned these efforts, and I now have the pleasure of announcing to our Eastern brethren that we have a full-fledged fish and game protector, with a salary of \$2,000 per year, \$500 traveling expenses, besides certain perquisites. This is even better than we had hoped.

Our State is young and sparsely populated; and our legislators have always heretofore so carefully guarded the treasury, that we sportsmen were much in doubt whether the Assembly (just adjourned) would grant our prayer, as it involved quite an outlay of State funds. So, imagine our surprise and gratitude when they not only gave us all we asked but added \$500 to the salary. But there is a little inside history to the matter and I want to give it away.

Heretofore we have had no protection for our fish and game except in so far as the salmon industry was concerned. It is true that there were numerous good laws for their protection, but nobody ever thought of enforcing them. The three Fish Commissioners were empowered (in fact it was their duty) to enforce all the laws for the protection of all our food fish. Many and many a notice was served upon them of the existence of illegal dams, sawdust, dynamite, etc., but the commissioners were apparently too much absorbed in the salmon industry or something else to give these trivial matters the least attention.

As every reader of FOREST AND STREAM well knows, private citizens will not prefer charges against their neighbors for infractions of the game laws. This fact has been demonstrated in every State of the Union, and there are plenty of good reasons why they will not.

Well, when it became apparent to the market-men that our Assembly was favorably disposed toward our bill, they proceeded to organize, raise money and attack the bill, tooth and nail. They openly boasted that they would secure its defeat at any cost. The canneries down the river seemed to join hands with the market-men, the old board of Fish Commissioners reinforced our assailants and we sportsmen found ourselves in a decidedly embarrassing position. We could almost imagine how Davy Crockett and his heroic companions felt when penned up in the Alamo, for we were outnumbered, and then too, you know that sportsmen have less of the right kind of ammunition than these other fellows have in such a fight. But we trusted in God and kept what little powder we had very dry. On the eve of adjournment the Assembly got rattled and passed every fish and game and Fish Commission bill it had on hand. Of course these bills conflicted with each other, and no two of them could legally stand, but by passing all of them the legislators could go back to their respective admiring constituencies without priming themselves for explanations or feeling that they had left

any duty unperformed. The Fish Commission bill was, of course, in the interest of the canneries, but I will not ask space to particularize or define the object of these various bills. The Governor's name was necessary, of course, in order to make these various bills law.

Suffice it to say, Governor Penneyer stood by us and by the interests of the great State of Oregon like a man. He vetoed every bill that conflicted with our game warden bill and to that he affixed his signature. And then too, the bill contains an emergency clause that sent it into effect last Monday. Mr. H. D. McGuire, the appointee, although not so well known as many other aspirants for the position, is an earnest, active, honest man who will do his duty and enforce the laws, and that is what we want.

In conclusion I desire to say that I have been a life-long Republican, but henceforth I am an out and out Penneyer Democrat, and if my vote would keep him in Oregon's chair he might rest assured of a life job. S. H. GREENE.

BOSTON AND MAINE.

Spring Shooting.

BOSTON, March 11.—Spring shooting begins to be the topic of conversation with the shotgun sportsmen, though no flights of birds are yet mentioned. Parties are being made up of members of the Monomoy Brant Club and invited guests. Members of this club go for their spring shooting in squads or sections, each party including about as many individuals as the club accommodations at Monomoy Beach will hold. Invitations to enjoy the brant shooting with members are at a premium usually with sportsmen who are not so fortunate as to belong to the club.

Maine Menhaden Fishermen.

The Maine Legislature is agitating the question of opening the season for duck shooting in that State April 1. The bill has made some progress, having passed one branch. But the measure that is interesting the shore fishermen the most is to open the bays and harbors belonging to Maine to the menhaden and mackerel seiners within the three-mile limit. It is the same old measure that has been several times killed in Massachusetts; the proposition to permit of seining in the waters of Buzzards Bay. In Massachusetts the measure has been killed several times, for the reason that there are cottage owners and people interested in shore fishing, along the shores of Buzzards Bay, who have considerable influence and a good deal of money. Here the influence of the menhaden fishermen and oil-makers has been met by more than its match, and Buzzards Bay is still closed to the seiners. But in Maine it looks as though the influence and the wealth of the menhaden catchers was being used in the Legislature. A bill has actually been introduced and has passed through its first stages in the Senate, though the lovers of harbor and shore fishing have protested vigorously. The danger is that the bill will pass both branches, but it is hoped that Governor Cleaves will veto it.

That Maine License Bill.

The obnoxious Maine sportsmen's license bill has been up in the Senate, and has been tabled there. The better sense of the Maine Legislature hopes that it will stay on the table, but its friends, and among them are numbered some of the lumber kings, will be sure to call it up again. The form of the bill proposes to tax every person, not a resident of the State, an annual license fee of \$5, for either hunting or fishing in that State. An amendment has been proposed allowing owners of property to the value of \$2,500 in the State, or persons paying a tax of \$5, to be exempt from the license law. This amendment was tabled last week, along with the bill. The design of the amendment is to favor the owners of camp property. A lawyer of considerable note tells me that the owner of camps in Maine would have a constitutional right to occupy them, though erected and maintained ostensibly for the purpose of hunting and fishing, and to occupy them without paying a license. Then being an occupant of his own camps, a person would be for the time being a citizen of the State, with all the rights of any other citizen, except that of voting, and being a citizen for the time, with all the property rights and privileges of any other citizen, and it being open season on trout in the lake or stream beside his camp, or open season on moose, deer or caribou or birds, the State cannot make a constitutional law that can prevent his taking his legal share of the game and fish about his camp. This sounds like good law, but how the Maine courts might regard it is a question. Another lawyer, with whom I have talked on the subject, suggests that the owners of camps and cottages in Maine, built for the purpose of hunting and fishing, cannot be legislated out of their rights to all the game and fish legally belonging to them under the existing fish and game laws. Their camps were built for the sake of the privileges of hunting and fishing, and they are worthless without these privileges, and hence these privileges cannot constitutionally be taken away by any tax not equally imposed upon all persons, whether residents of the State or not. The ownership of real estate carries with it all the privileges of the neighborhood—of the surroundings, the air, the water, the shade trees and the fish and game—all these without any tax or restriction, beyond that which the real estate pays. Not only would the owner of real estate be entitled to all of these privileges without further and equal tax with the citizens of the State, but he could also invite his friends to enjoy them with him, and permission or invitation from the owner of the real estate would carry with it all of the privileges of any citizen of Maine or any other State. It looks as though it might be a difficult matter for the solons at Augusta to frame a license law that will hold.

The Gilbert Trovt Bill.

Up to the present writing no further progress had been made in regard to the Gilbert trout law in the Massachusetts Legislature. In the meantime March is rapidly passing away, with winter still upon the trout streams. It looks as though the legal opening on trout, April 1, would be a very cold one this year. Yet the sportsmen are interested, and already they are getting their tackle together. SPECIAL.

JACK RABBIT SOUP AND SAUSAGES.

TAYLOR Co., Tex., Feb. 25.—FOREST AND STREAM of the 9th has many hard things to say of the jack rabbit which I cannot concur in. He is derided as a poor culinary article. Now I know that in the hands of a good cook he puts up an excellent soup, and as a sausage meat he is entitled to high rank. I did not know of these good qualities of his till I stopped a few years ago with an English family in Texas, who made me acquainted with them. Since then, whenever I shoot a jack rabbit in the season of frost, he promptly appears on my table as soup or sausage, and I have never heard any one speak of him when thus served except in praise. If our California friends, who seem to be so much pestered by him, will turn him to account in these ways, I dare say they will complain of him no more.

Nor is he looked upon by our farmers as a pest. He will forage upon our gardens if we let him, and so will any other sort of hare or rabbit, but if he does any injury to our field crops it is so immaterial no one notices it. I will except only the sweet potatoes, of the vine of which he is so fond he will eat them all if allowed. He will also grubble in the ground to fetch up the potatoes. Evidently, when he gets into a sweet potato patch he thinks he is in glory. But a watchful dog about the premises will soon make him shy of it. As for scare-crows, which some farmers put out, he quickly learns they are but harmless Quaker guns, and so despises them.

In this country we have a great variety and abundance of rich native grasses, and these and the sugary mesquite bean so content the jack he is under little temptation to maraud, except as to the esculent mentioned. A patch of sweet potatoes seems almost irresistible to him, as the watermelon patch is to the average small boy or negro. Some of my neighbors tell me he also has a keen liking for the peanut, so that he will encamp upon a crop of them continually if permitted, eating both vine and pods, but as I have not yet grown these things I cannot say of my own knowledge. For my part, I am willing to give him a liberal share of my potatoes for his soup and sausages. Can an animal feeding on such good food be otherwise than good to eat? But perhaps in other regions he may not have so good fare.

While on this line of thought I am tempted to remark that I believe there are very few sorts of creatures which in the hands of an adroit cook would fail to put up a good dish. I am tempted to except only animals of the dog family. I was once with a party of men who, being almost perished from hunger, attempted to eat a wolf which one of them had shot, but it was a failure. And yet we are told the Chinese consider fat puppies a great delicacy. I have been told by several old soldiers that they ate rats and mule meat at Vicksburg, and found both very tolerable eating. The subject is interesting, and as the world's population is thought by some to be growing faster than the food supply, it may be profitable to discuss it. I should like to see it undertaken in the columns of FOREST AND STREAM.

I read with delight Mr. A. N. Cheney's letter in FOREST AND STREAM of the 16th, quoting from Homer as to angling in his days, some twenty-three hundred years ago. I hope that Mr. Cheney and other writers will continue the entertaining work of examining into the classic authors, not only as to fishing, but hunting also. It will prove exquisite work, in which I would delight to take a share, but unfortunately cannot. Among other misfortunes that have befallen me in late years was the almost total destruction of my valued library, so that I am disarmed for literary work in that field and almost any other. But I remember a verse in the first ode of Horace which comes well in point:

Manet sub Jove frigido,
Venator, teneræ conjugis immemor:

which may be freely translated thus: "The young hunter in the eager pursuit of his game, stays out all night in the cold, unmindful of his tender wife sleeping in her comfortable bed." But I dare say she was not sleeping very soundly; rather that, like Tam O'Shanter's wife, she was "aursing her wrath to keep it warm" for the young fellow when he should return to her side. N. A. T.

A SOUTHERN GAME COUNTRY.

VICKSBURG, Miss.—In a recent issue of your paper is an account of a dinner given in New York city by the Meganitic Club of Boston. It contains a statement that the club's property consists of 160,000 acres or 250 square miles of territory. This is a vast extent of land for one club to own, and it must be a large organization of wealthy members to control such vast possessions.

In reading your paper closely for years past, I have often been astonished at the great expense gone to by wealthy and influential clubs in becoming possessed of desirable tracts for sporting purposes and in improving them. Mr. Hough's letters concerning the Chicago and Detroit clubs particularly impressed me on this point.

In the South as yet, we have found no need for such organizations, and we have not the wealth to indulge in such expenditures if we did have need to. I think our game here is far more abundant and accessible than in the North and West, and it is rare that the lands are posted or that objection is made by the land owners to a sportsman going on the property and killing all he can. In fact most of the best hunting territory—except for quail shooting, is on the wild lands away from civilization and beyond the scrutiny of the owners. It is simply more a question of transportation than anything else.

I think Mr. Warner and I have just about as good a preserve as the Meganitic or any other club, in our little launch, the Rambler, which enables us to take in 250 square miles or more of territory, if we want to. But the fact is we don't need so much ground as that by a long shot to hunt over. For duck shooting we have the Mississippi River bars as well as near tributary streams, which gives us all and more shooting than we have time to attend to. We always have some sport and often it is very fine, and we have never had occasion to go over 40 miles from Vicksburg. We have no fall nor spring shooting as further north of here, but ours is an all winter shoot, the ducks coming down here in November and remaining until the middle of March.

For turkey we go into the wild lands above here, though this noble bird is to be found on all sides of us, where there is an abundance of heavy timber. We have never yet drawn a blank when we have tried for them, and sometimes our luck has been rare. I know of no

finer sport than this game affords. It is still fairly plentiful, though less so than formerly when the encroachments of civilization were not so great. We have never had occasion to go over seventy-five miles to get all the sport we wanted, and often a much less distance sufficed. You might well say that our former launch, the Greenwing, has actually roosted among the wary old gobblers, and by the time this letter is in print we expect our new boat to be doing something in the same line.

Deer and bear are also plentiful in certain localities, and it is no trick with a sportsman experienced in killing this large game to get an animal almost any day he desires. On our hunts after turkey we sometimes get among them to a limited extent, but as a rule we devote but little time in pursuit of either kind, as we are not proficient in pursuit of such game.

Some of these days, the regions further north having become exhausted in game, the valuable lands of the South will be sought after by the wealthy clubs, who will find ample time and means to come this far for sport. And I believe such an advent is not altogether undesirable, as it will tend to preserve the game by eliminating from lands acquired by such clubs the market-hunter and the sportsman who shoots to excess. Only recently representatives from two widely separated organizations, one in Cincinnati, the other in Detroit, have been here making inquiries for a hunting and fishing preserve. What these clubs want is here, and can be had for the money.

And yet when they do come and buy there are certain spots that we know of which we hope will not be included in the preserve, for we want to shoot there a few years longer. We are not through with those rare regions yet, and want to try our hand a few seasons more before the favored spots are scooped in by the magnates. However, there are so many desirable tracts, and in such widely different localities that it will likely be a long time before an outsider who is fairly familiar with the territory will be shut out so he cannot get a day of good sport when he wants it. So, let the clubs come along, erect their barriers and protect their game where it would soon become abundant under proper care and afford fine sport to its members. We would try to get our share by dodging around on unspoken territory, and we think we could get it.

W. L. P.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, Ill., March 11.—High water in the spring usually makes good fishing later. On this basis we should have good fishing about Chicago this summer, for the spring floods are unusually high. The Rock, Fox, Kankakee and Illinois rivers are all booming this week. The snow which killed the quails will in liquid form transport fish to the anglers. Such are the compensations of nature, which is said never to make a mistake.

Sport is now betwixt and between in Chicago. Fishing is not yet, nor are the ducks yet up for those who wish to shoot ducks. The yearly awakening of the sporting fever is already visible, however, and much talk is current.

The dull season in the sporting year at Chicago is probably the thirty days last past. The shooters have then let go of the fall and not yet taken hold of the spring. It is not really dull here even then, for at almost every week of the year some one is coming in or going out for sport in a country not bound by the Chicago climate. Many Chicago men go South in the winter. Apropos of this I may state that this season's Chicago travel to Florida is greater than was ever known before. Mr. Hirth, who presides over the tackle department of Spalding's, told me this week that he had sold twice as many tarpon outfits this winter as in any other year during the same season.

Too Many Notes.

The only trouble about a Southern trip is that one takes so many notes that he can never in the world get caught up with his writing. The South is all a new world to the Northerner, and he is apt to bring away from it, after his first trip, a memory as jumbled as his notes. I am not sure that jumbled recollections are not as good as any.

I remember that when Billy Young had come to anchor in front of Stephenson's house, on Galveston Bay, we had to lighter our baggage across the tide flats with a big scow. The young man who poled the scow out to the schooner had on small-heeled boots and a noble pair of spurs. This seemed to me strange and I made a note of it. There was a strip of mud between the landing and the house. Young Wilcox put my heavy trunk on a sledge, hitched a lariat to the sledge, took a turn of the rope about the pommel of his saddle, mounted his pony and hauled the whole outfit across the mud without soiling the heels of his boots. Thus it may be seen that spurs may sometimes be useful to sailors. It all depends on the country.

Horses of the South.

The horses which we used on the sea prairie were the regular Texas ponies. They were patient, plucky brutes, which took the knee-deep plodding over the wet ground philosophically, and always took us home safely, no matter how dark the night or how great the distance. After dark the marsh country was baddish looking, and the trail was winding enough, but the ponies always knew the way home.

In Louisiana we experimented with the 'Cajun ponies, which I believe to be the smallest, most ill-conditioned, most despondent horses of the earth. Tête Rouge and Pinto were the names the Chief bestowed upon our mounts. Tête Rouge was a brilliant sorrel red, mane and all, whence his name. He was the tiniest, scrubbiest, dirtiest, sorriest horse that ever was, and no man could look at the reproach in his eye without a blush of shame at the thought of asking him to carry anything more than his own load of grief. Yet Tête Rouge was a good hunting pony, because his disposition was always the same, and he would stay where you put him. He was tired, very tired. He didn't care whether school kept or not. It made him groan to step over a cotton row, and at a ditch he made only the feeblest bluff at a jump, waiting calmly with his feet in the middle of the ditch until I got off and lifted him over. It was no use swearing at Tête Rouge. He didn't care a cent what you said about him. He was totally, absolutely, depravedly tired. I wanted to make a picture of Tête Rouge, but he was

lying down at the time, and I couldn't get him to stand up.

Nearly all the quail hunting in Louisiana is done horse-back. When the dogs find a bevy the shooters dismount and tie up. In Mississippi also they hunt in this way, and in the fearfully rough country about New Albany I found a horse the greatest luxury possible to have. Indeed, he is a poor man who hunts much afoot in the South. The horses of northern Mississippi we found to be the best we had met. They showed the blood of near-by Kentucky and Tennessee. Shooting, even with so good a mount between times, is hard work in so hilly a country as upper Mississippi, but the birds were abundant and flew strong as grouse. It may be remembered that in the Southern field trials at New Albany the party put up twenty-nine bevsies the first day out.

The Best Rats.

I wonder if everybody knows where the best muskrat fur comes from? In the South my market-hunting friends told me that the Kankakee and Illinois River rats bring four cents a skin more than any other kind.

Photographing a Skunk.

In all the great FOREST AND STREAM collection of amateur photographs, I presume there is not one showing a skunk on the point of going into battle. My notes tell me that in the South I tried to photograph a skunk. In short, I tried several times, and got up within 10ft. of him, too, in spite of his threatening attitude. Unfortunately the light was dim, and I find among my negatives only a series of blurs at the place where I hoped to have a nice study in black and white. Thus often we risk much for no result.

Texas Terrapins.

Galveston Bay, so my notes say, was once a great ground for terrapins. They would come out on the reefs in numbers, and made a great source of revenue to the fishers, or rather, the hunters. After the terrapins became scarcer the marketmen hunted them with dogs, walking along near the shores on the flatlands of the shore or islands. The dogs used became unerring in their work. A terrapin when surprised near the water will make for the water. The dog would in some cases put his paw on the terrapin and hold it. Others would only point it, and a few would bring it in the mouth to the master. Persistent following at all seasons has nearly exhausted the terrapin supply of this great bay. Both bird dogs and curs were used in hunting terrapins.

Terrapin and canvasback seem to go together naturally. I have already spoken of the great numbers of canvasbacks on Galveston Bay. Oysters also there are, and red fish, and all things truly desirable.

The Great Northwest.

The unselfish and disinterested pride of a man in his own dogs sometimes leads him to do very useful things. I do not doubt that Mr. Thos. Johnson, of Winnipeg, who sends me the following clipping from an article by Mr. J. A. McCaul in the *Western World*, thinks honestly that the reference to his dogs is the most valuable news that could come from Alberta. In his estimate of news he is both right and wrong. Those who know aught of the doggy world know that Mr. Johnson has good dogs, but they might not all know so much about the game with which he is so familiar from his experience in the country. This is how Mr. Johnson is doubly kind. The article reads:

Southern Alberta may fairly be called a sportsman's paradise, not one for pot-hunters or lovers of slaughtering large bags. The variety of game and scenery, the glorious weather during the shooting season, the successful handling of the dogs, gun, the rod and flies give a peculiar pleasure and zest to the true sportsman that is not to be compared to the mere slaughter of game so commonly called sport by some would-be sportsmen. Here we have to be our own guides, tent pitchers, etc., etc., in turn, handle our own dogs and learn as best we may how to take the wary grizzly, deer, duck, trout, salmon or whatever it may be.

As for grizzlies, cinnamon (brown) or black bears, elk, deer, sheep and goat, fairly good shooting can be had in this district by a little roughing it and mountain climbing. One cannot sit by the camp-fire and talk grizzly, etc., but must turn out and do some work for his sport, and with the right kind of men good enough sport to satisfy any one can be obtained in the Rockies which bound us on the west.

The swan, goose, duck and grouse shooting is good, and well up to the average of any country I know of. The varieties of swan bagged here are: The whistling swan (*Oler columbianus*), the trumpeter swan (*Oler buccinator*). Of the goose tribe large bags are made, the chief varieties being blue-winged goose (*Chen caerulescens*), often mistaken here for the swan goose (*Chen hyperboreus*), both of which appear in large numbers in the fall, and are easily bagged from Oct. 1; but all the varieties of the white goose are known here as "waxies," so called by the Indians "wevoia" (*Chen hyperboreus nivalis*), notwithstanding their classification in the books. To the sportsman the Canada goose (*Bernicla canadensis*) and *Bernicla hutchinsi*, the smaller goose, afford the most sport, being much more wary and shy, but with the use of sheet iron decoys affording grand sport and good hard shooting.

The duck tribe is well represented and very large bags can be made by one of their peculiar ways. Of this tribe I may mention as common varieties the mallard, the gadwall (seldom seen), the pintail, American widgeon, teal (greenwing), and the river ducks, canvasback, redhead, bluebill (large and small), golden eye (Barrow's) and the smaller one, buffleheads, with a scattering of blue-winged teal, harlequin, ruddy ducks and some hybrids. In grouse we have plenty of the pintail, which affords the chief field sport on the prairies in the early fall and in cover. In the mountains, the blue grouse, found chiefly in the mountains (except perhaps before Sept. 15, when the old and young ones come down to the prairie), with an occasional willow grouse and ptarmigan thrown in. In the plover and snipe line we have little to speak of. A few Wilson snipe are bagged, but as yet very few, and as for woodcock one unfortunate only has been blown our way.

The class of dogs in the country are good, including the Laverack and Llewellyn strains, mostly from the kennels of Mr. Thos. Johnson, of Winnipeg, who, I believe, is justly proud of some fine ones we have turned out, the work here requiring speed, nose and staunchness, which we aim to breed in the highest degree.

And last, but not least, I may say that the trout fishing in this district is unsurpassed. Simply magnificent fly-fishing can be had, the writer of this article having seen more than one day's trout fishing, reeling in an average of over 1lb. each, some 1lb. (fish) (with trout) reaching 3lbs. and others (brook trout) tipping the scale at 3lbs. Good trawling for lake trout and pike may also be obtained, and here the disciples of Isaac Walton can certainly revel.

Manitoba's Hibernating Animals.

It is the same gentleman who sends me an interesting clipping, uncredited, on the hibernating animals of another section of the great Northwest, of which many of us know so little, and as he says nothing therein of hibernating dogs, I shall this time visit him with no slings and arrows. This reads:

There are in Manitoba six species of animals that hibernate, or spend the winter in a dormant condition; these are the bear, badger, porcupine, raccoon, skunk and ground hog. It is a remarkable provision of nature that life can be sustained without food during a long winter. It will be noticed that all these animals become exceedingly fat as the winter approaches, and from that fat nourishment is, in some way, derived during the long season of sleep and inactivity, for when spring arrives the animals are always lean and hungry. In this country there are no rocks among which caves can be discovered, and no large, hollow trees, so the bear has much difficulty in finding a proper den in

which to spend the winter, and has often to be content with a hole in the side of some wooded bank, where shrub and fallen timber conceals and covers the entrance. The badger burrows to a great depth in any dry position on the prairie, and does not seek to close the entrance, but as the burrow is generally surrounded by the waxberry bushes, which stop the drift, the whole soon becomes closed by snow.

There are very few raccoons in Manitoba, but the number seems to be increasing, as the grain fields now afford food in summer, especially when the fields are near the woods which the animals frequent, for raccoons seldom venture far out on the prairie, as they are poor runners and are easily overtaken by a dog or wolf if upon open ground. Raccoons are generally found near rivers and feed on dead fish that may be cast ashore or on frogs when these can be found. Even in Manitoba raccoons love to winter in hollow trees, when those can be discovered large enough. Porcupines are not very common and are smaller in size and darker in color than those found in the eastern provinces. As the porcupine feeds principally on the bark of trees it frequents wooded districts and spends the winter underground. There are more woodchucks in Manitoba than many suppose, but as they never leave the thick woods they can be heard much oftener than they are seen. The skunk is the most luxurious of all the hibernating animals of this country, and not only prepares a warm bed of soft grass at the bottom of his burrow, but closes the entrance from the outside with a bunch of the same material, thus effectually excluding the cold. Other animals that spend the winter underground all store up a supply of food, on which they subsist during the cold season.

75 MONROE STREET, Chicago.

E. HOUGH.

Worcester Fur Club

WORCESTER, Mass., March 6.—Although the two hunts held by the Worcester Fur Club during the season just closed were discouraging in the extreme the total score of the club's members for the season would indicate that the poor showing made on the occasion of the "big hunts" was not due to a scarcity of foxes.

Returns received by President Kinney up to date show a total of 181 pelts taken by members of the club.

Charlie Howe, who has not been just up to an edge for the past few seasons, struck his gait at last, and tops the list, but by a single brush. A. C. White, who has been high gun among the Worcester men, tied with E. T. Whitaker for second place.

White can console himself for the lost leadership, however, with the knowledge that he added during the year to his stock of experience some things which the others missed. For one, he located the North Star, the Dipper, and another constellation of at least local prominence. Then he discovered a pond that grew an ice of surprising clearness and of wonderfully refreshing powers. He knew how to build a brush fire before.

Sam Smith, of Hopkinton, who led the club for a season, had to be satisfied with third place in company with W. J. Harrington.

The score of the club is as follows: Charles Howe, 10; E. T. Whitaker, 9; A. C. White, 9; S. A. Smith, 8; W. J. Harrington, 8; H. C. Newell, 8; Lyman Baker, 7; J. M. White, 7; N. Willard, 6; George Bates, 5; J. T. Adams, 5; E. B. Burbank, 5; C. Pierce, 5; H. Kinsley, 4; F. E. Harrington, 4; H. Adams, 4; J. R. Thayer, 4; E. H. Cate, 4; E. J. Bates, 3; J. E. Fuller, 3; Albert Hobbs, 3; Wilton Rand, 2; A. B. F. Kinney, 2; O. F. Joslin, 1; George Waite, 1; W. L. Taft, 1; W. R. Dean, 1; W. Perry, 1; D. M. Earle, 1.

HAL.

"Johnny, Get Your Gun."

OSCEOLA MILLS, Pa., March 6.—*Editor Forest and Stream:* In the fall of '91 I left my mountain home in Clearfield county, Pa., with my gun, and went to Adams county for a few days' quail shooting, as we have very few up here. On the second day I was out with a young man named William La Rue, and with my first shot I killed one quail and two woodcock. I could have killed with my second barrel, but missed fire, and so I know I killed them all at one shot. The same afternoon my friend and I sat on a bank and watched 15 woodcock working in the swampy ground about 30 or 40 ft. from us. When we got tired watching them we flushed the birds and I killed with both barrels. We had no dog, and that afternoon I killed 13 woodcock and 9 quail, and if you ever get into Bowers' Bottom you will have to do some very quick shooting.

Now I think Johnny has got the gun and should hold it until some other sportsman can claim it.

Pheasants and quail, what few we have up here, are having a hard time of it this winter. The snow has been very deep and weather very cold, but as yet I have not found any dead birds.

This is my first appearance in the FOREST AND STREAM, although I have been a reader for some years. I. C. J.

Game in North Carolina.

HENDERSON, N. C., March 1.—The quail, partridges, wild turkeys and other game birds in North Carolina have indeed had a hard time of it during the past winter—many thousands of them were frozen outright during the unprecedented cold spell and deep cover of snow and ice which endured the first thirty or forty days of the year. The markets of the State were glutted with impoverished game, often unfit for food. The sporting fraternity are laid under lasting obligations to Senator Leach, of Warren county, who bravely came to the rescue and had a law passed to prevent the destruction of the feathered tribe, esteemed by the sportsman, in certain counties in North Carolina. It is a pity that for "political reasons" many counties were not covered by this humane law, but the sections thus protected will doubtless offer the most inviting fields for shooting the coming autumn. The law was stringently enforced in Warren and Vance counties, and ample breeding stock for the coming summer preserved.

SPORTSMAN.

Indians and Big Game.

CORA, Wyo., Feb. 23.—Bands of elk and deer are in sight nearly all the time, and reports come of bands of elk numbering as high as 3,000 gradually drifting south toward the Colorado Desert, some fifty miles from here, where they will stay until the snow goes off in the spring. Then the elk, deer and antelope will start back toward the mountains as fast as the snow will permit. When they have gotten back to the foot of the range, they are stopped for a time on account of the deep snows in the mountains and at just the time of year when the females have their young, and hence it is that they suffer a terrible onslaught from the noble (?) red men, pensioners of Uncle Sam.

The Indians flock into this locality from Fort Washiki and Fort Hall, and their *modus operandi* is for the bucks to mount cayuses and ride along the timber or brush patches where the elk deer or antelope conceal their young, and as the creatures will not readily leave them

while being approached, it is a very easy task to kill every one found. If when they kill an old cow, the young is yet unborn, it is cut out and taken to camp and considered by them a very delicious dish. One Indian can kill as many animals in a morning's hunt as his squaws and papooses can take care of all day. It will readily be seen that the old and young are both killed, whether the young are taken by the Indians or left to starve or be devoured by beasts of prey.

The hides of these animals, after being made into buckskin, are traded to the small trading posts for Jamaica ginger, lemon extract, or cheap whisky, all of which intoxicates alike, and are sold in violation of the United States laws. One man purchased 800 lbs of buckskin last year in this way. This means 400 to 500 head of full-grown animals and fully that number of young destroyed.

Can some brother sportsman suggest a way to prevent this wholesale destruction which will ultimately exterminate our game?

IRA DODGE.

Mr. Dodge Will Wage War.

CORA, Wyoming.—*Editor Forest and Stream:* Some time ago I promised to furnish you some game notes, but owing to my bear fight on Nov. 2 last, I have been unable to obtain much personal knowledge concerning the same. After I wrote you an account of my fight, the doctor attending me discovered that my wounds were very much worse than he at first thought, and it was Jan. 2, two months later, before I could be moved home. Since then I have been confined to my bed most of the time, but now that the pieces of bone that have been floating about in my face and hand have been removed, recovery is a matter of a short time, excepting a stiff hand and a very disfigured face. I received in all about one hundred bites, viz., nine on my right leg, eight on the left, twenty-six on the left hand and wrist, twenty-one on my face, and too many on my right hand to count. If that wouldn't make a man mad what would? I intend to wage war against the grizzlies next spring, and many is the one that will make the woods resound and bite his paws before I am even, and I shall probably do the work with my little 6 lbs. .50-100 Maynard that stands against a large fir tree where the affray occurred.

If Mr. L. S. Kelley, of Chicago, will join me on a hunt

Scott and Thomas Cooke, two other hunters who have formed part of his party. They have been killing ducks, widgeon, sprig, gray geese and brant since early in November, along the Sacramento River and in the ponds, sloughs, swamps, creeks and bayous. Mr. Hoffman estimates that he alone has killed 3,000 ducks, while each of his companions has gone up in the thousands. The water is so high now that it is not a good season for hunting. There is plenty of game, but scarcity of food has driven it away. Mr. Hoffman and his party have taken a rest, although there is yet nearly three weeks before the close season begins.

"I have heard it said from time to time," said Mr. Hoffman, "that canvasback ducks were almost gone in California, and that there were now none to speak of anywhere. Those who think so ought to come up to Knight's Landing and take a look around there.

"Although I have done nothing else but hunt for 10 years, I have never seen so many canvasback ducks as this year. They are amazingly plentiful, and they are as fat and fine as they can be. The majority that I killed were canvasbacks. They have been feeding on tulle weed, a bulbous vegetable that grows in shallow water, and on the new wheat which is growing all about there.

"I have seen droves of canvasbacks and mallards on Senator Fair's 1,400-acre Yolo ranch lately each two to three miles long and a couple of hundred yards wide. Of course there might be narrow places in them, a hundred yards in extent or so, where there were no ducks, but as a rule the two to three miles would hold good.

"The ducks are too fat, as are all the wild fowl up there. In my cooking I would cut them open and take out some of the fat and throw it away, else they would be too greasy. I don't kill any butter-balls at all. I leave them alone. Mallards are very thick and the wild geese are extremely plentiful and are feeding on wheat, to the detriment of the ranchers."—*San Francisco Examiner.*

Maine Fish and Game.

PORTLAND, Me., March 7.—In Augusta this week I find Fish and Game Committee divided on opening September. The Rangeley and adjacent interests favor; eastern interests oppose. Lumbermen oppose everywhere. The Governor has not yet made any appointment for commis-

AMONG THE WILDFOWL.—XX.

"GOT THEM THAT TIME."

after grizzlies, I will convince him that they are as easily killed as the one Messrs. Perry and Wilson done up as referred to by Francis J. Hagan in FOREST AND STREAM of Jan. 12. Mr. Hagan's bear and mine could not have been the same, as they were in opposite directions from Big Piney, and his was of the kind that gives leg bail for security, while mine disputed the ground by reason of possession and prior right and contested his claim, as he supposed, to the higher courts in the happy hunting grounds.

IRA DODGE.

An Otter on the Juniata.

THOMPSONTOWN, Juniata County, Pa.—Some time ago, since the big flood of 1889, I wrote you of the reported appearance of an otter in our vicinity. Only two or three persons had seen him, although a "slide" and unfamiliar tracks were in evidence. These signs were on the banks of a deep pool, formed at the mouth of a small creek by an immense drift deposited by the flood. That his existence was not a myth seems to be now proved by the fact that recently an otter was killed three miles from the spot up the river.

A young girl living near the river had her attention attracted by the unusual barking of the dog, and hurrying to the spot, the bottom of a lock of the abandoned Juniata Canal, she found him facing an animal unknown to her. By means of a pole she soon dispatched it, and it was afterward identified as a young otter. He had probably come into the old lock in search of food.

The occurrence of the otter in this locality is noted with much interest. He is such a stranger that we are not sure of his identity when he does drop in on us. Whether he came to the Juniata from the northern counties in the Susquehanna (we are twenty-five miles above the former's junction with the latter) or by the same waterway from the Chesapeake Bay, we should like to know. Which is the most likely? We never heard of the appearance of the animal far above us.

MARCH 6.

ONYJUTTA.

California Canvasbacks.

A. J. HOFFMAN, a native of Knight's Landing, Yolo County, one of the most noted bird hunters of that part of California and who has done nothing except hunt for 10 years, is at the American Exchange, accompanied by John

sioner. I am told he is delaying until he knows if a bill will be passed providing for submission of all special legislation to commissioners and that if it does he will appoint a lawyer. The mass of special legislation asked for has been overwhelming. We are not likely to have any license law.

Unless there come heavy rains the Sebago fishing is likely to be poor, as the lake is very low, but we are overhauling our tackle just the same, and making ready to be there when the apple trees bloom.

I hear that deer have wintered well. Up to three weeks ago it was the best winter for protection from crusting we've had for years. This is the month when most crusting is done, and doubtless there will be the usual amount.

C. D. S.

Game Sold in St. Paul.

ST. PAUL, Minn., Feb. 20.—All the restaurants and shops in town are selling all kinds of game now, which is out of season, from quail to deer, but the game warden does nothing.

P. V.

That Tennessee Gun Tax Suggestion.

HIGHGATE, Vt.—*Editor Forest and Stream:* I note in your issue of the 2d a letter from R. B. Morgan, better known as "Dick Morgan," the dog breeder. The gun tax question is evidently used by him as a pretense to get into your columns and give vent to personal malice against the writer. My only object in paying any attention to him or his letter is through a desire to prevent other gentlemen from being imposed upon by him as I have been.

To show the utter untruthfulness of the article I will notice one item. He says that I expressed a box of ammunition there weighing 22 lbs.; this is so worded as to give your readers to understand that it was all ammunition in that box. That box is and was a heavy, strong wooden case, and its contents when shipped there were my hunting coats, vests, pantaloons—two pair—hip rubber boots, leather hunting boots, a heavy double blanket, one thick quilt, two rifles, one target pistol, camp axe, some books and magazines, pistol, rifle and 12-gauge shot cartridges, together with a miscellaneous lot of other articles that a sportsman would be likely to take when going away on a four months' cruise when he expected to camp out a portion of the time. I bought while at Morgan's two bags of shot, one bag of 25 lbs. he took possession of soon after it arrived, and a portion of the other bag I gave away.

The balance of his letter in truthfulness is on the same level as his ammunition yarn.

W. P. LEACH.

We are advised by several correspondents who sent money for a gun advertised by Jordan Mott Fowler, of Jersey City, N. J., that the express company through whom the money was sent has failed to find the party. The postal authorities return letters sent to the address and stamp them "Fictitious."

Sea and River Fishing.

The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.

CROOKED LAKE, MICHIGAN.

DURING the past five summers, while the "other fellow" has doubtless been catching elsewhere such wonderful strings of fish, I have been contented to spend my vacations in northern Michigan, at Cincinnati Point, on the shores of Crooked Lake. Each season myself and family, with a congenial party of friends, have availed ourselves of the courtesy of the Cincinnati Club, and occupied their cottages during the month of July—this we could do without inconveniencing any of the regular club members, who, being mostly lay fivers subjects, do not arrive until August. The club has six cottages, club house, dining room, kitchen and boat house. We hire our own help, purchase all supplies, *pro rata* expenses, and thus obtain each year at a nominal cost an enjoyable outing that brings us in close touch with nature in her most beautiful forms, and sends us back to our city homes strong and light-hearted.

Naturally, therefore, some of us (myself among the number) have become enthusiastic lovers of the rod, and notwithstanding the quantities of fish that are legitimately taken from Crooked Lake each season (to say nothing of those speared through the ice in the winter), we are never obliged to buy fish, either for table use or for exhibition.

As regards quantity, the fish in Crooked Lake may be named in the following order: Perch, rock bass, pickerel and bass, the latter becoming scarcer each year. I first had my attention called to the subject of brook trout during my vacation in 1890, by seeing a catch of seven that had been made one morning by a guest of the hotel at Eden, a little settlement across the lake from Cincinnati Point. This at once aroused my ambition, but as the end of my vacation was near at hand and as I was not "rigged" for trout, I pigeon-holed the subject, resolving, should I return the following year, to be fully prepared to go regularly into the business.

Therefore, when I reached Crooked Lake in July, 1891, I was the owner of a complete trout outfit, and at once commenced pumping the natives as to the whereabouts of the "spotted warriors." Ah, those natives! upon many a "wild goose chase" did they send me, where I plunged through tangled woods, crawled under and over fallen trees, fell into rushing brooks, lost hooks and broke lines on overhanging branches or sunken logs, and wearied, tattered and mosquito-bitten, returned to camp with empty creel, blessing those self same natives from the very bottom of my heart. Trip after trip did I make, but always with the same result, until at last my friends had learned to pleasantly dub me "crank." However, "he laughs best who laughs last." I persevered, and one day (without the aid of a lantern) I found an honest man, from whom I got the long sought pointer. The very next morning, with that man as my guide, we pulled away from camp. The day was auspicious, with a stiff north-west wind and now and then a cloud obscuring the sun.

Our course lay down the south shore of the lake, and at a point about three miles from camp, we headed directly for a mass of tall reeds which grew in the lake some distance out from shore. We poled our boat through these reeds and then over a shallow bar into as typical a trout stream as I ever expect to see—its name is Minnehaha. To our right, in stately grandeur, stood a thick forest of pine, hemlock and birch, and on our left a swamp which bore the appearance of a field of grain, so completely was it concealed by the thick grasses that grew out of it. The stream proper varied in width from 50 to 70 ft.

Acting under my guide's advice I deferred making a cast until we "got further up beyond the bend," and as we silently glided up the smooth surface of this miniature river I contented myself with leaning over the stern of the boat and peering through the clear, transparent water into the many dark, mysterious caverns beneath us.

As we rounded an abrupt bend, the death-like silence which surrounded us was suddenly broken by a roaring like unto a small Falls of Niagara, caused by our having startled a flock of young ducks, which hurriedly splashed across our course and disappeared behind the tall swamp grass. Then a short distance ahead a lot of cranes decided to argue the point, and by their clatter frightened several blackbirds that rose from the thicket and flew away, screaming their disapproval as they passed over our heads.

Reaching the upper end of the bend we beached the head of our boat, leaving the stern afloat at right angles with the stream. My guide gathered up his pole and worm-can (he took no stock in flies) and took a position some 50 ft. down stream.

I decided to fish from the stern of the boat, and promptly made a cast toward a promising dark pool just above. "Now," I communed with myself, "must I do or die. Now to forever put a quietus on that peculiar smile which heretofore has always awaited me on my return to camp." Splash, and my heart bounded as a lusty trout sprang, glittering like a rainbow, full length out of the stream as if to taunt me, and the circles caused by his descending majesty were mingled with those made by my lure, so quickly did I place it over him. Pluck—and I held my breath; pluck again—and the reel commenced to play its part. In my eagerness I must have struck him very hard, for there was an angry fish and great sport for the next few minutes, but at last I had him in the boat, and as he lay in the net, panting, yet still defiant, as I gazed admiringly on his bright and beautiful colors, I shall never forget the mingled feelings of triumph and exultation that were mine. I had killed my first trout, and all past failures were for naught; and while that particular trout measured only 9 in. in length, yet when the contest was over I was trembling as if I had a chill. Do you not understand this, brother members of the guild? I have caught many trout since, but never again do I expect to have the "shakes" until I land one that will tip the beam to 5 lbs.

Luck was with me that morning, and before the dinner horn had blown we were approaching camp with seven "speckled darlings," the largest of which was 10½ in. long. The whole party were waiting for me on the dock as we landed, with the query, "What luck?" accompanied by that dreadful smile, I permitted them to have their

innings until I unloaded all the traps, after which I uncovered my catch, and then I had my revenge—every last one of them wanted to go trouting instanter.

CINCINNATI, O., Feb. 8.

EDWIN C. GIBBS.

ONEIDA LAKE AND ITS FISH SUPPLY.

SYRACUSE, N. Y.—Oneida Lake is situated in the county of Oswego, N. Y., and is bordered on the south by Onondaga and Madison counties. The lake covers 57,000 acres; it is about thirty miles in length and five miles in width.

Previous to 1890 it was the "happy hunting ground" of men fishing for the market; in many cases they made this their only occupation; while in other cases, owners of cultivated and productive farms having handsomely constructed and well furnished houses clear of incumbrance, with money to loan, had no scruples against engaging in the illegal practice of taking fish from this body of water during the entire year.

That the lake under such adverse circumstances should not have been depleted of all fish within its borders, is one of the unsolved problems of nature.

Some few years since, a gentleman residing in a Western State, being interested in the subject, and of an inquiring mind, caught from a river in that section a variety of fish from one to two inches in length, and to ascertain the food necessary for these "babies," placed the food found in them under a powerful microscope, the result of which was that almost without exception there was found a like substance, too indefinite to be seen with the naked

THE "NESSMUK" MEMORIAL BRONZE.

The bronze tablet designed by Mr. Geo. T. Brewster, for the "Nessmuk" Memorial.

eye. The particular nourishment for fish just emerging from the egg is essential to their life, and deprived of it they will as surely die as the colt, the puppy, the kitten or the baby will cease to live, deprived of the mother's milk.

That Oneida Lake, with its numerous and shallow bays filled with plants and vegetable substance, contains in great quantity this essential food for young fish may be the solution of its wonderful productiveness.

There surely must be some such cause or it could not maintain year after year the immense supply of fish that has annually been taken from it by every design of net, except the purse net, and it is one of the wonders of the nineteenth century that this marauder of public property, in the hands of unscrupulous men, has not accomplished its destructive work even in this inland water.

It has passed beyond the question of probability and become a conclusion that the wholesale netting of fish from this lake and other waters must have an end, and that fish must be permitted to reach the age of reproduction, at least, or they will cease to exist.

Within the last two years, however, the State of New York, assisted at times by local protective associations, has done such effective work that netting therein has materially been prevented, and as a consequence fish have increased in size and quantity.

Should the State establish at this lake a hatching house and make it a central distributing place, wall-eyed pike particularly, and other fish could be furnished for every suitable water in New York, and at the same time place this lake under direct State protection.

With the steady increase of population of Syracuse, now reaching its one hundred thousand, and the demand for summer resorts and places of recreation, there can be none found more attractive within so short a distance from Syracuse as Oneida Lake, reached as it may be by the construction of about five miles of rail of easy grade, connecting with the R. W. O. R. R. at Clay Station, thereby opening to the public a quick and delightful ride to South Bay on the south shore of this lake, that would be largely patronized, and also be available to the citizens

of Syracuse, who would undoubtedly build similar summer cottages to those so attractive on the St. Lawrence River.

Here, then, is a body of water in the center of this State, easily approached by rail and otherwise, that is commended to the consideration of public-spirited persons whose disinterested purpose is to furnish for the people cheap fish food.

J. N. B.

MY CHANCE ACQUAINTANCE.—II.

THE old man pulled in his line, hauled up the anchor, spat on his hands, laid hold of the oars, started the boat and rowed in silence for several minutes. Then he asked, "See that old tumble-down mill over yonder? Well, that was the boss mill here onct, owned by a man by the name of Blank. Used to live in the Rapids. Ever know him?"

"Not by that name," I replied.

"Well, that warn't his name nuther; names don't count anyhow. But I tell you he was a cute one. Jest the kind of a feller for a lumberman in a new country. Didn't care for anything nor anybody. Lumber anywhere where there was a tree fit, specially if it could be hauled out arter it were felled. Oh, but he was a rusher, chuck full of business, jest made it hum. Lumber on Uncle Sam's land or anybody's, cared no more for a blazed line than you do for a dead bait. Stamp any unmarked log he came across, and if he dropped on to some particular good one, all stamped on the end why he'd cut off the mark and stamp 'em right. He were a rip roarer and a tough one. As for law, he'd a complete outfit in the law business. Had a pile of books and a right to swear besides his constitutional one. Got his head sawyer elected justice of the peace, hisself constable, and owned body and soul half the men entitled to sit on juries. When he got into a dispute about a line, which he often did, he'd fetch out his big brass instruments and make the fellers own up he were right whether they believed it or not. He stole a nice fat two-year-old from me onct. I knowed it well enough, but I darsent do anything about it, for the only justice in the township was his head sawyer and I could a proved he had some of the beef."

"Ever do anything about it?"

"Yes, I did. Jest kept still. Never let on that I'd lost a critter. Two years arter he had a drove of the finest hogs I ever seed. Well, one night two of 'em strayed off into the woods."

"Where did they fetch up?"

"Oh, one of 'em I sold to a logging camp about ten mile up the river. The other I kept in a kind of a cockloft overhead in my cabin for a month, when he died of heart failure—touched it with my hunting knife."

"Ever say anything to you about them?"

"Nary a word, but he s'picioned me, for I larnt arterward that he kept a watch on my place night and day for two weeks. But, say, we oughter git some bass here."

GRAND RAPIDS, MICH.

A. W.

TROLLING AND BAIT-CASTING.

Editor Forest and Stream:

In your issue of Feb. 23, "A Bait-Caster" counsels me to try bait-casting as a more attractive and enjoyable manner of taking the black bass than by trolling, in which view I can concur, although I should not place the amount of pleasure in the capture of a bass by the former style, as opposed to the latter, at so great a ratio as twenty to one, for the greater part of the enjoyment is in meeting the desperate leaps and rushes of the fish, albeit much of the charm lies in the manner by which the game is induced to take the lure.

Although, contrary to his supposition, I have taken a number of bass by bait-casting, and have attained some degree of proficiency in it, nevertheless I rarely practice it in the lake of which I wrote because I have found it rather ineffectual, at least when practiced from a boat. The reasons for this I shall endeavor to explain. In the lake in question, the growth of reeds and other aquatic vegetation is very sparse, as the entire lake has a rocky bottom, and so the bass remain in deeper water than they otherwise would, therefore, while bait-casting from a boat toward the shore has proved rather ineffective, I am inclined to believe that casting from off shore, as he advocates, would prove more successful since I have met with much success by using a fly in that manner.

While I much prefer to take fish and game in the most sportsmanlike way, and the creeling of a trout or bass by a fly affords me thrice the satisfaction and pleasure of the capture of one by bait, still, when it is impracticable or ineffective, I consider it no breach of the orthodox angling creed to resort to somewhat less scientific means, and I trust that the view which "A Bait-Caster" holds as to what constitutes a true sportsman will not dissent from this. I intend, however, to follow his friendly advice at the next opportunity and, having given it a thorough trial, shall report the result.

EURUS.

The British Anglers' Society.

A SUBJECT of much present interest to British anglers is the wholesale destruction of immature sea fishes by the use of trawl nets in shallow waters. A society, of which Sir Edward Birkbeck is president, was founded in London last month, and will have branches in all parts of the United Kingdom. This association, called the British Sea-Anglers' Society, will undertake to foster the favorite amusement of its members, and at the same time advance the public interest by collecting reliable information as to the effects of injurious fishery methods, and by urging legislation for the protection of young fish.

According to *Nature*, the chairman of the preliminary meeting for organization, Mr. C. H. Cook, opened the proceedings with the following remarks:

"I hope that the anglers will take up this cause of immature sea fish. Already a movement, to which we may give a strong impetus, is rolling forward in this direction, but it is checked by the trawlers' interests. The harm done by these men is almost incalculable. I have seen their nets within a stone's throw of the shore in less than three fathoms of water, where they scoop up and destroy the infant fish by the million. It may be that the evidence tendered by trustworthy members of the Sea-Anglers' Society may be the means of putting an end to inshore trawling. I hope it will. It often happens that the information given to the Fishery Boards is wilfully misleading, owing to it being given by fishermen who fear they will lose their living."

ANGLING NOTES.

Suckers.

ACCORDING to one of the daily papers, a boy returning from school informed his father that the teacher said that sharks were the first of the fishes to be created. The father replied if that was so suckers must have been a close second. It is not likely that he referred to the suckers of ichthyological works, which many anglers think it was time lost to create at all, if they think anything about them. But suckers are not to be despised and derided as useless except to cumber the water. Suckers of various kinds furnish a not unimportant part of the fish food supply; they are an excellent bait for other fish, for they are tough and live long on the hook, and they associate with the brook trout and indicate to the old bait-fishermen when to go fishing—for "when suckers run trout bite."

I made my first close acquaintance with the common brook sucker by means of a wire snare when I was a boy, and not long after I cultivated him with a spear, and my chief interest in the fish is that it is the first and last that I ever snared. I was "taught on suckers" and I finished with suckers. I recounted my success one day at the table, and my father asked, "How did you say you caught them?" "With a snare." "With a snare!! my son. I am ashamed of you!" It does not read now at all as it sounded then, for, although that ended the conversation, the way in which my father pronounced "snare" and "ashamed" made me feel that I had committed the unpardonable sin, and that a pony that had been promised me would be late in finding its way to our stable. I regret that I have never eaten a sucker, but there are plenty of people who have and who consider them excellent eating in the spring when the water is cold, and it is in the spring that they are taken, speared or netted, when they run up the brooks to spawn. I was led to make a note about suckers because of the complaints that in many streams where they were once abundant the suckers are becoming extinct, and the people who complain and deplore the scarcity of suckers wonder why it is so. The reason is not far to seek, for in these very streams where they are now scarce they have been speared—slaughtered—for years on their way to spawn. As the fish is not cultivated artificially and the natural spawning has been checked, the spearers are now reaping the just reward of their own folly.

Trout and Suckers Running.

People who live in the country where there are trout streams may hear of large trout being taken early in the season before they will rise to a fly, and these trout are quite apt to be larger than any that may be taken subsequently the same season. These big trout are taken when "the suckers are running." It is only a coincidence that trout and suckers "run" at the same time, as the former run up stream from the deep pools where they have spent the winter to find swift water, which quickens their actions and causes them to throw off the sluggishness induced by Jack Frost, and the latter run up the brooks to spawn. This is the bait-fisherman's harvest time, and this is the mode of fishing—if so it can be called. Finding a pool with sluggish current between rapids the fisherman baits his hook with a "gob" of wriggling earth worms, and weighting it with a sinker that will keep it at the bottom he casts it into the pool and sits himself down to wait. There is sufficient current in the pool to straighten out the line below the sinker and the worms move gently from side to side, as the heavy sinker prevents them from being carried out of the pool. Both trout and suckers must make some effort to get up the rapid below, and finding the pool they naturally rest in it, and the worms may be gathered in with little exertion, and when the fisherman feels a bite he gives the fish plenty of time, for bait fish are very deliberate at this season. Finally he yanks, and he may have a trout or he may have a sucker, and to those who fish in this manner, I think it makes little difference which it proves to be. A sucker is not the stupid fish that he looks to be, and they will do one thing I never knew another fish to do. When the brooks are low and the suckers are congregated in the pools, if they are hurried by the boys, and men too have done it, they will attempt to escape down stream. A pool above a rapid is always selected for this, and when the sucker driven from his retreat in deep water, comes to the rapid with not enough water for him to swim in, he turns broad-side to the current which rolls him over and over until he finds deep water below, provided he escapes the boot of the man or boy standing in the shallow water for the purpose of kicking him out on to the shore; for be it understood the suckers are driven on to the rapids with malice aforethought. Caught only, or chiefly, at spawning time, and caught with every possible device in shallow water, where they fall an easy prey to their captors, it is small wonder that suckers are becoming scarce in some sections of the country.

Trout Frozen in the Ice.

Some weeks ago I mentioned in these notes that during the cold weather which prevailed in December and January many of the smaller brooks in northern New York had frozen solid to the bottom, and this state of affairs did not promise well for the spawning beds of trout in those brooks. I certainly did not anticipate that the trout themselves would suffer from the cold, for as a rule they take themselves down stream into deep water, but a man in Warren county had occasion to cut a block of ice from a stream near his house, and to his surprise he found several trout frozen in the ice. The ice was cut from a pool where it was frozen to the bottom. It is clear that the ice first formed above and below the pool, cutting off the retreat of the fish and imprisoning them in the pool, where finally they were frozen in the ice. Since I have been writing, ice has passed the house, drawn from the Hudson River, which is more than 30in. thick, but even with this evidence of the severity of the frost I do not think that trout being frozen in a stream 50 miles further north is so remarkable, all things considered, as that a 4lb. small-mouth black bass should have been frozen in under the ice on the shore of Lake Champlain early in the winter. The fish was found by a young friend of mine, and had it not been found it would have frozen solidly in the ice, as it was imprisoned between the shore and a sand ridge thrown up by the wind and waves a few feet out from the shore, and half an inch of ice had formed

over it. As it was, the fish had been obliged to turn partly on its side to escape being nipped.

An Enthusiast.

An old gentleman once asked me to advise him about buying a fish rod and he called upon me to see some that I had. I showed him one after another until I brought out a total number that I have never dared mention since, for he lectured me in my own house upon the extravagance of owning so many rods. I do not know what he would have thought had he been at the dinner of the Fly Fishers' Club in London, where Dr. Gowland, a member, said that he owned 267 rods, with reels, lines, flies and everything to match. In all probability he would have said nothing, for he would have been stricken dumb.

A. N. CHENEY.

LAKE CHAMPLAIN BASS.

It may be of interest to the readers of the FOREST AND STREAM to hear of a few changes which have been made in the fish laws of Vermont, especially those relating to black bass, wall-eyed pike, etc.

The last Legislature enacted a law making it legitimate to fish in the waters of Lake Champlain with hook and line any time through the year (close season for bass to June 15). Perhaps some of you may question the policy of this law. Such we would refer to Sec. 27 of the fish and game laws of Vermont, which is as follows:

The use of pound-nets, trap-nets, seines, gill-nets, set-nets, fykes, set-lines, fishing otters or trawls in the waters of this State is hereby prohibited; and any person who shall so use for fishing any such pound-net, trap-net, seine, gill-net, set-net, fyke, set line, fishing otter or trawl shall be punished by a fine of one hundred dollars.

Does this not, in a measure, recompense for whatever harm might come from the privilege given us?

Furthermore, another reason for justifying such a law is the great increase of bass, wall-eyed pike, etc., during the past few years. Last year the fishing in the Great Back Bay was far ahead of that of several preceding years. Gentlemen who have annually visited our beautiful lake will testify as to the truth of this statement.

Lake Champlain is the natural home of the small-mouth black bass; they have been here from time immemorial, and moreover they are here to stay. If they could withstand the strain made upon them in former seasons by pound-nets, set nets, etc., can they not grow and increase when such practices are abolished, and only hook and line fishing allowed?

Too little is known of Lake Champlain. Brother anglers (I call you brother anglers, for there surely is a bond, indescribable but nevertheless a bond, which binds one angler to another), do you like to catch black bass? Do you love to look upon beautiful scenery, a lake dotted with many picturesque islands, its shores indented with charming little bays, its waters clear and healthy? Do you seek pleasure and rest? Then go to Vermont; go to Lake Champlain. You will, perhaps be disappointed, but in this way only, by finding it better than you expected.

A gentleman once said: "I have traveled all over Europe; I saw a great many beautiful places, but Lake Champlain in its unblemished, natural beauty, equals, if not surpasses, each one of them."

H. L. SAMSON.

SEA FISHING AT CADIZ.

CADIZ, Spain, Feb. 17.—Along the tremendous sea wall that surrounds beautiful Cadiz there were many fishermen yesterday, and it was very interesting to examine the equipment of these patient men, who were constantly busy baiting and throwing the line, with, as far as one could see, very poor success.

The rods used were from 18 to 25ft. long, generally spliced, very flexible and with a long tip. The lines were from 50 to 75ft. long, strung with cork beads at short intervals, heavier toward the pole, running finer and terminating in a gut leader bearing the float and two hooks. The rod was held under the left arm, and in making the cast the hook was held in the right hand, the flexible rod given a dextrous wave, communicating the motion to the slack line, which started seaward. When the tension reached the hook it was let go and gracefully dropped a good distance out upon the water. In recovering the hook the rod was swung under the line vigorously and the latter rattled over the rod until the float was stopped by the man's hand, and the hooks were caught with a great deal of skill. Most of these men were a guard on the right hand, and with apparent good reason. The hooks were small—about No. 7 sproat.

The bait was dough, or, when the water was clear, shrimp or fish on one hook and dough on the other. After the cast, a ball of dough mixed with sand was thrown out with unerring aim near the float. In the rough surf on the Atlantic side tough fish bait was usually employed.

The fish, if small, were drawn up hand over hand; if large a purse net bound to a wooden rim with thongs of calfskin, was let down by a friend and the fish played into it.

Two kinds of larger fish were taken, a white fish with large mouth and black blotches along the back, called the "baile," and a fish somewhat the shape of a salmon, of reddish color, called the "lisa." In clear water they could be seen to rise to the ground bait and to take the hook.

When a good bite was missed the circle of sympathetic friends leaning against the parapet enjoying the warm sun would characterize it in the expressive language of the south as "an atrocity" or "a barbarity," and the fisherman would patiently try again.

W. H.

Some Strange Captures.

A CORRESPONDENT writes about catching mussels on a line. On one occasion, while worm-fishing for trout, I caught two clams in the same brook. They took the bait, but I don't think they went out of their way to seize it.

I also caught a lizard in a New Hampshire pond while fishing for trout, and I believe one of my companions did the same, but am not sure, as it was long ago. Is not this unusual?

KELPIE.

WITH ROD AND CREEL.—The days approach when the sportsman will go forth with rod and creel. Where will he go? If wise, to the great trout and bass country along or tributary to the Grand Trunk Railway of Canada. Write for particulars to N. J. POWER, General Passenger Agent, Montreal, Canada.—*Adv.*

Fishculture.

U. S. Fish Commission.

THE report of U. S. Fish Commissioner, Hon. M. McDonald, for the year, July 1, 1888, to June 30, 1889, is just published. Its contents are: (1) Report of the Commissioner, in which is included a record of the fishcultural operations of the Commission.

(2) Report on the Inquiry respecting Food Fishes and the Fishing Grounds. By Richard Rathbun.

(3) Report on the Division of Fisheries. By J. W. Collins. The appendices to the report contain an interesting account of the Fisheries of the Pacific Coast, including Alaska; Distribution of Fish and Eggs; Investigations of the Steamer Albatross; Operations at Wood's Holl, Mass.; Notices of Certain Parasites of Fishes, by Edwin Linton; A Review of the Fresh Water Sunfishes, by C. H. Bollman; A Review of the Eels of North America and Europe, by Drs. Jordan and Davis; The Chemical Composition and Nutritive Values of Food Fishes and Aquatic Invertebrates, by W. O. Atwater; and Report upon the Participation of the U. S. Fish Commission in the exposition held at Cincinnati, O., in 1888.

This report covers 902 pages. Eleven thousand copies were printed, 3,000 for the use of the Senate, 6,000 for the House and 2,000 for the Commissioner. The papers for the most part have appeared in pamphlet form, as separates extracted from the Commissioner's report, and have been noticed in FOREST AND STREAM.

FIXTURES.

DOG SHOWS.

March 14 to 17.—Washington, D. C. F. S. Webster, Sec'y.
March 21 to 24.—City of the Straits Kennel Club, at Detroit, Mich. Guy D. Welton, Sec'y.
March 22 to 25.—Elmira, N. Y. C. A. Bowman, Sec'y.
March 28 to 31.—Illinois Kennel Club, first show, at Indianapolis, Ind. Chas. K. Farmer, Sec'y.
April 4 to 7.—New England Kennel Club, at Boston, Mass. J. W. Newman, Sec'y.
April 11 to 14.—Continental Kennel Club, at Denver, Col.
April 19 to 22.—Fifth Annual Dog Show, at Los Angeles, Cal. C. A. Sumner, Sec'y.
May 5 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.
June 13 to 17.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.
Sept. 5 to 8.—Hamilton Kennel Club. A. D. Stewart, Sec'y.
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y.

FIELD TRIALS.

Nov. 7.—International Field Trials. W. B. Wells, Sec'y, Chatham, Ont.
Nov. 20.—Eastern Field Trial Club's Trials, at High Point, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

Don't forget that Boston entries close March 18 with the Bench Show Committee, 125 Tremont street, Boston.

Indianapolis entries close March 21, with Chas. K. Farmer, 25 Ruckle street, Indianapolis, Ind.

BALTIMORE DOG SHOW.

THE third show held by the Maryland Kennel Club must be considered quite as successful as the first held in 1890, which will always be remembered in a "milky" way. The show held last week in the Cyclorama building was remarkable for quality in most of the important breeds, and the people of Baltimore showed a just appreciation of this fact by crowding into the building afternoons and evenings. Especially on Wednesday evening was the crowd a good one, taxing the round building to its fullest extent in galleries and main floor. The tickets gave out at the door and those in the ticket collector's box had to do double duty. There is little doubt that the club came out even, if not ahead. This means a good deal in the Monumental City, for a serious loss this year meant no more shows under the present management, as they experienced the "gait" unpleasantly in 1891. The show committee, consisting of Messrs. W. S. and C. D. Diefenderfer, W. C. Farber, J. E. Thompson, W. F. Riggs and T. J. Sheubrooks, worked hard every day and were continually on hand to lend every assistance and courtesy in their power. In this they were ably seconded by Mr. John Reed, the superintendent, who kept the building in good order and the dogs well attended to. Two rings were furnished, and judging was all completed the first day, the record this year. The judges were Messrs. James Mortimer, G. Muss-Arnolt, C. D. Cagle, James Watson and H. W. Lacy. Among those not mentioned last week as present and who came after the first day were Mr. J. H. Winslow and Col. Purcell, F. R. C. Clarke, W. Montgomery, Donald Munro, Frank Gillard, German Hopkins, etc.

The class of people who attended the show was excellent and it is very evident that the society people of Baltimore are following the lead of the other cities in going to the dogs. The dailies did well by the show and that is one secret of success. The catalogue had a good many typographical errors, but on the whole was well arranged, though there were far too many double numbers. With no novice and puppy entries the club may be said to have fairly held its own, and with a better classification and increased premium list will, no doubt, do better next year. The arrangement of awards on a large frame by the door was good, breeds and classes running in sequence, and not as usually seen, one class here and another perhaps three feet away of the same breed. It is very simple and should be adopted by every show. Prizes were paid promptly on Friday afternoon. A feature of the show was the comfortable room provided for exhibitors only, and judging by its crowded state at times those present fully appreciated it. During the show Mr. Reed, who is a favorite in Baltimore, was presented with a handsome diamond pin by the bench show committee in recognition of his good conduct of the show. Little more need be said and a review of the classes is in order. The weather throughout was good during the daytime, and in this respect the club had an advantage over New York and Philadelphia. Professor Hampton delighted the folks with his dog circus, the cat fight being the principal attraction.

MASTIFFS (James Mortimer, Judge).—With the exception of two or three of the winners there was little in this breed to commend in the way of quality. The principal winners have been out for the past three weeks. Miss Caution was the only challenge representative, and she was looking well, "Uncle Dick" evidently taking good care of her during her travels. Merlin, looking a little thinner, added another blue ribbon to his bunch, and will soon, if he is not already, be qualified for the higher walks of a mastiff's show life. A previous winner at past shows in Baltimore, The Moor, came second. He has a fairly well shaped head. His feet might be better, rather flat, but he beats Brother, third, and second at Philadelphia, in size, depth of body, bone and head. Ben C. is pinched in muzzle and ears are thrown back. He is a dog of fair bone and substance. The well known Ethel had little difficulty in scoring over Linkwood, Lady Margaret, whose dish face, light eyes and muzzle, faulty carriage of

ears and small bone scarcely entitled her to so much recognition; she took second. There was no kennel prize awarded, and Merlin won the special for best American bred.

ST. BERNARDS (*H. W. Lacy, Judge*).—The majority of the best dogs we have of the breed were present and proved a strong drawing card to the public. Challenge dogs brought out Sir Bedivere and Kingston Regent, and good dog as the latter undoubtedly is, there was no question about his taking second place to his more elegantly formed kennel mate. Sir Bedivere has lost none of his New York bloom, and was put down in good shape, probably as well as we may hope to see him at this time of year. The beautiful Lady Livingston stepped into the ring alone for the blue ribbon in the corresponding class for her sex. The open dog class brought out an excellent assortment. Out of eleven entered, Eboracum and Ben Hur were the only absentees. The New York winner, Marvel, was quickly put at the head of the line; his grand head, markings, excellent bone, depth of body and sturdy build, quite counterbalancing the slight defects he has in one forefoot and suspicion of straightness behind, he might to advantage be longer in body and flatter in coat, but his intense quality and noble expression leave nothing to be desired. Then of the four other active competitors, the rest, with exception of Prince Lomond, c., having retired, I thought Altoner, with his well-formed head, beautiful markings and quality, good bone, etc., well up for second place, while Grand Master, formerly Kamehameha I., and third at New York, I had little difficulty in placing third, his good bone, well-formed head, nice coat, body and good legs, and expression, though he lacks shadings, fully suffice to beat either Comte or Roland, Jr. Between these two there was more difficulty; neither are good behind, but Comte beats the other in expression, shape of head and color. For Roland, Jr., to jump from second at New York to vhc. here is an upset, I know, but really there is nothing about the dog in markings, build or quality to offset his washy body color and faulty hindlegs and muzzle. When Grand Master, as Kamehameha, was shown at Pawtucket in December last, I reported that he should have beaten the two placed over him, Othos and Roland, Jr.; and as between Altoner and Roland, Jr., they are, in my opinion, not in the same class, notwithstanding Altoner is not furnished in body yet. Prince Lomond, c., a son of old Ben Lomond, while he is well off for bone, is short in back, plain, bitchy head and is straight behind. This brings us to the bitch class, where three good ones came forward. In all ten were entered. Princess Florence was to compete for specials only; she was looking well, however, and ready for anything. The Swiss Mountain Kennels' three were absent, owing, we regret to say, to a serious illness in Mrs. Smyth's family, and Countess Madge and Ellen Terry were also down to compete for specials only. The Duchess Kennels' Hepsy I thought won handily, her better-shaped head, bone, body, handsome markings and beautiful condition placing her ahead of a new one, Maryland Kennels' Mascot Bernie, who was shown thin, but her good depth of muzzle, better skull, deeper body, better forelegs, bone and carriage of tail sufficed to score well over Miss Anna, who was not herself at all, and who only beats the other in stop and a trifle in quality and expression.

Then came the smooths with Scottish Leader and Melrose to the fore. While I think Melrose has put on a little flesh still he cannot compare with his lusty competitor in size, chest, ribs, loin, quarters and thighs; in true shape of head, expression, markings, trueness of forelegs, feet and hindlegs, he is superior to Leader, and it is simply a toss up between them, when condition and more or less flesh will play an important part. For quality and intense St. Bernard type I prefer Melrose. Empress of Contoocook and Miss Alton met again in the corresponding division, and while in cleanness of throat, chest, bone and color I prefer the latter, there is no getting away from Empress's depth of muzzle, broader skull, deeper body and better coat. That capital son of Alton, Melrose King, beautiful in formation of head, expression, markings, good front and active movement, though he is a bit stily behind, was so much superior to Altus that it seemed a farce to give the latter second, though he was a smooth St. Bernard and a son of Hector and Blodwin, that he had to rest content with saving his entry fee and a little to boot; he is plain in head, short and chunky in body, light bone and washy color. In bitches (3), one absent, Mrs. Smyth's Leitha, yet another of the wonderful Alton—Judith litter came forward and her competitor was the well known Bellegarde. Melrose Belle is very puppyish in her action and most of the time almost ran on her belly, but her superior expression, type of head, skull and depth of muzzle, cleaner throat, deeper and wider chest, better length of body and stronger quarters and hindlegs, all placed her well ahead of Bellegarde, beautiful and interesting bitch as the latter is.

There was no denying the superiority and evenness of quality, substance and type of the New York St. Bernard Kennels' four—Sir Bedivere, Princess Florence, Marvel and Kingston Regent—for the kennel prize for roughs, while Mr. Moore took the prize for smooths without competition. The medal for best American bred smooth dog went to Altus, but that for best bitch gave Empress of Contoocook somewhat of a scare, though, self-contained matron that she is, it takes a good deal to put her out. Melrose Belle came very nearly upsetting her Majesty, for she is better in skull, neck, forelegs, bone, breadth of chest, length of body and carriage of tail, but in coat, depth of chest, and muzzle, type of head and expression, the older bitch is superior, but had the younger bitch shown herself as she did subsequently, the decision that placed Empress first might have been altered. Medal for best American bred rough dog was taken by Altoner, but there was no competition for the companion medal for the other sex.

BLOODHOUNDS (*Mr. Mortimer, Judge*).—There was only one entry, Belhus, Jr., and he showed the Baltimoreans what a good one is like.

NEWFOUNDLANDS (*H. W. Lacy, Judge*).—There were three entries, and much better than usually seen out. First went to a well built dog, Surpass, who won at Brooklyn and Nash. He might be better in ear, and a good brushing would do him good. His coat is good, and little fault can be found with his legs, while his head is of fairly good shape. Therein he beats New York Lass, who only excelled him in ear and flatness of coat. Prince George, the best in the lot, had been properly shown, was put third, but really should have been turned down. It is not right to show such dogs with big bare patches of skin covered with scaly matter and some scabs.

RUSSIAN WOLFHOUNDS (*H. W. Lacy, Judge*).—The entry of these beautiful hounds was almost identical with that of New York and made a fine showing. There being no challenge class Argoss had to compete in the open, and this brought her and Groubian together. Argoss won, beating the other in coat, length and formation of head, forelegs, feet and loin, better arch and hocks; they are both fine animals and Argoss was shown in the pink of condition. Osslad, reserve, loses to both in head, shoulders and hindparts, while Cossack, a pup, is faulty in head, fair front, not depth of chest enough and not good behind. In bitches the strongly-made Zerry repeated her New York victory over Vinga, whom she excels in length and strength of head, bone, loin and quarters. Flodeyka, reserve, loses to both in head, hindlegs, condition and coat. Zmeika is a fairly well-formed bitch, but loses to the others in head, condition and hocks, which are too straight and weak, while Princess Irma, vhc., is too narrow throughout, but of exquisite quality and fine head. Svodka competed for kennel only and this prize went to Mr. Huntington's lot, which with Argoss, Osslad, Zerry and Princess Irma made, with the exception

of the latter, a more even and better built team of one type.

GREAT DANES (*Special Report by the Judge*).—Melac had a walkover, the always-entered, never-appearing Imperator as usual imperatively absent; this entering and never showing is getting almost ridiculous. Melac, little the worse for his three weeks' show confinement, except a little overheating on neck behind the ears, deserved his ribbon, as he is a good dog, although with several faults, and I wish to express myself about his quality and estimation as a great Dane a little more than the handing of the ribbon to Wenzel permits. Melac had never any serious competition, the defeat by Imperator excepted, and being shown all over the country and as a matter of course, in default of any better specimens, justly carried off premier honors everywhere; but through this success he is the dangerous agency of producing in the minds of many critics and judges who never saw any better ones before, a Melac type for the great Danes and thereby doing immense harm to the breed. It is a matter of course at present to consider anything correct which resembles his type, and it is his type that I positively deny as being the correct one and to warn against this dangerous precedent. Any fairish dog should beat him, had he only correct type, as Melac's overestimation in regard to type in this country calls urgently for a halt. I cannot comprehend how his certainly almost faultless body and limbs overbalances his thick neck and wooden, expressionless head, one-third too large; and I have to turn a criticism of one of our best and by myself most esteemed judges around; that any tyro can see the beautiful body and limbs of the dog, but it wants somebody who knows a breed to see the correct type in an animal, and to put Melac's type, good dog as he is individually, and as a sire, as the correct one before the public, is on a par with showing a 2:40 trotter at county fairs as the equal of a Nancy Hanks in speed. We will get some first-class specimens, with correct type over here in time, when you will hear a drop in critical and judicial quarters, and I hope this will occur soon, so as to avoid more danger of misconception as to type. Wenzel, first here as in New York, also no first-class dog, showed still a bit lanky in body, the only part where Melac is superior to him, principally by his mature development of ribs and chest, and, of course, would win if body was the only consideration. Theseus, second, a son of Melac's, I put over Hepbern Hero, the New York second, on account of his general soundness, and as he is, although rather short in front of his eyes, quite typical, he would have run Wenzel closer had he not something wrong about his tail, which has evidently been doctored, and never having seen the dog in other form myself, I could not give way to a suspicion; he is a good proportioned dog, good mover, and his true front and good neck principally beat Hepbern Hero. Hero is not, what I like in all big breeds, straight in front, although of better type of head than Theseus, but he is even more cheeky than he and very lumpy in shoulders; pasterns turned out, could be leaner in neck. Major McKinley, res., the winner at Philadelphia last week, has, outside of size and straight front, not much to recommend him, although size is apparently the principal requisite necessary with many in this country; he has his sire's peculiar wooden expression, has even more loose throat, and cannot touch him in body and quarters, where he is very faulty and weak; I certainly do not want to be understood to resent size, by no means, but I want a great Dane first, before all, then soundness, and, as a third consideration, size, which latter is all McKinley can lay claim to. The vhc. dog, Struth's Tiger, is a rich brindle son of Pedro's; he is awfully round and wide in skull, just like the head of that new-fangled breed, the terriers from Boston; has good bone, but is too wide in front and stily behind. Open bitches, first, Charmion, a bitch I gave only vhc. at New York, but whatever reasons I then had, either the small and crowded ring and slippery flooring at Madison Square, or whatever it was, I could not put myself in the self-admiration society to hold stubbornly to my former decision, which may have been at the time perfectly justified. I thought her better here and handed her the ribbon. Juno, second, same at New York, is an all round fair bitch; faults she has, certainly, but I will, as George Raper says very truly, drown the first absolute perfect specimen of any breed, as it never will exist in my time. Hepbern Vera, third, as in New York, will very likely get first under many judges here, as she is of immense size, but her very faulty quarters will beat her under me, and in addition she showed herself to the greatest disadvantage in the ring, laying her ears so as to make her grand head like a hound's, showed hollow-backed and should be more valuable at home through eventual produce, rightly mated. Princess of Thule, vhc., is a good strong brood bitch, badly cropped, as is also the winner in this class, too close to the head, very throaty and sway-backed. Minerva, the reserve, got fourth in New York, same as here, but if I could help it she would not have got that, as in the better ring and uncrowded class I could properly notice her execrable front, legs and movement, but her general good outlines and type helped her through.

ENGLISH FOXHOUNDS (*Special Report by the Judge*).—Four entered only; all present and were excellent as a whole and a pity that more of their quality are not shown. First, Specimen, as he was at Philadelphia and New York, is a splendid hound, a wee bit overdone in head perhaps, and sometimes roaches his back like a pointer. Second, Daffodil, first in her class at New York. Third, Poetess, second to Daffodil at New York, and Pensioner, vhc., same as New York; he is a good hound, a little too high on his runners and something wrong in his head and neck.

American hounds had only two very moderate specimens, did not withhold first because Brutus, the winner, was an old but not untypical animal, and although not much at that I did not feel quite justified in doing it. Pilot, second, was even more moderate, and I was in fact too liberal to them.

BASSET HOUNDS (*Special Report by the Judge*).—Bassetts had four entries of which three filled, the winner showed up in Ring, a pedigreeless unknown dog, but is so far, although very far from being perfect, the most characteristic specimen lately seen on the bench; he has that indescribable specific profile, is too angular from the front; his worst part is his too high set ears, which also lack the proper fold, severe fault, of course, but his strong bone and character should almost outweigh any other defect, if no better animal in this respect is there, and from this point he just smothered his two competitors. Second being a nice tricolored large dachshund bitch in appearance, and third, a raw, undeveloped puppy, splendidly hung and turned ears, otherwise coarse, and neither a basset-griffon nor a poil ras, besides being of a mottled washed out pale lemon and white color and a very plainish, uncharacteristic head; he got all he deserved, although many critics saw through his owner's eyes, who only saw the mile-long pedigree, where I could not follow, except when breeding.

No dachshunds appeared.

G. MUSS-ARNOLT.

GREYHOUNDS (*H. W. Lacy, Judge*).—In the challenge class, with Gem of the Season entered but absent, owing to an injured foot, the struggle lay between Lord Neverstill and Bestwood Daisy. Nicely formed bitch as the latter is, taking into consideration strength and greyhound qualities, I put Neverstill first. He has a much better head and eye, quite as good neck, better shoulders and ribs, loses in pasterns to the bitch, but is far better behind in quarters, second thighs and bend of stifle, and was in harder condition, Daisy being very soft; she is small and light throughout, but very pretty. I am quite prepared to see the decision reversed, and should not think the worse of either dog for it. Henmore King repeated his Philadelphia win, beating his kennel mate, Watcher, in head, skull especially, ribs, bone, pasterns and in hindlegs, where Watcher is not let down enough, but the latter's coat was in better condition. Fidel is a runt. Honor

Bright was absent. In bitches three came forward, and Wild Rose won somewhat easily, beating Chips, second, in front, feet and pasterns especially, Chips being too open in toes; the winner also is better in head, longer and more powerful jaw. Marguerite, vhc., is small and falls away too much behind, and is far too fine in muzzle. Manatany Kennels had no competition for the kennel prize.

POINTERS (*Mr. Tallman, Judge*).—There was a repetition of New York here in a smaller way. In the challenge heavy-weight classes Robert le Diable and Woolton Game were each alone; Robert keeps his age well and was in pretty good condition. In the corresponding light-weight classes Duke of Hessen, not in tip-top shape himself, looking light in body, proved his superiority over Inspiration, whose condition should have debarrd him from entering the ring, and was afterward disqualified by the vet. This should have been attended to before the show opened. Lady Graphic was alone in the female division, and well shown; she loses to a good one in muzzle, pasterns and feet. In open heavy dogs the New York awards were followed in order of merit, Ridgeview Panic, Duke of Kent II. and Hylas of Naso. I like Duke's head much better than the winners', and he is quite as good in other parts. Sanford Druid, reserve, is getting flesh on and will do better yet when in condition. Westminster Ralph, vhc., loses in front and ribs; while Peterkin of Naso, hc., is cheeky, stands back on pasterns, is heavy in shoulders, and is a rather plain dog throughout. Snap, c., is wide and heavy in front, and feet could be better. In bitches Lady Tammany this time competed in the heavy class, at New York she won second in the light-weight division, a plea in itself for the non-division in weight for pointers. Clancarty, second, I like better in head, but she loses in front to the other, while Westminster Gladys, third, is quite as good as either, and better in head and front.

Open dogs under 55lbs. had nine entries, and the winner, as at New York, proved to be the handsome Arthur, again beating Ridgeview Donald, who loses to him in head and pasterns. Ridgeview Faust was again third; he was commented on at New York. Glamorgan took reserve and Rock II. vhc.; they occupied their usual places. Marquis, hc., is better than the average in head, ears not hung well, shoulders heavy, rather plain in body, but well deserved his letters. Steve, c., is not deep enough in chest and ribs, but not true and ears poorly carried. In the absence of Patti, five faced the judge in the bitch class, and the winner was Ellen Kent, who could do no better than c. at Philadelphia last week; she is very moderate, a rather weedy bitch. Her kennel mate Spinaway IV. was placed second, and Elwood Kate reserve; at New York the latter was placed over the other two. Black Wonder's Sister is a better made bitch than either, though she is a bit off in muzzle and wide and heavy in shoulder. Nanon of Naso, though fair in skull, is weak in muzzle, good legs and feet, though she might be stiffer in pasterns—a well ribbed bitch. Hempstead Farm Kennels took the kennel prize.

ENGLISH SETTERS (*Mr. Tallman, Judge*).—There was a good entry in these classes, though the quality on the whole was not very good. Breeze Gladstone was absent in challenge class. Glendon could not be denied for the blue ribbon in open dogs. Tonic, second, having a little too much stop, and is beaten in type of head by Glendon, and is not so good behind. Prince Ben Ali, third, is a fairish dog throughout, but is beaten in head, muzzle especially, by the others. Gawain, reserve, in nice shape and feather, goes wide in front, is short-necked, but a handsome dog, and is only beaten in front by the second. Druid Hill, vhc., loses in front, but not so good in body and coat. Lewis's Rod and Ben Hur of River-view were absent. In the next class that smart little bitch, Prima Donna, was second, again beating Spectre in muzzle and hindquarters. Virginia Rockingham, third, is now well known. Daydrane, reserve, is a fat, heavy, chunky-bodied bitch, light in eye and not very good in head, plain, short muzzle, and got more than she deserved. Nushka of Elms, c., is small, but a better formed bitch. There was no kennel award made.

IRISH SETTERS (*Mr. Tallman, Judge*).—There was as usual lots of quality in this breed, but entries were not quite so numerous, as the Seminole Kennels were humanely giving their dogs a rest. This taking dogs round show after show must work mischief eventually when breeding time comes. Oak Grove Kennels supplied all the challenge dogs, five in number, and Kildare at last took a blue ribbon, he beats Seminole in head and behind the shoulder. In challenge bitches Norna had little difficulty in beating Rose Sarsfield. Three dogs came forward in the open dog class, and the New York winner, Duke of Kildare, was placed first over Blarney, Jr., bit high, full in skull and a somewhat coarse dog, heavy bone. Kildare Beverley has a better head and is quite as good otherwise. The New York winner, Queen Vic, still under the same ownership, could not be denied here, her nearest competitor being Belle of Kildare, third at New York, who was run close by the Marchioness, a fairly well made bitch all round. Kildare Winnie, reserve, is plain in head, would do with more rib and depth, and is not so good in coat. Oak Grove of course took the kennel prize.

GORDON SETTERS (*Mr. Tallman, Judge*).—A fair lot of these dogs. Dr. Dixon's dogs, as usual, furnished the challenge winners, Ivanhoe and Duchess of Waverly, second in the bitch class going to Becky Sharp, whose rich, bright tan is a welcome sight; she is faulty in muzzle and has a top-knot. In dogs the New York second winner, Archibald, beat Duke, who is tied at elbow and a little straight behind. Woodmill Scot is light in tan and faulty in quarters. There were only three in this class. In bitches (5), two absentees, the blue ribbon went to the well known Princess Louise, who is better in head than Catherine, second; the latter is mixed in head tan but well marked on legs; could be improved in hocks; has a plain head. Babmont, third, who is only a moderate one, faulty in head and bone.

CHESAPEAKE BAY DOGS (*Mr. Mortimer, Judge*).—A nice lot of these dogs, as might be expected in their native city, but not nearly so many as we have seen out at previous shows here. The winner, Lot, has a better type of head, so it is said, than Deacon, second, and tighter curled and crisper coat. Old Judge, reserve, loses in coat to the others, and the same may be said of Dawn, vhc.

SPANIELS (*Mr. Watson, Judge*).—These classes were just fairly well filled and the same old winners were to the fore, though in some cases their positions were reversed. In the challenge class Newton Abbot Laddie won again over Brantford Mohawk, having recovered from his lameness apparently. The other field classes were drawn blank. In challenge cocker dogs the well-known Fascination won again. In bitches the little Troublesome was placed over I Say, who is beaten in coat, body and cocker type by the winner. In open dogs that good little cocker Middy scored over Brantford Jet, beating him in cocker type of head and body, which is narrow and too long; Jet shows in nice coat. Prince W., third, is long in muzzle and not square enough, good body, but high on leg, good front and fair coat. In bitches there was something of a turn up, Mr. Watson going for more size. Miss Wagglers won over Woodstock Dora and Realization; it may have been size that put the latter back, for she can beat either in type of body and Dora in head as well, and for condition and coat she is well ahead. Miss Wagglers afterward beat Fascination for the special. Fascination beats the other in eye, brow, skull and set on of ear, length of head and set on of stern and general carriage. Miss Wagglers looked heavy in body, being in whelp and not in the best of shape, in coat and bone she has a little advantage. In any other color Mr. Watson was rather severe, withholding first from the well-known Chestnut, as notwithstanding he is short of coat and is small, he is only

WASHINGTON DOG SHOW.

WASHINGTON, March 14.—*Special to Forest and Stream*—The third annual show of the Washington City Kennel Club opened this morning with an entry of 470. While there are a number of dogs which have only fair merit, in most of the breeds the quality is well represented. Especially so is this the case in St. Bernards, pointers, Irish setters, fox-terriers, bull-terriers, collies and beagles. The building in which the show is held is admirably adapted for a show, light, airy and very large, affording, with the entry here, two of the largest rings we have yet seen. Catalogues were late in coming, but when they arrived were found to have few mistakes.

Judging has progressed expeditiously all day, and will be completed to-day with the exception of specials and black and tan terriers, the light interfering with the judging of them. Several well known exhibitors are present, Messrs. P. H. O'Bannon, L. C. Sauer, Dr. Hartman, Col. Purcell, C. E. Buckle, E. M. Oldham, Frank Dole, Geo. Bell, W. E. Hagans, F. R. C. Clarke, C. D. Diffenderfer, T. J. Sheen, Brooks, J. E. Thompson and the different handlers whose names are familiar to all. The weather has been against a large attendance, but a fair crowd was present to-night. The following are the awards made up to 6:30 P. M. The club members are working hard and affording every courtesy.

MASTIFFS—CHALLENGE—1st, C. F. Bunn's Miss Caution. —*Open*—Dogs: 1st, Mrs. Charles Wallach's Melina; 2d, W. P. Riggs's The Moor; 3d, A. W. Withers's Nero. *Bitches*: 1st, B. F. Lewis's Ethel;

COMMITTEEMAN FARRER.

PRES. HOFFMAN.

SEC'Y DIFFENDERFER.

COMMITTEEMAN SHEENBROOKS.

TREAS. DIFFENDERFER.

COMMITTEEMAN THOMPSON.

OFFICERS OF THE MARYLAND KENNEL CLUB.

2d, L. L. Nicholson's Queen. *Puppies*: 1st, withheld; 2d, Chas. L. Blanton's Gladstone—*Novice*—1st, withheld; 2d, Robert Parr's Leo.

ST. BERNARDS—ROUGH-COATED—CHALLENGE—Dogs: 1st and 2d, W. C. Reick's Sir Bedivere and Kingston Regent. *Bitches*: 1st, E. H. Moore's Lady Livingston. —*Open*—Dogs: 1st and very high com., W. C. Reick's Marvel and Refuge II.; 2d, E. H. Moore's Altouner; 3d and reserve, Maryland Kennels' Comte and Grand Master. *Bitches*: 1st, W. C. Reick's Princess Florence; 2d and 3d, Col. Jacob Ruppert, Jr.'s Hesperie and Miss Anna. Very high com., H. W. Taylor's Zenith. *Puppies*: 1st, withheld; 2d, J. J. Malone's Ingomar. —*Novice*—1st, Col. Jacob Ruppert, Jr.'s Countess Madge; 2d, Mrs. R. H. French's Fritz Emmet. Very high com., H. C. Fisk's Beau Brummell. —*Smooth-coated*—CHALLENGE—Dogs: 1st, E. H. Moore's Melrose. *Bitches*: 1st, Col. Jacob Ruppert, Jr.'s Empress of Coteauco; 2d, E. H. Moore's Miss Altouner. —*Open*—Dogs: 1st, E. H. Moore's Melrose King; 2d, C. L. Beatty's Trojan Hector. *Bitches*: 1st, E. H. Moore's Melrose; 2d, Col. Jacob Ruppert, Jr.'s Bellegrave; 3d, Miss Emma Gray's Psyche. —*Novice*—1st, E. H. Moore's Melrose Belle.

GREAT DANES—CHALLENGE—1st, Cumberland Kennels' Melac. —*Open*—Dogs: 1st, Illwils Kennels' Major McKinley; 2d, Hepburn Kennels' Hepburn's Hero; 3d, Cumberland Kennels' Theseus. Very high com., A. B. Strange's Venzel. *Bitches*: 1st, Hepburn Kennels' Hepburn Vera; 2d, 3d and very high com., Cumberland Kennels' Charmion, Minerva and Phoebe. Reserve, A. B. Strange's Juno. *Puppies*: 1st, J. H. H. Maenner's Harris; 2d, withheld. —*Novice*—1st, J. H. H. Maenner's Victor; 2d, J. Binder's Bismark.

BLOODHOUNDS—Dogs: 1st, G. F. Pollock's Belhus, Jr. *NEWFOUNDLANDS*—Dogs: 1st, Gair Kennels' Prince George; 2d, J. Coudon's Surpass. *Bitches*: 1st, Gair Kennels' New York Lass.

RUSSIAN WOLFHOUNDS—CHALLENGE—Dogs: 1st, H. W. Huntington's Argoss. *Bitches*: 1st, Seacroft Kennels' Svodka; 2d, H. W. Huntington's Princess Irma. —*Open*—Dogs: 1st, Seacroft Kennels' Groubian; 2d, H. W. Huntington's Osslad. *Bitches*: 1st and high com., Seacroft Kennels' Vanya and Flodeyka; 2d and very high com., H. W. Huntington's Zerry and Modjeska. —*Novice*—1st and 2d, H. W. Huntington's Krinena and Lobedya.

DEERHOUNDS—Dogs: 1st, J. J. Phelps's Roderick Dhu. *Bitches*: 1st, L. C. Gunnel's Maida II.—*Novice*—1st, J. J. Phelps's Roderick Dhu.

GREYHOUNDS—CHALLENGE—Dogs: 1st, A. W. Purbeck's Gen of the Season; 2d, L. C. Whiton's Lord Neverstill. *Bitches*: 1st, A. W. Purbeck's Bestwood Daisy. —*Open*—Dogs: 1st and 2d, Manatung Kennels' Henmore King and Watcher. *Bitches*: 1st, A. W. Purbeck's Wild Rose; 2d and 3d, Manatung Kennels' Marguerite and Chips.

FOXHOUNDS (AMERICAN)—Dogs: 1st, Sandy Spring Hunt Club's Barney. *Bitches*: 1st, Sandy Spring Hunt Club's Brush. —*(English)*—Dogs: 1st, M. Harrison's Denmark. *Bitches*: 1st, M. Harrison's Rosemary.

POINTERS—CHALLENGE—Dogs: (53lbs. and over): 1st, Hempstead Farm Kennels' Robert Le Diable. *Bitches* (50lbs. and over): 1st, Hempstead Farm Kennels' Woolton Game; 2d, George W. La Rue's Revelation. —*Open*—Dogs (53lbs. and over): 1st, Harry Dutton's Duke of Kent II.; 2d, Hempstead Farm Kennels' Sandford's Druid; 3d, Jos.

H. Hunter's Black Wonder. Reserve, R. O. St. Clair's Gun Gun. Very high com., J. R. Purcell's Nicodemus of Ion and Charles D. Roberts's Duke of Dexter. High com. and com., S. L. Cooper's Marshal Ney and Earl of Culpeper. *Bitches* (50lbs. and over): 1st, Dr. E. K. Goldsborough's Telle Kent; 2d, Elkwood Kennels' Westminster Gladys; 3d, J. R. Purcell's F. F. V.

POINTERS—CHALLENGE—Dogs (under 55lbs.): 1st, Hempstead Farm Kennels' Duke of Hessen. *Bitches* (under 50lbs.): 1st, W. H. Hyland's Lady Graphic. —*Open*—Dogs (under 55lbs.): 1st and 3d, Charlottesville F. T. K. nels' Rip Rap and Conscript; 2d, C. Heath's Arthur. Reserve, Victoria Kennels' Ridgeview. —*Puppies*: 1st, C. E. Connell's Rock II.; L. A. Biddle's Lamorgan, Charlottesville F. T. Kennels' Belle and Wild Ramon. High com., J. R. Purcell's Flockfinder and Heineken, Dr. J. A. Hartman's Kennar. *Bitches* (under 50lbs.): 1st, Charlottesville F. T. Kennels' Maid of Kent; 2d, C. Heath's Patti; 3d, G. W. La Rue's Dame Bang. Reserve, Woodbury Kennels' Sweet Lavender. Very high com., Charlottesville F. T. Kennels' Cosset, W. Stinemetz's Firenze and A. Goldsborough's Black Wonder's Sister. High com., Elkwood Kennels' Spinaway IV.; J. R. Purcell's Lady Margaret and C. Heath's Bloom. Com., W. N. Lipscomb's Croixie Ken and Elkwood Kennels' Ellen. —*Puppies*: 1st, C. G. McIlvaine's MacCroxteth; 2d, C. M. White's Sir Nixon. *Bitches*: 1st, A. B. Copley's Belle; 2d, W. N. Lipscomb's Vexation. —*Novice*—Dogs: 1st, C. G. McIlvaine's MacCroxteth; 2d, J. H. Kidwell's Hermit. Very high com., J. R. Purcell's Rod H. and Flockfinder. High com., A. M. Cowell's Shot C. *Bitches*: 1st, W. N. Lipscomb's Vexation; 2d, J. R. Purcell's Lady Margaret. High com., W. N. Lipscomb's Croixie Ken and G. A. Man's Bessie K. Com., C. E. Dessez's Belle.

ENGLISH SETTERS—CHALLENGE—Dogs: 1st, J. W. Wood's Donna. —*Open*—Dogs: 1st, Blue Ridge Kennels' Antonio; 2d, F. G. Taylor's Ben Hur of Riverview; 3d, L. Shuster, Jr.'s, Ezra Noble. Reserve, J. H. Hunter's Hoosier Boy. Very high com., J. R. Purcell's Nannie, Blue Ridge Kennels' Gath's Mark. High com., A. C. Peterson's Carnegie. *Bitches*: 1st, 2d and 3d, Blue Ridge Kennels' Countess Rush, Gossip and Laurence. Reserve, Mr. Hunter's Bessie. Very high com., Blue Ridge Kennels' Belle of Piedmont, N. Jensen's Dolly Noble. Com., W. Bryce, Jr.'s Spectre. —*Puppies*—Dogs: Dr. J. L. McCormick's Tonia; 2d, W. S. Boddy's Druid's Dick. Very high com., Scroth & Steubner's Harry Hill. *Bitches*: 1st, W. L. Kidwell's Modest Girl; 2d, J. H. Gulick's Blackmoore Girl. Very high com., Elkwood Kennels' Fanchon. —*Novice*—Dogs: 1st, L. Shuster, Jr.'s Ezra Noble; 2d, S. H. Hunter's Hoosier Boy. High com., A. C. Peterson's Carnegie. —*Puppies*—Dogs: 1st and 2d, W. H. Beazell's Queen Vic and Kildare Winnie; 3d, C. F. Thompson's Fly. Reserve, Oak Grove Kennels' The Marchioness. Very high com., Seminole Kennels' Claremont Heather and Delphinine. High com., Dr. S. G. Dixon's Lady Cleveland. —*Novice*—1st, W. H. Beazell's Kildare Winnie; 2d, Dr. S. G. Dixon's Lady Cleveland. High com., F. Geddis's Mingo.

GORDON SETTERS—CHALLENGE—Dogs: 1st and 2d, Dr. S. G. Dixon's Ivanhoe and Leo B. *Bitches*: 1st, Dr. S. G. Dixon's Duchess of Waverly; 2d, C. F. Mather's Becky Sharp. —*Open*—Dogs: 1st, Iolanthe Kennels' Archibald; 2d, B. F. Lewis's Duke, Com., T. Darling's Woodmill Shot. *Bitches*: 1st and 2d, Dr. S. G. Dixon's Princess Louise and Katherine; 3d, Mont Gordon Setter Kennels' Bambont. Com., Woodbury Kennels' Lill Lavender. —*Puppies*—Dogs: 1st, Mont Gordon Setter Kennels' Freemont. *Bitches*: 1st, Mont Gordon Setter Kennels' Fairmont. —*Novice*—1st, Dr. S. G. Dixon's Katherine; 2d, Mont Gordon Setter Kennels' Bambont. High com., Woodbury Kennels' Lill Lavender.

FIELD SPANIELS—CHALLENGE—Dogs: 1st, A. M. Spaniel Kennels' Newton Abbott Laddie. No entries in other classes.

COCKER SPANIELS—CHALLENGE—Dogs: 1st, A. M. Spaniel Kennels' Fascination. *Bitches*: 1st and 2d, A. M. Spaniel Kennels' Troublesome and I Say. —*ANY COLOR*—*Open*—Dogs: 1st, H. B. Fields's Branford Jet; 2d, A. M. Spaniel Kennels' Leo; 3d, C. F. Sackett's Prince W. *Bitches*: 1st and 3d, A. M. Spaniel Kennels' Realization and Mary Queen of Scots; 2d, Dole & Thomas's Woodstock Dora. —*Novice*—1st, A. M. Spaniel Kennels' Leo.

COLLIES—CHALLENGE—Dogs: 1st and reserve, Seminole Kennels' The Squire and Roslyn Dandy; 2d, Joseph Livingston's Ormskirck Sheep. *Bitches*: 1st, Seminole Kennels' Matchless. —*Open*—Dogs: 1st and reserve, Seminole Kennels' Gold Dust and Chrysolite; 2d and 3d, Hempstead Farm Kennels' Woodmansterne Trefoil and Conrad II. Very high com., Frank R. Carswell's Prince Wilkes. *Bitches*: 1st and 3d, Seminole Kennels' Gypsy Maid and Crissey; 2d, Iolanthe Kennels' Ormskirck Susie. Very high com., Samuel E. Rabbit's Roslyn Baby. —*Puppies*—Dogs: 1st, Seminole Kennels' Gold Dust; 2d, Samuel E. Rabbit's Roslyn Baby. *Bitches*: 1st, Seminole Kennels' Gypsy Maid; 2d, W. W. Fisher's Fisher B. Very high com., Samuel E. Rabbit's Gypsy Baby. —*Novice*—Dogs: 1st, Seminole Kennels' Gold Dust; 2d, Louis H. Crowe's Don. *Bitches*: 1st, Seminole Kennels' Gypsy Maid; 2d, Samuel E. Rabbit's Roslyn Baby. Reserve, W. G. Lee's Flora.

POODLES—CHALLENGE—1st, L. A. Biddle's Berni; 2d, Union Pet Dog Kennels' Dexter. —*Open*—Dogs: 1st, Frank Wilcox's Mikado; 2d, Dr. S. N. Duer's Ben L.; 3d and very high com., H. G. Trevor's Milo I. and II. —*Bitches*: 1st, H. W. Wescott's Betsey; 2d and 3d, H. G. Trevor's Chloe and Dinah.

BULLDOGS—CHALLENGE—Dogs: 1st, Illwils Kennels' King Lud. *Bitches*: 1st, Iolanthe Kennels' Saloni. —*Open*—Dogs: 1st, R. D. Winthrop's Leonidas; 2d and 3d, Iolanthe Kennels' Rustie Sovereign and Wal Hampton. Very high com., J. J. Phelps's Lord Sheffield. High com., S. W. Stinemetz's Trott. *Bitches*: 1st, A. B. Graves's Addis Combe Gipsy; 2d, Central Park Kennels' Dairy Maid.

BULL-TERRIERS—CHALLENGE—Dogs: 1st and 2d, F. F. Dole's Attraction and Starlight. —*Open*—Dogs (over 30lbs.): 1st, Mrs. J. N. Henry's Young Marquis; 3d, Iolanthe Kennels' Surefoot. *Bitches*: 1st, W. Hamall's Vesper Bell; 2d, Central Park Kennels' Rip; 3d, Dr. F. Mitchell's Maggie Clue. Very high com., Castle Point Kennels' Fidget. High com., W. J. Bryson's Countess of Dufferin. *Dogs* (30lbs. and over): 1st, F. F. Dole's White Duke; 2d, Central Park Kennels' Cleveland. *Bitches*: 1st and high com., F. F. Dole's Edgewood Wonder and Rosemary; 3d, F. W. Moulton's Lounmont Vixen. *Puppies*: 1st, Central Park Kennels' Cleveland; 2d, F. W. Moulton's Lounmont Vixen.

BOSTON TERRIERS—*Bitches*: 1st, T. Armstrong's Nettle.

BASSETT HOUNDS—1st, J. E. Barbour's Solomon; 2d and 3d, J. Hopkinson's Bracelet and Drayman.

FOX-TERRIERS—CHALLENGE—Dogs: 1st, Blanton Kennels' Blanton Victor II.; 3d, L. & W. Rutherford's Raffle. *Bitches*: 1st, Seacroft Kennels' Kildare Winnie. —*Open*—Dogs: 1st, Iolanthe Kennels' Rip; 2d, L. & W. Rutherford's Warren Tip-Top; 3d, Blanton Kennels' Blanton Rasper. Very high com., H. G. Trevor's Beverwyck Rufus. *Bitches*: 1st, Blanton Kennels' Spinster; 2d and 3d, L. & W. Rutherford's Warren Dorothy and Ducky II. Reserve, Iolanthe Kennels' Ripon Regina. Very high com., Toon & Symonds's Lady Roseberry. High com., Iolanthe Kennels' M. Stown and Miss Domino. Seacroft Kennels' Jamson. —*Puppies*—Dogs: 1st, Blanton Kennels' Blanton Stickler. *Bitches*: 1st, Blanton Kennels' Blanton Vindex; 2d, Seacroft Kennels' Seacroft Myrtle. —*Novice*—1st, Blanton Kennels' Blanton Stickler; 2d and very high com., Seacroft Kennels' Seacroft Myrtle and Seacroft Zarina. High com., J. A. Hoffer's Blanton Brangle. Com., R. G. Stewart's Jack's Darling, Osborne & Hobane's Fanny.

FOX-TERRIERS—WIRE-HAIRED—Dogs: 1st, H. Smith's Saint Broom. *Bitches*: 1st, H. Smith's Sister Pattern; 3d, Iolanthe Kennels' Jack Frost.

IRISH TERRIERS—CHALLENGE—1st, Toon & Symonds's Jack Briggs; 2d, W. J. Smeeth's Duffuray. Reserve, M. Harrison's Kennerly. —*Open*—Dogs: 1st, Iolanthe Kennels' Jackanapes; 2d, Toon & Symonds's Paddy Dorlan. *Bitches*: 1st, Dr. W. C. Johnson's Judy; 2d, Toon & Symonds's Salem Witch. Very high com., T. Pulvertaff's Little Maid.

SKYE TERRIERS—CHALLENGE—1st, Woodbury Kennels' Lovet. —*Open*—Dogs: 1st, C. H. Smith's Barnaby Rudge. *Bitches*: 1st, H. K. Cauer's Endcliffe Maggie; 2d, C. H. Smith's Islay.

SCOTTISH TERRIERS—Dogs: 1st and 2d, Toon & Symonds's Three and Rhudunan; 3d, R. Elliott's Ashley Plug. *Bitches*: Absent.

WASHINGTON, March 15. [Special to Forest and Stream.]

The judging of regular classes was completed this morning. **BLACK AND TAN TERRIERS**—CHALLENGE—1st, Rochelle Kennel's Sultan; 2d, Toon & Symonds's Prince Regent. Reserve, Dole's Queen III.—*Open*—*Bitches*: 1st, Toon & Symonds's Gypsy Girl.

WELCH TERRIERS—1st, Iolanthe Kennels' Dewr; 2d, Hornell-Harmony's Mephisto Dick.

PUGS—CHALLENGE—1st, Cryer's Bob Ivy; 2d, Seminole Kennels' Dixie. —*Open*—Dogs: 1st, Howden's Little Fritz; 2d, Belle Tip Top. *Bitches*: 1st, Toon & Symonds's Princess May; 2d, Davidson's Juliette; 3d, Geo. Davidson's Nellie. *Novice*—Toon & Symonds's Princess May.

KING CHARLES SPANIELS—Dogs: 1st, Mrs. Senn's Yankee Bo

young yet and is a well-built, cobby little fellow, with a more than average good head and good action. Redfellow got nothing, he is undershot. In the absence of Lady Gay, Mary Queen of Scots was alone and took the blue ribbon; she was at Philadelphia last week. The only Irish water was Trouble, who won; he has been spoken of before.

COLLIES (James Watson, Judge).—There were no challenge entries and the winners in the open classes are now well known. That handsome dog, Woodmansterne Trefoil, won somewhat easily over Toronto Wonder, who is not in the Chestnut bloom. Considering this dog's faulty forelegs and indifferent skull he should certainly give way to Conrad II., who, though he may not be so handsome, has the requisite attributes for a good collie. In bitches first went to Ormskirck Susie, who is a little full in brow; forelegs should be straighter, but she beats the others in quality and type. Lady Ross, second, has a plain head, fair body and coat, not enough quality; either Dublin or Lady Grieson, he, can beat her when in condition, better heads. The Collie Club trophies went to Trefoil and Toronto Wonder.

POODLES (H. W. Lacy, Judge).—Only two competed out of the three entries, Berri beating Dexter once more in cords and head, but loses to Dexter in body, loin long.

BULLDOGS (Mr. C. D. Cugle, Judge).—A tip-top lot of dogs here. Harper and Bo'swain did not answer to their names in challenge dogs, so left King Lud for the honors, which he richly deserves; he afterward beat Leonidas for the special; he is better broken up in face, better ear and gains a trifle in depth and squareness of muzzle, but is beaten well in front by Leonidas. Salem was alone in challenge bitches. In open dogs Leonidas, Wal Hampton and Rustie Sovereign was the order. All three have been so recently commented on it is no use repeating. Governor, big in ear, was vhc.; he is not out enough in front, nor broad enough in skull, nor broken up in face, stands too high as well. In bitches Addiscombe Gipsy had little competition, beating Derby Hebe and Miss Nancy decisively, Hebe is poor in front and ears hang down. Miss Nancy is better in shoulder. As stated, King Lud was considered best in show.

BULL-TERRIERS (Mr. Mortimer, Judge).—Attraction had no difficulty in beating Grove Duchess in head and front. In open dogs Sir Rudolph, the winner at New York, beat Surefoot in head and behind again, while Diamond Prince, reserve, loses to both in head and front. That nice little terrier, Edgewood Wonder, won well from Maggie Cline in the next class; she is better in muzzle, size, cleanness of shoulder, ear and body. Countess of Dufferin was he. and was at Philadelphia last week.

BEAGLES (H. W. Lacy, Judge).—Pretty much the same lot as at Philadelphia, with a few new ones from the Maryland division. Challenge dogs saw Roy K. again over Racer, Jr., who, though typical, is very faulty and weak behind. This our Philadelphia contemporary must have been overlooked. In bitches Emeline beats Twintwo in head, shoulders and forelegs. Open dogs (S) saw Forest Hunter one more place nearer the challenge goal. He beats Jim Simmons, second, in cleanness of shoulder, but the latter is a well-formed dog that in good condition would probably beat the other. Wanderer, third, is hardly true in front, weak in muzzle, but nice skull and ear; rather narrow body. Doctor, reserve, but for head and size might have been a peg higher, while Rockland Boy was out of it in size and substance in this company; did not look so well as last week. The others were large and coarse. Bitches (10) was a hard class to judge when the first was placed and I had no difficulty in putting Lonely there. Fanny Reed, second, I liked better than at Philadelphia, showing herself in better form, so I placed her over Vick R. A new one, Minnehaha, has a good deal of beagle type, especially in head; fair front when still, but does not move well; body good, if a trifle long; hindlegs well formed, and, had she moved better in the ring, might have been placed over Fanny Reed, but she had wretched action for a hound, but did a little better when I saw her a day or two afterward. Prudence, he., is big and head wrong. Snow is faulty both ends. Venus II. and Dorsey's Flirt got he. The former is out at elbow, but her type of head might well have got another title, while Flirt is too long in head and narrow in body. Rockland Kennels won the kennel prize and Lonely the special for best.

FOX-TERRIERS (Mr. Mortimer, Judge).—Most of these terriers have been seen out lately. Raffle and Grouse II. won the challenge entries. The latter had a difference with a wolfhound and came out second best. First in open dogs was Ripon Stormer, who keeps himself well, Warren Tip Top getting second; he beats the latter in head and front and body. Carnegie, third, is a coarse, heavily-fronted dog, ears high and coarse in skull. Buster, c., is only moderate. Dusky II. won in bitches, followed by her daughter, as at Philadelphia last week, and Lady Roseberry came next; she loses in feet and pasterns and head. Ripon Regina, reserve, should be truer in front. Maystown, vhc., was the same the week previous, and so was Miss Domino. Seacroft Myrtle, he., is light throughout. In wire-hairs the only dog was Saint Brown, well known here, and in the female division Sister Pattern again beat Jess Frost, the latter losing in front and muzzle and spring and depth of rib.

IRISH TERRIERS (H. W. Lacy, Judge).—Only two, but good ones. Jack Briggs beat Jackanapes in cleanness of shoulders, condition of coat and general character. We never saw the former looking better. The usual Welsh terriers were on hand. Dandies and Bedingtons were drawn blank.

SKYE TERRIERS (H. W. Lacy, Judge).—Here was a hot lot. It was tough and go between Wheel of Fortune and Barnaby Rudge, but I thought the latter beat in head and front and length comparatively, while the bitch gets it in color and texture of coat just a little. Endcliffe Maggie, reserve, and Islay, vhc., I think, were about right after all when fully compared in the ring, the former getting it in body and head and coat a trifle.

SCOTTISH TERRIERS (Mr. Mortimer, Judge).—Rhudaman had only Ashley Plug to beat in this breed, doing it in head, front and coat.

BLACK AND TAN TERRIERS (H. W. Lacy, Judge).—Broomfield Sultan alone in challenge class. The open class was warm, but I thought for true terrier character, bone, body and carriage Queen III. won nicely. Maiden is not herself and showed wheel-backed. Louie, though not in good shape, beats Gypsy Girl in head, forelegs and markings. The latter is badly breeched. Yorkshires one entry, and no good.

PUGS (Mr. Mortimer, Judge).—Bob Ivy, the hardy annual, again in challenge class. In open dogs Tip Top beats Meddler in muzzle, size and curl. The bitch prizes were withheld.

TOY SPANIELS (Mr. Mortimer, Judge).—Royal Duke, the King Charles, met a nice one in Jessie, but he beats her in shortness and depth of muzzle, tan and forelegs. The well known Tiney was the only Blenheim, and Portsmouth Minnie, a dark ruby, was alone in her class; good skull and muzzle, and nice coat.

ITALIAN GREYHOUNDS (Mr. Mortimer, Judge).—In dogs the well known Spring had an easy victory, beating Byron in ear, head and everything but size. Tony, vhc., poor head, big ear not properly carried. In bitches, champion Sprite won easily from Goldier and Tricie which are very moderate. A fair Mexican hairless was shown in Duke. The miscellaneous prizes were withheld from some big dogs.

H. W. L.

An old-timer whom we were pleased to meet at Baltimore was Mr. W. Montgomery, who, it will be remembered, in partnership with Mr. W. Tucker, owned so many good St. Bernards along in 1886-7. His Verone, Priam, Bertha, Snowball, etc., were well known in their day. Mr. Montgomery is now in business in Baltimore.

2d, Traver's Blackstone. *Bitches:* 1st, Senn's Twezel; 2d, Wamback's Jessie.

BLLENHEIMS.—*Dogs:* 1st, Hagerty's Bobby. *Bitches:* 1st, Wamback's Tiny; 2d, Trevor's Queen.

PRINCE CHARLES.—1st, Senn's Bell.

JAPANESE.—1st, Senn's Jap; 2d, Benjamin's Mandarin.

ITALIAN GREYHOUNDS.—*Dogs:* 1st, Lewis's Spring; 2d and very high com., Hoyt's Byron and Tony. *Bitches:* 1st, Lewis's Sprite; 2d and very high com., Hoyt's Goldie and Frischie.

MISCELLANEOUS.—Equal 1sts, Thomas's Boston Model and Central Kennels' Little Tarquin; 3d, Stone's Spot.

Indianapolis Dog Show.

We have received the Illindio Kennel Club's premium list, and for an initial show in a new town the club has arranged a liberal classification. The show will be held March 28 to 31. Mastiffs, St. Bernards, both kinds, great Danes, pointers and setters get \$10 for each challenge class, and \$15 and \$10 in the open. Greyhounds, collies, beagles and pugs have \$10 in challenge, and \$15 and \$5 in open classes. Other breeds are arranged on a basis of \$10 and \$5 in open and challenge prizes of \$10. St. Bernards, pointers, greyhounds and setters are given a kennel prize of \$50, and the most important of the other breeds \$10. Dr. Van Hummell gives \$25 for the best four greyhounds or wolfhounds, the prize to go to the best having the most entries, rather an unsatisfactory arrangement: as a wolfhound breeder, or *vice versa*, may go to the expense and trouble of sending a good team out, and though he may have better stock, comparatively, the greyhound classes being filled with a large but mediocre class of dogs, the greyhound man gets the money. Merit, not numbers, should govern the awards. Other valuable specials both in cash and plate are given by citizens of Indianapolis, and as \$3,000 have been subscribed as a guarantee that prizes will be paid, exhibitors should not hesitate to send their best.

The judges have scarcely been chosen with a wise appreciation of their several specialties. We all know Mr. Davidson as without a superior as a judge of pointers and setters, and to be also a good spaniel and beagle judge. He, however, gets great Danes, mastiffs and St. Bernards; these might well go to Mr. Mortimer. Mr. Davidson does not pretend to be a judge of the breeds particularly mentioned, so we are sure he will not take our remarks amiss. The superintendent will be Mr. Joseph Becker, and Geo. B. Roberts, D.V.S., the veterinarian. The premium list is well gotten up, and with Mr. Charles K. Farmer as secretary and Dr. Van Hummell as chairman of committee, everything promises to be well done. The American Express Co. will run a special heated car from Detroit without extra charge or change, so that Detroit exhibitors will have no trouble in taking in the show, too. The Adams Co. offer the same facilities from the Elmira show, which takes place the same week. The entrance fee is \$3 for mastiffs, St. Bernards, great Danes, Newfoundlanders, all setters, bloodhounds, deerhounds, Russian wolfhounds, foxhounds, greyhounds, and pointers; for all others an entry fee of \$2 will be charged. The secretary's address is 25 Ruckie street, Indianapolis, Ind. Entries close March 21.

Fox Hunting on the Ice.

Editor Forest and Stream:

While the July, Cook, Avent and other flying packs of red foxhounds are fair, they are not in it for speed here in the North. Yesterday William Ringer of this place, after hoisting sail on his iceboat and waiting for a friend, viewed a fox some mile or more from shore on Lake Champlain. He immediately gave chase, and then commenced the liveliest run on record, a sight race from view to finish. The fox was cunning and played back and forth over a crack that was unjumpable, except in a few places, for a few minutes, then straightened out for shore tight as he could go, with the iceboat whooping him up. Ringer ran on to him twice, and could easily have run over and killed him, but preferred to catch him alive. He had his hands on him twice, and finally

MR. PIERPONT MORGAN'S COLLIE NANCY LEE.
First open, novice and puppy classes, New York, 1893.

carried him ashore, the most demoralized though unharmed fox imaginable. I saw a week ago a bunch of twenty strong, lively quail of the lot that I put out last spring, and if we have no blizzards in March think they will stand the winter all right. W. C. WITHERBEE.

PORT HENRY, N. Y., Feb. 20.

Pedigree of Polo.

Editor Forest and Stream:

I noticed a communication in to-day's issue from a correspondent asking information concerning pedigree of St. Bernard Polo as to sire and dam, and also asking who was the sire of Dido. Polo was Dido's sire; this is all the information I have on the subject, and if it is of any use to the inquirer he is welcome to it. I have the pedigree up to Polo, if your correspondent desires it, will let him have a copy.

GEO. A. HARKNESS.

477 CARLTON AVENUE, Brooklyn.

The American Field Trial Club.

Editor Forest and Stream:

To make clear a point which might not have so appeared from the reports of the arrangements of the American Field Trial Club for this year's trials, I desire to say that the membership requirement is dropped. It is to be open to the world.

W. J. BECK, Sec'y.

COLUMBUS, Ind.

DOG CHAT.

Meddlers.

A little scene began at the Baltimore show on Friday that terminated in the Central Police Station at 4 o'clock in the afternoon. It was all on account of the pug dog Meddler, who took second prize in the open class. The dog has a notion or two of his own, and when left alone will attempt to escape from his cage. His first success in this line was on Wednesday afternoon, when the pug's cage was found to be empty. A search was made for him, but he could not be found. At night, just before the circus began, a reporter of the *American* noticed an unusual commotion among some ladies seated in the gallery. The *American* man bounded up the stairs and there found the dirtiest-looking pug he ever saw in his life. The dog had evidently been out of his cage for some time and had amused himself rolling over the dirty benches. He was anything but prepossessing and frightened some of the ladies. He was then placed in his cage. On Thursday morning Meddler again escaped while the dogs were being exercised. A thorough search was made but he could not be found. On Friday morning Mr. Diffenderfer overheard one J. A. Golden, remark that he knew

MR. CHARLES H. MASON.
Judge of St. Bernards, Philadelphia, 1893.

where a pug dog was that had escaped from the building the day before. Mr. Diffenderfer stopped Golden, who said that he had seen the dog on the steps of 916 Constitution street, and that he had seen a woman who lives there pick up the dog and carry him in the house. Ben Lewis and an officer went to the house and asked for the dog but the owner denied knowledge of it. A warrant was immediately issued for the arrest of Lizzie Anderson, charging her with keeping the dog over the allotted time without taking it to the pound. When Officer Burns served the warrant he recovered the dog, which was still in the house. Meddler is owned by Mr. Edgar Adams, of Philadelphia, but during the show has been in charge of B. Lewis. The case was heard before Justice Hobbs at 4 o'clock Friday afternoon. Lizzie Anderson wanted to take the case to court, but Messrs. Diffenderfer and Lewis told her that if she would pay the costs of the case they would not prosecute her. After some meditation she acquiesced, and the case was settled, she paying \$1.70. There was little time wasted in this affair.

Boston Dog Show.

Since the issue of the Boston premium list they have added a class for dachshund puppies, dogs and bitches, with prizes of \$5 and \$3, also a class for bassets, dogs and bitches, offering \$10, \$5 and \$3 as prizes. The American Spaniel Club has offered, open to members of the Spaniel Club only, specials as follows: The Oldham silver cup, value \$30, for the best field spaniel bitch, to be won four times before becoming the property of any one member; \$5 for the best brace of Clumber spaniels, \$5 for best brace of field spaniels, \$5 for best brace of cocker spaniels, \$5 for best brace of Irish water spaniels. Mr. Geo. Bell, Toronto, Can., offers cup for best trio of American-bred mastiff puppies entered and owned by exhibitor. James Stewart, M.D., of Boston, offers three bronze vases, copies of celebrated "Florentine Vase," for best pair of American-bred mastiff puppies out of same litter, under 12 months. To avoid as much as possible any cause for diseases at this show, they will use new wooden benching, which, although it perhaps is not as attractive as that with wire partition, etc., reduces the danger of disease to a minimum. Sanitas will furnish disinfectants. The results from the specials of \$10 each offered to exhibitors of New England who have never before shown a dog, bid fair to exceed the most sanguine expectations. Never before has there been such a demand for premium lists. Satisfactory arrangements have been made with the express companies, and they are waiting replies from the railroads, due notice of which will be given through the press. The committee would be glad to receive photographs of dogs from intending exhibitors to be used in the local papers. Every indication points favorably to the most successful show within the history of the N. E. K. C.

To Suffocate Dogs in Baltimore.

The Society for the Prevention of Cruelty to Animals is behind the movement to secure a new dog pound for Baltimore, Md., and have asked an appropriation of \$700 for this purpose. Mr. John R. Duval, secretary of the society, says that the present method of drowning the dogs picked up on the streets is decidedly cruel. He has had sketch plans prepared for a new dog pound, modeled after that of New York, in which the dogs are to be suffocated. He suggests a plain one-story wooden building, 40ft. by 60ft., containing an office, two large kennels, in which dogs will be placed according to sex, and six small kennels for dogs having the mange or other disease. It would contain a gasometer and an air tight room, in which the dogs to be killed would be placed. The asphyxiation would be done either by illuminating gas or the fumes of charcoal.

Chesapeake Bay Dog Club.

The yearly meeting of the Chesapeake Bay Dog Club was held March 8 at the office of Edward L. Bartlett, president, 205 East German street, Baltimore. All old officers—E. L. Bartlett, Pres.; J. O. Norris, Vice-Pres.; J. F. Pearson, Sec'y; T. J. Hayward, Treas.—and board of governors were re-elected, also two new members, viz., Mr. E. G. Elliott, Nantucket, Mass., and Major J. M. Taylor, New York city. The treasurer's report showing balance on hand was satisfactory it was moved and unanimously carried that as the club has no special use at present for more money, assessment for annual dues in future be remitted until such time as the president may desire same resumed.

International Coursing.

Dr. A. J. Cattanaoh, of Denver, a member of the National Coursing committee which has in charge the international

meet to be held sometime during the World's Fair, says that the committee hopes to have the necessary \$2,500 for the stakes raised by the middle of June. He thinks the meet will take place at Merced, Cal., about four hours' run from San Francisco. The location would insure the entry of Australian dogs, and English owners can be transported rapidly over the country from New York. The Californians seem to want it, and he thinks there will be little objection to it. Dr. Cattanaoh has a new litter of pups by Gallant Boy, a famous dog, and expects them to turn out well.

Saratoga Kennel Club.

Vice-President E. A. Hall presided at the March meeting of the Saratoga Poultry and Kennel Club at the Commercial Hotel, March 7. There was a large attendance, and among those from out of town were Edward Rosa, of Schenectady, and Lyman W. Clute, of Ballston Lake. Communications were read from a number accepting official positions in the organization, including Edward Rosa and George Rosa, of Schenectady; A. E. Blunck, of Johnstown; C. E. Rockensteyer, of Albany, and Lyman W. Clute, of Ballston Lake. New members elected embraced G. W. Brown, H. H. Lawrence, W. Feuton, G. I. Humphrey, Jerome Meader, Angus tus Thomas and Emmett Farrington, of Saratoga Springs; E. E. Baker, of Grangerville, and Gates Mabbett, of Greenfield. The election of a director to fill the vacancy caused by the resignation of J. A. Willis was deferred until the next meeting.

A Kennel Club for Bridgeton.

At Bridgeton, N. J., a new kennel club has been formed with the following officers: President, A. H. Grosscup; Vice-President, William Lilly; Secretary Louis Beckhardt; Treasurer, Barron Grosscup. A Board of directors was also chosen. The club will hold their initial dog show at the end of this month, confined to local breeders and owners. If the show proves a success application will be made to the American Kennel Club. The judges selected are: St. Bernards, pugs, mastiffs and Newfoundlanders, Warren Lewis; poodles and pet dogs, Paul J. Davis; setters and pointers, Andrew Mahr; greyhounds, Dr. E. T. Davis; hunting hounds, Charles Carman; bull-terriers and bulldogs, Hon. J. L. Van Syckel; coach dogs and miscellaneous, Stacy W. Newcombe. These judges are entirely unknown to the fancy, still they will have the same difficulty in pleasing every one as their confreres have.

Pug Importation.

Mr. Green, of Louisville, Ky., has purchased the pugs Drummer and Decima in England. Drummer was the sire of Simple Ben, that did so well at the late Nashville show and that unfortunately died soon after. Long prices were paid, it is said.

Sir Wallace Dead.

One of the oldest black and tan terrier show dogs in the country has gone the way of all flesh. We allude to Sir Wallace, owned by Mr. John H. Herbertson, of Detroit. He was over six years old and at one time was one of our best. With the advent of the new regime he had to give way.

Brunswick Fur Club.

There will be a special meeting of the Brunswick Fur Club at Mechanics' Hall, Boston, on April 4, at 11 o'clock A. M. By a vote of the executive committee of the club, members are requested to send to the secretary a full list of the hounds owned by them, stating name, sex, age, color, breeding and strain. The committee also desire that in the future whenever they get a new hound they will send the secretary full particulars. Mr. Bradford S. Turpin is secretary.

Sale of Champion Olga.

Mr. Albion L. Page, owner of the Dunrobin Kennels, has sold his deerhounds champion Olga and Bruar to Mr. Muir, of Detroit, and they will be shown next week in that city.

No sooner had the growl and bark of the dogs quieted down and passed away than two days after the Madison Square Garden was given over to the feathered race. There are not

MR. CHAS. HEATH'S POINTER ARTHUR.
First New York and Baltimore, 1893.

many dogmen who combine both pursuits, but during our visit we noticed that the Hempstead Farm had quite a number of exhibits there, principally black Langshans. They won the \$100 special for the best hen—pen rather, of that breed. A \$25 special for best Langshan in the show—and it was a whopper—the Langshan. First for breeding pen and first for American-bred black pullet. First black hen and first for pen of white Langshans. So Mr. Mortimer had quite a double work of it besides judging at Philadelphia the same week as the poultry show.

We regret to hear that two valuable St. Bernards belonging to Mr. George W. Patterson, of the Lakeview Kennels, were killed at Lakeview recently by a train on the Worcester & Shrewsbury Railroad. Owing to the snow on either side of the track, the dogs could not get out of the way in time.

Valuable prizes are at times given for whippet racing in the neighborhood of the metropolis. At Kearney, N. J., the other day, Blair Athol won a race against the noted Firenze. The prize was \$350, in addition to a trophy.

Mr. George Raper sailed for England on the Servia at noon last Saturday. A number of friends wished him *bon voyage* and *au revoir*. Mr. Raper will not judge at Manchester, as stated, but will attend to his reportorial duties for *British Fancier* at this important show. He declined judging at over a dozen shows before leaving England, including Bath, St. Helens, Cambridge, Kilmarnock, Guis-

borough, etc. Mr. Raper has aged somewhat since he was with us last year. The life he leads must be a hard one, indeed, as he is on the go almost night and day, judging, reporting and exhibiting. He will be over here again about April 10.

During Saturday night and before the benching was up a number of dogs arrived at the dog show held at Washington. The building is new and during the night the heating apparatus was tried. George Thomas had brought his dogs to the building and left them in their crates for the night. On Sunday morning the heat had been so intense that he found the noted greyhounds Ornatus and Lilly of Gainsborough dead in one crate, and Wild Rose in a very bad way in another, but has now recovered. The death of these dogs is most unfortunate, and Mr. Purbeck has our sincere sympathy. Frank Dole's bull-terrier Edgewood Wonder was also rather badly affected from the same cause, but soon recovered.

Mr. George Bell is in Washington, but, like the Senator, knows not "where he is at." First he is notified that suspension in the judicial air of the A. K. C. is his portion, and then within a few hours he is informed that he is reinstated with the full rights and appurtenances of a spaniel exhibitor. It all arose out of the judging at Baltimore. Mr. Watson's idea of a cocker did not conform to Mr. Bell's definition, and the latter expressing his views more forcibly than politely, which should not obtain in the best regulated spaniel or any other circles, Mr. Watson brought the facts to the notice of the A. K. C. We should have thought it better to have drawn the attention of the M. K. C. to the matter and let them act as they thought fit; then Mr. Watson could have appealed to the A. K. C. had he thought that justice had failed him. Any one who assails the judge on account of any decision he may make should be summarily dealt with by the club at whose show the affair takes place. Bench show committees must protect their judges.

Duke of Kildare was first and Kildare Beverly third in open Irish setter dogs at Baltimore, and not the reverse, as printed.

The following new ads. appear in our kennel business columns this week: For Sale—Harriers, F. M. Ware; collies, James Fraser, Asphodel Kennels; setters, W. H. Hubbard; terriers, E. K. Butler, Jr.; cockers, Corktown Kennels; pointers, H. J. Wagner; St. Bernards, M. W. Schaeffer. John T. Mayfield wants dogs to train for field work. The Kildare Kennels offer the crack Irish setter Duke of Kildare at stud.

At the Illindio Kennel Club bench show, to be held at Indianapolis, March 28 to 31, the Collie Club offers the silver club medal for best collie dog or bitch exhibited by a member of the Collie Club in open classes.

During the wait between the Baltimore and Washington shows Mr. Geo. Bell purchased Mr. Harry Grainger's (owner of the Regent Kennels of Baltimore) kennel of fox-terriers, including the well known Dusky Trap and Confidence, together with five or six others. Mr. Grainger is retiring from the fancy.
